SYNERGISM AT WORK FOR NEWSPAPERS

Readers want to care about the newspapers they read, and all of us at Universal Press Syndicate are devoted to providing you with features your readers can care about. Our comic strips and panels, including DOONESBURY, FOR BETTER OR FOR WORSE, THE FAR SIDE, CATHY, and the inimitable ZIGGY, are without peer in capturing the imagination and loyalty of readers. Features such as DEAR ABBY and THE MINI PAGE appeal to a broad spectrum of readers, while the op/ed writers we represent are an all-star cast of opinion-makers: James J. Kilpatrick, Mary McGrory, William F. Buckley Jr. , Richard Reeves, Robert Maynard and Jeff Greenfield.

Universal is working in many other areas to enhance the value of offerings to both newspapers and readers:

- Universal is the sole marketer to newspapers of Knight-Ridder's comprehensive data base, Vu/Text.
- Our publishing affiliate, Andrews, McMeel and Parker, offers a comprehensive program of books, cards and ancillary products that reinforces the appeal of the Universal features appearing in your newspaper.
- Trexler Crafts and Designs services thousands of readers of the popular column Pat's Pointers with the latest in contemporary needlepoint designs.
- Our subsidiary, Universal Licensing, further strengthens the value of our features by seeking outlets for the talents of writers and artists whose identities are already known to your readers.
- On another exciting front, we have just launched a premium service of color photos and superior feature stories for travel and home sections. PRIMARY COLOR is an exceptional coupling of words and art.

And we plan on continuing to do whatever has to be done to reach a goal we have in common with newspapers: capturing and retaining newspaper readers.

John P. McMeel, President
Kathleen W. Andrews, Vice President

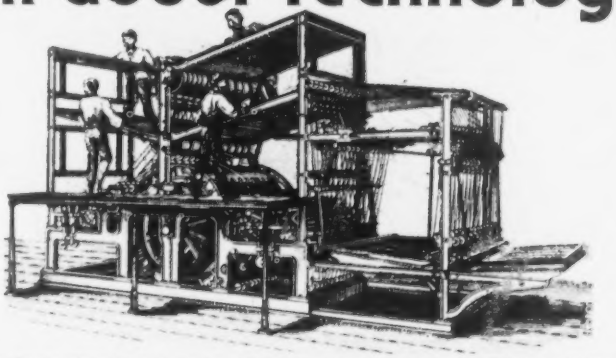
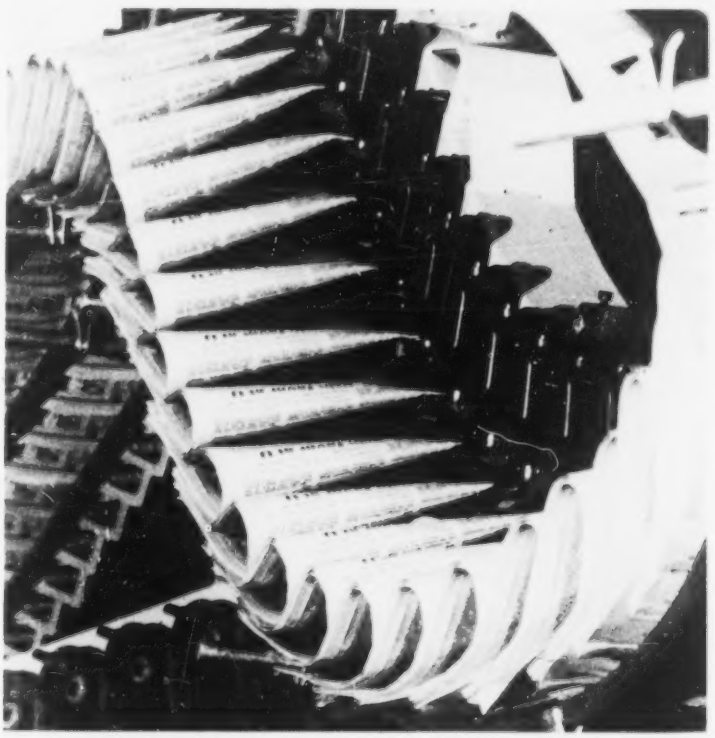
Talk about Technology!



Rotary Perfecting Press, circa 1872, with four feeders – used for printing "... large newspapers & delivering many thousands an hour."

The boys above and their publisher would have welcomed any new technology to save drudgery and time... FERAG is the industry leader in newspaper processing with advanced technology in customized, automated processing systems. Hundreds of the world's leading newspaper publishers rely on FERAG systems.

When you're ready to talk technology in automated processing systems, we're ready to listen... FERAG, Inc., Keystone Industrial Park, Bristol, PA 19007 . . (215) 788-0892



Exclusive FERAG Single Copy Conveyor grips each copy from the press folder at press speeds and carries it without marking to any preselected point in the production cycle... Microprocessor-based, the FERAG Single Copy Conveyor provides damage-free, accountable and controllable processing throughout the production and distribution operation.

FERAG

First in automated Processing Systems

Special Report *Syndicates, long-time purveyors of columns and comics, have expanded into new products in the past decade. Some have also entered other areas, particularly television and licensing. For newspapers, they offer everything from camera-ready sections for total-market delivery to daily television listings, from databases to graphics, from magazines and book excerpts to individual articles. And observers say the cornucopia will continue to grow as newspapers maintain their demand for more and better features to please their diverse readerships.* **16**

Schools for printers *College-trained production personnel are in demand. Many printing schools, however, can't fill their classrooms.* **8**

Editors get down to business *Increasing numbers of news executives are going back to campus to take cram courses in business administration.* **12**

Politics and the journalist *Once it was common for journalists to run for office. Now, many newspapers restrict employees' community involvement.* **28**

The Rehnquist court *Will the press be battered by the Supreme Court this term? Vote patterns reveal no bloc waiting to do the new chief justice's bidding.* **32**

Rewarding performance *The trend in newspaper compensation is away from annual, general pay raises and toward merit-based increases.* **34**

Going head-to-head *Only 29 U.S. cities still have two or more fully competitive newspapers. Analysts predict a bleak future for the two-paper town.* **38**

Solitary Sundays *The Sunday-only newspaper is a thing of the past. Only a handful of U.S. companies still publish the one-day wonders.* **44**

Essay: Sports' sordid side *Fans may boo, but newspapers must cover college athletic scandals, says the Lexington (Ky.) Herald-Leader's Creed C. Black.* **46**

Profile: Henry E. Payne *At 24, and less than three years out of Princeton, he is already a nationally syndicated editorial cartoonist.* **48**

Last-minute legislative barrage *At its close, the 99th Congress passed a fee on imported newsprint and amendments to the Freedom of Information Act.* **52**

Unabated acquisitions *At a New York City conference, experts predict that newspaper purchases and mergers will continue at a rapid pace.* **74**

CHAIRMAN'S CORNER

We must keep up our guard, lest the 'diversity principle' erode

The regional Bell Operating Companies are again challenging the "diversity principle" as they seek to take advantage of their monopoly position and to enter the electronic information services field. Recently proposed legislation could help establish such an unfair business environment.

As you all know, the diversity principle laid down by Judge Harold H. Greene in his 1982 decision states that companies possessing monopoly ownership over telephone communications should not be allowed to own or control the information carried over their monopoly facilities.

Alvah H. Chapman Jr.

Several of the BOCs and AT&T are involved, or plan involvement, in information services that appear to be counter to Greene's ruling.

On top of that, S 2565, introduced in the Senate last summer, would transfer the responsibility of enforcing Greene's decision from the court to the Federal Communications Commission. To date, the FCC has shown little or no support for the diversity principle or for any restrictions on the BOCs. Since that legislation was introduced, ANPA has worked hard to alert Congress to our concerns.

Uzal Martz, president and publisher of the Pottsville (Pa.) Republican and chairman of ANPA's Telecommunications Committee, has proposed to a congressional committee that a statutory ban on information services by the BOCs—and on electronic publishing by AT&T—be enacted to preserve the current competitive environment. Once competition has developed to a point where the danger of monopoly power seems remote, the ban could be lifted, based on objective tests of market dominance and on a determination by the FCC that the BOCs could not use their monopoly facilities to suppress competition. Other safeguards would then be sufficient to prevent anticompetitive conduct by the phone companies.

Sen. John C. Danforth (R-Mo.) embraced much of the diversity principle last month in proposing amendments to S 2565. This is the second time that Danforth has acted affirmatively to support diversity in telephone-based information services. However, the battle is far from over.

Legislation was also introduced in the House during the 99th Congress to allow the BOCs to enter the information-services business. The legislation secured more than 170 cosponsors.

We don't know yet what the future holds for information services, but we clearly recognize the danger that the BOCs and AT&T could pose—by controlling both information content and conduit—to the free expression of ideas by a multitude of voices. ANPA will continue to lead the fight before our lawmakers for a fair and equitable resolution. Your support and advice are always appreciated.

NAPP Customers consistently deliver outstanding print quality.

Best in the World

NAPP customers deliver their finest tearsheets to the Best in the World™ competition each year. The sixth annual contest will feature hundreds of newspaper entries from around the world contending for top honors in their class and vying for the coveted title of "Best of the Best" in color and black & white reproduction.

This year's champions will join a select group of newspapers which have been recognized by their peers for setting the highest quality standards in newspaper printing.

We believe NAPP customers produce the best printed newspapers in the world and invite you to judge for yourself. We will be at Booth #2472 during ANPA-TEC '87 in Las Vegas.

The Washington Post
PARADE

Six reasons why Parade is America's Sunday magazine.

Who. Who they read week after week. Pulitzer Prize-winning authors like Norman Mailer, David Halberstam, Carl Sagan.

What. What they read avidly: "Personality Parade"—America's best-read feature in print. Touching stories like that of James Stephens—a man who dedicated his life to saving children of lepers. And opinion makers/newsmakers like John Kenneth Galbraith and President Reagan.

Where. Where they read articles and features, including Lloyd Shearer's "Intelligence Report," that are among the most quoted in the world.

Why. Why they read it. Because Parade captures the fabric and texture of their lives every Sunday.

When. Sunday morning. With Jack Anderson on Washington. Dick Schaap on sports. Earl Ubell on health. And colorful profiles and useful information from James Brady and Gail Sheehy. As well as tasteful tips and recipes from food editors Sheila Lukins and Julee Rosso, authors of the best-selling Silver Palate cookbooks.

How. How does all this affect you? Newspapers respond to their readers. And readers respond to Parade. So, last year, more than 150 newspapers responded by adding Parade. Find out more about Parade for your newspaper. For more information, call Parade's Publisher, Carlo Vittorini at (212) 573-7000.

PARADE®

More readers want us. More newspapers carry us.

PRINTING SCHOOLS

Despite big demand for graduates, especially among newspapers, enrollment is declining in programs that specialize in printing production

BY ROSALIND C. TRUITT
presstime technical writer

Students at the Rochester Institute of Technology are like most college students these days. With single-minded determination, they want to graduate, find a job and make good money—in that order.

But unlike many graduates who may job hunt for months, diploma in hand, and settle for an entry-level position out of their field, RIT and other graphic-arts majors know something a great many young people apparently do not: The printing industry, particularly newspapers, is virtually begging for trained production workers, college placement offices and newspaper executives report.

Estimates vary, but graphic-arts educators and majors say that each year when graduation rolls around, there are anywhere from two to four times as many printing industry and newspaper production jobs available as there are graduates. That includes production management positions as well as those for the people who operate the equipment.

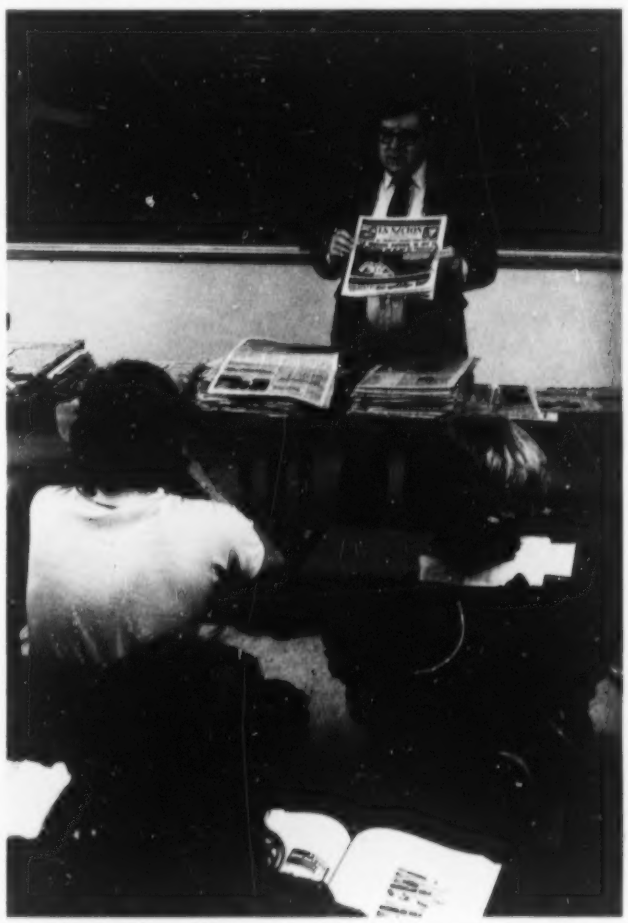
"Like everyone else, we want our share of good people, and the competition for the best people from the best schools is very heavy," notes Kim Breese, vice president/operations for Dow Jones & Co.

According to the 1986 *U.S. Industrial Outlook*, published by the U.S. Department of Commerce, there are some 53,000 printing establishments nationwide employing about 1.3 million workers. In 1985, an estimated 162,000 of them worked for newspapers.

In 1970, graphic-arts jobs accounted for 48 percent of all newspaper employment. That figure dropped steadily until 1983 when it reached 37 percent. Since 1983, however, the number of new newspaper production jobs has increased about 4 percent annually—a trend that is expected to continue in the near future. Yet, with a few exceptions, enrollment in graphic-arts programs is continuing to decline across the country, as it has for at least 10 years.

Newspapers suffer from a double whammy. If many students never consider the graphic arts to begin with, those who do often perceive other types of printing, from package design to magazines, as more glamorous.

"It sounds like commercial printers have done a better job than we have of selling themselves as an exciting profession," says Gene Bell, vice president/production director for the Chicago Tribune. "Newspaper production is exciting these days, and we have a good story to tell. We need to do a better job of telling it."



W. Frederick Craig, an RIT associate professor, teaches newspaper design.

NEWSPAPER MINORITY. The story doesn't completely fall on deaf ears.

Last spring, for example, RIT graduated 12 students from its Newspaper Production Management program—the largest class since the program began eight years ago. That number pales, however, when compared with an average of 150 students who graduate annually from the school's general printing program and select other printing specialities. (A few newspaper production majors choose other occupations, just as a handful of general-printing majors go to work for newspapers.)

Other large graphic-arts programs report similar figures. At Ferris State College in Big Rapids, Mich., about 40 printing students are graduated annually, and only about one-third choose newspapers. At California Polytechnic University in San Luis Obispo, the vast majority of 80 to 90 graphic communication graduates each year go into commercial printing.

To increase enrollments in its newspaper production program as well as to obtain input

on the type of training newspapers want their production managers to have, RIT earlier this year established an advisory committee of newspaper production executives from around the country.

Committee members say they are concerned because trained workers cannot be found to staff certain newspaper jobs. The problem is more acute for smaller papers, because the larger ones recruit more and seem to be more appealing in the eyes of printing-school graduates.

Another concern is that today's newspaper production supervisors average 50 years of age, and there could be problems in filling key positions when the inevitable retirements occur in years to come.

"Newspapers are looking for a different type of (production) person these days—people with strong educational backgrounds," says Bell of the Chicago Tribune. "We want people who have the technical training, of course, but also who have business and other skills essential to the field. The technology is changing so rapidly we need people who can keep up with the advancements."

RIT, whose School of Printing dates back to 1937, founded its Newspaper Production Management program in 1978 because newspaper executives pointed to the need for more college-educated production managers. There are currently about 30 students enrolled, but the program's ideal number is twice that many.

Many graduates obtain middle-management production jobs.

"I'm surprised more young people looking at newspapers don't consider newspaper production," says J.C. McCracken, an instructor at RIT. "On average, a young reporter or editor coming out of journalism school might expect $14,000 to $18,000 on a first job, if they're able to get one. Many of our students leave here with middle-management production jobs that pay $25,000 or more."

Educators and students say salaries generally aren't the determining factor when job decisions are made. If salaries were the only yardstick, more young people would likely choose newspapers. McCracken says 1986 RIT graduates indicated they were offered from $18,000 to $25,000 for entry-level jobs in the printing industry in general while newspapers were paying $23,000 to $32,000 to start in production jobs.

Other schools report their graduates found commercial printing firms and newspapers often paid comparable salaries for beginners, with newspapers paying more in some cases.

So if money's not the problem, why don't newspapers fare better?

Agreeing with the Chicago Tribune's Bell, the head of the Graphic Communication Department at Cal Poly, Harvey R. Levenson, says newspapers "don't do nearly enough to promote themselves as a viable career alternative" to people entering the graphic arts.

Robert Hacker, coordinator of RIT's Newspaper Production Management program, provides a different explanation. "Everybody takes newspapers for granted," he says. "Most people don't understand the complex, high-tech nature of the industry, how many things have to be done to get that newspaper to your doorstep with text and pictures. They (young people) might have taken a tour of the paper once and seen a bunch of guys running around with little paper hats on and working on an ancient letterpress, and they think they know how a newspaper's printed."

Although that's no longer the case in these days of modern newspapering, mere button pushing doesn't suffice either. Robert Stechschulte, head of the Graphic Arts Department at Ferris State, says: "It's

Grads Find Challenge, Satisfaction at Newspapers

Two of the RIT graduates who gravitated to newspaper production, Todd S. Socia and Pamela Ann Bolton, are happy about their career choices.

Socia, who graduated from the school in May 1985, says that earlier in his life, he wasn't convinced newspaper production work was for him. He had worked summers in the pressroom and the mailroom at The Bay City (Mich.) Times where his father was a production manager.

The elder Socia picked up some RIT literature at an ANPA trade show and gave it to his son just as he was to begin his senior year of high school. That helped steer him to Rochester.

When Socia announced his college plans, "people my age would ask me how the hell I could pick newspaper production management. They just couldn't imagine why I would be interested in it."

Perhaps they don't wonder about his career choice any more. At 23, Socia is assistant production manager for The Times-Picayune in New Orleans.

Some high schools offer graphic-arts courses, but "there aren't enough" that do, Socia says. "Students need to know that newspaper production is an exciting field for those interested in technical areas. There's a lot going on in computers and related fields. And things are changing every day, so much so that you can literally order a piece of equipment and find out it's obsolete before it's delivered."

He adds, "I think if more students knew all the areas (newspapers) work in, they'd get involved in newspapers."

In the three years since she graduated from RIT, Bolton has been promoted twice at the Anderson (S.C.) Independent-Mail, where she is now pre-press quality control manager. Bolton says she likes the challenge of working with both people and equipment.

"I learned a lot of theory at RIT, but when I began working here, I really grew up a lot," says Bolton, 28.

She became interested in photography in high school, an interest that soon shifted to printing. In college, her interest in general printing later focused on newspapers, and Bolton says she is happy she made the switch.

"In school, they teach you to be realistic and to work hard. They give you enough general knowledge so that you can be resilient enough to adapt to any change. I want to keep advancing, keep learning so that I'll be prepared when a production manager's job opens up for me someday," she says.

The serious atmosphere at RIT nurtured a strong dedication to the job she now has, Bolton says. "When I went to school there, my education cost $30,000. For that kind of money, you don't fool around. There weren't a lot of outside activities. People didn't go in for fraternities, for example. They were known by their majors, like 'the photography house.' People went there because they knew they'd get the training they needed and, more importantly, because they knew they'd get a job when they graduated." —*Rosalind C. Truitt*

more than just pushing buttons. They have to understand the logic behind what happens when you push that button. That's what we teach them. If they don't understand what was going on, how can they fix it when something goes wrong? How can they supervise people who actually work with the equipment?"

SCHOOLS, SPECIALTIES. RIT, Cal Poly and Ferris State are perhaps the best known of the U.S. schools offering a specialty in the graphic arts, but they are not the only ones. The Graphic Arts Technical Foundation periodically produces a list of technical schools, colleges and universities offering courses in graphic communications, and the latest edition contains more than 200 entries.

That number is actually lower than it was a decade ago. Many schools have dropped their graphic-arts programs, according to Jack Simich, education director for the foundation.

The two primary causes he cites are declining enrollments and rising costs of state-of-the-art equipment such as presses, color scanners and platemaking machines needed to prepare students for modern printing.

Staying current on the equipment front is not as much of a problem for the most prestigious of the institutions. Companies frequently donate their products to them, observers note. For example, the Graphic Systems Division of Rockwell International Corp. recently donated a $500,000 Goss Community offset press to Cal Poly.

Courses of study at all printing schools can lead to degrees in a variety of disciplines, including printing technology, printing management, printing systems and engineering, as well as applied computer science and newspaper production management.

Students interested in actual day-to-day production work generally can be trained in two years or less at a community college or trade school.

Although more than 40 colleges and universities around the country offer four-year degrees in the graphic-arts field, RIT, Cal Poly or Ferris State are mentioned most often when newspaper production experts discuss top-quality training.

All three prepare students for graphic arts in general, but RIT has the most extensive newspaper program. Its curriculum includes laboratory training on modern web presses, color scanners, and imaging equipment.

In addition to flexography, layout and design, and ink and color classes, all RIT printing students study labor relations, marketing and business law during a four-year, bachelor of science program. The aim, school officials say, is to give students a broad-based education.

Scripps Howard and Gannett Co. are among those offering scholarship money.

To that end, the 157-year-old institute recently announced an $85-million capital improvement program that includes an $8.5-million imaging science facility, new equipment and a 90-acre research and development park. Corporations, foundations, alumni and others have already pledged $54 million.

At Cal Poly, students earning a bachelor of science degree in graphic communications may specialize in one of four areas: printing management, printing technology, computer graphics or design reproduction.

Department head Levenson says production students put out a complete daily newspaper that carries news supplied by journalism students. Even with that exposure to the newspaper environment most of the graduates each year wind up in commercial printing, he says.

Ferris State differs from the other two schools in that it offers graphic-arts students the option of earning a two-year associate degree in printing technology or a four-year bachelor's degree in printing management. For the associate degree, classes range from photo composition to paper technology, while the four-year program includes technical classes as well as psychology, accounting, marketing and other courses.

The Ferris State printing program has graduated about 2,500 people since its inception in 1950, when the Michigan Press Association found its members woefully short of Linotype operators and asked the school to offer printing classes.

According to Stechschulte, most of the early graduates headed straight for newspapers. But in recent years, commercial printing has held a lure for the majority of them, in part because commercial printing offers them the chance eventually to own their own shops.

SCHOLARSHIPS, STUDENTS. With the notable exceptions of Ferris State and Cal Poly, which limit the number of students they accept, most printing schools must recruit actively to fill chairs in their classrooms, according to GATF.

Some efforts are being made by newspaper companies to make a printing education more appealing.

Scripps Howard and Gannett Co. are among those offering scholarship money for students planning a major in newspaper production.

Many others, including the Chicago Tribune and Dow Jones, which publishes The Wall Street Journal, provide newspaper production internships to students. The purpose is twofold. The internships expose young people to the field, and they help newspapers identify potential hires for the future.

Dow Jones takes its program a step further. Young people are selected for the summer between their junior and senior years. Those who do well in the internship programs receive scholarship money for their last year of study and are seriously considered for jobs when they graduate.

To attract even younger students, GATF places thousands of brochures in high school counseling offices all over the country, explaining graphic arts careers and emphasizing that everything from a soda pop can to a T-shirt to newspapers must be designed and printed. RIT is also producing some slick educational brochures and a video presentation aimed at updating the image of printers.

"We need to change the image of printing in the minds of kids," says Linda Tolan, assistant to the director of RIT's School of Printing and head of the image-changing project. "It's the best-kept secret in the country. We want kids to know that printing is graphic design, computers, engineering and managing people. It's an exciting interdisciplinary career and we spend a lot of time in schools telling kids just that."

Ferris State students Jeffrey R. Selk and Thomas E. Kennedy are typical of the different kinds of people who are being attracted to printing schools: in some cases, young people right out of high school; in others, older people making a career change.

Selk, 19, traces his interest in printing back to eighth grade when he first learned to print tickets for a school dance. Kennedy, 30, studied music theory previously in college. He says he decided to switch careers after learning that trained printers had little trouble finding jobs.

The schools also report that women and minorities are signing up in increasing numbers. About 30 percent of his current class at Ferris State are women, Stechschulte says. □

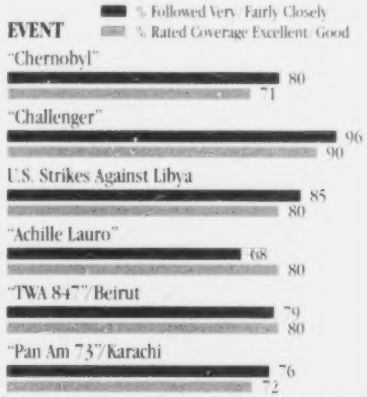
"The People & The Press," Part 2

How would you rate press coverage of these events?

How well do you and your fellow citizens think we in the press covered the above events?

As a newspaper-based media company, it's essential that we know. So we commissioned Gallup to find out.

Gallup asked Americans across the U.S. how closely they followed six major events and how they rated press coverage of them. Here are their responses:



(Note: Only those who followed events very or fairly closely were asked to rate coverage of them.)

Other press issues covered, too. Gallup re-asked key questions from "People & The Press, Part 1" to check for changes, then posed 50 questions on press handling of terrorism and news leaks.

We'll detail the findings in subsequent ads. Meanwhile, here are highlights:

Ambivalence about coverage of terrorism. Majorities said press coverage of terrorism was very or mostly satisfactory and in the public interest.

But majorities also said the press gives terrorists "too much" coverage and press coverage "increases the chances of future terrorist acts."

Division over news leaks. Among the 55% who understand the term, half said news leaks serve the public interest, half said they hurt it.

Part 1 vs. 2: No changes. Large majorities continue to like and believe the press and think it supports America and strengthens democracy.

Majorities also continue to think it "favors one side" and is unduly influenced by powerful individuals and institutions.

How to get Part 2 details. We'd be pleased to mail you a summary. Just call our public affairs people at (213) 972-3946.

We'd also like your views on these press issues. Send them to our chairman, Robert Erburu, Times Mirror, Times Mirror Square, Suite 100, Los Angeles, CA 90053.

EDITORS IN BUSINESS SCHOOLS

Positive results are reported by the news executives who have gone back to college to bone up on economics.

BY MARION LEWENSTEIN

Apparently, going back to the classroom—in business schools, at least—is an exhilarating experience for news executives.

A sampling among the small but increasing number who have attended business executive programs in recent years found them more than willing to talk lengthily and enthusiastically about their experiences.

"I've never before spent so much time with such a concentrated group of overachievers," comments Michael R. Fancher, executive editor of The Seattle Times. "The experience was a real 'stretching.' "

Fancher graduated in June with an MBA (master's in business administration) from a special two-year University of Washington Graduate Business School program. It was a heady day: He received the degree—indeed, he was class valedictorian—after a grueling two years of simultaneous work and studies; it was his 40th birthday; and he had just been promoted from managing editor to executive editor.

Explaining the value of what he learned while on campus, Fancher says: "The modern editor needs to represent quality journalism to the community and within the company. He has to know how to translate integrity and quality to financial success." His MBA studies, he adds, are helping him move toward that goal. "I know the right vocabulary now."

Larry Jinks of Knight-Ridder Inc. attended a much shorter Executive Management Program at Stanford University during the summer of 1985. But like Fancher, he found his eight-week experience immensely satisfying.

"I live and work in a corporate atmosphere; I deal a lot with financial statements and participate in business strategies. The coursework helped me grasp all this," says Jinks, vice president for news and operations, Newspaper Division, and senior news executive.

Echoing comments made by all executives interviewed by **presstime**, Fancher and Jinks say the best part of the business programs was the interaction with other class members, who were generally in the same age bracket and career stage.

"Learning how others solved problems in their business helped me," Fancher says.

Jinks values the interaction for still other reasons: "The concentrated exposure to the viewpoints of so many different business backgrounds and foreign countries was pure education for me." (Typically, a third or more of those enrolled at short-course programs are foreigners.)

THE PROGRAMS. Special business school programs for executives exist at various universities around the country, but best-known are the intensive short-course programs at Harvard, MIT and Stanford. They vary from eight to 11 weeks and cost from about $17,500 to $22,000, which includes tuition, room and board.

These programs require that executives be nominated by their companies, and that the companies pay the cost as well as excuse the executives from operating duties while studying. The course work is geared to top managers. A diploma or certificate is awarded upon completion of the program.

Two of these universities, Stanford and MIT, also have one-year Sloan Management programs aimed at middle-managers. These require full-time attendance for the academic year and, like the short courses, require company nomination and payment of fees. Tuition alone is about $24,000. Graduates of these programs earn a master of science in management.

In addition, about 60 universities offer a part-time, two-year MBA program such as the one that Seattle's Fancher completed.

His participation in the University of Washington program cost the newspaper about $10,000. It cost Fancher huge chunks of work and family time. In addition to full-time residency at the program for one week at the beginning and end of each of the two years, he had to attend classes on alternating Fridays and Saturdays. He also was required to put in 20

Lewenstein is professor of communication at Stanford University and a free-lance writer.

hours a week on course work, which included a one-night-a-week study group.

"The demands of the course work forced me to learn to delegate better on my job," Fancher said. As for his family, he sometimes had to cut back on visits to his children, who live in Oregon, and he and his wife had less time together.

Long, intense hours of study are common to all programs. "I never worked harder in my life," says Knight-Ridder President James K. Batten, who at the time he went though the Harvard Advanced Management Program (1981) was moving from corporate editorial responsibilities to business-side duties.

Batten is credited by other Knight-Ridder executives as having urged them to attend business programs. He explains: "The news business is so draining that it eats you alive. It makes sense to give others a chance to take a deep breath and luxuriate in something different. I got to understand business and business people better as a result of the experience; I want others to get that same background to give them broader potential for the future. That's good for them and the company."

OVERCOMING HOSTILITY. Another experience common to news executives who have gone to business school was encountering classmates who were hostile to the media.

Burl Osborne, president and editor of The Dallas Morning News, and Ben J. Bowers, executive editor and vice president of the Greensboro (N.C.) News & Record, were classmates in the Harvard program in 1984. Osborne says they "sometimes felt besieged" by press criticism.

He and Bowers took advantage of an assignment to devise a class exercise intended to demonstrate some of the constraints under which the press operates. Using a case history of a controversial story, they asked classmates to write just the lead sentence—in five minutes. They collected the leads and redistributed them, giving the executives a set number of characters in which to write a headline based on the lead in front of them, again within a few minutes. The headlines and leads were then projected onto an overhead screen for all to read.

Laughing as he recalls the results, Osborne says half the headlines and lead sentences were libelous, and the other half contained errors or opinions.

"That opened their eyes. From the discussion afterward, you could see that they began to understand that what may be viewed as bias is really just problems of getting news out on time and within limited space," he says.

Though many other news executives also presented formal classroom programs dealing with newspapers, most say the really worthwhile discussions took place outside of class.

"The valuable exchanges took place when you were brushing your teeth (in the dormitory bathroom) next to someone who had a stereotype of the press," said Jinks.

It wasn't just a one-way street, however, with editors content to explain the role of the press. They listened, too. David Lawrence Jr., publisher and chairman of the Detroit Free Press, observes, "I was surprised at the depth and frequency of anger about us."

Walter R. Mears, vice president and executive editor of the Associated Press, who was in Lawrence's class at Harvard (1984), describes how he kept hearing "horror stories" on the first day of class as he went about introducing himself.

Seattle's Fancher says that his classmates said they worried about talking to the press because mishandling of material might cost them their careers.

POSITIVE RESULTS. Has all this made a difference in newspaper content? Osborne

Business Executives Warm to Their Editor Classmates

Newspaper editors make good ambassadors when sent to executive business school programs. A check of some participants in programs attended by editors showed that classmates responded positively to the presence of news executives, although that may not have been the case initially.

Non-news business and government executives in the specialized business programs invariably comment favorably on the personal qualities of those editors who had been their classmates. "Impressive," "great breadth and depth," and "articulate," were commonly repeated descriptions.

As a result of the personal and intense associations that developed through study and living groups, many executives say they came to have a greater appreciation for the role of the press.

Gary Fazzino, Northwest public affairs manager for Hewlett-Packard Co., who attended the two-year MBA program at the University of Washington with Michael R. Fancher of The Seattle Times, says Fancher "was looked to for comments to provide perspective on many issues. Mike helped people to feel differently about news and how it is managed. We saw that he was a top-flight individual—capable, rational, deliberate and sensitive to what others thought."

Kathryn A. Paul, vice president and regional manager of Kaiser Foundation Health Plan in Cleveland, offers these comments about her Harvard classmates, Burl Osborne of The Dallas Morning News and Ben J. Bowers of the Greensboro (N.C.) News & Record; "They saw the world more broadly. Their presence made a difference to the total experience the rest of us had in the program. I had conversations with other classmembers that showed they were mulling over what they had heard from Burl and Ben in class and informally."

A member of the same class, Hugh G. Moulton, senior vice president and general counsel of Aleo Standard Corp., Valley Forge, Pa., observes: "My attitude had been that the less I had to do with the press, the better. I now have somewhat more positive feelings, through exposure to such seasoned people."

Still another participant in the Winter 1984 Harvard course, Laurence R. Codey, reports, "I came away with great appreciation for how hard it is to find educated, competent people who can handle many different issues.

"Their presence in the course was important because it showed that they care about the same things we do," says Codey, vice president and corporate rate counsel of Public Service & Gas in Newark, N.J.

One matter that continues to bother business executives is the lack of economics education among the press representatives with whom they come in contact on a regular basis. "It's reporters we hate," says Fazzino of Hewlett-Packard, only half in jest. "We don't hate editors."

For their part, the news executives who have participated in business programs encourage journalism students to get as much economics as they can before graduating.

of Dallas believes it has. "I think that as a result of my experience, there is improved editing at this newspaper," he says. "We are more careful with details."

Conceding that they struggled with their studies in such subjects as financial management and economics, the editors uniformly agree that overcoming their limited knowledge in these areas has made them more comfortable in dealing with corporate peers who have more business-side experience.

"I came out of this program feeling that I had skills I hadn't known I had," remarks Lawrence. "Certainly, I had never supposed that I was going to enjoy my financial management class above all others."

The return to the classroom has made them better managers, the news executives say, and it has sharpened their analytical skills.

The suggestion to enroll in business school programs usually comes from the most senior management, either within an individual paper or from corporate headquarters. As Batten of Knight-Ridder points out, management is looking down the road, trying to provide itself with greater flexibility by having more highly trained people in place.

Some editors have moved up to publisher or taken on some other operations-side duties since completing one of the programs. All say the course work helped make them more receptive to such moves.

Bowers, for example, says that having gone through the Harvard program has whetted his appetite for considering a publisher's role within Landmark Communications Inc., which owns the Greensboro daily.

Generally, those who were students and their superiors say the specialized programs are best suited for people high enough in an organization to "be where decisions come together." This may or may not explain the absence of women from those who have attended any of these programs, insofar as presstime could determine.

Among the handful of other news executives who have completed one business program or another is Richard G. High, editor of the Casper (Wyo.) Star-Tribune and senior editor for the parent company, Howard Publications.

High, who may have been one of the earliest editors to return to the classroom at a business school, participated in the one-year Sloan program at Stanford University nine years ago when he was 34. He was editor of Howard's Twin Falls, Idaho, paper when he entered the program and went to the Casper daily after graduation. With a circulation of 40,000, the Star-Tribune is possibly the smallest newspaper with an editor who holds an M.S. degree paid for by management.

"It was wonderful," he says. "What I learned opened up the realm of business and financial reporting. We're really covering the Wyoming economy here."

What he learned also has helped him borrow managerial structures from other businesses to improve internal communication, and has helped him develop new marketing strategies.

Lastly, the senior editor for the Howard group credits the classwork for helping him talk to publishers in their language on the corporate level. □

SYNDICATES SERVE SPREADING SMORGASBORD

Striving to accommodate change in the newspaper business, they are broadening the array of columns, comics and other features, and are providing more material for total-market-coverage publications and special sections

BY MARCIA RUTH
presstime staff writer

When America's most widely syndicated columnist asked readers to support passage of the National Cancer Act of 1971, Congress got its single largest flood of mail on any piece of pending legislation. Above the Senate mailroom, piled to the ceiling with sacks of almost a million cards and letters, appeared a sign acknowledging her power. "Impeach Ann Landers."

Still going strong 15 years later, this veteran of 31 years in newspapers continues to get strong reader response to her daily column—about 1,000 letters a day from home and abroad. That's impact any newspaper editor can envy.

Although not all syndicated features command such loyalty, their integral role in newspapers is well-established. And in recent years, these features have been expanding dramatically in breadth and variety even while their overall number, according to the annual syndicate directory of Editor & Publisher magazine, has remained relatively constant. With this change have come new and generally welcomed challenges to both the newspaper editors who select the features and the talented people who create them.

According to an informal presstime survey, most daily newspapers with circulations over 100,000 use about 100 to 150 syndicated features a year, and those with circulations of 20,000 to 50,000 average from 30 to 50. The papers pay anywhere from about $15,000 to $1 million a year, depending on the number they subscribe to as well as on their circulation and competitive position.

Syndication itself dates from the mid-1800s but did not enter daily newspapers in a big way until the early 20th century. Complementing the national and international news report of wire services, syndicates took hold initially with comics and columns.

Beginning in 1895 with "The Yellow Kid," the strip that spawned the term "Yellow Journalism" for outrageous press competition, syndicated comics ranging from the warmly received "Peanuts" to the often-controversial "Doonesbury" have evolved into national and international phenomena. In the column-writing field, like Walter Lippmann and Westbrook Pegler before them, syndicated columnists such as Jack Anderson and George Will wield as much influence as some of the politicians they write about. And features like crossword puzzles, bridge columns and horoscopes are simply enjoyed by millions who have no idea they come from a syndicate many miles away.

But in the past decade, syndicates, like their host newspapers, have changed dramatically. Just as newspapers reached for a broader spectrum of readers with a greater variety of materials for their news columns, syndicates expanded their offerings. In a sense, syndicates have served as caterers at a burgeoning newspaper smorgasbord.

Among their newer offerings are complete sections for newspaper inserts or separate delivery; packages of news and features on subjects such as health, food, travel and families; a wider range of specialty columns on subjects including soap opera digests and advice about sex; graphics—charts, maps, caricatures, etc.; television listings, with or without entertainment news and features; the editorial content of national magazines; information databases; and "one shots" such as free-lance articles and excerpts from best-selling books.

Until a decade ago, syndicates tended to market only what newspapers and independent artists and writers produced.

Today, operating almost like a newspaper editorial department, the larger syndicates also produce or commission

M. C. Vidali

Editors are faced with an almost perplexing assortment of choices.

many items they package for sale to newspapers. "Five years ago, certainly 10 years ago, this was not something syndicates did. Now it is among the leading things that we do, the revenue we get and profit we make," says Lou Schwartz, president of the Los Angeles Times Syndicate.

In addition, some syndicates have ventured beyond newspapers; they're into television production, book publication and broadway shows. Many have entered the lucrative land of "licensing," where newspaper comic characters generate sales for everything from toys to T-shirts to telephones.

Two of the largest operations—United Media and King Features—have diversified so much that only about half their revenues now come directly from newspapers. "When we formed United Media eight years ago, we tried to look at ourselves not as a syndicate company but as an idea company that operated across all media," says United's president and chief executive officer, Robert Roy Metz.

With the number of metro dailies shrinking, "we are looking at a market that is essentially static, and if we wanted to survive as a viable business, we had to do some other things," says Metz. "The ones who didn't—who tried to be just producers of columns and comics—have been gobbled up, have gone away."

Exactly how each syndicate works is largely unknown to outsiders. Highly competitive and secretive about numbers, the companies jealously guard their information. Numbers of clients and prices of individual features, for example, are hard to come by—and those that are released are sometimes questioned. "We don't think syndicates are truthful in the numbers they divulge," says Lee Salem, vice president and editorial director of Universal Press Syndicate. Even some published figures are "at best suspect and at worst specious," he says, and because of this, Universal refuses to take part in what he calls "popularity polls."

However, the syndicate business is highly concentrated so far as newspapers are concerned. "We all end up picking from the same sources, and there is a great deal of 'follow-the-leader,'" says Loren Ghiglione, publisher of the Bristol [Conn.] Press.

Despite the listing of about 350 syndicates in the Editor & Publisher Syndicate Directory, data from Feature Research Inc., a Texas firm, indicate that about 90 percent of syndicated material published in U.S. daily newspapers in 1985 came from only eight of them. Seven of the eight are affiliated with major newspaper groups or individual newspapers: Scripps Howard's United Media [encompassing United Feature Syndicate and Newspaper Enterprise Association], The Hearst Corp.'s King Features, News America Publishing Inc.'s News America Syndicate, Tribune Co.'s Tribune Media Services, The New York Times Syndication Sales Corp., Los Angeles Times Syndicate and The Washington Post Writers Group. The sole independent among the big eight is Universal Press Syndicate of Kansas City, Mo.

These companies have grown in two ways—in all cases, by expanding their product offerings; and in some cases, by acquiring other syndicates, such as King's purchase of Cowles Syndicate earlier this year [presstime, April 1986, p. 75].

The decline in the number of newspapers is "going to make honest people out of a lot of syndicators. They are not going to get away with foisting 'schlock.'"

Many people both inside and outside the syndicate business believe the consolidation trend will continue.

One of those is Richard S. Newcombe, president of News America Syndicate, which itself is for sale. "My personal prediction is that by the year 2000, there will only be one or two major syndicates," with major newspapers owning what he calls "boutique" syndicates.

With consolidation have come two counter trends: artists and writers are asserting more control over their material, and editors are being more selective and imaginative about how they use it.

For example, in increasing numbers, artists and writers are switching syndicates or splitting their business between two of them. "In the '40s, '50s and '60s, all the syndicates owned their features. Since then, a great number of the creators have fought hard to gain or regain ownership of their creation, which they should have had anyway," says Newcombe.

"On the other side of the coin, just as the creators want more freedom from their syndicates, the newspaper editors want more freedom" in how they use the material, he says. "There was a time when Walter Lippmann wrote a column five days a week, and [editors] would anchor that column five days a week and that column would never move," he says. "Those days are gone."

Another trend is that "exclusivity"—the restrictions editors placed on syndicates' sale of certain materials to competing newspapers—is losing its hold and changing its focus. Once a battleground for big-city dailies, the exclusivity issue nowadays more frequently pits metro dailies against suburban papers. (See story, p. 22.)

Amid these many developments in the evolution of syndicates, most observers say that the relationship between them and newspapers has improved dramatically, in part because of the increasing number of people with editorial backgrounds who lead and staff syndicates.

In the past, says Metz of United Media, many editors tended to "think of the syndicates as a bunch of guys going around peddling features." Now, particularly with the new services being made available, "it's not a buyer/seller relationship," says Karl Horwitz, president of The New York Times Syndication Sales Corp. and general manager of The New York Times News Service. "It's editor to editor."

Overall, the many changes have left people in the syndicate business optimistic about the future. "There are a lot of people in the [newspaper] industry who claim that the syndicate business is dying," says Dennis R. Allen, president of the Des Moines-based Cowles Syndicate when it was purchased by King Features. But "the future of the syndicate business, from my standpoint, is brighter today than it has ever been," says Allen, now vice president and creative director for King.

At the same time, Allen says the decline in the number of newspapers being published is "going to make honest people out of a lot of syndicators. They are not going to get away with foisting 'schlock,' which you could do when there were any number of newspapers who were gobbling up features. ... We're going to develop the kind of features newspapers will lust after," he says. "I'm banking on the recognition of quality by American editors."

Gene Pesek, Chicago Sun-Times

Ann Landers is swamped by just a portion of the 137,000 letters she received in response to a survey about women and sex.

CORNUCOPIA OF CHOICES. Beyond columns and comics, many of the new offerings are referred to as "packages," a mix of editorial material that editors can use in a variety of ways to suit individual needs.

In general, the smaller the paper, the more apt it is to use a syndicated package in the news columns of a special section or in a total-market-coverage publication.

One example is "Sunday Woman Plus," a weekly package of 15,000 to 18,000 words of "family-oriented" material. Drawing from a list of about 250 free-lance writers, plus nationally known columnists, the package's editors provide feature stories, celebrity interviews and columns on subjects like health, food, sex, children, the elderly and consumerism.

"We fulfill a need in marketplaces where they simply don't have the staff or the capabilities to do a Sunday magazine or a weekday product," says Merry Clark, editor of the King Features package.

Subscribing newspapers get the raw material along with camera-ready page layouts and color art. Clark says the papers, given four weeks' lead time, are "encouraged" to add local sidebars to national stories, such as a recent four-part financial series on the insurance crisis, home mortgages, two-career couples and personal banking. Newspapers ranging in size from less than 2,000 to more than 300,000 use the package in one form or another, she reports.

A pioneer in the package field, the Los Angeles Times Syndicate now offers them weekly in three subject areas—health and fitness, food styles, and entertainment—and includes related editorial art. Syndicate President Schwartz, a former managing editor of Newsday, oversees a package-producing editorial staff of about 20, augmented by a larger stable of free-lancers. The staff is divided into departments, each with its own editors, copy editors and managing editors.

As is true with King Features' "Sunday Woman Plus," the Times syndicate's packages are used in various ways by various newspapers. For example, Jack Rickman, feature editor of the Houston Chronicle and immediate past president of the American Association of Sunday and Feature Editors, says the Chronicle buys the health-and-fitness package, but "we don't use everything in it."

Other new dishes in the syndicated smorgasbord include: TV guides, magazines, graphics, wire services and "one shots."

- **Television program guides.** With the large number of cable channels now being offered in many locations, the job of providing accurate television listings poses a major headache for newspapers [presstime, June 1984, p. 6].

"In the days when you had five channels, you did it yourself," says Peter Willett, general manager of Tribune TV Log, the Tribune Media Services subsidiary that syndicates television listings.

"It just makes sense that the newspapers would look to specialists to come in and do this kind of thing," says Dean A. Vonetes, vice president and national director of advertising sales for TV Update, United Media's weekly television magazine.

Virtually all daily newspapers obtain their listings through one of these two syndicate companies.

Tribune specializes in customized guides, presenting various combinations of grids, rolling logs and topical lists. Its listings are most often used by larger dailies—over 100,000 circulation—with a combined circulation of about 24 million.

United concentrates on complete TV books, augmenting the listings with syndicate-written text and local advertising sold by the syndicate sales staff. Its TV Update is carried in 114 newspapers—most with circulations between 25,000 and 50,000—with a combined circulation of nearly 4.5 million. Other dailies are among the more than 2,000 publications that get listings alone from United.

Traditionally a difficult area for newspaper advertising sales, TV books and listings have become profit centers for some papers through syndication. Tribune sells small boldface ads that newspapers weave in with their daily and Sunday listings. United provides a complete sales staff that moves into a paper's circulation area for several weeks each year, selling 12 months of ads tailored for each paper's version of TV Update.

- **Magazines.** Although newspapers have long been able to negotiate individually for the right to republish magazine articles, the complete contents of some magazines are now easy for newspapers to obtain through syndicates.

Typically, subscribing newspapers receive the contents transmitted by one of the wire services at the time of publication. Editors then choose whatever they want and place it wherever they like.

A large syndicate can get 3,000-4,000 unsolicited comics and 3,000-4,000 text submissions a year, yet take on only three or four of each.

The largest syndicated source of magazine texts is The New York Times' syndicate, which has staples like Newsweek and U.S. News & World Report, specialty periodicals like Foreign Affairs, Foreign Policy and American Heritage, lifestyle publications like Family Circle and Ladies' Home Journal, and prestigious foreign magazines such as Der Spiegel, L'Express, The Economist, The Spectator, and Punch.

• **Graphics.** Newspapers' growing emphasis on modern graphics has been recognized by many of the syndicates.

For example, Tribune Media Services next year will begin to syndicate PressLink, a graphics network set up by Knight-Ridder Inc. for its newspaper group [presstime, Sept. 1986, p. 12]. The Tribune syndicate will continue to carry the twice-weekly Chicago Tribune Graphics Service, which includes camera-ready charts, maps and other illustrations. Similarly, the Los Angeles Times Syndicate markets packages of graphics from several large dailies.

But United Media and News America put together their own graphics packages. And some syndicates offer special packages, like the caricatures of public figures prepared by Chronicle Features, the syndicate of the San Francisco Chronicle.

• **Wire services.** Major newspapers make their contents available through supplemental wire services, but it is the syndicates that market most of the supplemental wires.

In addition to its own news service, The New York Times' syndicate markets the most domestic wires—The Baltimore Sun, Newhouse Newspapers, McClatchy Newspapers and States News Service—and the most international ones—Asahi News Service of Japan, International Herald-Tribune, Financial Times of London, LeMonde of Paris and El Pais of Madrid.

Other examples include Tribune Media Services, which sells Knight-Ridder's KNT News Wire; the Los Angeles Times Syndicate, distributing The Christian Science Monitor; and United Media, selling Scripps Howard News Service.

In addition to news, such wires also carry features usually obtained one-by-one through syndication. For example, there are more than 120 columns on the KNT wire and about 50 on the wires marketed through The New York Times' syndicate.

• **"One Shots."** News America Syndicate claims the largest selection of materials that editors buy on a "one-shot" basis, as opposed to syndicated materials received on a regular basis. "Our specialty is single articles and two- and three-part series," says Newcombe.

Among the 27 items the syndicate offered for the week of Sept. 22, for example, were a 2,000-word New York Magazine profile of U.S. News & World Report Publisher Mortimer Zuckerman, made timely because of the Soviet Union's detention of his Moscow correspondent, Nicholas Daniloff, and a five-part, 8,000-word series on the Beach Boys, excerpted from a recently published book on the rock group. In order to obtain rights to such exerpts before competitors act, "We pounce," says Anita Maderos, News America's assistant manager for select features.

From the stable of magazines it syndicates, The New York Times features about 10 "one shots" each week. Editors who do not buy a magazine's entire contents can preview these articles electronically, then pay only for what they actually use. Recent examples are Daniloff's account of his arrest and subsequent release by Soviet authorities (see story, p. 59) and the diary of his wife, Ruth. Both were published originally in U.S. News & World Report.

Marsha Bacon, Los Angeles Times

Los Angeles Times Syndicate's Julie Benson (left), editor/entertainment news service, and Managing Editor Steve Christensen confer in the LATS newsroom.

THE SELECTION FUNNEL. Before a new syndicated item reaches a reader—indeed, even before it reaches the newspaper editor's desk for consideration—it must pass through a lengthy selection process. Few make it through.

With the exception of features developed by syndicate staffs, the new offerings are the product of independent artists and writers seeking syndication. A handful of editors at each syndicate function as the narrow tip of a large funnel, picking one in a thousand. A large syndicate can get 3,000-4,000 unsolicited comics and 3,000-4,000 text submissions a year, yet take on only three or four of each.

People in the syndication business tend to agree with David

Hendin, United Media senior vice president and editorial director, who says the most basic criterion for developing or selecting new material is "to create a feature that cannot be created locally by one person—something that takes either a special person or so much work that it is not worthwhile for a newspaper to do."

Some syndicates seek a wide mix of material; others focus more narrowly.

"Syndicates that are ahead of the game are full-service talent agencies," says Newcombe of News America, which in addition to basic features this year joined the trend to "celebrity" columns by syndicating excerpts from the writings of Pope John Paul II. This new feature now appears in more than 100 newspapers.

Others have a more specialized goal. "My franchise as I see it is the editorial page," says William B. Dickinson Jr., general manager and editorial director of The Washington Post Writers Group. With columnists George Will, Ellen Goodman, David Broder and William Raspberry, he commands some of the hottest properties on the opinion pages of U.S. newspapers from a syndicate whose staff of seven could fit in the front lobby of large operations like King and United.

Chris R. Lucas, The Republican and The American, Waterbury, Conn.

Assistant Scene Editor Ruth Guillet Fields and Pressroom Foreman John Rock of The Republican and The American of Waterbury, Conn., check copies of Tuesday Woman, a weekly, 16-page tab made up almost entirely of syndicated material.

King is an example of a syndicate that specializes in features with wide appeal. "The ones that last usually have a strong universality," says Lawrence Olsen, vice president for marketing and sales. "We're not interested in a 'Hula Hoop' that whirls in and out," explains the syndicate's comics editor, Bill Yates. "We have strips that we've had for years that are very, very successful and continue to be successful. That's basically what we want."

Some syndicates bravely market new types of features for which skeptics say there is no apparent need. "When we introduced 'Tune in Tomorrow' (a column on soap operas), everyone said, 'Are you crazy?'" says United Media's Hendin. Also disparaged by editors at first were two other United columns—"Miss Manners" (on etiquette) and "Supermarket Shopper" (on coupons). All three are now syndicated in more than 200 newspapers. "What we're looking for," says Hendin, "are things we think will explode."

At the Universal syndicate editors seek out controversy. As the only major syndicate independent of a newspaper or newspaper company, it was formed in 1970 with the deliberate intention of operating out of the mainstream. "We just felt there was a niche for a syndicate that could take some chances, that could take some risk," says Universal President John McMeel. "We thought we could be a breakthrough company."

Universal opened with syndication of selections from the Random House book by Seymour M. Hersh on the Vietnam War's My Lai massacre and launched the liberal "Doonesbury" strip within its first year. Universal also syndicates conservative columnists including William F. Buckley Jr. and James J. Kilpatrick.

A few, such as Heritage Features Syndicate, stick to one viewpoint. Affiliated with The Heritage Foundation, its "motivation is basically to have a syndicate for conservative and free-market writers," says Managing Editor Andrew C. Seamans.

For newspapers, this expanding spread of features is an editorial groaning board, and selections must be made.

At most smaller papers, choice reflects the taste of the top editor. "My prejudices come into play," says Richard D. Martin, editor of the Kenosha (Wis.) News (evening, circulation 29,892). And sometimes features are chosen to please a particular segment of the community. "I bought (the comic strip) Cathy, which I hate but I knew women would love," says Martin, who claims that in this case he "overcame" his prejudices through application of a simple test: "Is it on the refrigerator with a magnet?"

Metropolitan dailies often designate one of their editors as "gatekeeper"—a central contact for the syndicates. This person channels promising material to section editors who actually decide what to buy.

"I don't act as an all-seeing, all-knowing editor," says Greg Lippert, "gatekeeper" at the Chicago Tribune. For instance, he says, "I don't have the expertise to say, 'This is a far better food column than we now use.'"

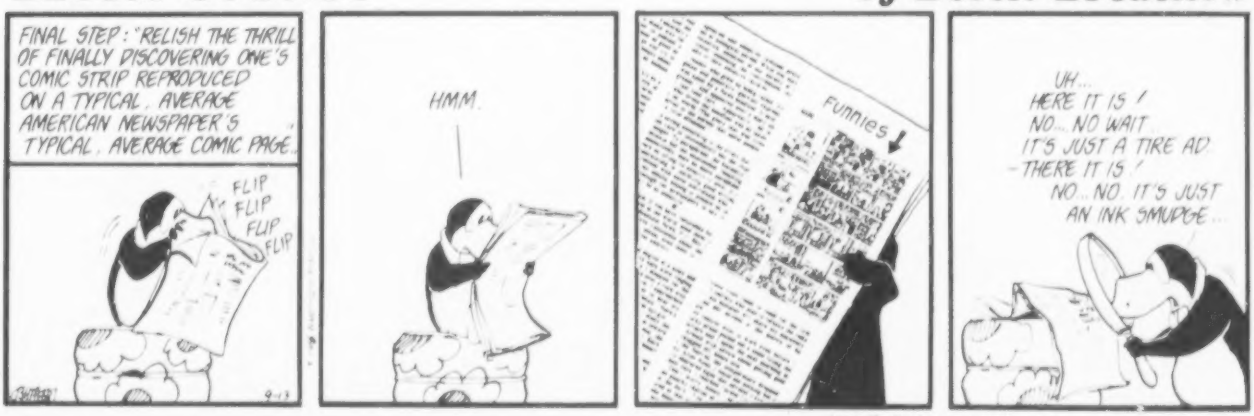
Lippert, whose actual title is features editor, says he talks with representatives of major syndicates "in most cases several times a week and in all cases once a month."

In general, the papers using the most syndicated material fall in the 100,000-to-250,000-circulation range, says Hawkins of Feature Research Inc.

Perhaps the main reason is explained by Tony Bembridge, managing editor/news features of The London (Ontario) Free Press (morning, 128,695): "I don't think we could do without nationally syndicated material. There are just areas of expertise we can't expect to pay the attention to that a newspaper the size of the LA Times can. Syndication allows you a good marriage between local material and other material."

Editors in competitive markets say they make special efforts

BLOOM COUNTY **by Berke Breathed**



FINAL STEP: "RELISH THE THRILL OF FINALLY DISCOVERING ONE'S COMIC STRIP REPRODUCED ON A TYPICAL, AVERAGE AMERICAN NEWSPAPER'S TYPICAL, AVERAGE COMIC PAGE."

to keep up with the syndicates and to try new features that seem to have the potential of being a hit.

"We buy new things, probably more than most, because of competition," says J. Scott Bosley, managing editor for features at the Detroit Free Press. "I used to be [at the Akron Beacon Journal] in Akron [Ohio]. There I could buy it I *knew* it was successful. Here it I think it *might* be successful, I'll buy it and watch it," he says. "You don't want to risk making a mistake."

For the editorial and op-ed pages, many editors seek balance. "We're always looking for a fresh point of view," says C. Michael Pride, editor of the Concord [N.H.] Monitor.

In addition to publishing syndicated political columnists on the editorial page, Pride says, "we're looking for different voices" for the op-ed page. What he wants there, he says, is people — syndicated or independent — who are "writing about what's not the top five AP items of the day. I don't want all the items to be about Libya, South Africa, the economy, tax reform. There need to be more pieces reflective of the way people live."

Balance also is a key at The Omaha World-Herald. After "credibility," says Editor G. Woodson Howe, "we look for an

Newspapers Are Asking For Less Exclusivity

One of the most controversial aspects of the way syndicates and their newspaper clients do business involves "territorial exclusivity"—the denial of features to a competing newspaper. There are indications, though, that the situation is easing.

Newspapers "still require territory, but for the most part they are asking less than they did 10, eight, six years ago," says Editorial Director Lee Salem of Universal Press Syndicate. "Where they used to insist on 200 miles, they now ask for 50, but they are still very adamant about what they consider their primary circulation area."

Speaking from an editor's perspective, Timothy M. Kelly of the Daily News in Los Angeles says "there was a time when some newspapers wanted exclusivity over the whole state and adjacent states, but that's been cut back little by little. It's not necessary anymore. In the old days, it was used by one big-city paper against another big-city paper. Now it's the big-city paper against the suburban papers nipping at the heels of the big-city papers."

Editors in the shadow of bigger dailies are most adamant that the practice must cease. Terming exclusivity "a throwback to the Dark Ages of Newspapers," Eugene Cryor, editor of the Fort Lauderdale News and Sun-Sentinel, says he does not claim exclusivity against smaller papers in his circulation area, yet loses features because of syndicate contracts with The Miami Herald.

William B. Ketter, editor of The Patriot Ledger in Quincy, Mass., has often spoken out against exclusivity claimed by The Boston Globe and other large papers [presstime, Feb. 1986, p. 35].

"American newspapers get up on their soapboxes in this country and around the world, and they talk about free access and an open society. And when it comes to the comic strip of 'Peanuts,' the editorial cartoons of Herblock or the commentary of David Broder, they don't believe in this. They believe that business is business, competition is competition, and if you are not the main paper in an area, 'tough luck,'" says Ketter. "I just think it's hypocritical, and I don't know how anyone can talk to me about 'free expression' or 'free press' and then not practice it in its totality."

Although territorial exclusivity has been the subject of several lawsuits, the most frequently cited case is the 1975 consent decree denying The Boston Globe exclusivity in an area where it did not have 20-percent penetration.

Last March, The Tribune in Oakland ended a three-year antitrust action against the San Francisco Chronicle by settling out of court a case many papers hoped would further erode syndicate exclusivity of dominant metros [presstime, April 1986, p. 48]. "I was hoping Bob [Tribune Publisher Robert C. Maynard] would take them to court," says Fort Lauderdale's Cryor.

The March agreement called for a step-by-step waiver of exclusivity by the Chronicle. Initially, the Tribune got three strips. Over the next 15 months, the Chronicle agreed to waive exclusivity to nine more features. And in mid-1987, it will begin to drop exclusive rights to three additional features every six months.

Opinions differ on the implications of the San Francisco-Oakland settlement. It "does not have the force of law," notes N. Christian Anderson, editor of The Orange County [Calif.] Register. But some other editors agree with Kelly that although the settlement is not binding on other newspapers, it is "just one more nail in the coffin of exclusivity." —*Marcia Ruth*

equal number of conservatives, liberals and moderates. And we don't want to get too top heavy with people who have 'Potomac fever.'"

Like many editors, Howe is also selective about the columns his paper uses. "We pay for three columns a week, but we won't use any if they're not good," he says. "Nobody has a prior claim on our space, no matter what their reputation."

At the other end of the spectrum, the larger papers usually use a smaller percentage of syndicated material on their editorial and op-ed pages.

The New York Times has none on regular contract.

Newsday has "half a dozen Newsday columnists and half a dozen syndicated columnists, and we use each of them at least once a week," says Senior Editor Eileen Barth.

In some cases, editors use popularity polls and other more scientific methods of deciding which columns and comics to buy or to keep. With comics, the process can be particularly painful because one strip usually must be dropped to make room for a new one—and killing the wrong one can touch off a storm of reader protest.

The selection process often reveals how segmented readership really is. "Readership varies widely, one could even say wildly," says David Starr, publisher of Springfield (Mass.) Newspapers. "The trick is to forecast whether a feature will be attractive for that segment of the population you are interested in."

Post-card polls that rate popularity do not show intensity, which is better revealed in a "drop test." For example, following a recent post-card poll in which many of the 8,000-9,000 respondents gave low ratings to "Robotman," the Rocky Mountain News dropped the strip and got "close to 400 calls in a few days," says Editor Ralph Looney. After restoring "Robotman," Looney says, "the next one we took out we got not a peep."

"The basic issue is one of segmentation," says Philip Meyer, William Rand Kennan Jr. professor of journalism at the University of North Carolina, Chapel Hill. "Editors are hung up on the 'referendum model' and tend to drop the least-read strip. But the least-read strip may be important to an important segment (of readers)."

As described in Meyer's recently published *The Newspaper Survival Book*, there is a growing awareness that comics need to be rated for three different kinds of readership: dramatic serials ("Steve Canyon"), light humor ("Dennis the Menace") and sophisticated humor ("Doonesbury").

Indeed, while some features are aimed for a mass audience, editors select others that appeal to a particular group. For example, when Gary Larson first syndicated "The Far Side," a lot of editors bought the panel knowing the appeal of the "far out" comic was strong but limited to a particular group of readers, says Stuart Dobbs, editor and general manager of Chronicle Features. "We're talking about the newspaper audience being a lot of little audiences."

PRICING: A MOVABLE FEAST. In contrast to the openness with which they tout the many features they offer, the syndicates close the door when the subject turns to costs. As one syndicate president put it when asked about prices, "I'd rather be evasive than definitive."

But some will give ranges. At United Media's United Feature Syndicate, prices go from $5 per feature per week in the smallest newspapers to $500 in the top markets, with the average price about $12-15. United's Newspaper Enterprise Association subsidiary sells packages of various features—primarily to smaller newspapers—with prices also based on circulation.

"Having to barter . . . is kind of a waste of time. I would like to know what the going rate for 'Doonesbury' is per 10,000 circulation."

At the Los Angeles Times Syndicate, Schwartz says "the range for a standard newspaper feature is probably $5 a week—occasionally less than $5—and over $300, depending on the situation." At The Washington Post's syndicate, the average cost of a column is $14 weekly, according to Dickinson.

"One shots" are another story. "Simply because there are so many variables," says Medeiros at News America Syndicate, "I think any kind of a price range would be misleading." They vary in price not only according to the circulation of the paper and the nature of the feature but also according to the feature's length. "If it's a 'how-to' or a routine interview or a travel piece, it would most likely be sold at a regular rate," where the minimum is $25, says Doris Richetti Nolan, News America's director of licensing and select features. "If it's an exclusive, or if the syndicate had to pay a large amount of money for the rights, the price would be escalated," she says. Then "the minimum could be $500 for a single piece."

While pricing for "one shots" is understood to be flexible, the secrecy surrounding even the most routine purchase of comics and columns results in what Editor Luke Feck of The Columbus (Ohio) Dispatch calls "a very sophisticated haggling system."

This process irks some editors. "Having to barter for something like this is kind of a waste of time," says Lawrence K. Beaupre, executive editor of Westchester Rockland Newspapers, White Plains, N.Y. "I would like to know what the going rate for 'Doonesbury' is per 10,000 circulation, or whatever," he says. "There is never a publicly quoted price."

Of the syndicated material he buys, Beaupre says the price falls in the $18 to $60 per feature range for his group of 10 evening dailies totaling 180,093 circulation. But there seems to be little relationship between the quality of a feature and its price, he observes. "How they arrive at those prices is a mystery to me."

For artists and writers, price is more standardized. Syndicates generally split feature sales 50/50, but special deals are common. For example, if an author shifts syndicates, as is happening more frequently these days, the new one may agree to pay a higher percentage for existing clients than for business gained after the shift.

Syndicate executives agree that newspapers of their parent companies typically get first crack at new releases—but no price breaks. Multi-paper purchases by newspaper groups are rare.

BRANCHING OUT. Most syndicates still conduct nearly all of their business with newspapers, but several of the major ones now market some of the same features to other media.

"We continually look at all of the (King) syndicate's characters—that's a real resource—in terms of what can we add and how can we change and how can we make it work in a different medium, and still be true to the property and the creator," says Executive Vice President Bruce L. Paisner.

A recent example is the adaptation of "Flash Gordon," "The Phantom" and "Mandrake the Magician" into a daily network

Gary Fong, San Francisco Chronicle

Wright of the San Francisco Chronicle says she always is on the lookout for offbeat material.

television show, "Defenders of the Earth," that began Sept. 29, while the strips continue in newspapers. "Defenders is a classic, company-wide project," says Paisner, who is also president of King Features Entertainment, another Hearst subsidiary. "We took comic strip characters, put on a major animated television series, and we have 60 categories of licenses, from toys to thermos bottles."

More familiar examples of non-newspaper syndicate activity are the products that line the shelves at bookstores and novelty shops: books; compilations of columns, comics and other syndicated material into book form; calendars; stuffed animals of comics characters, as well as coffee mugs, stationery, bookmarks and many other items. There have even been Broadway shows featuring the characters from "Peanuts," "Doonesbury" and the erstwhile "Li'l Abner."

FUTURE. In moving to licensing and other enterprises, and in seeking to help newspapers appeal to a wider range of readers, the syndicates are securing their basic survival.

But the number of major syndicates is expected to continue to decline, and this concerns some newspaper editors. "Four or five 'mega-syndicates' are going to control everything that's worth anything. That gives them a hell of a lot of power," says Timothy M. Kelly, editor of the Daily News of Los Angeles. He also fears that "as you get bigger, the tendency is to be less daring."

Similarly, Rosalie Muller Wright, feature and Sunday editor of the San Francisco Chronicle, observes that for her market, "a lot of the syndicate offerings are fairly tepid." Wright, who is the newly elected president of the American Association of Sunday and Feature Editors, says she is continually on the lookout for "the off-the-wall kind" of features.

For their part, however, syndicate executives maintain that some larger syndicates' sheer size enables them to absorb the start-up costs associated with more experimental material.

Most people at both syndicates and newspapers say they expect the assortment of features will continue to grow.

That's good news indeed to some newspaper editors who see a need for additional dishes at the syndicates' buffet.

Many bemoan the current dearth of "liberal" columnists. "I'm looking for one right now," says Pride of Concord.

Others call for adding more women and minorities to the lineup. Newsday's Barth says that most syndicates currently offer one black male and one white woman alongside several white males. "They tell me that op-ed page editors will not buy more than one female or one black," she says. "I'm not sure which comes first, the reluctance to go out and sell or the reluctance to buy. But I think it's a sad commentary on the offerings."

Still other editors identify opportunities for more special features. Syndicates are "very good at delivering syndicated columnists," says Ronald Patel, assistant managing editor/Sunday of The Philadelphia Inquirer, but "they haven't kept up with the times" in terms of some other needs.

Among these, Patel says, are more "real quality reporting" on the entertainment industry that is not gossip. "It's very expensive for an East Coast paper to maintain a West Coast reporter," he observes. After virtually taking over TV listings, syndicates could also provide information about such matters as recordings now available on compact discs, he says.

The Newspaper Features Council, composed of representatives from syndicates and newspapers as well as syndicated artists and writers, may play a leading role in shaping some of these issues in years to come. Executive Director Catherine T. Walker says "we're trying to address the problems of the various groups" on the council. Newspapers, for example, want to know such things as "how an editor at the syndicate picks a comic strip," she says. On the other side, cartoonists have complained about newspapers' increasing tendency to reduce the size of comics (presstime, Sept. 1986, p. 45).

Another widely held expectation is that the means of transmitting syndicated material to newspapers—illustrations as well as text—will become even more computerized, virtually ending the earlier practice of sending features by mail.

On the matter of pricing, some people forecast that smaller papers will have to start paying more to buy syndicated material. "It's stunning to me how low the prices are for newspapers, especially smaller papers in non-competitive markets," says Schwartz of the Los Angeles Times Syndicate. "The top five papers can pay $200 or $300 for a feature, but a paper that is one-tenth their size will not pay one-tenth the price," he says.

Further expansion by the syndicates into the area of licensing is also on tap, observers say.

But no matter how diversified syndicates become, newspapers will remain the heart of their operations. "It all starts with newspapers," says Joseph F. D'Angelo, president of King Features and past president of the features council. Despite the fact that "growth in ancillary areas beyond newspaper exposure is limitless in two areas, television and merchandise licensing," and "income can be *enormous* in relation to what you generate from sales to a newspaper," the syndicate executive says "the difference is *durability*." Whereas the life of syndicated material can be "transitory" in other media, he says, "in a newspaper it can be forever." □

A young cartoonist realizes a dream by gaining syndication. See profile, p. 48.

PUBLISHER POLITICIANS

Although they are less common today than in days of yore, politically active newspaper people spark some ethical concerns

BY MARGARET GENOVESE
presstime staff writer

It's October, and the days before the November elections are dwindling down to a precious few.

John Grey Montgomery, the Democratic candidate for lieutenant governor of Kansas, is in his office in Junction City taking a break from campaigning to tend to some of the business associated with being publisher of Montgomery Publications, a privately owned newspaper group composed of The Daily Union in Junction City and five weeklies in the state.

As a newspaperman running for office, Montgomery is an example of a once-common group that is now, in the words of another Kansas publisher, a "dying breed."

Montgomery is a name that has been linked with Kansas politics, as well as publishing, for three decades. Montgomery's late father, John D. Montgomery, was a two-time candidate for the U.S. House of Representatives, a member of the Democratic National Committee and state director of highways.

"I've sort of grown up around politics," says the current candidate for lieutenant governor, who served on the Kansas Board of Regents before tossing his hat, press pass and all, into the ring.

Kansas has a history replete with such involvement. The late U.S. Sens. Arthur Capper, Joseph L. Bristow and Clyde M. Reed were Kansas publishers. And the revered William Allen White, editor and publisher of The Emporia Gazette, was a legendary political power. A Pulitzer Prize-winning editorial writer, he also was a national committeeman for the Republican and Progressive parties and an unsuccessful candidate for governor.

Similar examples of past political involvement by publishers and editors can be found elsewhere. For example, Patricia L. Dooley, a graduate student at the University of Minnesota, in research completed last year found that of 145 randomly selected Minnesota editors and publishers during 1923-38, 29 had run for elective office. Of the 26 who were elected, 22 retained their newspaper positions; of the four who didn't, only one left the newspaper because of a perceived conflict of interest—and he named his wife editor and publisher in his absence.

Confirming the contemporary trend to lesser political involvement among newspaper people, Dooley found in a 1983 survey of 22 Minnesota dailies that 21 had restrictions on political involvement; 13 flatly prohibited holding office.

The trend is noticeable even in states with such a strong publisher-politician tradition as Kansas. "There is a transition being experienced in our state among many editors and publishers who feel they should not be as actively involved, particularly in the political element," says David L. Furnas, executive director of the Kansas Press Association.

> *"There's been a much sharper restriction on political activity and, to some extent, on civic activities."*

In Kansas, as well as across the country, some newspapers bar political activity from top management down. As Dooley found in Minnesota, many others prohibit news and editorial staffers from engaging in politics or impose other restrictions.

At The Wichita Eagle-Beacon, for instance, W. Davis Merritt Jr., executive editor and senior vice president, maintains that reporters and editors should stay out of political campaigns—to the point of not displaying yard signs or bumper stickers. He is concerned that it creates a public perception of favoritism—a candidate may see them and say, "Hell, the newspaper's parking lot is full of bumper stickers for Jones. No wonder I can't get a break."

Fear of favoritism also prompts some newspapers to restrict involvement of their news employees in community affairs of an apolitical nature.

Although the trend is away from political involvement, politically active newspaper people still can be found in all levels of government, from Congress to the city halls of the smallest communities.

An example of the latter is Rol Hudler, editor and publisher of weekly The Burlington (Colo.) Record and 19-year mayor of that town of 3,200. A newspaper person has "a lot of resources available to you that nobody else has in a small community. . . . That's a real tremendous advantage, and I think these small communities need all the advantages (they) can possibly get," says Hudler. Yet, he adds, "most of my colleagues don't think it's a good idea" to mix publishing with politics.

EVOLVING ETHICS. Del Brinkman, former dean of the William Allen White School of Journalism at the University of Kansas, has witnessed the shift in political involvement among newspaper people. "The roles of both the journalist and the elected official have changed, and they are more distinct," says Brinkman, who is now the university's vice chancellor for academic affairs. "It's part of an evolution that has occurred in society generally. The 'watchdog' function of the press has almost dictated that this kind of separation, so to speak, occur."

John L. Hulteng, long-time writer on press ethics, says the change is relatively recent in origin. Since the 1970s, "there's been a much sharper restriction on political activity and to some extent on civic activities," he says.

Hulteng dates the change to the period following Watergate and the Vietnam War, when the public began to recognize, and express reservations about, the power of the press. That prompted soul-searching among the media. "As this happened, the problems that some of these conflicts of interest posed have been seen more clearly," he says.

While Kansas publisher Montgomery sees no conflict of interest in his statewide candidacy in the Nov. 4 election, he says there is potential for conflict at lower levels of elective office. It is "in-

appropriate" for a publisher to run for a city or county office, he believes. "It would be too hard to separate the two roles. On a more regional and statewide basis, I don't see the same conflict."

Unlike Hulteng and Brinkman, Montgomery thinks the disinclination of publishers to become involved in politics is driven more by changes in ownership patterns than philosophy. "I think the chains would frown on their publishers running for political office. It takes a certain amount of independence, both financially and time-wise, to do this. I'm not sure the groups would permit them to take the time."

Despite his belief that the dual roles do not conflict, Montgomery asked the editor of each of his company's papers to draw up guidelines for their 1986 campaign coverage. "We have always had the philosophy we should give equal coverage to both parties," he says. Preparing guidelines "just put in writing what we were doing before."

Steven E. Curtis

Campaigning for lieutenant governor, Publisher Montgomery (right) greets Kansas City (Kan.) Chamber of Commerce official Robert Mayer.

MIXING PRESS, POLITICS. Ethics expert Hulteng believes that when it comes to politics, the "conflict of interest problem is so evident there and so great, it doesn't make any difference" what job a person has at the newspaper. "Your involvement in politics creates a problem for (your) colleagues," he says.

Agreeing with that sentiment was a majority of daily newspaper publishers responding to a poll conducted last April by Allied Daily Newspapers, a regional organization for newspapers in the Pacific Northwest. Ninety percent of the 34 respondents said they do not allow top management or newsroom employees to be politically active; and 57 percent said they place limitations on the political activity of non-newsroom employees.

One newspaper with a building-wide prohibition on political activity is The Manhattan (Kan.) Mercury, whose employee manual states: "There is no quicker source of misunderstanding and suspicion in our profession than the area of politics. We must not give any person reason to suspect that our handling of a story, editorial or picture is related in any way to political activity by a member of the staff." Reports Editor and Publisher Edward Seaton: "We have, in the past, terminated employees who opted to be involved in political activities."

Restrictions also are often found in newsroom ethics codes. Two approaches commonly taken are:

• **Prohibiting.** The Trenton (N.J.) Times' newsroom code states that there shall be: "No political involvement by any staffer at any level in a campaign. No political memberships, no bumper stickers, no buttons." Financial contributions must be reported in advance to the executive editor. Even such things as dating a campaign worker have to be reported to a supervisor.

Response to the code, drawn up two years ago by a committee of reporters and editors, "has been very positive because it is a set of guidelines set up by peers, rather that a flat-out set of rules," says Editor Linda Cunningham.

• **Distancing.** Unlike the Trenton daily, the Los Angeles Times does not flatly prohibit political involvement. Rather, its newsroom code says staff members "should not take part in political or governmental activities they may be called upon to cover, or whose coverage they supervise."

As Executive Editor William F. Thomas explains, "There would be little sense in prohibiting a music critic from serving as a school board member." However, he adds, such public service would pose a problem for a general assignment reporter.

The St. Paul Pioneer Press/Dispatch has no written rules barring or restricting political involvement by news staffers. "But they do know that if somebody gets involved or seeks office, we certainly would pull them off of any assignment" related to it, says Editor William R. Finnegan. He recalls two such cases at his newspaper within the past decade, one involving an editorial writer who was mayor of a small community in the area, the other a reporter who served on the local housing and redevelopment authority.

Finnegan, who is chairman of the Ethics Committee of the American Society of Newspaper Editors, discourages staffers from becoming active in politics or accepting government appointments.

CONTRASTING CONTRACTS. One thing that may stop a newspaper from prohibiting political involvement is a labor contract, Finnegan notes. There were contrasting situations this election year at two daily newspapers in Massachusetts.

In the first, a makeup editor for the Malden (Mass.) News served as media adviser for a candidate for the Democratic nomination for the state legislature.

The newspaper's contract with The Newspaper Guild of Greater Boston stipulates that an employee is free to engage in "any activity" outside of working hours provided it does not compete with the company or interfere with the employee's duties. Because of this, Editor Daniel C. Murphy could only ensure that the makeup editor, Richard J. Swanson, did not handle copy about the campaign.

Swanson says he would not have considered the political role if he were still a reporter on the city beat. But as a makeup editor, he saw no conflict. "I get to choose whether to run the Bhopal tragedy in India high up on the page or low on the page—nothing to do with the local issues."

However, Editor Murphy is not persuaded. "Even the appearance of conflict, I

think, is important" he says.

In the second Massachusetts case, The Boston Globe used its labor agreement with The Globe Employees Association to force an editor to give up his political activity. The agreement requires prior approval from Globe management before a newsroom employee runs for office.

Edwin H. Damon was a member of the school committee in Ipswich, Mass., when he joined the Globe in 1972. In 1974, he received permission to run for selectman of the town of 11,500 people. Relying upon that same permission, he ran and was re-elected three times. Damon says that after his re-election in 1983, the Globe said he had violated the labor agreement by not getting prior approval that year. The paper instructed him to do so in the future.

When election time came this spring, Damon asked his immediate supervisor, the editor of the Sunday newspaper, for permission to run. "He said he didn't see any conflict, so I took out nomination papers," says Damon, who edits the Sunday paper's "Living" section and the "Fun Pages" for young readers.

NEED MANAGEMENT HELP?

We either have or can find the

RIGHT PERSON

for your key marketing/ management position

If you need a key position filled in general management, advertising, circulation, promotion, or research, we have the contacts to provide qualified applicants, already pre-screened to your specifications.

You can have two newspaper management professionals conduct your search, at the most attractive fee schedule available. We include a special consulting package to help your new person insure success even after hired.

We have good managers right now, ready to be referred to you.

Give either of us a call.

Richard L. Hare, Hare Associates
62 Black Walnut Drive
Rochester, New York 14615
(716) 621-6873

Ronald C. Anderson, RC Anderson Associates
44 Rosewood Drive
Pittsford, New York 14534
(716) 248-5385

"Because of his stature in the community, a publisher needs to be involved in certain appropriate things."

Subsequently, there was a change in Sunday editors, and Damon renewed his request with the new one, who referred him to Alexander B. Hawes, assistant managing editor/administration. Hawes turned him down.

By that time, Damon's name was on the ballot. He told Hawes he would withdraw and announced that fact at a League of Women Voters forum. "As it turned out," he says, "I was elected anyway." He served for a month and a half, until the town could hold a new election.

COMMUNITY AFFAIRS. On the question of whether newspaper people should be involved in other types of community affairs, Hulteng finds it "much harder to draw a neat line." There are eloquent arguments voiced on both sides, he says.

Some editors and publishers argue that civic involvement by the staff is good for the newspaper. "We want our people to be involved in our community," says Gregg Jones, publisher of The Greeneville (Tenn.) Sun. "We believe that they can do a better job in developing contacts and in understanding the needs of the community by actually being involved, and I would dare anybody to find any trace of partisanship on anything but our editorial pages."

"I feel very strongly that newspapermen are also citizens of a community, and as long as a newsman can serve his community in a service capacity and not jeopardize his sense of professional ethics, or compromise them, I see no problem," says James H. Gray Jr., editor of the Albany (Ga.) Herald. Gray serves as president of the local United Way campaign, vice president of the local chamber of commerce, chairman of the board of Leadership Albany Foundation and vice chairman of the board of the local Goodwill Industries agency, among other things.

(Gray does not favor political office for newspaper people, however, even though his father, James H. Gray Sr., served as editor and publisher of the newspaper and, from 1973 until his death in September, as mayor of Albany. "Personally, I had a problem with a newspaperman being mayor of a community, but I reconciled it simply by saying that my father is publisher of the paper and, of course, that makes him more of a businessman than a newsman.")

On the other hand, Finnegan of St. Paul believes editors should take an "arms length" approach to civic groups. "I think an editor certainly can be involved in his church, a Boy Scout troop or something like that. I would begin to draw the line at being the president of the chamber of commerce or chairman of the Boy Scout Council in the area."

Newsroom ethics codes commonly advise employees against taking leadership positions in groups that are potentially newsworthy or doing public relations work for any group. A few newspapers have adopted a policy of public disclosure of civic involvement by staffers.

Unlike in politics, some newspaper people see reason to make a distinction between news-editorial staffers and others in the newspaper when it comes to civic involvement.

Merritt of the Eagle-Beacon suggests that there should be three standards—least restrictive for employees other than newsroom and publishers, most restrictive for newsroom employees, and an in-between category for publishers, who are technically responsible for the entire newspaper, including the newsroom. "Because of his stature in the community, a publisher needs to be involved in certain appropriate things," Merritt says.

Finnegan agrees that publishers tend to be sought after for leadership in the community. They have to come to terms with how they are going to relate their jobs at their newspapers with their civic activities. "I know good publishers agonize over those issues quite a bit," he says.

One publisher who confesses to being "uncomfortable" in his role as civic leader is Seaton of Manhattan, Kan. "Newspapers grow with their communities," he observes. It is "a business function" of the publisher or general manager to be involved in community affairs. "Where it gets to be sticky is where the publisher carries the title of editor-in-chief, which I do," Seaton says.

Currently, Seaton is chairman-elect of the Kansas State Chamber of Commerce. Although he considers his chamber activities—including a recent trip throughout the state stumping for a constitutional amendment to change property assessment methods—a "clear conflict of interest," he believes the organization's work to be beneficial to his newspaper, his company and the struggling Kansas economy. "That's how I'm justifying it." □

NETWORKING: AN UPSTART IDEA FROM A 25-YEAR VETERAN

Networking—for better efficiency. Lower costs and more productivity. The Intrepid II from Compugraphic handles news, wire service, and classified and display ads. All on the same system, designed specifically for newspapers. What's more, the IBM-compatible workstations can double as offline personal computers.

Get state-of-the-art capabilities from a seasoned veteran. Continuing its tradition of expandable, modular systems, Compugraphic designed the Intrepid II system for growing operations. One stand-alone terminal or a network of twenty.

All it takes is a phone call. Contact your nearest Compugraphic Newspaper Systems Division representative or Compugraphic Corporation, Marketing Communications Literature, 65 Industrial Way, Wilmington, MA 01887. **Cg compugraphic**

Conservative Bloc Crumbles When Press Cases Reach Court

BY GUIDO H. STEMPEL III

The appointments of William H. Rehnquist as chief justice and Antonin Scalia as associate justice have caused some analysts to suggest that difficult days may be ahead for the press in the Supreme Court.

After all, Rehnquist has voted against the press 77 percent of the time in the 77 First Amendment cases involving the press during his tenure on the court. Scalia, these analysts predict, will vote with Rehnquist most of the time, and that combination will lure other justices with conservative inclinations into their camp [presstime, July 1986, p. 62].

It could happen that way, but a look at voting patterns suggests another possible outcome.

Rehnquist joined the court in the 1971-72 term, along with another appointee of President Richard M. Nixon, Lewis F. Powell. They joined two earlier Nixon appointees, Chief Justice Warren E. Burger and Harry A. Blackmun on the court. This marked a substantial change in the composition of the court, and the impact on press-related cases was soon evident.

In the first three years Powell and Rehnquist were on the court, there were 22 press cases. In 17 of those cases, the four Nixon appointees all voted the same. Furthermore, in nine of those cases, they joined with Byron R. White in a 5-4 decision.

All nine decisions went against the press. Fortunately, only two were major cases. One was *Branzburg v. Hayes*, the case in which the court rejected confidential privilege for news people. The other was *Miller v. California*, the obscene-pornography case. While that decision was significant in its area, it had little effect on newspapers.

The bloc crumbled the next year. There were five press cases, and the Nixon foursome didn't get together on any of them. They split 2-2 on one, and Rehnquist was the sole holdout on the other four.

This is not to say that the four Nixon appointees stopped voting together. In fact, they voted as a bloc 24 times in the 55 press cases in the next 12 years. However, only one of these was a 5-4 vote, and 13 were unanimous decisions.

What has happened is that Blackmun and Powell have pulled away from Rehnquist. Rehnquist voted against the press

William H. Rehnquist

Warren E. Burger

Harry A. Blackmun

Lewis F. Powell

77 percent of the time in those first three years and has continued at that pace for the entire 15 years. Blackmun, on the other hand, voted against the press 73 percent of the time those first three years—but only 36 percent of the time since then. Powell, who parted company with the other three four times in those first three years, voted against the press 64 percent of the time. Since then, he has voted against the press 47 percent of the time.

What this means currently can be seen by looking at the voting since 1981 when Sandra Day O'Connor joined the court. The cases to look at are the ones on which Rehnquist and William S. Brennan disagreed. When they agree, the outcome is assured. There were 14 press cases on which they disagreed in the last five years.

Blackmun, who voted with Rehnquist on 21 of 22 cases from 1971-74, voted with Rehnquist on only four of the 14 cases on which Rehnquist and Brennan disagreed from 1981 to 1986. Powell voted with Rehnquist six times, with Brennan seven times and did not participate once.

O'Connor, who holds views similar to Rehnquist's on a number of issues, voted with him on eight of those 14 cases. John Paul Stevens also voted with Rehnquist on eight of them, while White voted with him on nine and did not participate in one.

There is more than the mere counting of votes to consider, however. Look at what has happened in some major cases. In *Philadelphia Newspapers v. Hepps*, which established that the burden of proof is on the libel plaintiff to prove falsity where there is public interest, Blackmun, Powell and O'Connor joined Brennan and Marshall in this year's 5-4 decision.

Those same five joined in the 1984 decision in *FCC v. League of Women Voters of California* giving public broadcasting stations the right to editorialize.

Blackmun, O'Connor, Powell and Stevens joined Brennan and Marshall in *Bose v. Consumers Union*, the 1984 decision that opened to appellate court review the determination of whether there was reckless disregard of truth in a libel case.

So, while there are other justices who see some issues as Rehnquist does and who might at least be said to have conservative leanings, there is no conservative bloc awaiting the chief justice's call.

While Rehnquist has remained steadfast in his position with regard to the press, Blackmun and Powell have moved to the center. That is where O'Connor and Stevens have positioned themselves, too.

Whether Rehnquist can get more support from these colleagues without changing his position remains to be seen. It may well be that the price for that support will be meeting them halfway. □

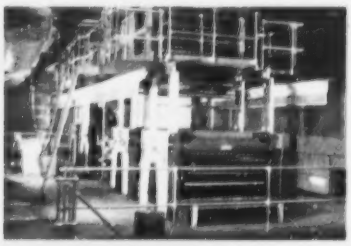
PERFORMANCE!

"The Uniman 4/2 allowed us to develop quality color in a hurry . . . and I mean that in two ways. First, it enabled us to be successful with full process color when we introduced our 10-section Sunday edition last spring. Second, on a daily basis, the press brings up four-color fast, with very little waste. The Uniman 4/2 has more than met the challenge."

Andy Bickford
General Manager
Nashua Telegraph



"We're getting excellent reproduction from the Uniman 4/2. Its speed is more than adequate for our circulation, and I fully expect it to meet our demands for some time to come. In my opinion . . . it's a mighty fine press."

Eugene Miller
Pressroom Foreman
Charlottesville Daily Progress

"The ease of operating this press still impresses me. We didn't order top-of-the-line press controls, yet the mechanics are so good on the Uniman 4/2 that we run top quality at optimum efficiency."

John B. Johnson, Jr.
Managing Editor
Watertown Daily Times

These three newspapermen have perfectly defined what press performance should be: producing great newspapers while keeping operating costs down. The Uniman 4/2 offers all this *plus* the solid corporate support to make you completely confident in M•A•N-Roland. Call 201-469-6600 or write to M•A•N-Roland USA, Inc., 333 Cedar Avenue, Middlesex, NJ 08846.

COMPENSATION TRENDS

Newspapers try new ways to reward top performers from the limited pool of money available for wage increases

BY CLARK NEWSOM
pressTime labor writer

Slowly, some changes are taking place in the way newspapers compensate their employees.

Pay increases for both unionized and non-union employees traditionally have come once a year as the reward for performing well enough to stay on the payroll and to maintain purchasing power in an inflationary economy.

But a trend toward tying pay to performance—so-called "merit pay"—is gaining momentum, especially in the newsroom.

Newspapers also are using compensation plans that have built-in incentives for outstanding job performance, including paying annual bonuses to employees for helping to meet company objectives.

"Companies are talking about getting away from annual general increases and looking at such things as bonus awards based on team accomplishments," says Michael J. Valenti, compensation and benefits manager at the Los Angeles Times.

Valenti says the Times encourages one-time bonuses for all employees for outstanding accomplishments, particularly in project-related assignments. In addition, he says, "We've redesigned a long-standing incentive-pay program in some of our production departments where excellent performers are rewarded with bonuses."

However, merit pay has run into obstacles at unionized newspapers in cases where the concept involves something other than payments above contractual, top-salary minimums.

For example, at newspapers in Cincinnati and Milwaukee, management proposals for wage increases based *solely* on merit have gone from the bargaining table to litigation. Both cases stemmed from negotiations with The Newspaper Guild over new labor agreements and soon will be the subject of National Labor Relations Board hearings.

At issue is whether an employer wishing to implement a merit-pay plan remains legally obligated to negotiate salary minimums.

The NLRB issued a complaint against The Cincinnati Enquirer based on unfair labor practice charges filed by the Guild. The Advice Section of the NLRB General Counsel's Office is reviewing the case to determine whether a complaint should have been issued by the agency's regional director.

The Guild filed similar charges against The Milwaukee Journal and Milwaukee Sentinel over a company proposal that all pay for editorial employees be based on merit, and that minimum pay rates in the current agreement be eliminated. "Our argument is that they are professionals and should be paid on the basis of merit," says Richard A. Williams, vice president/employee relations director.

© 1986 Knight-Ridder Inc.

Yes, this is a grisly picture.

But in a glance, readers understood the enormity of what happened to the White City. No amount of words could equal this image and those that came with it.

It began on November 14, 1985.

Colombia's long-dormant Nevada del Ruiz volcano erupted. Photographers Carol Guzy and Michel duCille of Knight-Ridder's Miami Herald were dispatched to the Colombian town of Armero.

It was known as the White City because of its extensive cotton and rice crops. Now a brown tidal wave of mud, ash, melted snow and rocks had cascaded down the slopes.

Armero was no more.

To get to the scene, Guzy and duCille, along with two Miami Herald reporters, rode for five hours over twisting, fog-covered roads. Then, when the roads ended, they faced a five-mile walk. As they approached Armero, the mud was hip-deep.

Carnage and corpses surrounded them. Throughout the area, the roar of the eruption had been replaced by the quiet of dying.

Only 20 percent of the town's 28,000 inhabitants had survived.

Guzy and duCille sent back gut-wrenching pictures. They knew they'd be painful to print. But from a human perspective, they'd captured the truest pictures of the trauma and the tragedy of Armero. DuCille recalls, "I was shooting close-up shots of a dead baby, and all the time thinking, 'My God, this could be my son.' They were about the same age."

The Herald's pictures and stories about the devastation in Armero created an immediate, compassionate reaction in South Florida. Thousands of Herald readers brought food, clothing and medical supplies to local fire stations. Eventually, twelve truckloads of relief supplies were sent to Colombia.

Carol Guzy and Michel duCille won the 1986 Pulitzer Prize for Spot News Photography.

The Miami Herald had sent two reporters and two photographers 1,500 miles to get the story. A chartered jet had to be used to get the pictures back to Miami before deadline. In all, it was a herculean feat.

By comparison, no other news organization's coverage came close to the Herald's.

But The Miami Herald is a Knight-Ridder newspaper.

KNIGHT-RIDDER

We never underestimate the American people.

Knight-Ridder, winner of an unprecedented seven Pulitzer Prizes in 1986, is a nationwide communications company with eight television stations, cable systems, business information services and 28 daily newspapers.

judge in Milwaukee is set for Dec. 15.

According to merit pay's critics, while it may be easy to tell who the stars are and to reward them, the middle level of employees suffers in such a system. "In our view," says Richard J. Ramsey, executive secretary of the Guild's Contract Committee, labor agreements "must have an underpinning of a sufficiently high minimum-salary structure so that all employees are properly compensated for performing work in their classifications."

The Oct. 17 issue of The Guild Reporter noted that the memberships of Guild units at four major dailies—in San Francisco, San Jose and Minneapolis—have voted their bargaining committees authority to call strikes "as the number increases of highly prosperous U.S. publishers mounting challenges to the wage-increase systems" in Guild contracts.

Companies are "looking at such things as bonus awards based on team accomplishments."

Michael J. Valenti

Merit-pay proponents maintain that minimums eat up the wage budget and that high achievers therefore cannot be sufficiently rewarded.

Under a typical merit-pay system, a "merit pool" is established and increases are given on the basis of performance reviews [presstime, Aug. 1986, p. 18]. "Merit pay is something a lot of good reporters are interested in," says John B. Jaske, vice president/labor relations and assistant general counsel for Gannett Co.

For the purpose of deciding how to allocate salary increases based on merit, performance reviews are "a valuable management tool" so long as employees clearly understand they are being rated on performance and not on attitude or personality, says Robert H. Giles, executive editor of The Detroit News. Giles initiated a merit-pay program at the Rochester Times-Union and Democrat and Chronicle in 1979 when he was editor there. He says management demonstrated to the Guild "in practice" that the plan was administered fairly.

Several newspapers have negotiated merit-pay programs while retaining basic minimum wages for various levels of experience. An example is the Birmingham Post-Herald, where newsroom employees are represented by a local of the International Typographical Union.

Regardless of the merits of merit increases, people entitled to them may be disappointed next year.

Sibson & Co., a management consulting company in Princeton, N.J., found in a national survey of 750 U.S. companies that they are planning to award merit 1987 increases averaging 5.2 percent—the lowest level in more than a decade. The survey included three newspaper companies.

N. Fredric Crandall, a principal in Sibson's Chicago office, says the conservative budgeting is due to the relatively low level of inflation and uncertain economic forecasts for next year. "A major challenge facing companies is how to recognize and reward outstanding performers and, at the same time, effectively administer reduced budgets," he says.

A broader survey by another management consulting firm, Towers, Perrin, Forster & Crosby of New York City, produced similar results. For the 1,200 U.S. companies in the survey, including eight newspaper firms, merit increases next year are expected to average about 5 percent for both exempt and non-exempt (hourly paid) employees, "regardless of industry and geographic location," says Jill Kanin-Lovers, a vice president and salary management specialist.

INCENTIVE PLANS. With the trend toward smaller merit increases, more companies are looking at alternative pay programs, such as perpetual incentive plans and one-time bonuses, as ways of rewarding outstanding performance. These types of plans have been used for years in many newspapers' "management-by-objective" programs, but now there are instances where rank-and-file employees are being included.

At The New York Times, for example, all outside advertising employees participate in an incentive-pay plan, built around revenue goals, that is approved by senior management on an annual basis. Employees can earn about 40 to 45 percent of their salaries in extra compensation, reports Erich G. Linker, vice president/advertising director. "We're pleased with it and proud of it," he says.

This year, the Milwaukee newspapers began an incentive-compensation plan that applies to all employees. With the first payment beginning in 1987, employees whose divisions achieve 92 percent or more of their operating earnings goals will get a certain percentage of their base pay as a reward.

For example, a division that attains 92 percent of its goal will receive additional compensation totaling 1.2 percent of those earnings to divide among its eligible employees. At 100 percent of the goal, the division receives an extra 2 percent, and at the maximum of 110 percent, it will get 3 percent of its operating earnings to divide among employees as additional compensation.

The plan covers employees throughout The Journal Co. who have a calendar year of service, including part-time employees who work at least 1,000 hours a year. A separate incentive program provides additional pay for executives who have responsibility for achieving the profit goals of a division or unit.

Although bonuses to top executives are commonplace, they are rare among rank-and-file workers. There is "a lot of talk, among banks in particular, about keeping a lid on base salaries and using bonuses to reward people, but there is no flood tide toward that," says Kanin-Lovers of TPF&C.

A bonus is, of course, a lump sum—unlike a salary increase that continues forever. Some newspapers, such as the Eugene [Ore.] Register-Guard, have paid unionized employees a bonus in lieu of first-year wage increases in new labor agreements.

There are newspapers where a reporter receives a bonus for an excellent story, a circulation district manager receives a bonus based on the number of new subscribers and a pressroom crew gets a bonus for newsprint waste savings, according to the ANPA Human Resources Department.

Such arrangements are definitely growing in one area, according to Edward T. Redling, president of a subsidiary of The Wyatt Co., a benefits consultant. "There is a trend toward salary plus some type of bonus arrangement for sales representatives," Redling says. Concurrently, he says, the number of salespeople paid either on a straight salary or straight commission basis is declining. □

WHERE NEWSPAPERS COMPETE

From 502 in 1923, the number of U.S. cities with fully competitive dailies has dropped to less than three dozen. Analysts foresee a continuing decline.

BY GENE GOLTZ
presstime staff writer

The long-term outlook for head-to-head newspaper competition in most cities is bleak, according to securities analysts who track the industry.

Twenty-nine U. S. cities still have two or more newspapers in direct competition with each other. That number is scheduled to increase to 30 on Nov. 2 and to 31 on Nov. 14 when new dailies are launched opposite existing ones in Dothan, Ala., and Sarasota, Fla.

(The count of competitive papers does not include those with joint operating arrangements, under which the papers compete for news but have common printing and business operations.)

The number has stayed fairly constant over the past five years. In November 1981, for example, there were 30 U.S. cities with competing papers. But a look at the history of intracity competition since 1923 shows a staggering loss of competitive newspapers.

In 1923—before radio, before the Great Depression—502 U. S. cities had two or more competing dailies, according to a Stanford University study cited by Benjamin M. Compaine in his book *Who Owns the Media?* (See chart.) The number had plummeted to 243 a decade later and stood at 37 in 1973.

Despite the leveling off in the current decade, analysts say only a handful of cities eventually will be able to support two newspapers.

"We're not sure *any* city can support two profitable newspapers indefinitely," says analyst Bruce Thorp of Lynch, Jones & Ryan in Washington, D.C.

"In all but a handful of cities," says New York analyst R. Joseph Fuchs of Kidder, Peabody & Co., "the economics are not there to support more than one newspaper."

Another analyst, Kevin Gruneich of First Boston Corp., has a theory that competition can survive only where one paper is clearly dominant and the other assumes a secondary position—with fewer readers, fewer expenses, fewer resources and lesser profit. "These (number two) papers may not have to disappear," he says, "but there will be only one mainline paper in town."

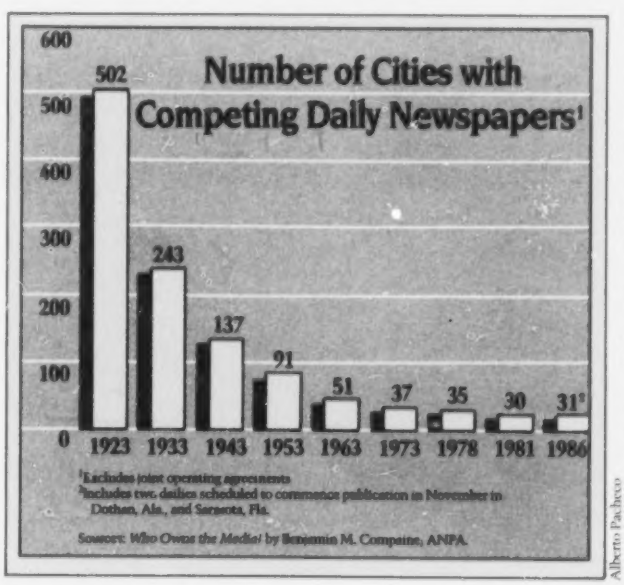
He cites Chicago as an example of a viable two-paper city, where the Tribune is the dominant paper and the Sun-Times is in a secondary role. Dallas, which lately has been hurt by a lackluster economy, seems to be moving in that direction, he adds, with the Morning News increasing its lead over the Times Herald.

Leo Bogart, executive vice president and general manager of the Newspaper Advertising Bureau, says a paper can survive as the second paper in a competitive city, but it may have to carve out a special sector of the market.

"There is always an advantage in being the leader," Bogart says. "For instance, if you have the number-one detergent on the market, you will get a disproportionate amount of shelf display from distributors." He says newspapers are no different: When one becomes dominant in circulation, it picks up a disproportionate share of advertising.

Nonetheless, there is hope for the secondary paper, he says. "You can have a viable newspaper with the lesser share. It's not necessarily going to fold."

To make sense out of the sometimes puzzling question of why some cities that should have two papers don't, and vice versa, an examination of several specific cities is helpful.



Alberto Pacheco

NEWSY NEW YORK. If there's a city in the country that should support at least two profitable daily papers, most observers agree, it is New York. But the definition of competition there is muddled.

There are six general-circulation dailies there: The New York Times, New York Daily News, New York Post, the Staten Island Advance, the New York Tribune and—the latest addition to Big Apple newspapering—Newsday. (The Wall Street Journal is not included in the count

because it specializes as a national financial newspaper.)

The Advance and the Tribune are much smaller dailies, with circulations of 74,296 and about 40,000, respectively. They don't figure significantly in New York's competitive picture.

The major newspaper battle there involves three tabloids—the Post, the News and Newsday, the Long Island daily that in 1985 decided to expand to Manhattan and Brooklyn. (It had previously been making inroads into the borough of Queens.)

The New York Times (morning, circulation 1,035,426) takes 62 percent of newspaper advertising in New York City papers, according to Media Records, with the Daily News (morning, 1,275,268) carrying 31 percent and the Post (all-day, 751,798) getting just 7 percent.

These percentages do not take into account Newsday (evening, 582,388), which runs ads for many big stores located both in the city and on Long Island. The New York edition of Newsday now claims about 110,000 circulation in Queens, Manhattan and Brooklyn.

The betting is virtually unanimous among analysts and newspaper executives that at least one out of the three tabloids eventually will disappear.

Martin Singerman, executive vice president of News America Publishing Inc., the Post's parent company, says, "Something is going to give. But we are in a very strong position corporately."

Analysts say the Post has been losing money. Without denying or confirming those reports, Singerman says, "From a dollar-and-cents standpoint, we did better last year than the year before, and we've done even better this year."

The News America executive says Newsday has made no serious inroads in the New York City boroughs. He concedes that the paper, owned by The Times Mirror Co. of Los Angeles, has increased its circulation in Queens, but considering the total circulation of New York City newspapers, he dismisses the invasion as being of minor significance so far.

"So far Newsday hasn't made serious inroads. Their encroachment is in Queens, adjacent to their publishing area. But they're a formidable publisher with substantial resources, and we certainly are

Dailies Doubling Up in Dothan. Dothan?

Dothan, Ala., may seem an unlikely setting for a war between competing daily newspapers, but it's about to become just that.

On Nov. 2, a former weekly newspaper publisher, 43-year-old Wayne Chancey, will launch the daily Wiregrass Today in the Southeastern Alabama city of 48,750.

Wiregrass Today will be a morning paper, published six days a week. (There will be a combined Friday-Saturday edition.) It will compete directly with The Dothan Eagle, an 83-year-old morning paper that is published seven days a week.

There's also a twice-a-week paper there, the Dothan Progress. Chancey launched that one, too, but later sold it.

If Philadelphia and Baltimore cannot support competing dailies, how can Dothan—and for that matter, five other U.S. cities that in the 1980 census had fewer than 50,000 population?*

"If we had any doubts at all," says Chancey, "we wouldn't start it."

Chancey has just built a 16,000-square-foot building and installed a 10-unit Goss press, three of which have color capability. He has 10 editorial people on the payroll and intends to hire more as the need arises.

Chancey says his first press run will be about 52,000. Initially, he plans to blanket a 14-county area with free Sunday distribution while selling daily subscriptions as well as single copies.

*The others are Manchester, Conn.; Slidell, La.; York, Pa.; Cookeville, Tenn.; and Kingsport, Tenn.

Despite what outsiders might regard as a rather unlikely situation, the fact is, if you're going to start a daily newspaper, there are probably few places as promising as Dothan, according to Sue Cronkite, executive editor of Wiregrass Today.

The Alabama town serves as a commercial center for portions of the Florida panhandle and of southwestern Georgia.

The second fastest-growing area in the state, Dothan boasts plants of Sony, General Electric, Michelin and a number of electronics firms, and has three shopping malls.

Chancey, a 1965 journalism graduate of Auburn University in Alabama, was a reporter for The Alabama Journal in Montgomery before he founded, at the age of 22, the weekly Headland Observer in 1966. He sold that paper and entered the Dothan market by launching the weekly Progress in 1970. In 1974, he founded the weekly Ashford (Ala.) Power and later sold it, too.

Meantime, the Progress expanded to semiweekly publication, and in 1980 Chancey sold it to Freedom Newspapers Inc. with the stipulation that he would not engage in publishing any other local paper for five years.

Chancey says he got a good price for the Progress, and in the five-year interim branched out into a newspaper brokerage business, real estate development, insurance and home-building. Now he's ready to get back into newspapering.

"This is my first daily venture, but I have qualified people on the staff who have been in the daily (newspaper) business all their life. We don't feel money will be a factor in success or failure. It's going to depend on quality and people.

"We're aware of the history of starting up dailies, and we are aware of the odds. But we also know our markets, and we know our people."

Wiregrass Today gets its name from turf in the Dothan area that has the appearance and texture of wire. With his new plant, Chancey was one of the first occupants of a newly built industrial park, with the result that he was given the privilege of naming his own street. It's now called Wiregrass Way.

The Eagle, the other daily paper in town, is owned by Thomson Newspapers Inc. of Des Plaines, Ill. Chancey won't talk about his competition, and Eagle Publisher Marvin Newman won't either. "We're just trying to give our readers the best possible product we can give them, mornings, seven days a week," says Newman.

Newman says his 22,572-circulation paper runs an average of 36 pages daily and 80 on Sunday plus Parade magazine and color comics. With 110 stores in the three shopping malls and the plethora of industrial plants in the area, says Newman, "Advertising has been real good."

If there is a good and growing economic base, high employment and an overall fast-growing area, shouldn't a new, competitive daily be able to succeed in Dothan? Stay tuned.

—Gene Goltz

One theory is that competition will survive only where one paper assumes a secondary position—with fewer readers, fewer expenses, fewer resources and lesser profit.

watching them very carefully," Singerman says.

Adding an element of uncertainty to the New York situation is the likelihood that owner Rupert Murdoch will try to sell the Post. In March, Murdoch purchased television station WNYW (Channel 5) in New York City, and under Federal Communications Commission rules against cross-ownership in a market, he cannot own both the station and the newspaper. Murdoch obtained a two-year waiver, expiring at the end of 1987, to decide which property to sell.

As for the possibility that Murdoch might decide to sell Channel 5, Singerman comments, "I don't think that's going to happen."

In such a competitive market, with the Post losing money and the News and Newsday also clamoring for the advertising dollar, the question is: Who might buy the Post? Speculation in some quarters is that if Murdoch cannot find a buyer, he may simply fold it, leaving Newsday and the News to battle it out.

There is an outside chance, some observers say, that Murdoch, lacking a buyer, would be allowed to continue publishing the Post rather than having the FCC be put in the position, in effect, of abolishing it.

John E. Dunleavy, assistant to the publisher at the Daily News, says: "Whether there is room for all three (tabloids) is a matter of opinion and conjecture. If there is room for less than three, the News expects to be one of the survivors."

In early October, giant retailer Gimbels closed its 11 stores in metropolitan New York, causing a loss of $10 million in annual advertising revenue for the Daily News. Alexander's, the paper's largest advertiser, is expected to close its main store on 59th Street after Christmas 1987. Another store, Ohrbach's, has announced it will close early next year.

The closings are a blow, Dunleavy acknowledges, but he says the paper has made a big effort toward attracting smaller advertisers. With its million-plus circulation, the News has plenty of readers—that's not the problem. Analysts say the problem is many are blue-collar readers—not the type many advertisers want to reach.

In the past few years the News, owned by the Tribune Co. of Chicago, has seesawed between prosperity and disaster. In the recession year 1982, it lost $14 million, rebounded for a record profit of $20 million in 1983, dropped back to somewhere between $5 million and $10 million profit in 1984 and cleared about $3 million in 1985, according to estimates by analyst Thorp. Union leaders have said Publisher James Hoge told them at midyear the paper lost $1.3 million the first quarter of 1986.

Dunleavy says the News is improving in many ways. It has expanded news coverage, adopted a new format for its Sunday magazine and expects "to meet the competition in New York by making a better newspaper." He concedes, though, "It is still too early to claim success."

Dunleavy agrees with the Post's Singerman that Newsday has not affected the other tabloids—yet. "They made their big move in Queens. To date, they have not made much of an impact either in circulation or in advertising revenue. It's not significant at all."

LOCAL LOS ANGELES. While Los Angeles is "a big-city megalopolis," as analyst Fuchs describes it, LA is surrounded by more than two dozen suburban communities, each of which has local interests and has carved out market segments. The situation has not proved conducive to success for the number-two paper there.

While the Los Angeles Times (morning, 1,088,155) is fat and prosperous, the a.m. Herald-Examiner has lost money for at least 19 years and has shown little sign of getting permanently into the black.

John J. McCabe, the Herald-Examiner's general manager and chief operating officer, says that although the profit-and-loss statement is proprietary information, "It's pretty safe to assume the paper is losing money."

The Hearst Corp.-owned Herald-Examiner became mired in a no-win situation when it endured a disastrous six-year strike, which began in 1967. The paper continued to publish, employing nonunion help, but by the time the unions gave up the struggle, the paper had seen its circulation drop from a high of around 750,000 to 230,000.

For the six-month period ending Sept. 30, the Herald-Examiner reported an ABC-audited circulation of 241,454, an increase of nearly 5,000 from September 1985. "We're in there chipping away and struggling," says McCabe, and analysts agree there is no sign that Hearst has any immediate intention of giving up the battle as it did earlier this year when, unable to find a buyer, it closed the Baltimore News-American.

Ringing the Los Angeles area and draining a respectable share of the market are The Orange County Register of Santa Ana (all-day, 300,985), flagship of the Freedom Newspapers group; the Long Beach Press-Telegram (all-day, 128,684), a Knight-Ridder paper; and the Van Nuys-based Daily News of Los Angeles (morning, 148,133), owned by multimillionaire Jack Kent Cooke. They represent three formidable

SUPPORT PRODUCTS INC.

REMOTE PASTING & SOFTENING SYSTEM
SAVES MAKEREADY TIME AND MONEY

The Support Products Inc. remote pasting and softening system is easily installed on any folder. It allows production of booklets from 8 to 96 pages. Remote control keeps pressman away from moving web — eliminating possibility of tools being dropped in folder. High pressure employed permits finer orifices on the glue heads, so the glue job is neater with less material used. Call today for additional information and pricing.

GREENE

JENKINS

ROYKO

ROONEY

TMS' lineup of heavy-hitting columnists will get the attention of all your readers.

When it comes to hard-hitting commentary, you can't do better than our lineup. Greene covering the American beat. Jenkins taking a humorous and often offbeat look at life in general. Royko sharing his unconventional views on everything. Rooney finding the most unusual things in the most usual circumstances. No matter what your readers' tastes, these four will touch home with all of them.

Their words will make your readers laugh out loud. Their columns may make your readers angry enough to go after change. And they may even make them cry. But whatever the reaction, Greene, Jenkins, Royko and Rooney will leave an unforgettable impression.

Put these heavy-hitters to work in your newspaper. Call John Matthews at 1-800-322-3068. Greene, Jenkins, Royko and Rooney — just four more examples of how at TMS we're committed to bringing you "A Tradition of Creativity."

reasons why Los Angeles, huge as its population is, cannot support two profitable urban newspapers, says Fuchs.

In addition to those newspapers with six-figure circulation, there are 15 dailies in Los Angeles and Orange counties alone with less than 100,000 circulation each, "and hundreds of weeklies," says Patricia LoVerme, marketing research manager for the Los Angeles Times.

If there's a city in the country that should support at least two profitable daily papers, most observers agree, it is New York. It now has six of general circulation.

ANCHORAGE AWAY. Many cities with populations similar to Anchorage's—about 200,000—have no hope of supporting two competing newspapers. Yet the Anchorage Daily News and the Anchorage Times are locked in fierce competition, and executives on both newspapers say the city can support both—although one and possibly both are losing money.

Says William Hofer, general manager of the Times, "When you ask me whether Anchorage can support two newspapers, I would respond, certainly. Our income level is second or third in the United States, and the educational level of our residents is right up on top."

Howard Weaver, managing editor of the Daily News, observes that a greater percentage of residents there read newspapers. Surveys by Belden Associates show that 83 percent of adults in Anchorage read at least one newspaper and 30 percent read both.

The Daily News was virtually out of it as a business enterprise in 1976 when the paper won a Pulitzer Prize detailing influence of the Teamsters union on Alaska's economy and politics. The Pulitzer notwithstanding, the paper had to lay off 40 percent of its staff that year.

Katherine Fanning, who had founded the paper with her husband, Larry Fanning, in 1967, traveled to Sacramento in 1979 to ask C. K. McClatchy, president of the McClatchy Newspapers group, for money to tide the paper over. Instead of a loan, McClatchy bought the paper, gave Mrs. Fanning 20-percent ownership (her husband died in 1971) and embarked on a spending binge that has resulted in the Daily News' leading the Times in both circulation and advertising. ABC figures show the a.m. News had 53,169 weekday circulation last March 31 and 64,545 Sunday, compared with 40,029 daily and 50,070 Sunday for the p.m. Times.

Erwin Potts, executive vice president of McClatchy Newspapers, says the Daily News had one profitable month in May, but "we are not running in the black now." He says the depressed economy owing to the low demand for oil has caused the paper's advertising to decrease 25 percent from the level of a year ago.

But Potts says the rival Times suffered an even steeper decline, and as a result, the Daily News has increased its share of newspaper advertising in the Anchorage market to 60 percent.

Times General Manager Hofer says he can agree that the News has nearly 60 percent of the advertising, but he contends both papers slipped equally—about 25 percent—from last year because of the slumping economy.

Asked whether the Times is currently making a profit, Hofer says: "It becomes exceedingly difficult when you have a competitor that doesn't give a damn (about profits). As far as I'm concerned, this war is just beginning. The Anchorage Times has had 72 years of history. We've served Anchorage and Alaska long and well, and we certainly intend to do that some more, regardless of whether McClatchy's here or not."

Hofer says, nevertheless, that the competition has a beneficial side. "The advertisers and readers get a better product, and that is a plus for the marketplace. Too many markets are down to one newspaper and . . . I have seen a lot of newspapers not putting out too great a product." □

THE CHALLENGE OF CENTER STAGE

How do you salute a major event in the Southern California arts community like the opening of the Orange County Performing Arts Center?

If you're the Los Angeles Times, the answer is obvious. You turn out "Center Stage," the largest magazine you've ever published: 254 pages, with an ad count that includes 64 full-page four color units.

You make the scope of "Center Stage" staggering. Everything from the number of steel beams that hold up the building to the nuts and bolts of developing world class artistic standards.

Narda Zacchino, Editor of the Times Orange County Edition, described "Center Stage" by saying, "We chose to produce a magazine that would entertain as well as inform, educate as well as celebrate. It was a special challenge."

If you'd like to see how that challenge was met, send a self-addressed mailing label to: Los Angeles Times, Promotion & Public Relations Department, Times Mirror Square, Los Angeles, CA 90053.

You'll understand why Southern California had nothing but applause for "Center Stage."

A Special Kind of Journalism

Only a Few Papers Carry on Sunday-Only Legacy

BY GENE GOLTZ
presstime staff writer

"During the last few years a new class of newspapers—partly literary, partly gossipping, partly silly, partly smart, partly stupid, partly namby-pamby—have grown up from the lowest and most sickly state to a point of some consideration in certain portions of society not much beyond the limits of the city. We allude to the Sunday Newspaper Press."

Thus did the New York Herald in 1844 refer to a phenomenon in America, the newspaper that was published only on Sundays. In 1852, Philadelphia alone counted 16 of them.

But as daily newspapers expanded into the Sunday market, most of the Sunday-only operations succumbed. Today, there are only a handful of such papers in the United States.

Three of the remnants of what was once a trend in American newspapering are published in Pennsylvania, where the tradition of Sunday papers was so strongly evident in the mid-19th century. They are the Sunday Independent of Wilkes-Barre and The Sunday Dispatch of Pittston, communities that are a scant eight miles apart; and The Sunday Grit, which is published 70 miles to the west in Williamsport.

The Sunday Independent is one of three newspapers in the fiercely competitive Wilkes-Barre market. Yet with Audit Bureau of Circulations-verified circulation of 64,934, the Independent prospers as it has for three generations.

Founded 80 years ago, it has always been in the Hefferman family of Wilkes-Barre. The current editor and publisher is Thomas F. Hefferman II, who also writes a sports column for the paper.

Despite its weekly publication schedule, the Independent pays for the daily AP wire and AP LaserPhotos at regular rates. The paper also carries King Features, United Features and other syndicated material, including color comics.

The Independent, which constructed a new building in 1976, employs 10 full-time editorial people and has about 60 employees altogether, says Tom Huntington, managing editor.

Printing the paper's five sections takes place over four days. Because the paper has a union shop, it can't compete with non-unionized local printers for most job printing, Huntington says. Thus, the Independent's Wood letterpress press lies idle the rest of the time.

Nonetheless, says Huntington, "This paper is thriving. We are a good newspaper." A recent issue ran 88 pages plus six pages of comics, Parade magazine and 10 preprinted advertising inserts.

Best of all for the Independent, it has Wilkes-Barre's Sunday market entirely to itself. Neither of the city's two morning dailies—The Times Leader and the Citizens' Voice—publishes on Sunday.

One reason for this is the bitter competition between the two dailies. The Citizens' Voice was founded in 1978 as a strike paper after Capital Cities Communications purchased The Times Leader and negotiations over new labor contracts reached an impasse [presstime, Sept. 1985, p. 30].

Newspaper analyst Bruce Thorp says that given their money-losing past and the area's depressed economy, the Wilkes-Barre dailies are not likely candidates to launch a Sunday edition.

This is true even though Sunday newspapers in many markets are so profitable that they represent 25 percent of a daily's total earnings, says Thorp, who is with the brokerage firm of Lynch, Jones & Ryan in Washington, D.C. Overall, Sunday newspapers have been the fastest-growing segment of newspaper publishing in the United States, having increased from 586 in 1970 to 797 in 1985.

Bill Thompson, associate editor of The Times Leader, says the previous ownership tried to establish a Sunday edition in the early 1970s. "I understand it was put together rather hastily," says Thompson. The edition failed to take hold and was folded.

He says starting a Sunday paper is a subject that has been discussed several times since Cap Cities acquired The Times Leader, and it "is always on the table."

But the strength of the Sunday Independent is well-known, Thompson says. It "has made itself pretty much of a habit. It's had Sundays so long it would be quite an undertaking" to compete against it.

Robert Manganiello, general manager of the labor-subsidized Citizens' Voice, says, "We're certainly not looking in that [Sunday paper] direction. Quite honestly, we've got enough to do to put out a daily."

The second-largest of these Sunday anomalies, The Sunday Grit, is owned by Stauffer Communications Inc. of Topeka, Kan. Although the company also publishes a national Grit, circulation about 660,000, The Sunday Grit is a separate, regional publication. It is a broadsheet paper with a circulation of about 30,000 in 14 counties in north-central Pennsylvania, with Williamsport as the hub.

Hefferman (left) and Huntington look over a recent issue of the Wilkes-Barre paper.

The two Grits have separate advertising and circulation staffs, but the same editorial staff that prepares national stories for the national edition handles local copy for The Sunday Grit, according to Executive Editor Michael Rafferty.

Founded in 1884, two years after the National Grit, The Sunday Grit contains wire-service as well as staff-written articles.

The tabloid national Grit is folded inside the Sunday paper, so the Sunday subscribers in Pennsylvania get both papers.

With the Aug. 24 issue, The Sunday Grit began printing a color-comic section on its offset press. It also uses at least one process color photo on the front page of each issue and carries additional color in the paper's four separate sections—news, sports, people and business/classified.

Unlike the Wilkes-Barre paper, Grit does various kinds of job printing through the week. In addition, Grit Publishing Co. operates an independent Commercial Printing Division that produces shopping supplements, brochures and other products.

The Sunday Grit enjoys a circulation area that is relatively free of direct Sunday competition. The big cities are far away: Philadelphia is 164 miles to the southeast, Pittsburgh is 200 miles southwest, and both Harrisburg and Scranton are 86 miles away. The daily Williamsport Sun-Gazette does not publish on Sunday.

"There are no (other) Sunday papers per se in our area," Rafferty says. The paper gets a general variety of run-of-paper local ads, he says, but very little national advertising.

In Pittston, meanwhile, The Sunday Dispatch also continues to be published on Sundays only, as it has been since 1947.

Although Pittston is a town of just 10,000 population, the paper boasts a circulation of about 15,000. Sunday Dispatch Editor John W. Watson notes that in the densely populated area around Wilkes-Barre and Scranton, there are 35 incorporated towns, and it's almost impossible to tell where one starts and another ends. Watson says his paper circulates in an area of 55,000 people, including all 35 towns.

The Watson family acquired the paper in the early 1960s, and John Watson's father, William A. Watson Jr., is the current publisher.

The Sunday Dispatch differs from the other Sunday-only publications in one major way. It has no wire service. The paper carries all local news, with six editorial employees counted among the 25-member staff. The press run does not start until midnight Saturday in order to include the latest possible breaking news, Editor Watson says.

As dailies expanded into the Sunday market, most of the Sunday-only operations succumbed.

The Pittston paper during the week also does job printing, including the weekly paper of the local Catholic diocese.

The Scranton/Wilkes-Barre area where The Sunday Dispatch competes also has eight other weekly or daily and weekly newspapers (including the Sunday Independent and two other Sunday papers), a dozen shoppers, three magazines, and numerous broadcast stations, says Watson. And this is in an area known as the Rust Belt, where most of the coal mines and railroads that had been the backbone of the economy ceased operations long ago.

Despite the loss of heavy industry, the area has a considerable amount of other commercial activity. And the paper, like its Wilkes-Barre neighbor, is thriving, Watson says.

There is also a Sunday-only, paid-circulation newspaper in Massachusetts—the 13,500-circulation Sunday Post of Lynn, a Boston suburb where the Daily Evening Item is published weekdays.

Founded in 1959, The Sunday Post is a paper of record that routinely carries announcements of births, engagements, deaths, in addition to a full local news report, according to Editor Arthur J. Belleville.

The existence of the Pennsylvania and Massachusetts Sunday-only papers raises the question of whether the concept could work in other areas.

Analyst Thorp doubts it. He cites high start-up costs, a newcomer's lack of a circulation list and almost-certain competition from big-city Sunday editions. Thorp says that offhand he can't think of a place in the United States where there is a crying need for a Sunday-only paper. □

When Covering College Sports, Many Papers Are Cheerleaders

BY CREED C. BLACK

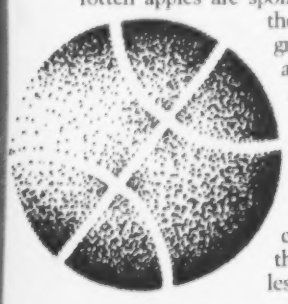
Another autumn brings the return of that colorful spectacle called college football—sunny Saturday afternoons, vast stadiums filled with happy throngs, hyperactive cheerleaders, festooned marching bands, pompoms, tailgate parties and, of course, the young gladiators known as "student-athletes."

And then, long before the last touchdown of the season is scored, college basketball makes its entry in packed arenas filled with their own brand of hoopla and razzle-dazzle and with another set of those "student-athletes."

These annual pageants not only quicken the pulses of sports fans, they also brighten the national scene from coast to coast and enliven our newspapers.

Unhappily, however, there's another side to this slice of Americana. The New York Times described it—accurately—as "the sordid underside of college sports" in reporting on the series my paper did last year on payoffs to University of Kentucky basketball players. And columnist George Will, deploring the academic neglect of the athletes who are the center of all the frenzied attention, wrote recently in Newsweek—again accurately—that "big-time college sports are a continuing scandal, corrupting and exploiting."

They are indeed. Those who want to think otherwise may argue that a few rotten apples are spoiling the barrel, but the record of transgressions in both areas—payoffs and academic failure—is too overwhelming to permit such a comforting conclusion.



There isn't enough space in this magazine, much less this article, to recite even the recent history of those transgressions. But on the assumption that anyone reading a newspaper trade journal also reads newspapers, that should hardly be necessary. Our editors in Lexington put together a year-end review of the events of 1985 alone that supported in painful detail their introduction to the article:

Creed C. Black

"On the playing field, it was competition as usual. But off the field, each month's news brought more tidings of scandal. Taken as a whole, the year's events left a growing realization that cheating on NCAA rules is out of control."

And the record of 1986, if anything, has been even worse.

On the basis of our experience, however, it seems fair to say that this is a story many newspaper readers don't want to see—particularly if it involves the home team. Much of the public outrage our series produced was aimed not at the news of the payoffs but at our treachery in printing it. Investigating irregularities at City Hall is one thing, but digging into such a revered institution as UK basketball is something else again. Why mess with something that's supposed to be fun and games in a world that already has enough to worry about?

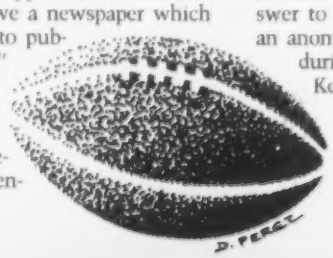
A common thread running through many of the letters we received was that the rules violations weren't really news. "Kentucky appears to be doing nothing different than almost all other universities do," one critic wrote. "The only difference is that Kentucky happens to be unfortunate enough to have a newspaper which finds it necessary to publish stories about it."

Necessary? No, it wasn't necessary. We knew our series, which resulted from a seven-month investigation by two reporters, would be unpopular. But we published it because we had become convinced that collegiate athletics had spawned a national scandal, and that the colleges and universities weren't going to clean it up individually or through the National Collegiate Athletic Association until the newspapers of the country told the ugly story and demanded a cleanup.

Despite the pressure to win, intensified in recent years by the big bucks TV pays to the schools whose teams have national rankings and go to bowl games, it isn't true that "everybody" is buying players or allowing athletes to spend four years on make-believe academics and then dropping them without degrees (or education) once they have outlived what one former university president candidly called their "utilitarian" value.

"I do believe that it is quite possible to have a completely honest and generally successful program," the Rev. Theodore M. Hesburgh, president of the University of Notre Dame, said at a football banquet there several years ago. "We have a long history of doing just that." So do some other prominent institutions.

Newspapers, then, need not be cowed by the familiar argument of coaches and fans alike that their role is to be cheerleaders for the home team, come what may. Their true role is to cover college athletics the way they ought to cover everything else—fully, fairly, fearlessly. And if some of that coverage turns out to be unpleasant and displeasing, there's no better answer to the critics than one provided by an anonymous caller to our switchboard during the furor over our series on Kentucky basketball: "Please tell Mr. Black the grassroots people are with him 100 percent. If UK don't want to be in the paper, they shouldn't do nothing." □



Black is chairman and publisher of the Lexington (Ky.) Herald-Leader, which won the 1986 Pulitzer Prize for Investigative Reporting for its series on NCAA rules violations at the University of Kentucky and elsewhere.

Speaking of . . .

Henry E. Payne

Just 24, cartoonist has benefited from the luck of the draw

BY C. DAVID RAMBO
presstime staff writer

Oliphant. MacNelly. Herblock. Wright. Conrad. Borgman. Peters. Payne.

Payne?

The name may not mean much to a lot of people now. But according to some editors, Henry E. Payne can be listed in the ranks of the best syndicated editorial cartoonists—those who shine because of their special wit, political savvy and artistic ability.

What's so remarkable is that Payne is just 24 years old, less than three years removed from college. Etta Hulme, editorial cartoonist of the Fort Worth Star-Telegram and president of the Association of American Editorial Cartoonists, characterizes Payne as one of a new breed of young, talented entrants to her field. "I think he's got something more than the gag in him," she says.

After graduating from Princeton University in 1984, Payne became cartoonist for his hometown Charleston (W.Va.) Daily Mail. Last December, he moved to Washington, D.C., as editorial cartoonist for Scripps Howard News Service. He is syndicated by Scripps' United Feature Syndicate.

"He is among the best young cartoonists, and in a couple of years I think we're going to be able to remove the qualifier," says B.J. Cutler, editor-in-chief of Scripps Howard Newspapers. Cutler cites Payne's "combination of ability to draw" and "an original and really sharp sense of humor. . . . He just sees things in an original way, and that's a gift."

Cutler was tipped off about Payne's talent by someone who met him at a convention of the cartoonists' association. "Newspapers always take a chance sending their editorial cartoonist to a convention," Payne wryly observes.

He received a history degree at Princeton after gaining local and national attention for his work at the Daily Princetonian and at another student-related publication, the Nassau Weekly.

With his artistic gift and Ivy League diploma, Payne could have pursued any number of fields. He says he chose editorial cartooning because it represented "a natural fusing" of his two major interests: art and politics.

He got his first break when as an undergraduate he was hired for two summers as an intern at the Charleston paper. William P. Cheshire, then the Daily Mail's editorial page editor, says that "despite Payne's limited experience, he had a well-developed and mature editorial cartoonist style." The student cartoonist turned out to be "very quick, very prolific" and drew things that were "better than most of the stuff we were getting from the syndicates," says Cheshire, now editorial page editor of The Washington Times.

In addition to his editorial commentaries, Payne did work for other Daily Mail departments, such as drawings for in-house ads and sports caricatures. "He would sit down with an idea and in a matter of minutes he'd have a sketch" that in most cases would be developed into a final piece for publication, says Executive Editor Sam E. Hindman. There was a "clamor" in all departments for him to do work, Hindman adds. "He never said no."

"LOOK AT THE BRIGHT SIDE, MR. DANILOFF... AFTER FIVE YEARS AS A CORRESPONDENT, YOU FINALLY GOT THE CHANCE TO SEE THE REAL SOVIET UNION."

The same holds true in Washington. Cutler says Payne happily churns out extra news and sports illustrations in addition to his routine contributions.

Last June, Payne achieved one of his career goals—syndication—when he was signed on by UFS. About 30 newspapers now use his work either through the news service or the syndicate.

With each of his five weekly cartoons, Payne says he endeavors to make a strong statement, not just elicit a chuckle from readers. "A lot of cartoonists are entering the field just to add a joke" to the palette of news and commentary, he says.

Politically, Payne is a conservative and usually aligns himself with President Reagan. But Payne does not inflate the importance of cartooning in the political process. Although cartoons are among the most widely read elements of an editorial page, he says they probably do not sway public thinking. "A cartoon will serve only to buttress an opinion or cause you to chuckle about that opinion."

Artistically, he sees himself as "a mix" of three types of contemporary editorial cartooning. One is the Herblock school, always in vertical format, strictly of a political nature and heavy on the use of symbols and labels. The second is in the vein of Oliphant, who started producing work in horizontal format and with "a cinematic approach"; Oliphant "loosened" the mood and added to the "amount of humor you could introduce." The third is the style of Jim Borgman, Jeff MacNelly and some other younger cartoonists who "sort of came in and diversified."

Payne's interests do not rest with politics and art. He enjoys sports, having played junior varsity basketball in college and some tennis.

Payne and his wife, Talbot, an art dealer, live in Arlington, Va. □

Quality and commitment: The best in editing.

"AP is an extension of the home newsroom. AP is there, just as surely as the city desk or the sports department. The AP wire is just a part of the staff."

John Marlow, news editor at the Seattle bureau, thinks his primary responsibility as an AP journalist is to serve member newspapers and their readers.

"The bottom line is really that the readers will be getting a balanced news report."

In his 26 years with AP as a newsman, bureau chief and editor, Marlow has had his share of bylines and frontline excitement. But he has grown to find satisfaction in the often anonymous work behind the newsfiles, digests and advisories. These, he says, ultimately shape the news reports appearing in newspapers, whether AP is credited or not. "We have a tremendous impact on how well informed the public is."

Marlow and other editors are the administrative backbone of AP's bureau system, serving the thousands of newspapers and broadcasters who own AP. He's responsible for long-range planning, staff scheduling, and editing. He'll take care of a member's request for special coverage, or he'll provide help if a member's computer goes down.

Like him, the 2,850 people who staff AP's 219 offices around the world are dedicated to giving these members the highest quality service in the news industry—a goal that is a continuing commitment by everyone in AP.

Marlow says that AP staff members' awareness of their wide audience is what strengthens their personal dedication and keeps their standards high.

"If AP makes a mistake, it appears in hundreds of papers around the country. So we take painstaking care that it's right before it goes to the wire."

Kozol offers tips for newspapers on how they can fight illiteracy

Literacy expert Jonathan Kozol says "it's time at last to put the numbers game behind us" and for newspapers and other businesses to tackle the problem of illiteracy, regardless of the number of Americans who lack literacy skills.

Kozol, the Newspaper Advertising Bureau and government agencies have weighed in with conflicting data on the number of American adults who cannot read, with estimates ranging from less than 1 million to 78 million (presstime, Sept. 1986, p. 18).

But Kozol told an Oct. 9 gathering of newspaper and magazine executives that the "real point" is that large numbers of people whom some may classify as "literate" can "read only at mechanistic levels." Such people, he said, lack reading-comprehension ability and thus are unable to perform adequately in the technologically oriented society of today—and tomorrow.

The occasion for Kozol's remarks was a Washington, D.C., luncheon at which the author of *Illiterate America* unveiled a new literacy report he prepared for Cox Newspapers. The report is titled "Where Stands the Republic?" with the subtitle of "Illiteracy: A Warning and A Challenge to the Nation's Press."

Garner Anthony, chairman and chief executive officer of Cox Enterprises Inc., said the inspiration for the report was Kozol's address last April to the ANPA Convention in San Francisco. "We asked him to tell us in greater detail what we, as an industry, could do," Anthony wrote in a preface to the 33-page report.

In it, Kozol made several specific proposals on how newspapers can help fight illiteracy. They include:

- Using newspaper pages to advance local literacy goals—for example, by publishing articles appealing for volunteers to tutor non-readers, and by carrying a regular column or page aimed at marginal readers
- Supporting local literacy programs by making financial contributions, providing work space for tutors, encouraging newspaper employees to volunteer as tutors, publishing instructional materials and seeking to bring other organizations into the effort
- Serving as advocates on behalf of "those who have no voice, no verbal skills, to press the cause themselves."

Kozol recommended that "in addition to the thrust of editorial support from individual papers, a combined commission of the ASNE (American Society of Newspaper Editors) and the ANPA ought to be created to coordinate their efforts. This recommendation stems from suggestions voiced already by the editors and publishers with whom we have consulted."

Jonathan Kozol

One thing he said newspapers ought *not* to do is "lower the reading level of their papers"—now generally estimated to be at the ninth- to 10th-grade level. "Degraded literature is not the answer to diminished literacy," Kozol said. At the same time, he said journalists should "scrutinize their prose to see if simple stories are not sometimes rendered needlessly opaque by overly elaborate verbiage."

Copies of Kozol's report were distributed to editors, publishers, educators and political leaders throughout the country. Jerry W. Friedheim, ANPA executive vice president, told Cox Chairman Anthony that the newspaper industry "is delighted to have this additional building block and tool."

Additional copies are available from Lynda J. Stewart, director of communications, Cox Enterprises Inc., P.O. Box 105720, Atlanta, Ga. 30348.

Also on the literacy front:

- A new federally funded study of the literacy skills of young adults ages 21-25 found that while "95 percent can read and understand the printed word," much more difficulty is encountered when they are asked to deal with more complex material.

The "real point" is that large numbers of people can "read only at mechanistic levels."

The study was conducted by the Educational Testing Service under the auspices of the National Assessment of Educational Progress, a federal research project. "While we don't have a major *illiteracy* problem, we do need to improve the skills of most of our young adults," said Archie E. Lapointe, executive director of NAEP. "In other words, we do have a *literacy* problem."

The study of about 3,600 young adults measured proficiency in three areas: prose literacy—reading and interpreting such things as newspaper articles, magazines and books; document literacy—identifying and using information in such things as forms, television listings, charts and indexes; and quantitative literacy—applying mathematical operations to information in such things as a menu, a checkbook or an advertisement.

"While the overwhelming majority of young adults adequately perform tasks at the lower levels on each of the three scales, sizable numbers appear unable to do well on tasks of moderate complexity," such as summarizing the main argument from a lengthy newspaper column, NAEP reported.

- The Times Mirror Co. sponsored an Oct. 2 conference in Los Angeles on "Literacy: A Good Investment." It was designed to get business representatives together with literacy experts.
- Gannett Foundation announced "The Literacy Challenge," a two-year, $2-million grant program, in cooperation with USA Today. Grants of up to $100,000 will be awarded to the best proposals to launch or expand statewide adult literacy efforts.
- Scripps Howard announced grants of up to $10,000 to Scripps Howard news organizations that conduct community literacy projects.

In addition, the Scripps Howard Foundation has established the Charles E. Scripps Award, a cash award of $2,500 a year for the newspaper or broadcast station that best promotes literacy in its community. □

New publications designed to help teach media management

Two new publications are available to assist in teaching media management and economics courses in college.

One is *Economic Structure and Performance of the Communications Media, Course Instructional and Bibliographic Materials*, which was produced with a $3,450 grant from ANPA Foundation. Prepared by Thomas H. Guback, research professor of communication at the University of Illinois, the 73-page publication contains instructional materials and a bibliography for a 15-week course.

Judith D. Hines, vice president and director/ANPA Foundation, said it is more of a "manual" than a typical course outline or syllabus because of the depth of instructional material provided. "Frequently the concentration on media management and economics has been on the management side," she noted. "This material fills some gaps of specifics in economics. We think it would be a useful resource for every journalism professor."

Copies are available for $6 from Guback, Institute of Communications Research, University of Illinois, 222 Armory Building, 505 East Armory Ave., Champaign, Ill. 61820.

The other new publication is *Bibliography of Media Management and Economics*, published by the University of Minnesota. It was compiled and edited by Rita Du Charme, coordinator of the University of Minnesota's Media Management and Economics Resource Center. Produced using a computer database, the 113-page publication contains more than 400 titles in 35 subject categories.

Copies are available for $8.50, plus $1.50 for postage and handling, by contacting Du Charme at MMERC, School of Journalism and Mass Communication, University of Minnesota, 1111 Murphy Hall, 206 Church St. S.E., Minneapolis, Minn. 55455. □

After hearing objections, ACEJMC revises its restructuring plan

The organization that accredits U.S. journalism schools has decided to act in response to complaints that the newspaper business is overrepresented in its membership: It is planning to recruit additional members from non-newspaper organizations, rather than adopt a radical restructuring plan.

At its Oct. 19 meeting in Chicago, the Accrediting Council on Education in Journalism and Mass Communication passed a "sense of the council" resolution that "every effort" be made to invite membership from six additional national organizations from each of three fields: broadcast, advertising and public relations.

This would bring their representation up to the level of the newspaper business, which currently has ACEJMC representatives from eight organizations. With equal representation from academic organizations as well as several public members, the proposal could result in a council of more than 70 members.

Last June, an ACEJMC committee attempted to address the imbalance issue by proposing the restructuring plan. It called for a reduction in the size of the council, creation of five accrediting committees for various segments of the communications industry and establishment of a dues formula.

The plan was widely criticized. Some academic members of the council believed it represented a return to sequence accreditation, which had been eliminated in favor of accrediting the entire school or "unit." Some professional organizations feared they would lose their voices on a smaller council. And some groups said they could not afford to belong to the council under the proposed fee schedule [presstime, Oct. 1986, p. 57].

In addition, ACEJMC officials determined that the Council on Postsecondary Accreditation, a national education group under whose guidelines ACEJMC operates, probably would not approve of the plan if it meant the primary responsibility for accreditation was to be taken away from the council and given to the accrediting committees.

Council President John A. Lavine, who chaired the committee that drew up the reorganization plan and who redrafted it twice in an effort to meet various objections, said he is hopeful adding members can eliminate the concern about imbalance. Bringing in additional organizations also would mean that increases in council expenses "can be borne by a broader base," said the editor/publisher of the Lavine Newspaper Group of Chippewa Falls, Wis. "That is positive."

The matter will be discussed again at the next ACEJMC meeting in May in New York City, at which time Lavine will present a new dues proposal. Currently, each member organization decides on its own how much to give to the council.

ANPA Executive Vice President Jerry W. Friedheim, who attended the meeting, expressed optimism over the council's latest action. "I think if they can succeed in attracting more support from additional national organizations, it will strengthen the council and would probably accomplish all of the things that they've been trying to achieve by a dozen reorganization suggestions over the last few years," he said.

In other action at its October meeting, the council:

- Agreed to invite comment from schools on a "menu" of open-meeting proposals, including the option of making no change in its present procedures under which accrediting decisions on individual schools are made behind closed doors and reports on the schools are kept confidential. The council took a preliminary vote at a previous meeting to move toward openness.
- Adopted the recommendation of an appeals committee in granting provisional reaccreditation to the University of Wisconsin-Eau Claire, which was denied reaccreditation last April.
- Began organizing task forces on a variety of topics including fund-raising and educating media professionals and educators about the accrediting process and its benefits. □

Foundation publishes new NIE bibliography

A new list of Newspaper in Education publications has been published by ANPA Foundation.

The sixth edition of "Bibliography: NIE Publications" contains information on 124 publications selected by a panel of reviewers. Most were published by newspapers in collaboration with local schools.

Each entry includes the name of the publication and when it was published, a description, the grade level at which it is designed to be used, source and price.

A copy of the bibliography has been sent to newspaper NIE coordinators. Additional copies are available for $1.50 each ($1 each for orders of 50 or more) by contacting Ruth Finn of ANPA Foundation at The Newspaper Center, Reston, Va. □

Newsprint fee and FOIA changes passed at end of 99th Congress

The 99th Congress is history, but in its near round-the-clock drive toward adjournment in October it passed some legislation whose effects will be felt directly by the newspaper business—including a surprise fee on imported newsprint and the first major amendments to the Freedom of Information Act in a decade.

Also key to newspapers was an action the Congress didn't take. It failed to act on legislation ANPA had opposed that would have transferred jurisdiction over the AT&T consent decree to the Federal Communications Commission.

• **User fee on imports.** A congressional order to the U.S. Customs Service to impose a "user fee" on nearly all imported products was contained in the massive budget reconciliation bill passed one day before the Oct. 18 adjournment.

According to Martin Casey, ANPA manager/government and international affairs, the fee will apply to imported newsprint. For fiscal year 1987, the fee will be .22 percent of the value of the imported product and will decline to .17 percent in fiscal years 1988 and 1989. The bill was signed by President Reagan Oct. 22, and the fee takes effect Dec. 1. For example, on a ton of newsprint valued at $500, the fee would be $1.10.

Another bill passed Oct. 17, a water resources measure, contains a new .04 percent "port user fee" that also will affect some imported and domestic newsprint. At press time, the bill was awaiting signing by the President, who was expected to do so. If enacted, the fee would take effect April 1, 1987, and apply to the value of all cargo loaded or unloaded at U.S. ports except that going to Alaska, Hawaii and U.S. possessions.

• **FOIA amendments.** Provisions exempting more law enforcement records from the FOIA and limiting the fees that may be assessed news media FOIA requesters were added to the omnibus drug enforcement bill that was passed Oct. 17. The President was scheduled to sign the bill Oct. 27.

Specifically, it would exclude from FOIA coverage records relating to a criminal investigation under three circumstances: If there is reason to believe the subject of the investigation is unware of it; if a third party requests records of a person by name and the person is a government informant whose status as an informant has not been officially confirmed; and if the records relate to foreign intelligence or counter-intelligence or international terrorism and the existence of the records is classified.

The bill also changes fee policy for the FOIA, including limiting fees that may be charged to members of the news media to reasonable standard charges for document duplication. Most other requesters will be charged fees for searching and reviewing the documents.

The FOIA provisions were a compromise between press groups, the American Civil Liberties Union and Sens. Orrin G. Hatch (R-Utah), chairman of the Judiciary Committee's Constitution Subcommittee, and Patrick J. Leahy (D-Vt.).

Bruce W. Sanford, First Amendment counsel for the Society of Professional Journalists, Sigma Delta Chi, said he was

D.C. wants to restrict newsracks

The Nation's Capital, which sometimes looks like the nation's newsrack capital, is considering legislation to regulate newspaper vending machines.

A proposal by District of Columbia Mayor Marion Barry to the city council would require owners to register newsracks and have liability insurance; establish placement, size and appearance restrictions, including limiting those next to curbs to groups of four with six feet of space between groups; and require those in a renovated section of Pennsylvania Avenue to be uniform in size and color.

The District's existing newsrack regulations were promulgated during the 1930s. In 1976, the city's attorney declared them "too restrictive of the constitutional guaranty of freedom of the press" and said they should not be enforced.

Representatives of The Washington Post and The Washington Times said they hope to work out whatever problems exist and to avoid regulations. □

Alan Tepper

Many Washington street corners are crowded with newspaper vending machines.

"very happy" with the compromise. SPJ/SDX had been pushing for FOIA amendments to strengthen the act from a requester's standpoint. "I think that the fee-waiver provisions explicitly mentioning the news media are significant accomplishments for the press. The law enforcement provisions are, I feel, so restrained that they really don't give the Justice Department and the FBI anything they could not get from the courts if they made a reasonable argument," he said.

On the other hand, ANPA had been opposed to consideration of any amendments to FOIA for fear of opening the act up to major, harmful revisions. W. Terry Maguire, ANPA vice president/general counsel, said the compromise "certainly is preferable to other proposals that were briefly considered as the legislation moved rapidly through the process."

Ironically, HR 4862, the bill that ANPA feared would be a vehicle for harmful FOIA amendments, did not receive final action. It would have changed procedures for processing requests for business information [presstime, Oct. 1986, p. 46].

• **Telecommunications transfer.** Even though Senate Majority Leader Robert J. Dole (R-Kan.) said he wanted his bill transferring control over the nation's phone companies to the FCC to be passed during this session, S 2565 never emerged from the Commerce Committee.

On Oct. 8, Commerce Committee Chairman John C. Danforth (R-Mo.) proposed amendments that would prevent either AT&T or the regional Bell Operating Companies from providing electronic publishing where they serve 75 percent or more of the customers in a market.

The action was considered a major victory for ANPA, which had suggested such a 75-percent test in testimony before the Commerce Committee as a way of guaranteeing the "diversity principle," which holds that AT&T and the BOCs should not be allowed to own or control the information carried over their monopoly facilities [presstime, Sept. 1986, p. 46].

Congress also failed to act on legislation to amend the Newspaper Preservation Act. The Senate Judiciary Committee approved a bill that would have extended the act's antitrust exemption to total-market-coverage publications of newspapers in joint operating arrangements. It was not considered by the full Senate.

In other developments, Congress extended the Superfund toxic dump program without the value-added tax that ANPA had opposed [presstime, Dec. 1985, p. 39] and passed two sweeping employment bills. (See story, p. 68.)

—*Margaret Genovese*

Court declines to review cases

The U.S. Supreme Court in October denied review in five cases of interest to newspapers:

• *Copley Press Inc. v. Smith*, in which Copley Press sought review of an Illinois appeals court ruling that a county jailer was not a public figure for libel purposes.

• *LaRouche v. National Broadcasting Co. Inc. et al.*, in which LaRouche sought review of a ruling by the 8th U.S. Circuit Court of Appeals upholding a federal district court decision not to compel the NBC-TV network to disclose confidential sources [presstime, Oct. 1986, p. 46].

• *Fleming v. Moore*, in which Fleming sought review of a Virginia Supreme Court decision to let stand a $233,333 damage award in a non-media libel case in which Fleming was the defendant.

• *Janklow v. Newsweek Inc.*, in which Janklow sought review of a federal appeals court ruling that the magazine's allegedly defamatory statements are constitutionally protected expressions of opinion.

• *Jersawitz v. Noonan*, in which Jersawitz challenged a federal appeals court decision upholding the constitutionality of a Bureau of Prisons regulation limiting interviews with inmates to licensed broadcast stations.

Once again this term, a publication designed to help journalists report on Supreme Court cases is available from the American Bar Association. "Preview of United States Supreme Court Cases" is published in cooperation with ANPA Foundation and the Association of American Law Schools. A one-term subscription is $73 from the ABA, 750 N. Lake Shore Drive, Chicago, Ill. 60611.

COURT BRIEFS

• ANPA Oct. 23 filed a friend-of-the-court brief with the Federal Trade Commission arguing that an **R.J. Reynolds Tobacco Co. advertisement,** which took issue with a government study, is "fully protected under the First Amendment." It said the FTC should uphold an administrative law judge's decision to dismiss a complaint against the ad [presstime, Sept. 1986, p. 38].

• The Minnesota Newspaper Association has filed suit in U.S. District Court in Minneapolis challenging the constitutionality of federal laws prohibiting the mailing of newspapers containing **advertisements of lotteries** or other gaming activities [presstime, Aug. 1985, p. 37]. MNA named the U.S. postmaster general, the U.S. Postal Service and the United States as defendants.

A similar case currently is pending in U.S. District Court in the District of Columbia. Aimes Publications Inc. of Buffalo filed suit against the Postal Service and the United States after it was denied second-class mail treatment for its monthly magazine, Lottery and Gaming Review.

• In a 3-2 decision, the Idaho Supreme Court Sept. 18 ruled that an advertiser that has supplements printed out of state for insert into Idaho newspapers must pay the **Idaho use tax on the purchase of the supplements** from the printer. K mart Corp. had challenged a decision by the Idaho State Tax Commission that it was liable for the tax.

• T.V. Views Inc., publisher of a shopper distributed in Monterey and Santa Cruz counties in California, has filed an **antitrust suit** against Gannett Co., publisher of the Salinas Californian, and Ottaway Newspapers Inc., publisher of the Santa Cruz Sentinel.

In its complaint, filed in California Superior Court, T.V. Views charges Gannett and Ottaway with violations of the state business and professions code, including below-cost advertising in their shopper publications. Gannett and Ottaway have denied the charges.

• The U.S. Court of Appeals for the 5th Circuit Oct. 1 affirmed a federal district court ruling that Yazoo Publishing Co., publisher of The Yazoo (Miss.) Herald, a twice-weekly newspaper, was **not guilty of antitrust violations** as charged by The People's Press Inc., publisher of a defunct daily newspaper in Yazoo City [presstime, Sept. 1985, p. 36].

• Two **minority stockholders** in The Troy (Ohio) Daily News **have filed suit** in U.S. District Court in Trenton, N.J., against the company, several company officials, an Ohio media consulting firm and The Delphos (Ohio) Herald Co. Among other things, they charge officials with conspiring to fraudulently loan $500,000 to The Delphos Herald. The defendants have filed a motion to have the case dismissed, or at least transferred to a federal district court in Ohio.

ABA draft report endorses impersonation of press by police

A portion of a draft report to be presented to the American Bar Association gives "tacit" endorsement of the practice of impersonating members of the news media by law enforcement personnel, according to the ANPA/ABA Task Force.

At its Oct. 16 meeting in Washington, D.C., the press/bar panel said it will ask the authors of the report, ABA sections on criminal justice and individual rights and responsibilities, to delete that part of the report before they present it to the ABA House of Delegates in February.

The report, recommending principles for inclusion in federal and state laws governing undercover investigations, says law enforcement agencies should establish certain guidelines for investigations that involve "sensitive circumstances" such as the impersonation of members of the media, clergy, physicians and attorneys [presstime, Oct. 1984, p. 16]. □

U.S. won't block Evansville sale

The Justice Department will not object to the planned sale of daily newspapers in Evansville, Ind.

The department had been looking into the transactions in which Scripps Howard will sell The Evansville Press, the evening newspaper, to Robert H. Hartmann, a former Scripps Howard executive, and purchase The Evansville Courier, the morning paper, from the Robert C. Enlow Trust and a group of minority stockholders [presstime, Sept. 1986, p. 65].

The newspapers are partners in a joint operating arrangement. Under the deal, Scripps Howard will gain complete ownership of Evansville Printing Corp., which performs business functions for both papers, and of Evansville's Sunday newspaper. An amended JOA contract will be filed with the Justice Department after the sales are finalized, according to a Scripps Howard official.

"It was not a simple matter and it took considerable looking at," said Justice Department spokesman Mark T. Sheehan Oct. 22. "We advised them today that we would not object." □

ANPA files opposition to 6 BOC waiver requests

ANPA in recent months has filed comments with the Justice Department opposing six proposals by Bell Operating Companies to enter unregulated businesses. The Association said the proposals could violate terms of the AT&T antitrust consent decree.

In each case, a BOC seeks a waiver from terms of the decree [presstime, March 1986, p. 45].

Three of the requests came from Ameritech:

- To allow its software subsidiary, Applied Data Research Inc., to provide software updates and modifications through personal computers via phone lines. ANPA said the request fails to define clearly what types of information can be transmitted.
- To provide a service in which a special operator would be able to give the name and address that corresponds to any given phone number. Although ANPA believes this type of service is prohibited under the decree, the Association raised no direct opposition to the Ameritech request, partly because a similar program exists at Illinois Bell and because there are no competitive service alternatives. But ANPA stressed that any requests to provide this type of service for the first time should follow established procedures of public comment and Department of Justice review.
- To provide non-telephone directory services, such as indexed facts and information, through kiosks in airports, shopping malls, hotels and other public locations. ANPA opposed the plan, saying it strays too far into the information services field. Even though Ameritech would not use its exchange facilities to transmit the information, the service nevertheless would consist of gathering, storing, retrieving and transmitting information—activities that are prohibited by the decree, the Association pointed out.

Two other waiver requests were submitted by US West:

- To enter the market research and business consulting fields and conduct, among other things, public-policy research on national, state and local issues and public-opinion research. ANPA opposed the request, saying it was so broad that it could include information services. US West would be generating, storing, retrieving and transmitting information over its own facilities, the Association noted.
- To enter the securities business, serving as broker-dealer in securities and financial contracts, investment advisor and underwriter. ANPA said it has no objection to the firm's providing traditional securities services, but it noted that the securities industry today relies on electronic services to disseminate information. The request by US West was vague as to whether it included offering electronic information services, and ANPA recommended that any waiver granted specifically prohibit such activity.

The sixth request was by Southwestern Bell, which wants to provide customer-support and marketing-support services such as order processing, credit and check authorization, processing of payments, telemarketing and customer surveys. ANPA opposed the request because most of these proposals fall within the information services category. □

ANPA requests stronger safeguards in Computer III

In final comments to the Federal Communications Commission on its Computer III proposal, ANPA again urged stronger safeguards to prevent monopoly abuses by AT&T and the Bell Operating Companies.

The comments were in reply to initial responses by AT&T and the BOCs and other interested parties regarding Computer III, which is a continuation of the FCC's rule-making as a result of the breakup of AT&T [presstime, Feb. 1986, p. 36].

ANPA specifically:

- Urged rules that would prevent AT&T and the BOCs from using information about customers to their own advantage in offering unregulated services.
- Reaffirmed its position that specific procedures should be in place to monitor orders for phone lines needed to provide enhanced services in order to bring problems to light and protect against unfair business discrimination.
- Urged that the FCC require separate bookkeeping and other monitoring devices to ensure that AT&T and the BOCs do not use revenue or cost-shifting practices for subsidizing business interests outside of regulated service. □

ANPA to study ZIP-plus-4

The ANPA Postal Committee will examine the implications the nine-digit ZIP code has for the newspaper business.

The longer code, which adds a hyphen and four digits to standard five-digit ZIP codes, is used in conjunction with automated bar-code printing and reading machines. The goal is to increase postal efficiency and hold down costs.

Discounts are given to large-volume customers who use the longer code. So far, the discounts are available only for first-class mail. But a postal spokesman said USPS plans eventually to adopt the system for second-class and all other classes. There is no timetable for doing so, the spokesman added.

The Postal Committee decided at its meeting Oct. 14-15 in Washington, D.C., to examine several issues related to the longer ZIP code. They include how newspapers can benefit from the program in their own mailings, and how it someday may be used in newspapers' marketing plans. Nine-digit ZIP codes theoretically can designate addresses down to a city block or even a floor in a large building. The five-digit code designates a post office destination.

The committee also will examine apparent confusion at the Postal Service over such things as what kinds of machinery will be used in processing nine-digit mail.

Third-class mailers already have voiced strong concern over the elongated code. Gene A. Del Polito, executive director of the Third Class Mail Association, told Postal Committee members that TCMA intends to "fight tooth and nail" if the Postal Service maintains its present course on the program.

Some third-class mailers worry that a discount program tied to the longer ZIP code could mean the elimination of presort discounts, Del Polito explained. Many of those mailers, especially the ones that compete against newspapers, heavily use the carrier-route presort rate.

Del Polito said TCMA also is concerned about how the nine-digit ZIP "has been marketed and the way it has been implemented. . . . Nobody [at the Postal Service] has a clear view of how the program is going to be implemented."

A major concern is location of the bar code that USPS "sprays" onto envelopes as part of the extended ZIP's automation. USPS currently positions the bar code in the lower right hand corner of an envelope and requires that a lot of white space be retained. Such a configuration would come into conflict with "teaser" copy typically printed on many third-class-mail envelopes, Del Polito said.

The third-class mailers' representative also noted that mail volume of Advo-System Inc. has decreased this year because of competition and because of the firm's marketing decisions. Advo now accounts for 14.3 percent of all third-class volume presorted to the carrier-route level, compared with 19.9 percent in 1983, Del Polito said.

The carrier-route presort category represents about half of all third-class mail, he said. □

Del Polito (right) makes a point with Postal Committee Vice Chairman Gregg K. Jones (left) of The Greeneville (Tenn.) Sun and ANPA Executive Vice President Jerry W. Friedheim.

POSTAL NOTES

• Congress **approved postal funding** for the current fiscal year that will allow second-class, in-county rates to remain stable.

The funding level for so-called "preferred" mail, including the in-county category for publications, was $650 million.

Congress did not, however, restore funding for the former "limited circulation" portion of preferred mail, which provided lower rates for mailings of fewer than 5,000 copies outside the county of publication [presstime, Oct. 1986, p. 49].

• ANPA said it will **intervene in the federal court appeal** of The Enterprise, a free weekly newspaper in Winchester, Tenn., that is protesting a decision by the postal governors barring the paper from using subsidized rates [presstime, Oct. 1986, p. 49].

ANPA is expected to support the governors' decision.

• The Postal Service has urged the Postal Rate Commission to dismiss ANPA's complaint over the use of postcard-like **detached mailing labels**. The cards bearing address labels accompany some presorted third-class mail [presstime, Jan. 1986, p. 23].

ANPA asked the rate commission for a 90-day extension of the time it designated for responses to the USPS motion.

• The Postal Service also asked the rate commission to dismiss the recent complaint of four dailies against a USPS rule disallowing certain forms of **second-class, total-market-coverage** delivery.

The Sacramento Bee, the Des Moines Register, The Tennessean of Nashville and the Nashville Banner said the new rule amounts to an improper change in classification [presstime, Oct. 1986, p. 49].

USPS said the complaint is groundless. The rate commission asked for public comment by Nov. 5.

Journalists who died in war are honored

Memorials to journalists who died while covering armed conflicts for U.S. news agencies were dedicated Oct. 7 at Arlington National Cemetery outside Washington, D.C., and at the National Press Club in the downtown area.

"This day is long overdue," said Robert Lewis, president of the Society of Professional Journalists, Sigma Delta Chi, which cosponsored the memorials with the National Press Club, the Overseas Press Club of America and No Greater Love. The latter is a non-profit organization that provides "programs of friendship and care" for children of Americans killed in war or terrorist incidents.

At the cemetery, a tree was dedicated as a living memorial; it is a Darlington oak, a species that was chosen because it does not lose its leaves in the fall and therefore symbolizes the perennial commitment of journalists to covering the news. Located at the base of the tree is a stone in the shape of an open book. The stone is inscribed: "This tree grows in memory of journalists who died while covering wars or conflicts for the American people. One who finds a truth lights a torch."

At the press club later in the day, there was an unveiling of a plaque containing a list of the 227 journalists known to have lost their lives while covering wars and conflicts since World War I.

ABC News correspondent Steve Bell, master of ceremonies for the dedicatory events, said sponsors had already learned of at least three omissions from the list. He urged news organizations with additional names to contact No Greater Love, 1750 New York Ave. N.W., Washington, D.C. 20006. □

Margaret Genovese

James and Sarah Burrows search the plaque for the name of their grandfather, Life photographer Larry Burrows, who was killed in Vietnam in 1971. Looking on are David Ulizio (left), grandson of combat correspondent James J. McElroy who was killed in Iwo Jima in 1945, and Alice Ducq, granddaughter of International News Service reporter Ray Richards who was killed in Korea in 1950.

APME reports cover full range of newsroom issues

Key trends and issues in reporting the news are examined in detail in the 1986 Continuing Studies reports by committees of the Associated Press Managing Editors Association.

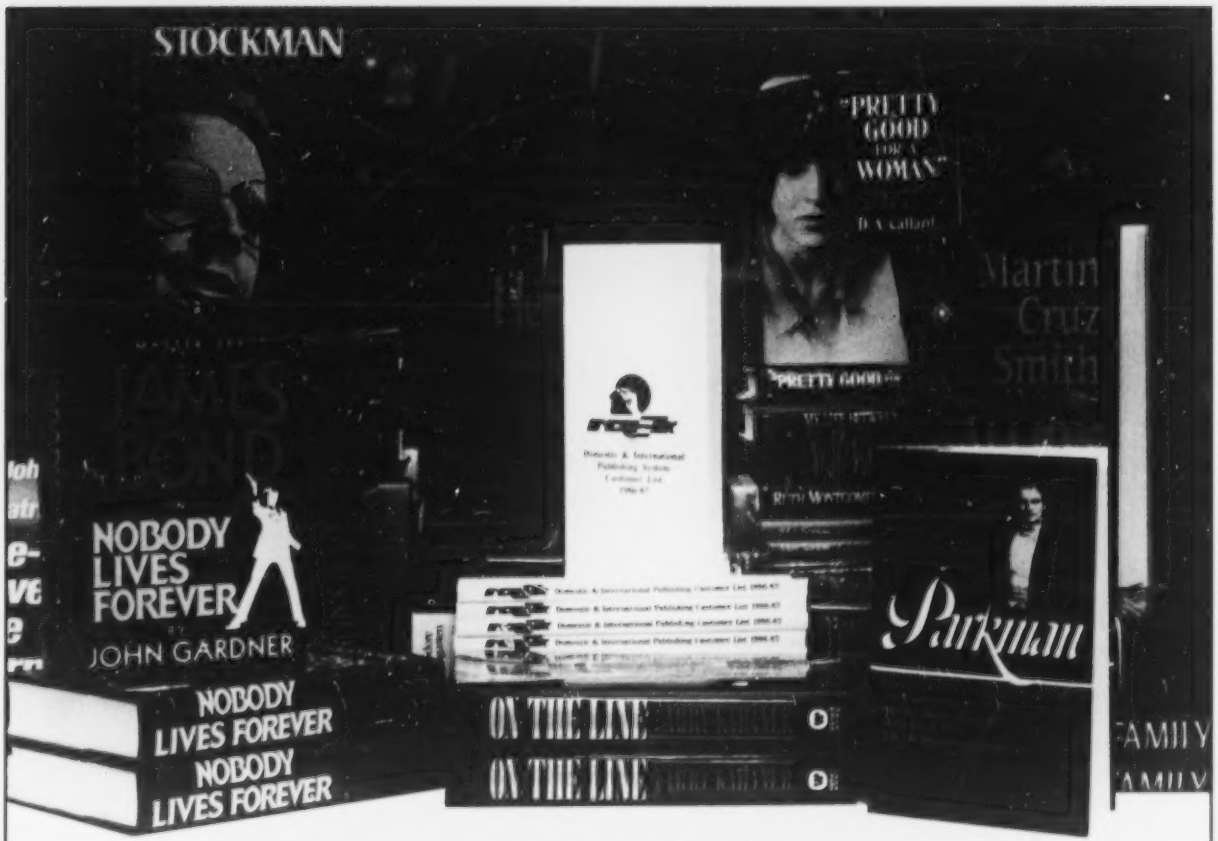
The reports were issued at the APME's annual convention Oct. 21-24 in Cincinnati.

A limited number of single copies of 11 of the 17 Continuing Studies reports are available from the ANPA Public Affairs Department at The Newspaper Center, Reston, Va. The committees, their reports and committee chairmen are:

- Credibility and Professional Standards: "Credibility: Maintaining the Vigil," Robert W. Ritter, The Sun, San Bernardino, Calif.
- Newsroom Management: Beverly Kees, Post-Tribune, Gary, Ind.
- Business and Economics: "They're Taking Off," Robert Cochnar, San Francisco Chronicle
- Freedom of Information: Robert E.L. Baker, The Free Lance-Star, Fredericksburg, Va.
- Sports: "How the AP Performs, APME Survey," W.F. Cento, St. Paul Pioneer Press and Dispatch
- Telecommunications and Technology: "Personal Computers," Frank Simmons, Daily Press and The Times-Herald, Newport News, Va.
- Changing Newspapers: "What Editors are Doing to Improve Readership," Ralph Langer, The Dallas Morning News
- Minorities: "Minorities: Recruitment, Mainstreaming, Coverage," Reid MacCluggage, The Day, New London, Conn.
- Media Competition: "TV Books," Earl Maucker, Fort Lauderdale News and Sun-Sentinel
- Writing and Editing: "The Well-Edited Newspaper: Putting the Pieces Together," Leonard Pardue, The Courier-Journal and The Louisville Times
- Photo and Graphics: "Would You Run These Photos?" James F. Vesely, The Detroit News.

Not currently available from ANPA are the following reports:

- Commentary: Luke Feck, The Columbus (Ohio) Dispatch
- Foreign News: "Reporting on Central America: How Good is It?" Sue Reisinger, The Miami News
- Future Directions: "The Adventures of Super Editor," Richard Archbold, Press-Telegram, Long Beach, Calif.
- Marketing and Research: "Focusing on Research," Lawrence K. Beaupre, Westchester Rockland Newspapers, White Plains, N.Y.
- Journalism Education: "Report on Journalism Education," Janet Brandt, The Tacoma (Wash.) News Tribune
- General News: Michael E. Waller, The Hartford Courant □



Must reading before you buy a Front-end System.

Now in its 9th printing.

Write or call for your FREE copy today. It's our customer list. Chances are you'll find a publisher who has about the same circulation... puts out about the same number of pages... an operation very similar to your own. He's probably just down the road a few miles, and he's using a Mycro-Tek System. CALL HIM! Ask him about his system, what he likes or doesn't like. You'll get honest answers from a fellow publisher.

Call some more listed in the book, and ask them anything you want. After a few calls we think you will see why we have over 800 installations in the U.S. and 35 foreign countries.

What other system vendor has the guts to give you a complete customer list... and let you decide who you call?

Now make a FREE call — 1-800-835-2055. Next year be a part of a best seller that money can't buy.

P.S. If you're close to signing a deal, we'll Fed-X the book overnight.

Media education campaign gets $150,000 start

Project Watchdog, the $1-million media campaign to educate the public on the value of a free press, got off to a running start in October with a $150,000 grant from the Robert R. McCormick Charitable Trust.

Sponsored by the Society of Professional Journalists, Sigma Delta Chi, the campaign was recently approved by the Advertising Council. This means once the society has raised the $1 million for ad production, it could get as much as $25 million in free advertising space and ad time [presstime, Sept. 1986, p. 45].

The full amount of the McCormick grant will be spread over three years. It is expected to be a "catalyst" for other media contributions, said SPJ,SDX Executive Officer Russell C. Tornabene. □

ASNE protests 'disinformation'

The American Society of Newspaper Editors expressed "outrage and alarm" at "evidence that senior officials of the Reagan administration have been involved in an incident to spread 'disinformation' regarding U.S. policy toward Libya."

"This calculated technique of falsehood, commonly employed by totalitarian governments as an instrument of policy, is repugnant to American democratic principles and destructive of the role of the press in a free society," the ASNE board said in an Oct. 11 telegram to President Reagan. □

Press and education seminar Nov. 9-11

The First Amendment Congress will sponsor a conference Nov. 9-11 on matters involving the press and education. Called "First Amendment Issues: Schools in a Free Society," the conference in Williamsburg, Va., will focus on three points: media coverage of education and access to the media by educators; student press rights and responsibilities; and challenges to textbooks, other curriculum materials and books in school libraries.

In another development, the congress has raised $197,000 for a permanent office [presstime, Dec. 1985, p. 45]. □

Presentations available from well-attended conference on marketing strategies

ANPA's first-ever conference on "Creative Marketing Strategies to Win Readers and Advertisers" drew 223 participants from 34 states, four Canadian provinces and four foreign countries.

The Oct. 16-17 conference at Hyatt Regency O'Hare, Chicago, was sponsored by the ANPA Circulation and Readership Committee in cooperation with the Newspaper Advertising Bureau's Future of Advertising Committee, the American Society of Newspaper Editors, International Newspaper Advertising and Marketing Executives, International Circulation Managers Association, International Newspaper Promotion Association and the Newspaper Research Council. Program chairman was Thomas Curley, president of USA Today.

Audio cassettes are available from ACTS Inc., 1025 E. Clayton Road, Ballwin, Mo. 63011; (314) 394-0611. Cost with shipping is $102 for the full conference and $9.50 for individual tapes.

Single copies of 19 texts from the conference are available from the ANPA Public Affairs Department, Box 17407 Dulles Airport, Washington, D.C. 20041. They are:

- "What We Know About Single Copy Sales and Buyers"—Virginia Dodge Fielder, vice president/news and circulation research, Knight-Ridder Inc., Miami; Jay T. Harris, executive editor, Philadelphia Daily News
- "Point of Purchase Newspaper Promotion"—Barbara van Pelt, marketing manager, The Dallas Morning News
- "Promoting the News"—Robert T. Burns, vice president/marketing and administration, USA Today, Arlington, Va.
- "Making the Most of Special Events"—Richard P. Honack, manager of promotion and special events, Chicago Tribune
- "What We Know About Weekday and Weekend Newspaper Circulation"—Albert E. Gollin, vice president/associate director of research, Newspaper Advertising Bureau, New York City
- "Trend Analysis and Newspaper Marketing Strategies"—C. Gordon Wade, president, The Cincinnati Consulting Group
- "The Weekend Package"—Michael R. Fancher, Executive Editor, The Seattle Times
- "Reader Access Sections"—Clement C. Winke, president and publisher, Boca Raton (Fla.) News and News of Delray Beach
- "Weekday Advertisers"—Conrad A. Kloh, director of sales and marketing, The Arizona Republic and The Phoenix Gazette
- "Weekday Readers"—James D. Squires, executive vice president and editor, Chicago Tribune
- "The Move to Daily Publication"—Daniel E. Baumann, president and editor, The Daily Herald and Paddock Publications Inc., Arlington Heights, Ill.
- "Keeping Up With an Expanding Market"—Stuart Schwartz, corporate director of newspaper marketing, Lee Enterprises Inc., Davenport, Iowa; John H. Blexrud, vice president/marketing director, The Orlando Sentinel
- "Strategic Sellers: Urban Encounters"—Joseph M. Ungaro, president and general manager, Westchester Rockland Newspapers, White Plains, N.Y.; Robert Comstock, executive editor, The Record, Hackensack, N.J.; James S. Toedtman, managing editor, New York Newsday; James P. Willse, vice president/managing editor, New York Daily News
- "Strategic Sellers: Targeting for Success"—Beverly A. Barnum, corporate director of market research, Harte-Hanks Communications Inc., San Antonio
- "Targeting for Success: Promotion"—David J. Andree, marketing services manager, San Francisco Newspaper Agency
- "Targeting for Success: Circulation"—Ralph L. Harrington Jr., Manager/north home delivery, Houston Chronicle
- "Targeting for Success: Editorial"—James T. Robison, managing editor, The Orange County (Calif.) Register
- "Targeting for Success: Advertising"—James F. Fowler, marketing director, Winston-Salem (N.C.) Journal
- "Conference Review and Closing"—Thomas Curley, USA Today; Baumann, Paddock Publications Inc.; Ungaro, Westchester Rockland Newspapers; Barnum, Harte-Hanks; Philip K. Hanna, vice president/group circulation, The New York Times Regional Newspaper Group; and Reg Murphy, publisher, The Baltimore Sun. □

U.S., Russian journalists resume efforts for exchange visits

Following the Soviet Union's release of U.S. newsman Nicholas S. Daniloff, two proposed exchange visits between U.S. and Soviet journalists are getting back on track.

The American Society of Newspaper Editors Oct. 14 contacted the Union of Journalists, an 8,600-member organization including most media employees in the Soviet Union, to try to reschedule a visit by Soviet journalists to the United States. There was no response by press time.

The visit was to have begun Sept. 21, but was called off after ASNE said it would be "inappropriate" for the delegation to come to the United States at that time.

Similarly, faculty at Columbia University's Graduate School of Journalism have reopened discussions with Soviet journalists and the Alerdinck Foundation, a Netherlands organization attempting to improve East-West relations through communications. The parties are trying to arrange an exchange in which three young Soviet journalists would spend time working at U.S. newspapers and three young Russian-speaking U.S. journalists would do the same at Soviet papers.

Discussions ceased following Daniloff's arrest, and faculty members sent a telegram of protest to the Soviet Union's U.S. ambassador.

Donald R. Shanor, Cabot professor of journalism, said he hoped the exchange could take place by late spring. He invited newspaper publishers and Russian-speaking journalists interested in participating in the program to contact him at (212) 280-3837.

Daniloff, Moscow correspondent for U.S. News & World Report, was released Sept. 29 in a deal in which the Soviet Union also freed a jailed dissident and the United States released a Soviet United Nations employee who had pleaded no contest to espionage charges [presstime, Oct. 1986, p. 51].

Foreign journalist trainers needed

The Center for Foreign Journalists is looking for senior and retired news executives who want to spend time in a developing country training foreign journalists. The center has received numerous requests for names of such executives from U.S. organizations involved in training foreign journalists.

There already have been more than 40 such training missions sent abroad from the United States this year, and CFJ Executive Director George Krimsky said the number of requests is expected to grow.

In addition to collecting names for the organizations, CFJ itself is taking an active role in training senior and retired journalists for such missions. Assisting the center with a recent one-week training program for 11 U.S. news executives was J. Edward Murray, an experienced trainer and former president of the American Society of Newspaper Editors and the Associated Press Managing Editors.

For more information, contact CFJ, 11690-A Sunrise Valley Drive, Reston, Va. 22091; (703) 620-5984.

Murray (left) and Krimsky listen at a recent meeting in Reston, Va., for U.S. news executives preparing to serve as trainers.

Press groups protest Colombian reporter's treatment in U.S.

ANPA, the American Society of Newspaper Editors and the Reporters Committee for Freedom of the Press separately have asked federal officials to explain why a Colombian newspaper reporter was detained and denied entry to the United States in October.

Patricia Lara of El Tiempo in Bogota was stopped by immigration officials at a New York airport on her way to attend an awards ceremony at the invitation of Columbia University's Graduate School of Journalism.

Lara has filed a $5-million administrative claim against immigration officials.

ANPA filed a Freedom of Information Act request seeking materials accounting for the Immigration and Naturalization Service's including Lara's name in its "lookout book" of aliens who are inadmissible to the United States.

"If she was listed solely because of her writings, there is great reason for concern. If, on the other hand, the government took its action for different reasons, then an explanation of those reasons is in the government's and the public's best interest," said Jerry W. Friedheim, ANPA executive vice president, in a letter to Attorney General Edwin Meese III.

ASNE President Michael G. Gartner said the press cannot protest the detention of journalists around the world, such as U.S. reporter Nicholas Daniloff, "and ignore the inexcusable circumstances surrounding the recent detention of Colombian journalist Patricia Lara."

Also protesting were the Committee to Protect Journalists, Inter American Press Association and The Newspaper Guild.

WORLD PRESS NOTES

• The World Press Freedom Committee will sponsor a **world conference on censorship** in London Jan. 16-18. Plans call for more than 100 people to be invited to participate in the conference, which will focus on practical measures to alleviate growing limitations on press freedom.

Arrangements for the conference will be coordinated by Hewson A. Ryan, director of the Edward R. Murrow Center of Public Diplomacy at Tufts University's Fletcher School of Law and Diplomacy.

• ANPA has registered strong protest with the government of Malaysia over **harassment of The Asian Wall Street Journal**.

Disturbed over articles published in the Journal, Malaysia had banned distribution of the paper for three months and expelled two correspondents.

The incident was not the first threat to the U.S. paper in Asia.

• A **Nigerian journalist was killed** Oct. 19 as a parcel delivered to his home exploded when he opened it.

Dele Giwa, editor-in-chief of Newswatch magazine, had been interrogated by Nigerian officials several days earlier when he was accused of plotting a revolution and importing arms.

Newspapers eye keyless offset as a way to reduce waste, manpower needs

Newspapers with offset presses have long complained about the amount of newsprint they waste at the start of the press run as an operator adjusts keys to find just the right balance of ink and water to produce a salable copy.

And when newspapers like the St. Petersburg Times (morning circulation 315,698) and Evening Independent (39,998) spend upwards of $38 million annually for newsprint, the waste can mount up to $500,000 to $750,000.

It is for that reason the St. Petersburg papers will begin testing a keyless or "anilox" offset system next summer. The Graphic Systems Division of Rockwell International (Goss) will convert two units of a Goss Metro press to a keyless inking system that includes anilox rollers and "doctor" blades.

Other U.S. newspapers have tested keyless offset but only in black-and-white printing. St. Petersburg will test color.

"We believe that keyless offset is definitely the way offset will go" in coming years.

In 1977, ANPA unveiled a keyless inking system for letterpress printing; it was the forerunner of adapting flexographic printing methods for newspapers. A short time later, ANPA researchers developed keyless inking for offset presses.

According to William D. Rinehart, ANPA vice president/technical, a keyless inking system for offset presses offers many of the advantages of flexography. In the last couple of years, as flexo's advocates have trumpeted that process's advantages, interest in keyless offset also has been surging, he said.

Like flexography, keyless offset "reduces manning requirements and reduces newsprint waste," Rinehart noted. "We believe, as do many of the press manufacturers, that keyless offset is definitely the way offset will go" in coming years.

The kinship between keyless offset and flexography has been affirmed at Goss, where Vice President and General Manager Les Kraft said some of the research being conducted to produce its first flexographic press has been found applicable to keyless offset.

Other recent examples of interest in keyless offset include these developments:

- The New York Times decided to continue its testing of Goss keyless offset until the end of this year, at which time it will choose whether to convert other units to anilox inking.
- Tokyo Kikai Seisakusho, a Japanese press company, has been testing a keyless offset press in the laboratory and in daily production at a Japanese newspaper. Next spring, the company will release a detailed evaluation of the system's printing performance and marketability.
- Testing of an ANPA-designed anilox offset system continues at the Burlington County (N.J.) Times, where newspaper production executives have reported it has proved to be cost-effective.
- A six-month test of keyless offset last year at The Commercial Appeal in Memphis left the newspaper's director of operations convinced that keyless offset is indeed the wave of the future.

Next year's test in St. Petersburg will attract even greater attention, of course, because of the addition of the color factor. Ralph E. Imhof, the St. Petersburg printing plant manager, said process color appears on one of every four pages of the Times and Evening Independent.

Imhof said that after observing the black-and-white testing in New York City and Memphis, his dailies wanted to determine whether color can be run efficiently and consistently on keyless offset presses. "We like to be innovators," he said, "but not at the expense of what we

Reliable technology.

☐ The X-Rite B318 battery powered color reflection densitometer is unmatched in accuracy, stability, and reliability ☐ Powered by **rechargeable ni-cad batteries**, this small, but mighty quality control tool provides thousands of printers precise density measurements day in, day out. ☐ The B318 incorporates X-Rite's exclusive **electronic filter selection** capability which enables you to move from one color channel to another with the push of a button. ☐ For added convenience the B318 is equipped with a **"low battery" indicator** along with an **AC power source adaptor**. And you can order the B318 with either standard graphic arts or narrow-band response. ☐ To learn more about how X-Rite's technology can benefit your printing operation call us toll free at **1-800-248-9748**. Highest standards for all newspaper inks

No other inks give you as consistent, trouble-free performance on the press, or as clean and crisp reproduction on paper. That's because our standards are the most demanding in the industry. In formulation, in manufacturing, in testing, in delivery systems.

Every ink has the right body and flow to provide excellent distribution from fountain to inking rollers to printing cylinders. Halftones look fresh and sharp, solids lay down smoothly. U.S. inks set fast on the paper with minimum rub-off, linting, and picking. Great scuff resistance brings your papers through collection and folding without streaking or smudging.

Mileage? You simply can't beat it with anybody's ink.

US U.S. Printing Ink

East Rutherford, NJ; Washington, DC; Jacksonville, FL; Cincinnati, OH; Chicago, IL; Dallas, TX; San Francisco, CA; Los Angeles, CA

consider to be our excellent print quality."

Imhof said, however, that if keyless offset emerges as a viable press option, "it would save us a great deal of money." Exact figures are difficult to obtain, but press manufacturers said converting an offset press to anilox inking would cost from one-third to one-half as much as buying a new flexographic press.

WORKING OUT BUGS. According to those who already have tested keyless offset, some bugs remain to be worked out, but they believe this will happen as more testing is done.

"The testing we did for six months last year was very experimental and limited, but I feel there's a definite future in keyless offset," said Jim Fenley, director of operations for The Commercial Appeal. For the test there, Goss converted a Metro offset press unit to keyless inking.

"It really makes a lot of sense," Fenley said. "You can reduce manning, conserve ink and get good print quality. I believe most offset presses will be keyless in the not-too-distant future."

Keyless offset works in much the same way that flexography does. An anilox roller engraved with microscopic cells rotates through an ink trough, and the cells carry ink to the plate. The doctor blade wipes away excess ink.

When it works, "It's a thing of beauty. It does everything we want it to," J.A. (Andy) Riggs Jr., senior vice president/operations of The New York Times, told a meeting of the International Newspaper Conversion Group in Washington, D.C., in late October.

However, Riggs compared keyless offset right now to a golfer who shoots well on the first nine holes, then falters on the back nine. He feels its potential is just as great as it was two or three years ago but admits to some frustration with time lost to doctor blade and anilox roller adjustments.

Another problem, Riggs said, is that the testing itself requires closer monitoring of ink, paper and plates. "We don't always have time to do that. We have a lot of newspapers to produce."

But he emphasized that when the presses are running well, few adjustments are necessary. And the pressmen who work with the Goss keyless inking system every day are convinced the desired consistency will someday be there, he said.

Halfway around the world, field testing of the TKS keyless offset press is also showing promise. John E. Hall, senior vice president with Taft Equipment Sales, the U.S. marketing agent for TKS, said results to date have been "very favorable."

TKS first demonstrated a keyless offset press at ANPA's annual equipment exposition in 1983. After it was shown, the press was taken back to Japan for further research.

"I believe our tests in Japan have proved that black-and-white can be produced consistently. Now we need to develop color," Hall said.

"Our evaluation will look at everything, including how well plates, inks and paper perform. We will need that kind of detailed information in order to decide whether or not there is a market for such a press. And the people who buy them will want the information before making a switch." —*Rosalind C. Truitt*

TECHNOLOGY NOTES

• The Graphic Systems Division of Rockwell International (Goss) has introduced a **vertically stacked offset press** for newspapers. The Colorliner, which can print color on both sides of the web, will enable companies to print both newspapers and commercial work on the same press.

The design calls for four vertical units that can print up to 16 process color pages.

According to the company, advantages of vertical stacking include space savings as well as improved registration because distance between printing couples is reduced. The firm said the Colorliner will print up to 75,000 broadsheet copies per hour on straight runs or 37,500 "collect."

The first one has been purchased by The Times Journal Co. of Springfield, Va., and is scheduled for delivery in early 1988.

• The Graphic Arts Technical Foundation has announced a new study to determine the extent of **commercial printing by newspapers**.

GATF says the study will cover more than 7,000 daily and weekly newspapers and will feature profiles of several newspapers in the commercial-printing business.

The completed report is expected to be available next spring.

• Members of all currently organized national flexographic groups recently **formed the International Flexographic Technical Association.**

The group is composed of flexographic technical associations from the United States, Italy, the United Kingdom, France, Japan, Holland and West Germany. National groups are also forming in Australia, New Zealand and Brazil.

One of the umbrella group's first projects will be to compile a reference work, *Flexo Source Guide to Presses, Supplies and Equipment*.

In addition, IFTA is planning to conduct an international awards competition next year for newspaper and other types of flexographic printing.

• Also on the flexographic front, the U.S. Flexographic Technical Association has compiled in book form 25 **"Beginning Flexographer" articles** that appeared in its journal during 1984-85.

Covering such topics as inks, substrates and press maintenance, the articles are based on formal papers and workshop presentations.

The book costs $12 for FTA members and $24 for non-members. To order, contact David Pastrich, director of training and education, FTA, 95 W. 19th St., Huntington Station, N.Y. 11746.

TECHNOLOGY CALENDAR

• **TypeView '87,** a seminar sponsored by National Composition Association, will be Nov. 14 at the Royal Sonesta Hotel in Cambridge, Mass.

• The National Printing Equipment and Supply Association will hold its **Print Outlook Conference** Dec. 1-2 at the Hyatt Regency Capitol Hill in Washington, D.C.

• **Paper and Ink Problems in the Pressroom,** a seminar sponsored by the Graphic Arts Technical Foundation, will be Nov. 22 at American Host Farm Resort in Lancaster, Pa.

• **Computer Graphic Arts**, a seminar, will be Dec.7-10 at the Marriott Marquis in New York City.

• A seminar on **Color Separation and Electronic Scanning**, sponsored by the GATF, will be Dec. 13 at the Greetsboro/High Point (N.C.) Marriott.

• Expocounsul International will sponsor a **Microcomputer Graphics Show and Conference** Dec. 17-19 at the Jacob K. Javits Convention Center in New York City.

• **Graphics of the Americas '87,** a graphic arts trade show, will be Jan. 23-25 at the Miami Beach Convention Center.

New guidelines suggested for standardized retail research

Standardization, a key prescription in efforts to improve the financial health of newspapers, has reached another area—research.

Publication of the Future of Advertising Project's "Guidelines for Standardized Retail Research" in September concluded years of work by several newspaper organizations on how to present research data to retail advertisers [presstime, June 1986, p. 64].

"It happened in less than two years, and I didn't think it would happen in my lifetime," said Lee M. Dubow, senior vice president of corporate sales promotion for Belk Stores Services in Charlotte, N.C.

Representing the National Retail Merchants Association, Dubow had worked with committees of the International Newspaper Advertising and Marketing Executives, the Newspaper Research Council, and the Newspaper Advertising Bureau to develop the guidelines.

The final version of the guidelines was hammered out by a subcommittee of the Marketing Data Task Force of the Newspaper Advertising Bureau's FOA project. The subcommittee was headed by John T. Mennenga, senior vice president/marketing and research for the newspaper rep firm of Sawyer-Ferguson-Walker Co.

Retailers "never questioned we put out a lot of research. But they wanted it to be easy to read," said Albert (Tappy) August, assistant advertising director of Richmond (Va.) Newspapers. "The key word is 'packaging.'"

The guidelines spell out uniform ways to gather and present data, including demographics, methodology and format.

"Now if Belden (Associates in Dallas) does a study for a newspaper in Maine and Simmons (Market Research Bureau in New York City) does one for a paper in Oregon, the information coming out of these will have the same common questions, demographic breaks and format," said Mark Mattison, media information and systems manager for Knight Ridder Newspaper Sales.

The result of this uniformity, said Belk Stores' Dubow, is that large retail advertisers may be more likely to include more newspapers in their advertising schedules.

"Major markets we understand," but without comparable research data, many others are "sort of nonen[i]ties," said Dubow, whose company has 350 stores in 16 states and currently advertises in more than 225 newspapers.

Those supporting the guidelines also made it clear that they are "minimums" and in no way limit additional research conducted or commissioned by individual newspapers.

Also recently produced through another FOA task force—Readership and Retention—is a "working paper" on circulation retention by John Mauro, former research director of Richmond-based Media General Inc.

Unlike the guidelines for retail research, "Promoting Circulation Sales" poses questions. According to Mauro, the main one emerging from an analysis of the strategies employed by 15 newspapers of various sizes is this: What kind of sales pitches should a newspaper use?

Former Scripps Howard executive Robert H. Hartmann is chairman of the Marketing Data Task Force, and Baltimore Sun Publisher Reg Murphy heads the one on Readership and Retention.

Copies of both publications are available from NAB, 1180 Avenue of the Americas, New York, N.Y. 10036, (212) 921-5080, ext. 397. The cost is $3 for the research guidelines and $4.25 for the circulation report. □

Another paper goes to one ad rate

Rate parity—a long-time demand of national advertisers—has claimed another ally—The Globe and Mail of Toronto.

Beginning Jan. 1, 1987, the differential between national and retail rates will be virtually gone at the Canadian daily.

To accomplish this, the paper has "aggressively moved up retail rates and held national rates flat or reduced them," says Marketing Director Mike Soliman.

Replacing this rate differential is a more clearly defined system of pricing ads by the newspaper section in which they appear. Under this system, the prime section is business, then front-section news, followed by sections like fashion, travel, entertainment and sports.

"It's almost like the television approach, where we are saying, 'prime time is one thing and morning shows are another,'" says Soliman. "We don't have a line rate anymore."

At the same time, The Globe and Mail has raised its overall rates only 3 percent, instead of the 6- to 12-percent hikes of the past, he says. "We have said to our advertising community: 'As we get our act together, we will pass on our savings to you.'"

Although confident these choices will be profitable in the long run, Soliman says "it's a fairly gutsy move because it is costing us some money in the transitional phase."

At least two other newspapers have launched ad-parity programs this year. They are The Wichita (Kan.) Eagle-Beacon and The Toronto Sun [presstime, Sept. 1986, p. 51]. □

'Goodwill' writeoff leaves Advo with large loss

Advo-System Inc., one of the largest direct-mail operations in the country, reported a third-quarter net loss of just over $48 million, or $4.16 per share, compared with a net loss of $5.615 million, or 48 cents a share, for the same period of 1985.

But the company said the new figure does not portray its true financial picture, which, it said, is positive.

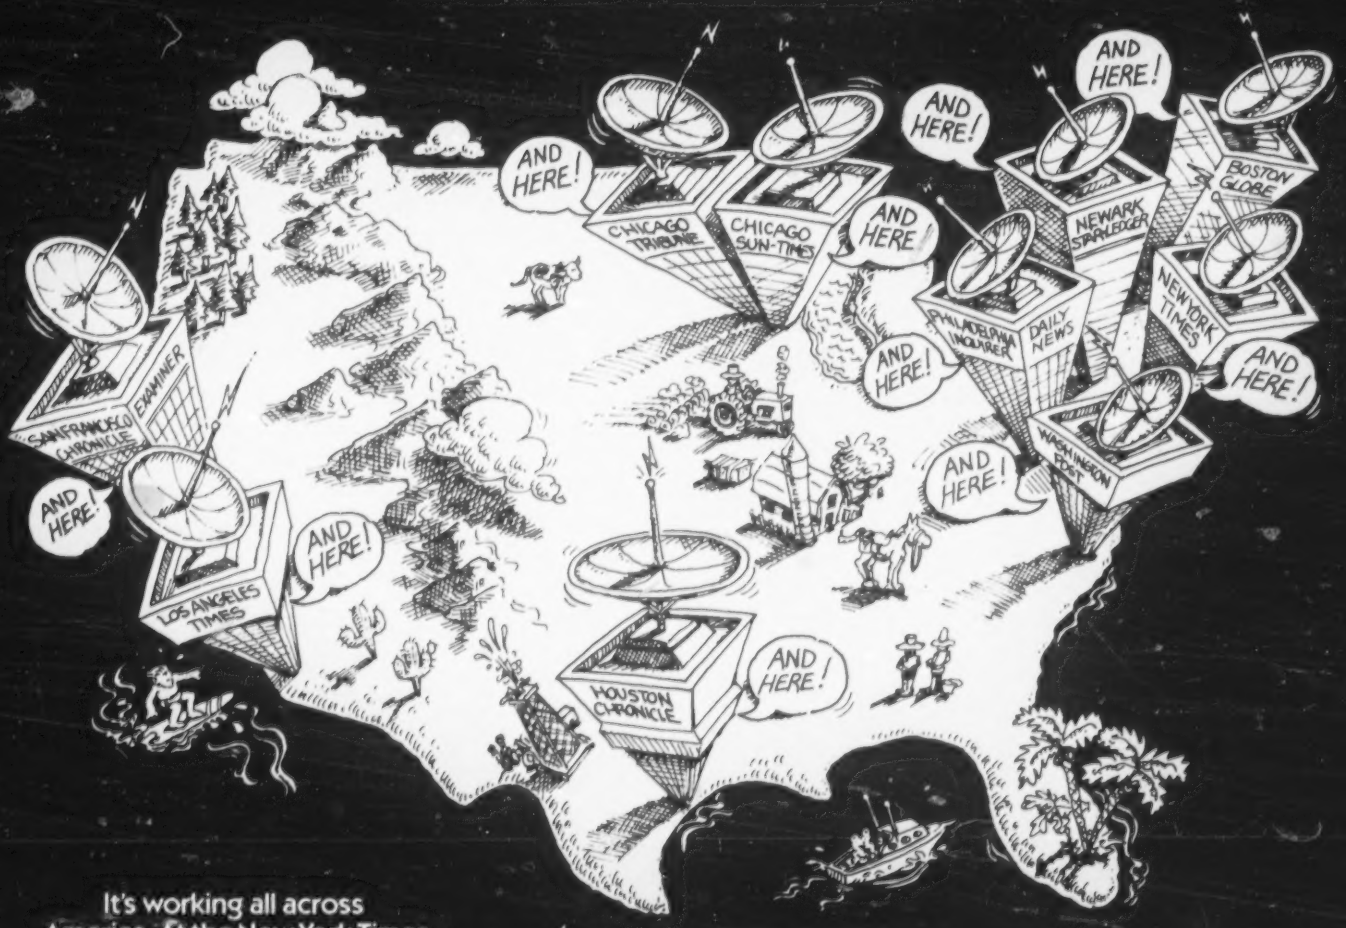
Craig Humphrey, Advo vice president of financial development, said the reason for the large net loss is a one-time, pre-tax "goodwill" write-off of $75.2 million. "The goodwill entry has nothing to do with operations, nothing to do with cash flow," he explained.

Without counting the goodwill loss, Humphrey said, the company had a pre-tax profit for the quarter of $2.15 million.

The goodwill was an "intangible asset" added to the books when John Blair & Co. purchased Advo in March 1984, he said. All of that goodwill has been written off in conjunction with Advo's recent purchase by Warburg, Pincus Capital Partners [presstime, Sept. 1986, p. 50].

The fourth quarter will reflect no goodwill and "is going to be profitable," Humphrey said. □

THE ADS FROM OUTER SPACE ARE HERE!



It's working all across America. At the New York Times. Newark Star-Ledger. San Francisco's Chronicle and Examiner. The Boston Globe. In Chicago, at the Tribune and Sun-Times. In Philadelphia, at the Inquirer and Daily News. It's working for the Washington Post, Houston Chronicle and Los Angeles Times.

These are pioneer AD/SAT newspapers. AD/SAT – the satellite network that's linking advertising agencies with newspapers, to deliver ads at the speed of light. Eliminating the late, the mangled, the lost and the unreproducible. Ending your worries about ads which never run. Revenue you never see.

Demonstration agencies are now sending repro material to these newspapers. The transmission takes seconds. And the quality of reproduction would make any production manager dance for joy.

What's more, there's also the added bonus of an electronic message system – for the first time directly linking ad agencies with newspapers and their representatives.

The number of AD/SAT newspapers is rapidly growing, because the dream is now a reality. So are the benefits.

If your newspaper hasn't explored ads from outer space yet, now's the time.

Write: AD/SAT, 527 W. 34th Street, New York, NY 10001. Or call: 212/330-0678.

AD/SAT.

We deliver newspaper ads at the speed of light.

Workers tell of drug problems

In its "Among Ourselves" house organ, the Los Angeles Times is running a series of first-person articles by employees who are recovering alcoholics and/or drug addicts.

In the articles, the employees detail the extent of their addiction and the steps they have taken toward recovery. The publication noted that alcohol abuse and drug addiction are problems common to an estimated 15 percent of Times employees.

The newspaper, which has an employee assistance program, began screening job applicants for drugs last year [presstime, Nov. 1985, p. 58].

The series originated from the suggestion of employees who meet regularly as a support group. They asked their employee assistance program counselors if it would be helpful to share their experiences with other employees. The counselors presented the proposal to management.

"It's timely and good that information is being shared and the seriousness of the problem is coming to light," said James D. Boswell, vice president of employee and public relations. "All of it is part of an ongoing drug and alcohol education program that we have at the Times."

In the first installment, published in the September issue of the house organ, a middle-management employee described his experiences with cocaine, LSD, marijuana and alcohol. "I remember one occasion where I mixed cocaine with white baking flour to try and cut it," he said. "I sniffed it all with the white baking flour. I baked bread in my nose. I was sick! It was terrible!"

The employee also said he remembered returning to the office after drinking margaritas at lunch and giving telephone callers "any outrageous lie I needed to tell to get them off the phone because I could not understand what they were talking about. All I knew was that I couldn't communicate."

The third-generation Times employee said there were times when he would try to control his drinking. "I would know that I had specific responsibilities that I had to fulfill and so instead of drinking eight or nine pitchers of margaritas, I would drink two or three." He said he hit rock bottom when he woke up one morning to find he had driven a company car into a cinderblock wall.

After entering Alcoholics Anonymous, he said he regained control of himself. "I've been promoted into management in my sobriety. I'm interested in my career at The Times. I have a greater interest and enthusiasm in being able to contribute to this organization than I ever had. I loathed this organization for nine years, and I've been here 10. Now I like it."

In the second of the series, published in October, a female employee said she "bought most of my drugs," including Quaaludes, "here in the company."

She also said she drank every day at lunch. "I started getting promotions, and I was still drinking," she said. "I always felt like I wasn't really good enough for these wonderful things happening to me. I thought, 'Boy, if they ever find out how much I drink. . . .'"

She also sought help from AA. "I've been sober since that first meeting," she wrote. "Everything's changed for me. My attitude about the job is so much better. My home life, my level of serenity, they're just like gifts. It's far beyond anything I ever imagined.

"I know there are a lot of women out there who are embarrassed, and they think that it's not a ladylike thing to have this disease. But alcoholism affects all classes of people, male and female.

"What [an alcoholic woman] has to remember is that the best thing that she could do for herself and the people around her is to seek help." □

Court denies damages to discharged employee in Hartford case

The Connecticut Supreme Court has upheld The Hartford Courant in a suit filed by a former circulation department employee seeking damages for wrongful discharge and for the infliction of emotional distress.

The employee was fired in 1981 on grounds he had misappropriated company funds. He alleged that his discharge was based on a false accusation.

At issue was whether the plaintiff was covered by the "public policy" exception to the general proposition that a non-contractual employee can be discharged "at will." The court noted that an employer is allowed, in ordinary circumstances, to make personnel decisions without fear of incurring civil liability. Employee job security, however, is protected against employer actions that contravene public policy [presstime, Sept. 1986, p. 32].

The former employee alleged that the company had "negligently investigated" the circumstances surrounding his discharge. But the appeals court agreed with a lower court's conclusion that such an allegation does not mean there was "an important" violation of public policy.

In addition, the court said that the plaintiff's allegations were insufficient to maintain an action for unintentional infliction of emotional distress.

(Morris v. Hartford Courant Co., No. 12756) □

No miscarriage risk found in VDT work

Scientists at the University of Michigan have concluded that pregnant women who work at video display terminals for fewer than 20 hours a week do not have an increased risk of miscarriage.

The study found a slight—but not "statistically significant"—increase in the number of miscarriages among women who worked more than 20 hours a week at VDTs. More research is needed in this area, the scientists said.

The researchers selected 728 women for in-depth personal interviews from 4,215 Michigan state employees who responded to questionnaires.

Another study of possible adverse effects on pregnancy from the use of VDTs is under way at the National Institute for Occupational Safety and Health [presstime, July 1986, p. 64]. □

ITU awaits outcomes of referendum on CWA merger and elections

The future course of the International Typographical Union will be charted by the end of November when ballots are counted in a membership referendum vote on merging with the Communications Workers of America.

The merger is expected to be approved by the members. It would change the ITU into the Printing, Publishing and Media Workers Sector of the CWA [presstime, Sept. 1986, p. 56].

The mail-ballot referendum is being conducted by the American Arbitration Association, with a cutoff date of Nov. 19 for receipt of ballots at AAA headquarters in New York City. The ballots will then be sent to AAA's Denver office for counting Nov. 25.

Also to be tallied are the ballots in the election for international officers, including a challenge by Vice President Allan J. Heritage to the incumbency of President Robert S. McMichen.

Meanwhile, the efforts of one large mailer local to disaffiliate from the ITU has resulted in a disruption of collective bargaining at some newspapers in the San Francisco Bay area. San Francisco-Oakland Mailers' Union No. 18, with about 870 members, had voted 388-75 to disaffiliate from the ITU. But the international union, with the approval of U.S. District Judge Thelton E. Henderson, put the local into trusteeship under the supervision of ITU International Representative Kenneth N. Prairie.

Lawyers for the ITU successfully argued before Henderson that the disaffiliation vote should not be recognized. The ITU's bylaws stipulate that an affiliate's vote to break away from the union is invalid if 15 or more members appeal. After the vote, the mailers' union asked its members by mail ballot if they wished to join forces with the Teamsters, but the ballots were impounded under an order from Henderson.

While the appropriateness of the trusteeship was being litigated, two newspaper companies that had been in new contract negotiations with the mailers' local filed representation petitions with the National Labor Relations Board. The San Francisco Newspaper Agency, the company that handles non-editorial functions of the San Francisco Chronicle and the San Francisco Examiner, and The Modesto Bee asked the board to determine what union, if any, represented the mailers' units at their plants.

The NLRB has agreed to process the Modesto petition, but it has taken no action on the one from the San Francisco agency. The agency has said it will not bargain with the mailers until their bona fide representative is determined.

Elsewhere, in late October, members of Minneapolis-St. Paul Mailers' Union No. 4 voted 227-1 in favor of representation by the Teamsters. They had voted 246-6 earlier in the month to disaffiliate from the ITU. —*Clark Newsom*

NLRB orders newspaper to resume bargaining on new agreement

The NLRB has ordered The Idaho Statesman of Boise to resume bargaining with a union and to restore the working conditions that existed before the company put its final proposal for a new labor agreement into effect.

The newspaper is appealing the order in the U.S. Court of Appeals, District of Columbia Circuit.

The case arose during negotiations with Typographical Union No. 271 over a new contract for mailroom employees. The company proposed, among other things, that trainees covered by the previous agreement be absorbed into a new "helper" classification that would not be covered under the new agreement. Helpers' wages and working conditions would be set unilaterally by the company.

The company put its proposal into effect in October 1985 after the union rejected it.

An administrative law judge found that the company had violated the Taft-Hartley Act by insisting to an impasse on a change in the bargaining unit's "scope"—that is, a change that takes union representation away from employees who previously had it.

The three-member board panel agreed with the judge that the company had violated the act by bargaining to an impasse over a non-mandatory subject [presstime, July 1986, p. 73].

(The Idaho Statesman and Boise Typographical Union, 281 NLRB 41)

NLRB upholds work assignment

In an NLRB case, The News Tribune of Woodbridge, N.J., has been upheld in its assignment of newspaper delivery work to employees of a non-union distributor.

The Newspaper and Mail Deliverers' Union of New York and Vicinity had claimed its members were entitled to the work because of an agreement made with the newspaper's former owner and because of its certification in 1971 as the bargaining representative of drivers.

Assets of The News Tribune were purchased in 1985 by Macromedia Publishing Co. of Hackensack, N.J. The deliverers' union picketed the newspaper in an effort to have the work assigned to its members [presstime, Feb. 1986, p. 55].

The board said the case involved "a traditional jurisdictional dispute" between two competing claims for the work.

It found "reasonable cause to believe" that the deliverers' union had violated the Taft-Hartley Act in its attempts to force the daily to assign the work to union employees, and that the case was properly before it for a determination pursuant to Section 10(k) of the act.

Accordingly, the board awarded the work to the independent distributor's employees based on the company's preference and economy and efficiency of operations.

(Newspaper and Mail Deliverers' Union of New York and Vicinity and Macromedia Publishing Co., 281 NLRB No. 95)

B.C. appeals panel reaffirms decision upholding unions

An appeals panel of the Labor Relations Board of British Columbia has ruled against Pacific Press Ltd., publisher of The Vancouver Sun and The Province, in a dispute over the refusal of union members to handle certain advertising.

The board had ruled in 1985 that the workers did not violate provincial labor law when they refused to perform work associated with advertising from a company that had been declared "unfair" by the local labor federation [presstime, July 1985, p. 62].

Pacific Press will appeal the board's decision in provincial court.

Violations of FLSA charged in two suits against newspapers

Suits alleging violations of the overtime provisions of the Fair Labor Standards Act have been filed against two newspapers, and a third is being investigated by the U.S. Department of Labor's Wage and Hour Division.

These developments are taking place while a federal judge's decision is being awaited in the case involving the Concord (N.H.) Monitor's contention that reporters are professional employees exempt from coverage under the act [presstime, Aug. 1986, p. 49].

In the new situations:

- Five editorial employees filed suit in U.S. District Court alleging that The Washington Post owes them "and others similarly situated" overtime pay. They claim that hours worked in excess of 40 hours a week were not paid for at a rate of one and one-half times the regular rate, as required by the act.

The suit, brought by two reporters, two assistant editors and a news aide, alleges that the Post unlawfully compensated them by providing compensatory time off at straight-time rates in lieu of overtime. The company refused to pay overtime "on the asserted ground that the department or Post budget did not allow the payment of overtime wages," according to the suit.

The plaintiffs said the company "has intentionally and willfully" maintained a system of rules and policies designed to discourage them and others from seeking compensation required by the FLSA. The suit seeks as-yet unspecified damages plus attorneys' fees.

- The Labor Department filed a suit in U.S. District Court alleging that the Norwich (Conn.) Bulletin owes overtime pay to circulation district managers. The suit also alleges that part-time mailroom workers who were paid on a piecework basis did not receive minimum wages.
- A wage-hour compliance officer has conducted an investigation involving all employees of The Columbia (Mo.) Daily Tribune. The newspaper had not received a report on the investigation by press time.

NLRB seat filled

The U.S. Senate Oct. 18 confirmed the nomination of Mary Cracratt, a Kansas City, Mo., attorney, to fill the vacant fifth seat on the National Labor Relations Board. Her term will run through 1990.

Congress bars mandatory retirement, sets fines for hiring illegal aliens

Shortly before adjournment, the 99th Congress passed two sweeping employment bills. One forbids most employers from setting a mandatory retirement age. The other provides criminal and civil penalties for employers who in the future knowingly hire aliens not authorized to work in the United States.

President Reagan is expected to sign both measures into law.

The bill repealing the mandatory-retirement age amends the Age Discrimination in Employment Act of 1967. The act initially prohibited people from being required to retire before age 65. The limit was raised to age 70 in 1978.

Under the amended act, that cap would be removed Jan. 1 for companies employing more than 20 workers. It also requires employers to continue the same group health insurance for workers over 70 as is offered to younger workers.

There are exemptions for a seven-year period that cover police, firefighters and tenured academic faculty.

Robert E. Brophy, vice president of human resources for Scripps Howard in Cincinnati, said he does not view the legislation as a matter of major concern for the newspaper industry. "Historically," he said, "newspapers have not been concerned with the age requirement in terms of retirement." Brophy is chairman of the ANPA Human Resources Committee's Health and Welfare Subcommittee.

As for the recently passed Immigration Reform and Control Act of 1986, Claudia M. James, ANPA assistant general counsel, said newspapers should "review the requirements of the law to ensure they are in full compliance."

The act calls for employer fines ranging from $250 to $2,000 for the first offense, $2,000 to $5,000 for a second, and $3,000 to $10,000 for subsequent ones. For "pattern or practice" violations, employers could also face six months in prison.

No fines would be levied during a six-month "education" period following the bill's enactment.

Employers would be required to verify new hires by examining either a U.S. passport or a combination of a birth certificate or Social Security card with a driver's license or alien identification card known as a "green card."

NLRB elections

Cincinnati Enquirer, GCIU: Paper handlers voted 13-5 against their inclusion in a unit of pressmen represented by Local 20-M of the Graphic Communications International Union.

(NLRB Case No. 9-RC-14950)

Kingston (N.Y.) Daily Freeman, Guild: Circulation drivers voted 2-2 against representation by Local 180 of The Newspaper Guild. A majority vote is required for a union to win representation rights.

(NLRB Case No. 3-RC-8934)

San Jose Mercury News, GCIU: Photoengravers voted 15-9 in favor of continued representation by Local 583 of the GCIU.

(NLRB Case No. 32-RD-735)

Recent contract settlements

Calgary (Alberta) Herald, independent: Five-year agreement covering composing room employees; retroactive to July 1, 1986.

Memphis Commercial Appeal, GCIU: Two-year agreement covering pressroom employees; retroactive to Feb. 1, 1986.

Milwaukee Journal and Sentinel, GCIU: Three-year agreement covering platemaking employees; retroactive to May 1, 1986.

San Diego Union and Tribune, ITU: One-year agreement covering composing room employees; retroactive to Sept. 1, 1986.

(Details in October and November 1986 issues of the ANPA Labor & Personnel Relations Letter.)

Dayton group votes to affiliate with Guild

Newsroom employees of the Dayton (Ohio) Daily News/The Journal Herald represented by the independent Dayton Newspaper Editorial Association have voted to affiliate with The Newspaper Guild. The legality of the vote, however, is being challenged by a group of employees.

The employees voted 56-49 to affiliate immediately after voting 57-49 to ratify a new three-year labor agreement that had been negotiated by the independent union.

The Guild has filed charges with the NLRB alleging that the company unlawfully refused to implement the new agreement, which had not been signed by late October. The company, meanwhile, has put new pay scales into effect, but it refuses to recognize other provisions related to union security.

The group of employees opposed to the Guild filed charges with the NLRB alleging that the vote was not taken in conformity with the independent union's constitution. The company has filed a brief with the NLRB contending that there is a question of representation.

San Antonio Light ordered to bargain

The NLRB has ordered the San Antonio Light to bargain with Local 25 of The Newspaper Guild over a new labor agreement covering circulation department district managers in the city.

The board agreed with an administrative law judge that the company violated the Taft-Hartley Act in 1980 when it withdrew its recognition of the union as bargaining agent for the employees [*press*time, Sept. 1981, p. 36].

The company had relied on petitions signed by 33 of the 56 employees in the unit saying they no longer wished to be represented by the union. But the judge found that two supervisors unlawfully had promised benefits to employees if they disowned the union. Therefore, the company was precluded from relying on the petitions as a basis for withdrawing recognition.

The board also found that the union had violated the act by restricting the right of members to resign.

(The Hearst Corp., San Antonio Light Division, 281 NLRB No. 113)

Firing upheld for breaking pledge

The discharge of a security guard at the Detroit Free Press for violating a "last chance" reinstatement agreement has been sustained by an arbitrator.

The grievant had been suspended for an incident involving consumption of alcohol on the job. He was subsequently referred to the company's employee assistance program in an effort to overcome any alcohol-related problem.

With the concurrence of his union, Local 79 of the Service Employees International Union, the guard entered a company-paid, 28-day hospitalization/alcohol rehabilitation program at the Oxford Institute near Detroit.

Following treatment, the grievant met with union and company representatives and an Oxford consultant to discuss a resolution of his suspension. A key document presented by the grievant at the meeting was titled "My Aftercare Plan," which was part of an out-patient rehabilitation program he had agreed to follow.

Under the plan, the grievant agreed that for a minimum of one year he would:

- Review with the plant nurse on a daily basis his use of Antabuse, a drug that produces an intolerance for alcohol
- Participate in Alcoholics Anonymous meetings and have his attendance verified
- Call the Oxford consultant once a month
- Seek continued treatment at a community clinic.

The grievant then signed the "last chance" agreement, which incorporated his aftercare plan. It stated that if he failed to abide by the terms, he would be subject to immediate discharge.

About six months after he returned to work, the company learned he was not taking Antabuse, and he was again suspended pending an investigation. At a subsequent meeting with company and union representatives, the guard also was unable to verify his attendance at AA meetings and was subsequently discharged.

Arbitrator David W. Grissom found no evidence that the guard had signed the agreement under duress. He also found that the agreement was neither vague nor ambiguous. In the arbitration hearing, the grievant admitted that he had not attended AA meetings as required.

Grissom said that under the circumstances, he was "bound to honor the integrity" of the agreement.

Additional arbitration awards

Baltimore Sun, Guild: Joseph M. Shamoff sustained the discharge of a circulation department telephone clerk for deliberately cutting off customers.

Philadelphia Inquirer and Daily News, Guild: Andrew S. Price ruled that the company did not violate the labor agreement when it refused to grant a leave of absence to a classified advertising clerk so that she could work at the union's office for about four months as a secretary-clerk.

San Francisco Newspaper Agency, Teamsters: Emily Maloney sustained the discharge of a circulation district manager for engaging in acts of physical violence—including use of a knife—while on the job. The incident involved a traffic dispute the district manager had with the driver of another vehicle.

San Jose Mercury News, ITU: William Eaton ruled that the company did not violate the labor agreement by having classified advertising employees, rather than composing room workers, prepare dummy pages by computer.

Wall Street Journal, ITU: Walter E. Boles Jr. sustained the discharge of a printer for removing computer equipment from the Dallas plant without permission.

Washington Post, Guild: Walter A. Maggiolo upheld the union by ruling that a writer was not an independent contractor but an employee covered by the labor agreement.

Washington Post, Guild: Jacob Seidenberg upheld the company's refusal, under its "no nepotism" policy, to hire the son of an employee as a permanent employee.

Youngstown (Ohio) Vindicator, Guild: Hyman Cohen ruled that the company properly refused to grant leaves of absence to two employees to attend an arbitration hearing. The newspaper had arranged their work schedules in such a way as to enable them to attend the hearing on one of their days off.

(Full texts are available from the ANPA Human Resources Department at The Newspaper Center, Reston, Va.)

Price increases to hold, this time

After failing in seven attempts to do so over the past two years, North American newsprint producers have managed to raise prices from $535 to $570 a metric ton. However, even though suppliers, newsprint analysts and newspaper buyers agree the price increase will stick this time, the consensus is that the new prices won't actually go into effect until Jan. 1.

In some cases, mills are charging the new price, then giving customers discounts covering the $35 difference.

The increase comes in spite of the fact that last spring many analysts flatly stated there would be no increase this year. In late summer, the predictions weren't as emphatic, but doubts were nonetheless expressed that an increase would hold [presstime, Aug. 1986, p. 56].

A crystal ball gone haywire? Sort of, but Richard L. Johnson, senior vice president/marketing for Abitibi-Price Sales Corp., said the signs were there all along, and some observers simply failed to read them correctly.

First, Johnson noted, newsprint consumption is growing. During the first eight months of this year, U.S. users consumed 3.4-percent more than they did in the same period of 1985. "We are running flat out, and the demand is still outpacing the production," he said. His firm is the sales and marketing arm for Abitibi-Price Inc., the Canadian company that is the world's largest producer of newsprint.

Elsewhere, an executive of one U.S. newsprint manufacturer, who asked that his company not be identified, said it is "delighted with the price increase."

He said newsprint producers had insisted for several months that rising consumption and other economic factors would force prices to rise, despite the objections of buyers. "No one believed us."

Among the other factors cited by newsprint observers were these:

• Strikes this year in British Columbia, New Zealand and Texas created unexpected downtime for mills and cut production. Consumption climbed throughout the year, and the result was a decrease in stocks. At the end of August, U.S. daily newspaper publishers had a 38-day supply on hand, compared with 44 days' worth a year earlier.

• Newsprint producers, after being thwarted in the past, were determined to stand fast and keep the price increase uniform this time. In the recent past, when buyers balked at a higher price, a few mills backed down, giving users the option of shopping around.

• The recent weakening of the U.S. dollar has diminished the Canadian mills' return on sales to U.S. users. Canada supplies more than half of the newsprint consumed in the United States.

• It was simply time. Newsprint producers have complained that they needed the price increase two years ago, and that because they failed to get it, necessary capital improvements were put off. As a result, they said, the mills aren't as productive as they could be.

Abitibi's Johnson said recent history has shown that price increases often stall for several months, only to be followed by a rapid succession of increases. He feels history may repeat itself because the failure to get an increase the past two years has meant decreased profits for shareholders.

William Metzfield, who buys newsprint for Gannett Co., acknowledged that the climate for an increase was right. Does that mean that the pendulum will swing from a buyers' market to a sellers' market? Metzfield characterized the emerging situation as "equilibrium" between the two sides.

Homer E. Taylor Jr., vice president of operations/manufacturing and supply for Scripps Howard, agreed, adding: "I think what we'll have is a more balanced market. I don't think either the buyers or the sellers will have an upper hand. 1987 will be an interesting year because it's hard to predict exactly what will happen."

North American newsprint mills announced this latest increase in July, primarily because most contracts call for a 90-day notice of such increases.

Newsprint consumption for all U.S. users has increased each month of 1986, ranging from 5.7-percent increase in January to a 0.4-percent increase in March.

The last increase, in which the list price for newsprint went from $500 to $535 per metric ton, came in the midst of heavy coverage of the 1984 Summer Olympics in Los Angeles and the presidential election campaign, and after several paper mills in British Columbia were closed by lengthy strikes. —*Rosalind C. Truitt*

Kenaf project advances

With the pulping of 35 tons of "kenaf" in October, Kenaf International moved a little closer to the reality of building and operating the first full-time newsprint mill in the United States that would use the fast-growing plant as a substitute for wood pulp.

According to Jerry K. Stanners, chief executive officer of The Bakersfield Californian, 50 acres of kenaf were harvested, baled and shipped to Ohio where pulping was done at the C.E. Bauer mill in Springfield.

The Bakersfield daily owns 42.5 percent of Kenaf International. Another 42.5 percent is owned by Agrifuture Inc. Charles S. Taylor, general manager of KI, owns the remainder of the company.

Stanners said KI was pleased with the initial pulping tests. The newsprint produced was very satisfactory and measured up to conventional newsprint in brightness and opacity, he said.

Other pulping and papermaking trials will be conducted over the next several months. Stanners said during that time KI will seek financing for the proposed mill that would be built in southern Texas, west of Brownsville.

The only kenaf mill that has been developed to date is in Thailand.

A fully operating kenaf facility in Texas would consist of the mill and 25,000 to 30,000 nearby acres of kenaf. Kenaf has the potential to produce five to seven times as much pulp per acre as pine trees [presstime, April 1986, p. 67], and the mill would produce an estimated 192,500 metric tons of newsprint annually.

KI's timetable calls for putting the mill into full operation by the end of 1989.

Company officials feel the soil and climate in Texas are ideally suited to kenaf growing.

Further development will determine whether kenaf newsprint is cheaper to manufacture than wood pulp newsprint.

KI believes that if enough kenaf newsprint can be produced to supply newspapers on a regular basis, prices will stabilize, Stanners said.

ANPA has been active in advancing kenaf newsprint. In 1980, the Association funded a study that determined kenaf would grow well in warm climates and could be harvested two or three times annually. □

Newspapers' growth, measured by newsprint use, has outpaced the economy since 1975

BY JON G. UDELL

Newspapers and newsprint consumption in the United States have grown more rapidly than the total economy during the last 10 years—a remarkable achievement for a mature industry. (See graph.) Even more important, our nation's newspapers are well-positioned for future growth.

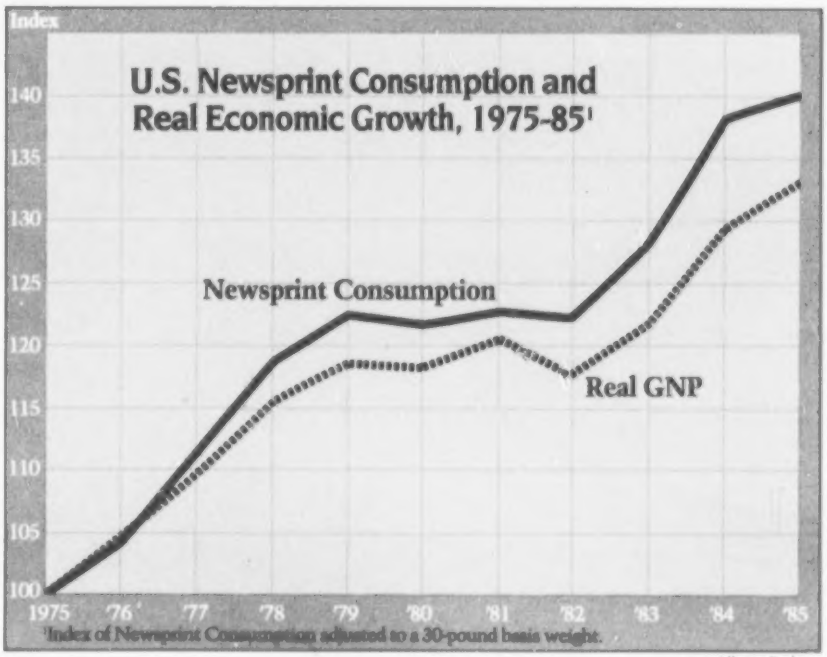
Usually, a healthy but mature industry like the newspaper business grows more slowly than the economy. An expanding economy includes many new products and services that provide most of the economy's growth. Therefore, it is not surprising that for many decades, the U.S. newspaper industry expanded at approximately two-thirds the national economic growth rate.

The above ratio is derived by comparing the expansion of U.S. newsprint consumption to that of the real gross national product. Newsprint consumption by newspapers reflects both changes in content (advertising and editorial) and changes in circulation. Therefore, newsprint consumption measures the real economic growth of newspapers.

Although newspapers' direct share of total U.S. newsprint consumption has declined somewhat, preprinted advertising and editorial linage have grown rapidly. These preprinted inserts, produced on newsprint purchased by others, ultimately become part of the newspaper. Therefore, the total expansion of U.S. newsprint consumption—40 percent during the last 10 years—provides a fairly accurate measure of U.S. newspaper growth.

Why this extraordinary decade-long growth and positive outlook for its continuation? There are several reasons.

First, U.S. newspapers are successful in expanding advertising linage despite an unprecedented severity of competition from other media. In 1985, daily newspapers carried $25.2 billion of advertising—$4.4 billion more than broadcast television and cable TV combined. Last year, newspaper advertising revenues advanced 7 percent, whereas those of the television media rose 5.6 percent.



Alberto Pacheco

U.S. newspapers are likely to be the nation's largest advertising medium for a good many years to come.

Newspapers' effectiveness as an advertising medium is even greater than revenues suggest because many of the dollars spent on preprinted advertising inserts go to parties other than newspapers, even though the preprints are a part of the newspaper.

Contrary to numerous predictions in recent years, the most vigorous competition for advertising is not coming from the electronic media but from another print medium—direct mail. For example, last year the advertising revenues of that medium rose more than 12 percent, and direct mail is now the nation's third largest advertising medium, exceeded only by newspapers and television. Although direct mail is a vigorous competitor, it is encouraging to see another print medium doing so well in an era of rapidly advancing electronic technology.

As for television, it has reached the maturity stage of its life cycle despite the continuing advance of cable and satellite transmission. The television industry will continue to grow but not at the expense of newspapers and other established media, as was true during its adolescent years.

The more recently emerged electronic media, such as videotex and teletext, are in the early stages of their product life cycles. However, these media are not likely to be formidable competitors at any time in the foreseeable future.

Here is the way things are shaping up:

- U.S. newspapers are likely to continue to be the nation's largest advertising medium for a good many years to come.
- U.S. demographics are favorable to newspapers. People in the 30-55 age group tend to be the most avid consumers of newspapers, and this segment of the U.S.

Dr. Udell is Irwin Maier professor of business at the University of Wisconsin. He is also chairman of the board of the Federal Home Loan Bank of Chicago.

population is now increasing rapidly. It reached a record 75 million in 1985. More significantly, the Census Bureau projects a 27-percent increase to more than 95 million by 1995. This means the major market for daily newspapers will expand rapidly in the years ahead.

• The quality of newspaper management remains high. Unlike many other industries that wither and die as new competitors emerge, U.S. newspapers through enlightened management have successfully improved their products and services to both advertisers and readers, thus remaining the nation's largest medium of communication.

The advance of management methods, newspaper technology and the quality of U.S. newspapers during the past 20 years has been astounding. Many U.S. newspapers may be aged, but they are anything but feeble.

For all of these reasons, U.S. newspapers are extremely well-positioned for future growth. During the 10 years ahead, U.S. newspapers are likely to again expand at a rate that equals or exceeds that of the U.S. economy. □

UPIU contracts ratified

A three-year contract has been ratified between the United Paperworkers International Union and Champion International Corp. at the company's Lufkin, Texas, newsprint mill. Workers will receive increases of a $1,000 lump sum in the first year, 38 cents an hour in the second and 2.5 percent in the third.

UPIU members also ratified a three-year extension to a labor contract at Great Northern Paper Co.'s East Millinocket, Maine, mill. The contract, which had been scheduled to expire July 31, 1987, provides for pay increases of 3 percent in 1988 and 2.5 percent in 1989.

Also on the labor front, negotiations continue between the UPIU and two mills where contracts expired last summer: Augusta (Ga.) Newsprint Co. and U.S. Pulp and Newsprint (Kimberly-Clark) in Coosa Pines, Ala.

In Canada, two of three machines are now operating on a day-to-day basis at MacMillan Bloedel Ltd's newsprint mill in Port Alberni, British Columbia. Production there was interrupted for more than a month when striking International Woodworkers of America pickets refused to allow pulpwood into the mill [presstime, Oct. 1986, p. 65]. □

Statistics delayed

Newsprint statistics for September were not available at press time. They will be published in the December issue.

NEWSPRINT NOTES

• Manistique Papers Inc. has **completed an 18-month, $21-million renovation** of its newsprint and specialty-paper mill in Manistique, Mich. Production will be increased by more than 40 percent to about 81,000 metric tons a year [presstime, Jan. 1986, p. 54].

• The Quebec government plans to **sell its holdings in Domtar Inc. and Donohue Inc.** The government owns 30 percent of Domtar and 55 percent of Donohue. Sale of the two concerns could net $500 to $600 million [presstime, Oct. 1986, p. 65].

• Mississippi Chemical Corp., a farmers' cooperative, is studying the **feasibility of building a newsprint mill** in northeastern Mississippi. Details on the exact location, size and configuration are not yet available. The study should be completed by the end of the year, according to a company spokesman.

• Abitibi-Price has begun **conversion of one of three newsprint machines** at its Alma, Quebec, mill to make directory paper. Estimated annual capacity of the machine being converted is 65,000 metric tons [presstime, April 1985, p. 56].

• Bowater Inc. announced it will construct **additional waste water storage** at its Catawba, S.C., newsprint mill to keep the plant in full operation. The company had said previously that operations might have to be curtailed because of water shortages arising from this year's drought. The additional waste water storage facility will cost an estimated $4.5 million.

• James River Corp. and its 95-percent-owned Crown Zellerbach Corp. subsidiary have **approved a merger** in which CZ will become a wholly owned subsidiary of James River [presstime, June 1986, p. 77].

North American ports reopen; pact rejected in New Orleans

A three-day strike by the International Longshoremen's Association ended Oct. 3 when management groups at North Atlantic ports agreed to extend the recently expired contract until Nov. 17 and to continue negotiations. The strike closed ports from Maine to Virginia threatening shipments of many goods, including newsprint.

Meanwhile, longshoremen in New Orleans reached a tentative agreement with shipping companies and dock operators. The port had been shut down for nearly five days because of a strike. Settlements were reached at West Gulf ports and tentatively at Mobile, Ala. [presstime, April 1986, p. 52]. □

Reagan signing ends New England rail strike

President Reagan signed legislation Sept. 30 to end a strike by the Brotherhood of Maintenance of Way Employees against two New England railroads—the Maine Central and the Portland Terminal.

Guilford Transportation Industries, parent company of the railroads, has challenged the constitutionality of the legislation in federal court. Members of the BMWE had been on strike since March 3 [presstime, Oct. 1986, p. 64]. □

Greyhound may sell bus operations

Greyhound Corp. said it will sell its bus operations unless it wins substantial concessions from the Amalgamated Transit Union.

The parties' contract expired Oct. 31. Several parties have been contacted as possible buyers [presstime, July 1986, p. 78]. □

Merger denied

The Interstate Commerce Commission denied the merger of the Santa Fe and Southern Pacific railroads on grounds that the anti-competitive effects would outweigh public benefits. Santa Fe Southern Pacific Corp. said it will ask the ICC to reconsider [presstime, Nov. 1985, p. 62]. □

WHAT'S BLACK AND WHITE AND BLUE ALL OVER?

A newspaper that needs the special coverage of Mutual Insurance.

All too often, insurance companies leave the newspaper industry out in the cold. They simply won't cover the special insurance needs that only newspapers have. That's why more and more newspapers are turning to The Mutual Insurance Company of Hamilton, Bermuda, for policies which address the particular needs of the newspaper industry.

Mutual is the newspaper insurance specialist, with twenty-five years' experience in protecting ANPA-member publications against the unique hazards of the newspaper industry. Mutual has extensive experience in serving newspapers and related publications, and is continually working to develop new ways to secure the free press.

With Mutual, you don't have to hold your breath to get the protection you need. We encourage publishers, editors, and journalists to contact us at the address below with suggestions and inquiries about your particular insurance needs.

Experts see prolonged period of mergers, acquisitions

Mergers and acquisitions of newspapers will continue at a rapid rate through this century and into the next, a group of prospective investors was told at a blue-ribbon conference in New York City in October.

Other media properties, including television and radio stations, cable TV, book publishers and trade journals, also will continue to go on the block to be joined with or bought by other companies, according to one of the masters of merger, Christopher I.H.M. Shaw.

Titled "Mergers and Acquisitions in the Media and Communications Industries," the two-day seminar was attended by about 60 financial representatives of various firms at the posh Westbury Hotel.

Those attending represented a wide variety of companies, including magazine, book and newspaper publishing companies, banks, credit corporations, accounting firms and trusts. Shaw and two other speakers noted that virtually all of those in attendance were interested in acquiring media properties rather than selling any they already owned.

It was a meeting at which experts took prospective investors through every step of the acquisition process—how to find the newspaper or other media property of one's dreams, how to finance it and what to do after closing the deal.

The United States contains 35,144 media entities of many descriptions, Shaw said, and they are owned by 3,400 corporations that are continually buying and selling.

Shaw's definition of media entities includes daily and weekly newspapers; shoppers and pennysavers; consumer, trade and scholarly magazines; broadcast stations and cable TV systems; book publishers; and database companies. He said his list does not include some 3,156 newsletters and "other fringe publications."

"So there are enough mergers and acquisitions going on to keep everybody here busy well into the next century," Shaw told the audience.

As chairman of Henry Ansbacher Inc., he has negotiated more than 120 media transactions, including such recent sales as the Louisville newspapers by the Bingham family to Gannett Co. for $300 million, and the New Haven newspapers by the Jackson family to Ingersoll Publications for $170 to $200 million.

Asking rhetorically where all the merging, buying and selling might end, Shaw quoted a client as saying that by the year 2000, all U.S. media might be in the hands of about six conglomerates.

Another speaker, I. Kendrick Noble, took issue with that assessment. Noble, a senior media industry analyst at Paine-Webber Inc., said the constant buying and selling of media properties has resulted in new media entities being formed, with the result that more exist now than ever before.

At the same time, Noble suggested that the *largest* of the media properties may be owned by a half-dozen huge companies by the end of this century.

Shaw said there is a pattern that family dynasties usually follow when they sell their newspapers and other media properties. The individual components are invariably worth more than the whole, and family members come to recognize this. The family-owned company usually pays low dividends, and family members who are not part of the operation become dissatisfied, Shaw said.

"The four or five family members who are running the company often adopt the position that the outsiders can 'Get lost.'" Shaw said. The result is a family dispute—"a fundamental divergence of interest between family members." This results in selling the property and dividing the proceeds.

As an example, he cited Sallie Bingham, who was drawing $300,000 in annual dividends on her shares of the Louisville newspaper publishing company. With the sale, she ended up with $84 million, Shaw said.

But the buyer also gets rich, he added. A daily monopoly newspaper with 15-percent operating profit can be made to yield higher gross revenue and a 40-percent profit within two years, he said. This is achieved, Shaw explained, by doing things the former owner had neglected to do—cutting unnecessary expenses, raising prices both in advertising and circulation, and in general operating a more efficient company.

A buyer should judge how high he can go on a purchase price by figuring he can pay a total price for the paper of 6 to 10 times the annual operating profit, Shaw said. But the buyer should figure the operating profit on the basis of the 40-percent return expected after two years of streamlining the paper's operations.

Jeffrey E. Epstein, vice president in the Mergers and Acquisitions Department of First Boston Corp., said three criteria count in buying a paper: Is it the right company? Is it the right time to buy it? Is the price too high? "The first two far outweigh the third," Epstein said. "If you meet the first two, you can't pay too much."

Shaw, who makes a commission on each merger or acquisition he completes, joked that media owner Joseph Albritton once told him: "You'll never be happy till you sell everything into one big company and then retire."

The Henry Ansbacher chairman said that depending on reaction to the first mergers-and-acquisitions conference, others may be held. The conference was arranged and managed by Executive Enterprises Inc., which conducts business seminars throughout the country.

—Gene Goltz

National salary survey to be conducted

Planning has begun for an annual, nationwide survey of newspaper wages and salaries.

Representatives of newspaper trade associations met Oct. 1 at The Newspaper Center in Reston, Va., and formed a working committee to design the survey, which will be administered by the Inland Daily Press Association. Inland currently conducts a wage-and-salary survey, but only about 300 newspapers participate.

At the meeting, ANPA Senior Vice President Thomas C. Fichter said a comprehensive survey is needed because newspaper benefit managers currently are asked to participate in about a dozen salary studies, some conducted by individual newspapers. This "overload" is resulting in low response rates, he said.

The committee is made up of representatives of ANPA, Inland, the American Society of Newspaper Editors, International Newspaper Advertising and Marketing Executives, International Newspaper Financial Executives, and Gannett Co. □

Globe-Democrat asks for help; Worcester newspapers sold

BUSINESS ROUND-UP

The Missouri Industrial Development Board is considering a request by the St. Louis Globe-Democrat that the board issue a $15-million revenue bond to enable the newspaper to buy printing presses and thus continue operating.

Linda Whitehcart, public relations director for the board, said in late October the panel will decide on the first segment of the bonds, $2.4 million, after it receives a detailed appraisal of the Globe-Democrat's assets and completes a routine financial investigation. The balance could be approved later after further deliberations, she said.

William E. Franke, co-owner of the Globe-Democrat, said in September he had invested $6.5 million in the newspaper, and his partner, Publisher John B. Prentis, had contributed nearly $1 million. If new funding is not found, the paper may have to close, Franke said, because it had lost $120,000 a week since resuming publication under their new ownership Jan. 27.

Industrial development funds have been available for years in many states to help businesses, including newspapers, in such matters as new plant construction [presstime, Oct. 1979, p. 5]. The money usually emanates from insured revenue bonds. No state money is involved. The borrower finds buyers for the bonds and uses future revenue to pay back the principle and interest. Terms usually run from 15 to 25 years but can extend to as long as 40 years. Interest rates generally run about 2-percent below the prevailing market rate.

In other newspaper-business developments:

Also in **St. Louis**, the Pulitzer Publishing Co., publisher of the Post-Dispatch, announced it has bought back 43 percent of its stock from dissident stockholders. The $185-million purchase ends litigation between the Pulitzer and Quesada families and Alfred J. Taubman. Taubman, a Michigan businessman who once owned 20.6 percent of the stock, has abandoned a proposal to buy the entire company for $625 million.

• In **Worcester, Mass.,** it was announced that Chronicle Publishing Co. of San Francisco had agreed to purchase the Worcester Telegram (morning, circulation 56,648), The Evening Gazette (82,177) and the Sunday Telegram (127,145). The purchase also included three smaller dailies in Massachusetts—the Marlboro Enterprise, the Hudson Daily Sun and The Daily Item in Clinton—plus 12 weeklies and commercial printing facilities owned by Beacon Communications, a subsidiary of Worcester Telegram & Gazette Inc.

The purchase price was not announced, but analysts estimated it at about $200 million.

Richard C. Steele, Telegram & Gazette president and chairman, said the owners, members of the Booth and Stoddard families, decided to sell because no younger family members had expressed an interest in carrying on the business. As part of the agreement, Steele will stay on to manage the Gazette for three years. The new owners agreed to maintain "present policies and personnel practices," Steele said.

ANPA helps plan for Constitution's bicentennial

ANPA is involved in planning for the celebration of the bicentennial of the U.S. Constitution in 1987.

Jerry W. Friedheim, ANPA executive vice president, will serve as vice chairman of the newly formed Media Advisory Committee to the Commission on the Bicentennial of the U.S. Constitution. The Oct. 8 announcement was made by former U.S. Chief Justice Warren E. Burger, chairman of the commission.

ANPA Foundation is planning several projects in conjunction with the observance. Within the next year it will:

• Publish a Newspaper in Education curriculum on the bicentennial.

• Make available a series of articles titled "Constitution Corner" and materials relating to American Bar Association TV programs on the Constitution.

• Coordinate a school-based "Celebration of Citizenship" next September.

IJE report shows progress in hiring minority journalists

The campaign to hire minority journalists "is finally showing some dramatic results," according to a new report by the Institute for Journalism Education.

The report, based on a survey of more than 300 managing editors, said that in 1985, 17 percent of entry-level journalists hired by U.S. dailies were minorities.

In addition, the study found that minorities comprised 9 percent of "directing editors" hired in 1985—defined as editors with other editors reporting to them.

However, the report cautioned that the survey measured only hiring, not promotion. And as indicated by its title, "Musical Chairs," the report noted that high turnover has erased some hiring gains.

IJE, which operates three major training programs for minorities [presstime, May 1986, p. 28], released the report during the Oct. 21-24 convention in Cincinnati of the Associated Press Managing Editors.

"This study shows that when editors get serious about minority hiring they get results," said IJE President Ellis Cose.

But he cautioned that "it is on the battleground of retention that the struggle for full parity in the industry will be won or lost." □

Recent acquisitions

Park Communications Inc. of Ithaca, N.Y., acquired The Daily Pioneer, Bemidji, Minn., circulation 7,458.

Edwards Publications of Knoxville, Iowa, is acquiring two Iowa dailies from Cedar Rapids [Iowa] Gazette Co.: the Cherokee Daily Times, circulation 3,398, and The Daily Reporter, Spencer, circulation 3,622. □

Corrections

Three numbers were inadvertently dropped from the first chart accompanying the October Special Report on women in the newspaper business. The missing numbers, for the category of "Editor" published on p. 32, are as follows: male, 472; female, 78; percentage of editors who are female, 14.

There was also a typographical error on p. 33 concerning a 1985 survey on women in newsroom management. The statement that "fewer than 10 percent of 'directing editors'" were women should have read "fewer than 12 percent."

Presstime regrets the errors. □

Suzanne Kreiter, The Boston Globe

Job applicant Darlene Gee looks over the bulletin board at the Minorities in Newspapers Job Conference. Sponsored by the industry-wide Task Force on Minorities in the Newspaper Business and by the American Society of Newspaper Editors, the Oct. 16-18 job fair in Boston drew a record 400 people, including more than 250 applicants and recruiters from 96 companies.

Giago plans Indian weeklies

A leader in American Indian journalism is planning to start a dozen weekly newspapers for Indians—and then sell them to local Indians as the papers become profitable.

He is Tim A. Giago Jr., founder, publisher and editor of the largest independently owned Indian weekly in the United States—The Lakota [S.D.] Times—and first president of the Native American Press Association [presstime, Aug. 1986, p. 35].

The new venture is named Native American Publishing Inc.

Joining Giago in it is Gerald Garcia, president and publisher of the Bryan-College Station [Texas] Eagle.

According to Giago, the plan is to establish an Indian-owned weekly in each of the 12 areas into which the country is divided by the federal government's Bureau of Indian Affairs.

The first paper the new corporation will start will be The Red Lake Times on the 5,000-member reservation in Minnesota of the Red Lake Band of Chippewa Indians.

Establishing Indian newspapers independent of tribal government is essential to maintaining press freedom, said Giago, who noted that tribal papers are often the first things cut when money is short. □

Simonson named to top NNA staff position

David C. Simonson has been named executive vice president of the National Newspaper Association.

He is former president and publisher of Pioneer Press, a group of 40 weeklies in the Chicago metropolitan area with a combined circulation of more than 220,000. He was president of Suburban Newspapers of America in 1984.

Simonson succeeds W. Melvin Street, who is retiring, as head of the NNA staff.

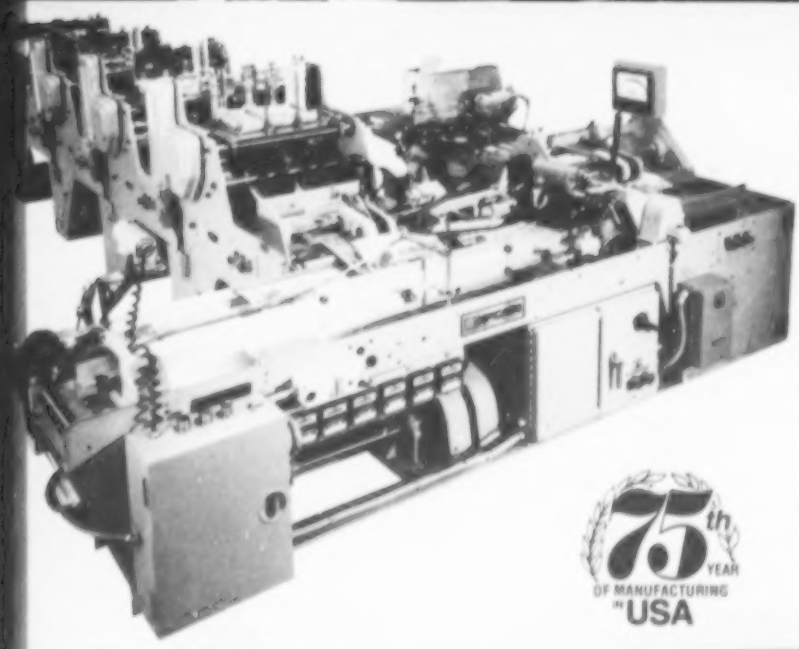
The organization, which has headquarters in Washington, D.C., has membership of about 5,000 weekly and primarily small daily newspapers.

Simonson's appointment was announced at the association's 101st annual Convention & Trade Show in Nashville Sept. 24-27.

NNA officers elected during the Sept. 24-27 convention were: President Richard A. Nafsinger, president of Eagle Newspapers Inc. and publisher of the Hood River [Ore.] News; Vice President Webster Hawkins, publisher of the Osawatomie [Kan.] Graphic; and Treasurer Thomas F. Bradlee, publisher of the Cecil Whig of Elkton, Md. □

"The McCain 660 turned out to be a dependable investment... not an expense."

Gregory Cushman, President
Loren Dyer, Operations Manager
THE BULLETIN
Bend, Oregon



75th YEAR OF MANUFACTURING IN THE USA

"The McCain 660 inserting machine has done everything we expected and more. It has turned out to be an investment...not an expense. It's dependable, in averaging more than 12,500 papers per hour, with either single or multi inserts. I would recommend the serious consideration of the McCain 660 for anyone planning to purchase a stuffing system."

McCain users across the country are quick to praise the 660's performance and dependability. It incorporates any number of in-line insert stations, so that all stuffs are gathered in a single pile. The gathered stuffs are then inserted into the body of the paper in one smooth, continuous operation. Difference in size and thickness of stuffs is, therefore, not a problem. There's a 660 system available to fit every stuffing need. Write or call for details. McCain Manufacturing Corp., 6200 W. 60th Street, Chicago, IL 60638, 1 312 586-6200.

Discount air fares available for attending newspaper meetings

Employees of ANPA-member newspapers are eligible for discount fares on Delta Air Lines and United Airlines when they travel to and from newspaper industry meetings.

Under the new program, a 5-percent discount is available off special fares, such as super saver, excursion or first class. Where the employee does not qualify for a special fare, a 30-percent discount is available off regular coach fares.

According to Mark Daly, ANPA director of membership development, in order to obtain the discounts two requirements must be met. First, the date and location of the meeting must be on file with the airlines. Organizations or newspapers planning meetings should contact the ANPA Membership Department so that those meetings can be put on the list, Daly said.

Second, ANPA-member newspaper employees or their travel agents must use special, toll-free telephone numbers and ANPA account numbers when making reservations. For Delta Air Lines the telephone number is (800) 241-6760; the account number is R-0210. For United Airlines the telephone number is (800) 521-4041; the account number is 651-E.

Clarification on writer of Macintosh article

In an article on personal computers in the August-September issue of APME News, Editor Will Corbin of the Times-Advocate in Escondido, Calif., implied that there may have been some "suspect" information in an earlier presstime story on the Macintosh computer.

Wrote Corbin: "Even in the newspaper industry the information can be somewhat suspect. A story in the April 1986 edition of presstime extolled the virtues of the Macintosh for publishing. Its author was a consultant for one of two Macintosh dealers mentioned in the story."

Presstime Editor James E. Donahue acknowledged that, although the situation was not exactly as Corbin described it, the criticism was warranted. The article was a free-lance piece carrying two bylines. One of the authors, Stuart Silverstone, was identified on the first page of the article as a computer/communications consultant. Silverstone says he was never a consultant for the Macintosh dealer in question; however, the dealer is one of many that refer potential buyers who want more advice about Macintosh systems to Silverstone, an expert on that equipment.

"Although the relationship Mr. Silverstone had with the dealer appears to be common in the computer industry," Donahue said, "if presstime had known about it when the story was being edited, the reference to the dealer would have been removed and a more specific identification of Mr. Silverstone would have been included. Such disclosure is our firm policy, and I regret that it was not fulfilled in this case."

Recommends waste committee

I was glad to see your article on newspapers' potential liability for cleanup of Superfund sites in the recent (October) presstime. It is of little comfort, however, to learn that others are faced with potential Superfund liability. Donrey is involved in one such site where we are looking at a potential $17 million contingent liability.

In our situation, we have worked with other "potentially responsible parties" to set up a steering committee.

Our steering committee has hired its own engineers and has proposed its own cleanup procedures, at a cost substantially less than that proposed by the Environmental Protection Agency. The efforts of the steering committee have seemed to convince EPA of our good faith and have, thus far, staved off a Justice Department enforcement action.

Our efforts to convince EPA that the mixture of waste ink and blanket wash is non-hazardous have, thus far, fallen on deaf ears.

Despite our efforts to get off the PRP list, we have also continued to work closely with the steering committee since we believe that it is our responsibility as good corporate citizens. We have also instructed our newspaper editor to treat this as any other news story, so as to avoid an improper public appearance both within our community and at EPA.

I highly recommend the informal steering committee approach since, in the long run, we believe it will save us a considerable amount of money and will permit us greater control over the cleanup efforts. We also believe it furthers a positive corporate image that we are working to effect a cleanup, rather than avoid responsibility.

Required reading

I read the special report, "Newspapers and Language," in the September 1986 issue of presstime.

I think it should be required reading of all journalism students.

Thanks for printing the report.

Ray Newton
Assistant dean
Northern Arizona University
Flagstaff

Jere Warren, Fort Lauderdale News and Sun Sentinel

South Florida public schools are displaying posters of this drawing that appeared originally on the front page of the Fort Lauderdale News and Sun-Sentinel Lifestyle section.

Newspaper numbers

140,979,000—number of dollars General Motors Corp. spent in 1985 to advertise in newspapers—the highest amount among national advertisers, according to Media Records.

37—estimated percentage of adults ages 21-25 able to summarize the main argument from a lengthy newspaper column, according to the National Assessment of Educational Progress.

18 million—number of copies of non-subscriber mailings newspapers make each week, as estimated by the Newspaper Advertising Bureau. This represents about 1.7 percent of all third-class volume.

It was distinctively a boo-boo

Typos do not all come from the editorial departments of newspapers. Public relations folks can goof, too.

Consider the case of Regan Communications, PR firm for The Boston Herald. On Sept. 29, it sent a letter to about 20 publications, and the opening paragraph trumpeted the paper's "amazing battle from near distinction to a profit-making daily."

"Near extinction" was what had been intended, of course.

Dean A. Miller, The Pueblo Chieftain

The Pueblo (Colo.) Chieftain built a 30-foot-tall tree of newspapers to recognize National Newspaper Week Oct. 5-11 and International Newspaper Carrier Day Oct. 11. Marketing Manager Jim Campbell sits atop the 7.5-ton creation made from 52,325 "overs"—roughly the paper's daily circulation. It took 15 hours to build.

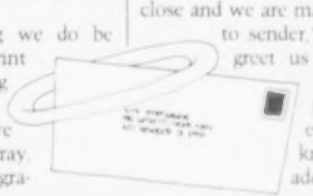
And may your letters arrive on time

The annual National Postal Forum in Washington, D.C. gives mailers a chance to see and hear all things postal, and that can even apply to the more solemn moments.

At this year's luncheon, Monsignor Raymond J. Boland of the Washington, D.C., Roman Catholic archdiocese delivered this invocation:

"May everything we do be first class. Imprint Your own loving ZIP code upon our hearts so that we may never go astray. Provide in Your gracious providence special handling for those of us who are fragile and keep us in one piece. We have been signed, sealed, stamped and delivered in Your image and likeness, and we beg You to keep us in Your care as we go about our appointed rounds.

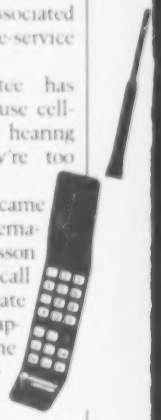
"And when our days draw to a close and we are marked 'return to sender,' be there to greet us at heaven's door so that nobody may ever say 'unknown at this address.'"



Cellular telephone breaks sound barrier on Capitol Hill

First, portable computers were banned from the press tables in congressional hearing rooms. They make a noise "like a pig oinking," says J. Michael Shanahan, chairperson of the Standing Committee of Correspondents, which has jurisdiction over the housekeeping details associated with newspaper and wire-service coverage of Capitol Hill.

Now, the committee has asked reporters not to use cellular radiotelephones in hearing rooms. It seems they're too noisy, too.



The latest hang-up came after United Press International reporter Judi Hasson used a cellular phone to call in her story on the Senate Judiciary Committee's approval of U.S. Supreme Court nominees William H. Rehnquist and Antonin Scalia.

Anticipating that the committee's votes would occur close to the end of the p.m. cycle, and knowing that it would be "very, very difficult" to get one of the two pay telephones outside the hearing room, Hasson borrowed the portable phone from a UPI White House correspondent. "I was in the very back of the press area, and I don't think I was intrusive in any way," she says, describing herself as being "hunched down and halfway under the table" while placing the call.

Another reporter covering the hearing didn't see it that way, however, and sent a letter to the standing committee, complaining about the noise.

Shanahan, congressional correspondent and political writer for McClatchy Newspapers, says as far as he knows, Hasson is the first print correspondent to have used a cellular phone at a congressional hearing. "She showed great initiative, as far as I'm concerned," he avers.

Hasson says she plans to use a cellular phone again on a story with similar time constraints, although the next time she will go into the hall to transmit.

SOME NEWSPAPERS ARE ONLY PRINTING THE STORY

SPECIAL REPORT

Uncertainty Is Over; Flexography Is Here

Whither UPI? More Changes At the Top

Look what Simmons says about USA TODAY!

Simmons Says:
We're No. 1!
4,792,000 readers every day.
Better demos than Time, Newsweek or Sports Illustrated!

Now, look what the new Monroe Mendelsohn says about USA TODAY!

Monroe Mendelsohn Says:
3,606,000 affluent readers every day!
That's nearly 1 million more than in 1985.
Monroe Mendelsohn annually surveys readers in $50,000+ households, for the USA's most prestigious publications, and their 1986 study shows that USA TODAY delivers more affluent readers than Business Week, Fortune or Forbes!

AUDIENCE

PUBLICATION	USA TODAY	FORBES	BUSINESS WEEK	FORTUNE
HOUSEHOLD INCOME $50,000+	3,606	2,546	2,522	2,282
HOUSEHOLD INCOME $100,000+	1,226	1,095	1,009	867
TOP MANAGEMENT	974	993*	883	867
OWN SECURITIES WORTH $50,000+	1,659	1,629	1,362	1,164
LIFE INSURANCE WORTH $250,000+	1,010	713	681	662

Source: MMR 1986 *Forbes may have more affluent top management readers, but we still beat them in money matters!

THE NATION'S NEWSPAPER

USA TODAY

NO. 1 IN THE USA...4,792,000 READERS EVERY DAY

Doesn't nearly everyone you know read USA TODAY?

SYMMETRY® ON SUNDAY

IT UPGRADES YOUR SUNDAY MAGAZINE. IT ATTRACTS NEW ADVERTISERS.

If your objective is to improve your Sunday magazine, to increase ad pages, revenues and circulation…in an environment that reproduces color advertising and editorial with virtually all the subtlety and fidelity you see in national magazines…then you should examine Symmetry® supercalendered paper.

Color reproduction on Symmetry's satin-like, polished finish will satisfy the most discriminating advertiser. Coupled with quality editorial design, your Sunday magazine then becomes an enhanced setting for readers and advertisers alike.

The New York Times Magazine is one example. With advertising sagging in the mid-1970's, it turned to Symmetry and Symmetry helped turn it around. Last year, The Times Magazine carried more advertising than any other U.S. magazine.

Symmetry's ability to balance quality with economy is catching the attention of some of America's leading newspapers. Join them — and follow the trend to upgraded Sunday magazines with upscale advertising and Symmetry.

INDEX VOLUME 8, NUMBER 12 DECEMBER 1986

Special Report *Now that flexography has proven itself to be a viable newspaper printing process, attention centers on how much of the market it can corner. Used heavily in the packaging industry, flexographic technology has been tested by U.S. daily newspapers in more than 15 locations thus far. Flexo fans point out that the presses reduce newsprint waste, use water-based inks that produce less rub-off and have numerous other advantages. Admittedly, there are still a few bugs to work out. But many observers believe there is an explosion of flexo coming.* 36

UPI's upheavals *The beleaguered wire service, under another new president, hopes to become an "indispensable" buy for newspapers.* 6

Sunday spinoffs *More newspapers are occasionally publishing two Sunday magazines, with Part 2s devoted to a single topic.* 12

Quaint carrier custom *In days of yore, newspaper carriers delivered fanciful "addresses" to their customers during the holiday season.* 14

What's afoot on Fleet Street *The British newspaper industry is undergoing many changes, including a decline in union power and a rise in technology.* 18

Covering AIDS *Whether to identify AIDS victims is an emerging ethical dilemma that will confront more editors as the deadly disease spreads.* 26

Quality circles *At least 14 daily newspapers have instituted "quality circles," a concept of employee problem-solving that's improving things in the plant.* 32

Multicultural management *A participant in the University of Missouri's new, intensive management training program for minorities tells what it was like.* 46

Profile: Thomas D. Shaw *Following in the footsteps of his great-great-grandfather, he manages a family newspaper business that is 135 years old.* 48

Essay: Up from mediocrity *The Charlotte Observer's Rolfe Neill suggests how papers can regain respect, improve circulation and answer other prayers.* 50

Coloring the comics *An increasing number of newspapers are adding color to the daily comics. Some cartoonists love it; others question the quality.* 58

Fellowships directory *The annual listing of mid-career fellowships finds offerings holding steady, but some programs report a decline in applicants.* 62

CHAIRMAN'S CORNER

The newspaper reporter of today is indeed a professional

The U.S. Department of Labor is reviewing its 40-year-old interpretation that newspaper reporters are not "professionals" under the Fair Labor Standards Act. ("Professionals" are exempt from the act's overtime and record-keeping requirements, as are executive and administrative personnel.) This out-of-date misinterpretation should be changed!

Newspaper reporters today clearly possess all the indicia of professionalism, and ANPA has filed comments with the Labor Department in support of this position. Newspaper reporters meet both the "learned" and "creative" criteria used by the department in measuring professional status.

Alvah H. Chapman Jr.

To qualify as a "learned" professional, the department says, a person must have advanced knowledge in a field of learning "beyond high school." Statistics confirm that most newspaper reporters today have the requisite advanced study—usually degrees from excellent journalism schools. Back in 1940 there were 44 schools of journalism, today there are more than 300. Last year, 84.5 percent of first-time reporters hired by newspapers were journalism school graduates.

Those who did not attend journalism schools instead acquired a strong, liberal arts college background, which some editors prefer as a course of study for a prospective newspaper reporter.

The number of reporters hired today directly from high school is negligible—less than 1.7 percent.

The work of our modern-day newspaper—observation, analysis, evaluation and writing—is inherently "creative" and thus meets the department's other test. Both in the gathering of the news and in the writing, the reporter's enterprise is a key ingredient.

The creativity inherent in a newspaper reporter's job is quite like that of the broadcasting announcer or writer, the cartoonist, the columnist, the musician, the composer, the conductor—all jobs deemed "professional" by the Department of Labor. Newspaper reporters clearly communicate in print form what radio and TV announcers convey in voice form. This double standard is silly, arbitrary and cries out for correction. They are all professionals.

There is a world of difference between the reporter of the 1940s and the reporter of today, and it is time for labor regulations to recognize that. The academic background and duties of a reporter today could not be farther from the description of a reporter as an uneducated, manual collector of facts—yet that's how the job is described in the Department of Labor's interpretations from four decades ago.

Today, more than 30 occupations are recognized as "professionals" by the Labor Department. It is hard to reconcile that a floral designer or a dental hygienist can be recognized as professional while such recognition is denied our newspaper reporters. The department's current review provides an excellent opportunity to bring these outdated interpretations into step with current reality.

My. . .how we've grown

Sunday circulation reaches 300,475

Growing circulation is one of the measures of how well we are meeting the needs of readers and advertisers. At The World-Herald we must be meeting those needs. On Sunday, November 2, we set a paid circulation record for the sixth straight week and for the first time our Sunday circulation climbed over 300,000.

A circulation of 300,000 is a milestone few newspapers achieve. Only 42 newspapers in the United States can make that claim.

When people in the Midlands purchase a copy of our newspaper it is the renewal of a personal relationship that began in 1885 when the first reader picked up the first copy and made us a part of his life.

Partnerships tend to endure in the Midlands. We are proud to have earned the trust of our readers and we will do all we can to insure that that alliance will become stronger and will continue to grow.

Omaha World-Herald

UPI

As more large newspapers drop the second-biggest wire service, new management fights a crucial battle to make it 'indispensable'

BY MARGARET GENOVESE
prestime staff writer

The new president and chief operating officer of United Press International wants one year to turn the nation's struggling, second-largest wire service into something newspapers "can't do without."

In an interview in his ninth-floor office at UPI headquarters in Washington, D.C., Milton R. Benjamin said he hopes next year to be able to go to editors and publishers at renewal time as "the indispensable United Press, and not the perennial United Fund."

That task grows more formidable almost daily.

Just before Benjamin became the surprise selection to head UPI Nov. 6, the service lost The New York Times as a client, a loss estimated by some to be in the $1 million-a-year neighborhood. About a week after his appointment, the New York Daily News said it, too, was dropping the service when its contract expires in June 1987. And The Wall Street Journal said it would discontinue taking all but the UPI statistical stock quotation service after the end of this year.

This means that the wire service has lost three of the five largest-circulation U.S. daily newspapers as subscribers. On top of that, labor unrest is at a boil among the UPI staffers. [See story, p. 8.] And, finally, Benjamin faces the "Milt who?" factor—he is largely unknown in the newspaper and broadcast industries upon which his service depends for its survival.

For Benjamin there is one top-of-the-list priority that must be accomplished to deal effectively with all the service's troubles—improve the UPI report.

To effect the change, he said, UPI plans to hire experienced personnel in key editorial positions, install a new "state-of-the-art" computer system and phase in "stunning" new computerized photographic equipment.

He said UPI's new principal owner, Mario Vázquez-Raña, has the "commitment and the resources" to make the necessary improvements in UPI operations.

Benjamin also said he has "no reason to believe that there is any substance" to some allegations of impropriety surrounding the Mexican publisher [prestime, July 1986, p. 18]. A former journalist, Benjamin said he checked out the allegations before accepting the job.

New leader Benjamin sees turnaround ahead.

Benjamin, 44, becomes the fifth person to be named UPI president since the E.W. Scripps Co. sold the money-losing wire service in June 1982 for $1 to a group made up of Nashville broadcasters Douglas F. Ruhe and William E. Geissler, Illinois newspaper publisher Len R. [Rob] Small and lawyer Cordell Overgaard.

Others who have occupied the presidency have been former broadcast network executive William J. Small, former media executive Luis G. Nogales, former UPI financial advisor Raymond H. Wechsler, and former Chicago Tribune Editor Maxwell McCrohon, who had served as UPI president since August and whose resignation was announced the same day Benjamin was named.

"I think that most people would look at the number of changes that have taken place on the business side at UPI and say this has not been a well-managed business," said Benjamin. "I wouldn't disagree with that."

However, he said he does not believe the management turmoil has damaged the wire's credibility. "I believe it has raised questions about whether UPI will be around for the long haul, and I hope that our performance over the next six months will put those questions to rest."

Prior to becoming UPI president, Benjamin was president of the Washington, D.C., management consulting firm that last spring drafted a strategic plan for a UPI financial turnaround. Announcing Benjamin's appointment, Vázquez-Raña said, "I am convinced that the strategies he has developed will make UPI absolutely essential to our newspaper and broadcast clients, and will enable us to become a viable and profitable company."

The task will not be an easy one. Newspaper clients have continued to desert the service. According to the rival Associated Press, about 40 dailies have dropped UPI since Vázquez-Raña and a minority partner, Houston businessman Joe Russo, purchased the service last June for about $40 million and took it out of Chapter 11 bankruptcy proceedings.

Some departing papers cited a deterioration in the service's quality. David Hall, editor of The Denver Post, said he did not consider the UPI report "to be essential, nor did I consider it to be compelling.

"I'm not telling you that I think that it was horrid," he added. But given the fact that the newspaper receives the Asso-

ciated Press "and a plethora of other wire services," Hall said he thought the money could be better spent in areas such as expanding the newspaper's own national news gathering effort.

Neither UPI nor its departing subscribers would disclose how much those newspapers had been paying for the UPI service.

Benjamin's first out-of-town trip as UPI president was Nov. 17 to The New York Times to ask executives to reconsider their recent decision to drop the service effective Dec. 31. The defection of the Times, which became public knowledge in late October before the latest management shift at UPI, is considered a serious blow, both financially and symbolically.

Like The Denver Post, the Times said it wanted to use the money to develop its own editorial team. Following the meeting with Times officials, Benjamin said he had nothing new to report "beyond that I'm hopeful."

"Of all the ills that could have befallen them at this juncture, this [loss of the Times] was one of the worst," said UPI Newspaper Advisory Board Chairman Eugene L. Roberts, executive editor of The Philadelphia Inquirer and president of Philadelphia Newspapers Inc.

Immediate past chairman of the Advisory Board is James F. Hoge, president and publisher of the New York Daily News. His office said he did not want to answer questions concerning his newspaper's decision to drop the wire.

Although the rash of defections obviously is of great concern to UPI, Benjamin stressed the need for the service to upgrade its performance. Over the last 10 years, he said, there has been "too large a number of promises of improvement and too little performance.

"I think the performance now has to come very quickly and in a way that is persuasive, because I think that it's very important that UPI be in a position, in a year from now, to go to its clients and say, 'We hope that you are going to renew for 1988 because we are so valuable to your news organization that you can't do without us and we are worth every penny that you're paying,' and not go to them and say, 'We hope you're going to renew because it's important that there be two wire services,' and, 'Gee, competition will keep AP honest.'"

Benjamin said his "most immediate and major goal is to infuse quality into this organization."

In the last 20 years, American journalism has "improved greatly," he said. Staff members of large U.S. newspapers are better educated and many have expertise in the areas they cover. "Largely as a factor of financial constraints, I think it is indisputable that UPI has improved less over that time than its clients," he said.

Newspapers no longer face as much competition from other newspapers as they did 20 years ago, he observed. "I think there is a definite need to provide a news report to clients that is more in line with what they are looking for today than what UPI has been providing them in recent times," he said.

STAFFERS SOUGHT. Benjamin emphasized that the key to providing an improved report will be the UPI staff.

Since Vázquez-Raña assumed ownership of UPI less than six months ago, UPI's domestic editorial staff has grown from 807 to 834. (This compares with a low of 748 in the midst of bankruptcy proceedings in 1985 and 949 when the Ruhe and Geissler group purchased the wire service in 1982.)

However, an official of the Wire Service Guild, which represents most UPI employees, claimed the new hires generally have been "rookies—that is the bottom-scale people, as opposed to experienced people." Added Dan Carmichael, secretary-treasurer of the Guild local and a 16-year-veteran UPI reporter: "They have the right to do that. I question it as a business judgment."

Acknowledging that "certainly, a lot of the people that had been hired during the summer and fall were young people," Benjamin said he will be looking to add more experienced people.

Describing today's UPI staff, Benjamin said his "sense" is that it is made up largely of long-time employees "who are quite experienced and some of them absolutely first-rate and who have performed in the most dedicated way under what were obviously very tough conditions over the past several years. . . . But then you drop down to a great number of very young people who are not as experienced as I think you'd like them to be." There is a need, he said, to have "a stronger mid-level than exists," made up of people with "graduate degrees in areas of specialization who are experienced."

"I think UPI has not really been out there trying to compete for the best and the brightest" alongside other major news organizations, Benjamin commented. "I think it has to do that."

He said he will not be directly involved in hiring, except to try to bring in "some new people at the very high end of the editorial structure."

In early October, UPI announced a reorganization plan that divides the United States into 21 regions, with regional business managers and editors. Formerly, UPI had a five-division editorial structure and a centralized business administration.

Benjamin called the reorganization "a very smart move" from a business standpoint. But he said he had not had an opportunity to discuss its editorial implications with UPI's senior editorial personnel.

TECHNOLOGICAL ADVANCES. Benjamin also described plans to upgrade the technical side of UPI. Within the next year, he said, Vázquez-Raña will make an "enormous capital investment in technology," an investment he pegged at "way into seven figures."

UPI will be "totally recomputerizing" next year, he said. This month, it will announce a major computer contract, affecting both the central computer that receives copy from UPI bureaus around

The UPI Parade of Presidents Since 1982

Maxwell McCrohon

Benjamin's "most immediate and major goal is to infuse quality into this organization."

the world and distributes it to subscribers, and the computers used by its reporters and editors. He declined to name the vendor, except to say it is "one of the major computer companies."

Also this month, UPI will unveil new computer-assisted digital photographic equipment, which it will begin deploying at subscribing newspapers in 1987.

Calling the equipment "absolutely stunning," Benjamin said UPI invested heavily in the research-and-development of the technology, a product of a domestic company. According to Benjamin, this particular photographic technique is not currently used by newspapers but has been applied in the medical field. "It will blow your mind in terms of the type of color that it produces," he said.

He also said UPI will be working toward an "integrated data stream" to carry, in digital form, all of its news, photo and broadcast services. Currently, UPI uses several communications channels to transmit that information.

FINANCES, SUBSCRIBERS. Benjamin declined to provide information about UPI's anticipated revenues and losses for calendar year 1986, except to say "revenue will be less and losses will be greater" than anticipated in the disclosure statement filed with UPI creditors in conjunction with the bankrupcy proceedings. That statement projected calendar year revenues of $87.6 million and pre-tax losses of $5.3 million. Any decision on whether to make UPI's 1986 finances public will be made by Vázquez-Rañia, he said.

At an Oct. 1 meeting of the UPI Newspaper Advisory Board and a newly formed Editorial Review Committee, Vázquez-Rana said that although 110 days had elapsed since his purchase of the wire service, "only now are we getting into the reality of the income base" of the company. It was "still impossible to calculate expenses," he reportedly told the group.

According to detailed notes taken at the meeting by board member Charles Glover, editor-in-chief of Cox Newspapers, Vázquez-Rañia said he had brought in external auditors to examine the situation. Glover quoted the UPI owner as saying: "I'm not going to show you their report. If I show it to you, you would have to suffer with me."

Also according to Glover's account, Vázquez-Rañia revealed that a detailed checking of billing lists had found that in some cases UPI was billing inactive contracts and canceled contracts. He blamed "bad internal information born out of a lack of internal organization." UPI also had been paying for telephone land lines not in use, he added. Those kind of "fatal mistakes" had been cleared up, he said.

Benjamin echoed Vázquez-Rañia's complaints about internal financial information. "The system of financial information and controls that was in place here on the day that Mario Vázquez-Rañia took ownership was unlike anything that I have ever seen in a business of this size," he said. "It has been very difficult to obtain the information that you need to financially manage a company of this size in real time."

Although Benjamin declined to discuss subscriber levels, another UPI official esti-

Editor reshuffling fuels employee disgruntlement

The upheaval at UPI in November was not limited to the president's office.

At the same time the wire service got a new president, it became known that Managing Editor Ronald E. Cohen had been dismissed, triggering a four-day byline boycott by some protesting UPI staffers.

Less than three weeks later, however, Cohen was asked to return to his old job by UPI's new president, Milton R. Benjamin. That happened the same day Benjamin accepted the resignation of UPI Editor-in-Chief Malcolm K. Hughes.

Ronald E. Cohen

Hughes resigned Nov. 24 after what he described as a "disagreement" with Benjamin over "control of the newsroom and the appointments I could make." Hughes, who recently celebrated his 30th anniversary with the wire service, also said Benjamin had been "talking about bringing (in) someone with a name" as UPI's top editor. "It seems I don't have a name," he said.

Shortly after Hughes' resignation, Benjamin said he intended to "find the most talented and experienced person in the industry to become editor of UPI."

At press time, Cohen had not decided whether to accept the UPI's offer that he return.

Cohen, who left Nov. 6, said he had been told that he was "too tied to an old UPI image of being more interested in the breaking, bulletin, urgent-type news, rather than in-depth, more analytical pieces," a characterization he called "patently false."

He also said he had no clue prior to late September that there was any dissatisfaction with his work. In fact, he said, in the middle of that month, Hughes wrote a letter congratulating him on his 25 years with the wire service and saying he looked forward to "marching side-by-side with me to a new era of glory" for the wire service.

While still on the UPI payroll, Cohen wrote UPI Chairman Mario Vázquez-Rañia to inquire about his dismissal. Denying involvement in the matter, Vázquez-Rañia replied that the decision was made by the "highest level of editorial management" and that his "way of doing business was to let his managers manage," Cohen said.

"The whole thing is fuzzy enough," he added, "that I'm just not convinced who was behind this and why it happened."

On the other hand, former UPI Foreign Editor Sylvana Foa flatly said she was fired in September because she "crossed horns" with Vázquez-Rañia, who is Mexican, over staffing of UPI's Mexico City bureau. Prior to leaving UPI, Hughes denied that charge.

In the wake of Cohen's firing, Dan Carmichael, secretary-treasurer of the Wire Service Guild, characterized staff morale as "horrendous." After the Hughes resignation, he said the description "remains operative." He called Hughes' resignation "another blow to the workforce . . . a workforce that has suffered one blow after another for the past three years."

Meanwhile, the union has threatened to bring UPI's owners to court on contempt charges over money it says is still owed some employees under the agreement under which UPI emerged from bankruptcy.

—Margaret Genovese

mated that UPI had "close to 600" U.S. daily newspaper subscribers, 2,300 U.S. broadcast subscribers, and 875 non-media subscribers in the United States.

The Associated Press, of course, constantly monitors its rival, and according to AP Assistant General Manager Kelly Smith Tunney, 30 newspapers dropped UPI service and began AP service between July and mid-October. Another eight that had been subscribing to both wire services dropped UPI service during that period. As of mid-October, 122 newspapers subscribed to both full news services, Tunney said, adding that AP has 1,365 member newspapers.

Also in the financial area, Benjamin said he placed an "immediate and very high priority" on determining how much various information products sold by UPI cost to produce. "The prices that we've put on various wires do not reflect a very good understanding of what it costs us to produce those," he said.

Benjamin said UPI would remain a "ubiquitous," full-service wire. While it will continue its effort to be first with breaking news, the service, he said, would give more attention to what he called "high-value" information—the kind of comprehensive, in-depth stories provided by supplemental wire services. UPI has the advantage, he said, of being able to provide this kind of information from more places and about more subjects than any of the so-called supplementals.

CONTACTS, CREDENTIALS. As Benjamin began the process of visiting UPI subscribers around the country, he acknowledged that he is not well-known among newspaper editors, although he has developed contacts with newspaper publishers. Benjamin was assistant to Katharine Graham, chairman of The Washington Post Co., while she served as ANPA chairman and president in 1980-82. He served as chairman of ANPA's telecommunications public policy group.

Also at the Post, he was a national affairs reporter, deputy metropolitan and foreign editor. Prior to that, he was a foreign editor at Newsweek and a roving foreign correspondent for the Voice of America. He also was Washington bureau chief for The Boston Herald Traveler (predecessor of The Boston Herald) and worked for UPI for four years as a reporter and editor in its Boston and Washington bureaus. He began his news career with The Springfield (Mass.) Union.

He left the Post in 1984 to go into consulting, first with Gray & Co. in Washington, then starting his own firm—Anderson, Benjamin, Read & Haney, Inc. Benjamin will continue as a director of the firm and said he is sure he will want to rejoin it "at some point in the future."

While Vázquez-Raña maintains "a very great interest" in seeing UPI become a viable and profitable company, Benjamin said the Mexican owner has a newspaper publishing business in Mexico that takes up his time, and he will be occupied with his duties having to do with the 1988 Olympics. Vázquez-Raña is president of the Association of National Olympic Committees.

"In terms of operating the company and taking the steps necessary to rebuild its relationship with its clients and beginning improvements in quality, I have complete authority over that," Benjamin said.

In a letter to subscribers immediately after assuming the position, Benjamin asked them to "give us 1987 to earn our place in your newsroom."

Borrowing a line from Chrysler Corp. Chairman Lee A. Iacocca, who reversed the sagging financial fortunes of that auto manufacturer, Benjamin said UPI expects to be in a position by next Thanksgiving to declare: "If you can find a better news service, buy it." □

PRESIDENT
National Press Foundation

The National Press Foundation, a rapidly expanding non-profit foundation dedicated to professional excellence in journalism through mid-career programs, is seeking a president and chief operating officer based in Washington, D.C. Duties include fund raising, administration of small staff and oversight of programs. Ideal qualifications include: development experience, proven leadership ability and a commitment to quality journalism. Salary and benefits negotiable. Send resume and letter by January 10th to:

The reputation for excellence enjoyed by Hearst Broadcasting didn't just happen. People made it happen. People whose ideas and talents have resulted in an impressive list of outstanding achievements.

WCVB-TV, Boston, the newest member of Hearst Broadcasting, has received many prestigious honors, among them the 1985 Edward R. Murrow Award, for the best local news organization in the U.S.; WDTN-TV, Dayton, has helped 25,000 youngsters through its child identification campaign, Ident-A-Kid; and WIYY-FM, Baltimore, has won awards for focusing attention on the problem of teenage drinking. In fact, all the Hearst stations are making important contributions to their respective communities.

Throughout The Hearst Corporation, the innovative ideas of our people...all 12,000 of them working in more than 135 Hearst businesses ...have helped Hearst become one of the largest and, we think, one of the best communications companies in the world.

PART 2s

More newspapers follow The New York Times' lead and produce high-quality, profitable Sunday magazine spinoffs

BY MARCIA RUTH
presstime staff writer

At the height of World War II, when Paris designers could not hold their annual shows, The New York Times joined U.S. fashion leaders in staging alternative shows in New York City.

Coverage of such events began as "Fashions of the Times" articles in the Times' weekday pages and Sunday magazine. Then in 1950, an expanded version moved to a free-standing section of the Sunday magazine called a "Part 2."

Today, 17 such Part 2s account for about one-fourth of the number of issues of The New York Times Magazine published each year, as well as about one-fourth of the magazine's advertising pages.

And a few other dailies have also started Part 2s.

Editorially, Part 2s are "an expansion of the areas we already cover well," says The New York Times Magazine's advertising manager, Barbara J. Litrell.

What is new is the advertising dollars they generate. In the most recently added Part 2—The Good Health Magazine, published last Sept. 28—about 80 percent of the ads were "new business," Litrell says.

Good Health is now on a semiannual publication schedule, as are these other Times Part 2s: Fashions of the Times, Men's Fashions of the Times, The Sophisticated Traveler, Home Design, Home Entertaining and The World of New York. Published three times a year is The Business World.

For a long time, the Times magazine has been considered in a class by itself. Far and away the leader among newspaper magazines in attracting national advertising, it has consistently led the field in the overall number of advertising pages. In 1985, it also emerged for the first time with more ad pages—4,360—than *any* weekly magazine, according to the magazine industry's Leading National Advertisers, which measures advertising.

Although many newspapers use their Sunday magazines to highlight a particular subject and attract related advertising, printing separate magazines on a single topic is a relatively new phenomenon.

"We saw The New York Times doing it and thought—at least in fashion and travel—'If it works in New York, why not in Chicago?'" says John A. Churchill, advertising manager of the Chicago Tribune's Sunday magazine.

In 1984, the Tribune started with two Part 2s, then went to five in 1985 and 1986. Planned to continue yearly are spring and fall issues for both fashion and travel, as well as a home furnishings Part 2 that was inaugurated this year. In 1985, the Tribune had another second section of the magazine, "24 Hours in Chicago," sponsored by a single advertiser, a department store.

"I don't know if we'll keep adding one every year forever," says Churchill, "but that seems to be the track we are on."

In the past three years, the Los Angeles Times has also launched a combination of regular Part 2s and issues wrapped around a particular event.

Three years ago, the Times began the twice yearly "Traveling in Style," which was "downsized" along with the regular Sunday magazine last year [presstime, April 1986, p. 12].

This year, one special Part 2—the Sept. 21 "Center Stage" publication—focused solely on the opening of the Orange County Performing Arts Center.

Another newspaper that has joined the trend is The Boston Globe, which now has seven regular Part 2s plus an occa-

The Los Angeles Times publishes "Traveling in Style" twice a year.

sional special issue, such as the one published Aug. 31 commemorating the 350th anniversary of Harvard University.

For some papers, Part 2s allow experimentation with new approaches without going out on a limb every Sunday. "We will try something in a Part 2 we would not try in the regular magazine," says Churchill. For example, pleased with the full-bleed color and different trim of its latest Part 2s, the Tribune plans to move to adopt that new look for the regular Sunday magazine early next year, he says.

Other papers, such as the Providence Sunday Journal, offer a modified Part 2—a pull-out, themed section that is tucked inside the regular Sunday magazine. "What we do is run two covers essentially," says Advertising Manager Robert F. Pyper. "It is more practical for us to do it this way than run two separate books."

In 1985, The Globe and Mail in Toronto chose another path: publishing specialized magazines without a general one—essentially, Part 2s without a Part 1—on Friday as a "weekend" magazine.

The newspaper currently publishes a monthly magazine covering business and "what to do and where to go" in Toronto,

"We saw The New York Times doing it and thought . . . 'why not in Chicago?' "

as well as a quarterly travel magazine, says Marketing Director Mike Soliman. These magazines are distributed as part of the Sunday paper, and Soliman says he hopes eventually to broaden the offerings and to step up the frequency to weekly.

Newspapers with Part 2s regard them as successful, but some say it is hard to pin down their financial impact.

At the Chicago Tribune, the five Part 2s account for 8.8 percent of the total number of Sunday magazines published annually (57). And they bring in 12.5 percent of the Sunday magazine revenue.

At The Boston Globe, with its seven regular Part 2s plus some special issues, the revenue figure is closer to 6 percent, says Display Advertising Manager Oliver Rodman. More importantly, the Part 2s "bring new people (advertisers) into the magazine," says Rodman, and on occasion they also bring advertisers into other parts of the paper. The important thing with new accounts, he says, is that it is "not switch business but new business."

The Los Angeles Times does not divulge revenue figures, but with 254 pages, including 161 pages of ads and 385 different ads, last September's "Center Stage" issue was the paper's largest magazine.

At The Globe and Mail, success is measured on two fronts—ad revenue and circulation, says Soliman. For example, when a Friday paper contains a specialized magazine, single-copy sales go up 18,000 to 22,000, he says. "If I can keep 2 to 3 percent (as regular readers), it's a wonderful way to build circulation."

So far, there is agreement that the most viable subjects are fashion, travel, business and a focus on the city where the newspaper is published.

What remains to be seen is whether the move to specialized Part 2s is only an option for the largest papers, or whether others will join the trend. □

CAN YOU MEASURE THE QUALITY OF YOUR NEWSPRINT?

IF YOU CAN'T FILL IN THE BLANKS, YOU PROBABLY AREN'T GETTING THE NEWSPRINT YOU NEED.

Quality printing demands quality newsprint . . . especially for quality color reproduction.

Today's increasing demands for color, by advertisers and consumers, require greater control of newsprint brightness, opacity and color. And now you have it.

Technidyne's MICRO TB-1C allows everyone to clearly communicate these values with real numbers that everyone understands. The simple-to-operate MICRO TB-1C provides accurate, reliable, standard measurements . . . a common language. Every time.

Newspapers can order quality newsprint with confidence, and check those orders when they arrive. Mills know what to produce. Exactly. Everyone will be talking the same language. At last!

Contact us today for more information or a demonstration.

Long Ago, Carriers Also Delivered Special Holiday Greetings

BY KAY MAGOWAN

Nowadays mention holiday customs around a newspaper office and people will probably think you're referring to the newest staffers getting stuck with the worst hours, having to sit at the same table with the editor at the Christmas party, getting cookie crumbs in your VDT, or turning down a bottle of booze because it's against the ethics code.

But a couple of centuries ago, a more pleasant—and now long-forgotten—newspaper holiday custom was just getting started.

Remnants of the custom still exist in the form of the calendars or cards some carriers give to subscribers during the holiday season. But from the mid-1700s to the early 1900s, these greetings were much more original. Called "carriers' addresses," they usually were in verse form and often were elaborately printed.

Called "carriers' addresses," they usually were in verse form and often were elaborately printed.

The addresses generally were designed to thank customers for their patronage and to solicit a tip. Their contents varied, but the important news events of the year often were summarized.

These newspaper relics, filled with timely and timeless bits of wit and wisdom, appear quaint by today's standards. Consider this excerpt from the New York Sunday Press address in 1861:

"Our pleasure and duty alike we have found,
As the year was running its twelve months round,
In furnishing freely to sex and age
Spread skillfully out on the printed page,
A record true, from week to week,
Of all that the mail or wire could speak.
The deeds of a thousand million hands
In a dozen of zones and a hundred of lands,
Fun, politics, roguery, war and peace,
Loves, mysteries, murders that never cease
While the pulse of humanity burns and beats
Through the country's lanes and the city's streets.
We have talked of the sick, the dying, the dead,
The nursery and the bridal bed,
The liveried lackeys of royal courts,
The men of the people in rows and sports,
How Julia ran off with her father's groom,
And Nell punched her husband's head with a broom,
How cities fell amid war's fierce din,
While conquering armies thundered in,
And how Timothy died from the prick of a pin."

Because the addresses, like newspapers, usually were discarded after reading, most of the ones that still exist are in the rare collections of libraries and historical societies across the country.

In one sample of nearly 100 addresses from various libraries around the country, the oldest was from the Pennsylvania Gazette of Philadelphia in 1748 and the newest from The Daily News of Batavia, N.Y., in 1904. Sizes ranged from single-page handbills to eight-page pamphlets. The shortest was 12 lines, but several of the poems ran more than 200 lines.

Early addresses were quite plain, but in the 1800s, the heyday of the carriers' addresses, fancy borders and color were added as the annual greetings became more and more elaborate. Broadsheets, 12

Selections from Broadside Collection, Brown University Hay Library; photos by Madaline Friz

Magowan worked as a copy editor and assistant news editor for daily newspapers for 14 years before becoming an assistant professor in 1983 in the Department of Mass Communication at the University of Wisconsin, Milwaukee.

inches by 18 inches or larger, were favored for a time, but pamphlets became popular in the 1850s. Near the end of the century, some papers started adding calendars and others produced almanacs instead of verses. These variances seemed to signal the end of the poetic practice.

Most carriers' addresses were not signed, so their authorship remains a mystery. Carriers, of course, wrote some. Others were the work of reporters, editors and anonymous local poets. A few were credited to widely known authors such as John Greenleaf Whittier, Alfred Lord Tennyson, James Whitcomb Riley and Nathaniel Hawthorne.

Many of the poems sounded like the famous letter carriers' credo and told how the newspaper carriers shivered through the cold winters, splish-splashed through the spring rains, sweated through the summer heat, and sludged through the mud and muck of autumn's tempests. But in the 1784 address from the Pennsylvania Gazette the carrier offered an apology to the reader:

"'Twas wrong indeed to wear out shoes,
To bring you nothing but bad news"

Many addresses eschewed the lighthearted for more sober reflections on subjects such as war, peace and freedom as, for example, this 1820 Erie (Pa.) Reflector poem:

"We have no news from Europe's shore,
'Tis the same tale, told o'er and o'er,
That men are born for slaves;
Imperial crime o'er kindred souls,
The tide of blood and ruin rolls,
And Death's dark banner waves."

Or, from the 1773 Pennsylvania Gazette, this poignant reflection:

"Each fam'd Revolution we find is no more,
Than a dull Repetition of what went
before."

Comments on the events of the year weren't just from the big-city dailies. For example, in 1875 a Grasshopper Falls, Kan., carrier for the Grasshopper and New Era newspaper included the following verse in his holiday greeting:

"This year, from his arduous labors, has
gone
The Afric (sic) explorer—the great
Livingstone.
His work was so noble all nations may
claim
A part in his conquests, a pride in his
name."

Under the "issues haven't changed much in 100 years" category come these verses from The Emporia (Kan.) News of 1870:

"A word perhaps is not amiss,
Its stand is true and strong
That Woman's Right is to do right,
But never to do wrong.

And in her right to help herself
By work or hand or pen,
And in her right to equal pay,
For equal work, with men."

Politicians took their lumps in the addresses, as in this from The Oregonian of Portland, 1852:

"Had I a muse I here would sing
Some great exploits of colonel King,
A rara avis of his class—
A perfect legislative ass."

Or, from The New York Daily Advertiser, 1828:

"Our Aldermen, that goodly corps,
(Not merely meant to eat and snore),
Drawn from the wards in comely pairs,
To arrange the city's deep affairs
Draw from the people mints of cash,
And lav it out in feasts and trash."

Some addresses brought up strictly regional issues. The 1871 address from the Central City (Colo.) Register explains the local antipathy toward Eastern miners brought in to work worthless mines.:

"The swindled Eastern payer sends
To work this barren hole,
Some first-class nincompoop who lacks
Conscience, sense or soul.

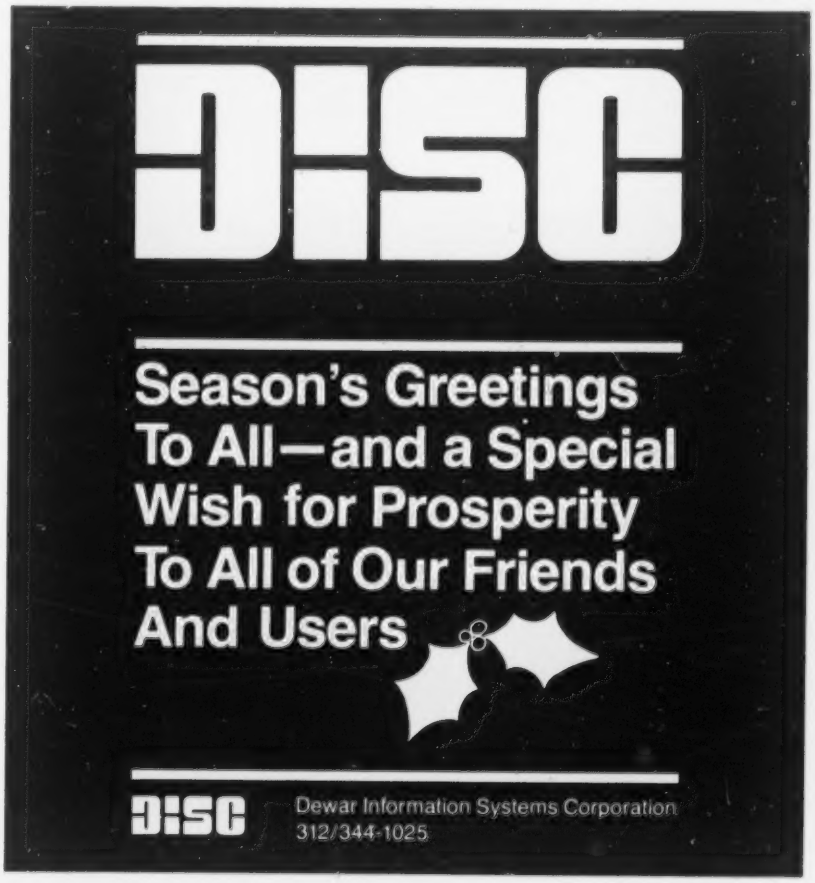
He spends the cash the owners send
To work their precious mine
In trotting horses, gaudy clothes,
Women, cards and wine."

Although many carriers' addresses never mentioned money, some, such as this from the Salt Lake City Daily Tribune in 1883, started with a blatant request for a tip:

"Accept, my jolly patrons, a carrier's
'Happy New Year,'
For you 'mid the heat of summer, for you
through winter drear,
Certain and sure as sunrise, I have left the
Trib. at your door,
Thanks for a silver quarter, many thanks for
something more."

Others, such as the 1894 address from The Washington Post, took a more subtle approach but hit the topic hard at the end:

"There's no good in making promises,
And I don't intend to boast,
But just try me with your silver
If you want an early Post."



What used to be black and white and read all over...

SECTION C

BUSINESS

Circulation down; Ad revenues slip

Recent surveys indicate a decrease in circulation for major daily newspapers that are still utilizing black and white print. Industry experts also agree that a black and white format directly relates to a decline in ad revenues.

Survey responses substantiate today's "color world." More than 90 percent of those surveyed own one or more color televisions. Almost all respondents read two or more color magazines per week.

Advertising, in print as in television, is a visual medium. Attaining the right "image" for whatever is being marketed is all important. For more and more advertisers, black and white no longer suffices, especially when their significant insertion rates are considered.

Recent surveys indicate a decrease in circulation for major daily newspapers that are still utilizing black and white print. Industry experts also agree that a black

Can now be black and white and red and yellow and...

...in short, a more visually impressive, attention-getting newspaper with late-breaking color pictures! Hell Graphic Systems is your single-source for state-of-the-art products that allow you to conveniently and cost-effectively step up to full-page color composition. And the cost-savings, increased ad revenues, and greater circulation that go along with it!

We're contributing to newspapers' color revolution with innovative products such as:

- The NewsPlan system for video transmission of late-breaking news photos
- Chromagraph color scanners for the generation of high-quality separations
- The Scanskop for soft proofing assurance
- The LS210 laser image setter for combined output of text and graphics
- The Pressfax system for facsimile transmission of newspaper pages

Hell offers a complete product line that allows any newspaper of any size to feature late-breaking news, sports, and advertising in color. Get the edge on your competition! Join the color revolution...you'll see the results in increased circulation and ad revenues. And our systems can be easily configured to your exact production requirements.

Circulation up;
Ad revenues rebound
The use of color is paying big dividends for news-
paper publishers across the nation.
Recent industry surveys indicate a marked rise in
readership and advertising revenues in major daily
newspapers that have switched from black and white
to color.
The use of new color technology has served a two-
fold purpose: heightening reader interest through a
more visually appealing format and reducing the time
gap between news deadline and press time. Now, even
the video camera can replace the traditional still photo
camera in the field.
The move to color also results in significant cost
savings. Although situations vary, the return on in-
vestment is quite favorable, with the new equipment
paying for itself in three years, on average.
The use of color is paying big dividends for news-

British Press Upheaval

With much weaker unions in place, newspapers are fleeing Fleet Street. The shakeup has resulted in new papers and streamlined operations.

BY BRIAN P. KNOX-PEEBLES

The recent chain of events in the British national newspaper industry is part of what many see as the most significant changes in commercial communication in Great Britain since the 15th century.

The structure of the British newspaper industry differs from that in the United States, and a lot of what is happening at this moment on Fleet Street happened several years earlier in the United States.

However, as Madison Avenue is to advertising and Texas to oil, so Fleet Street is to newspapers. It is the heart of the industry and has influenced the development of siblings throughout the world. It is also in the capital of one of the countries with the highest per capita consumption of newspapers in the world. Hence, what is happening in Britain *is* of interest and significance.

So far as the structure of Britain's newspaper industry is concerned, it is sharply polarized between the immensely competitive national sector and the regional sector that until fairly recently, when the serious threat from free publications emerged, had operated in local markets similar to those in the United States. There was one substantially dominant paper per region, with competition coming from broadcast media and leisure activities.

The entire U.S. newspaper industry, with the exception of The Wall Street Journal, The New York Times and USA Today, would fall within the regional category.

But within Britain's national newspaper industry, 11 dailies with circulations ranging from about 200,000 to 4 million are published out of London each day; within the quality sector, where the standards match those of The New York Times or The Wall Street Journal, there are the Daily Telegraph, The Times, The Guardian and the Financial Times; also, The Sunday Times, The Observer, The Sunday Telegraph and—since Oct.7—The Independent. (See chart, p. 20.)

Total circulation of the national papers has been stable for the past 15 years, though the quality sector has been outperforming the popular press. The overall stability has been achieved despite the increase in TV channels and hours of broadcasting; outdated production methods; appalling industrial relations leading to lost production running into millions of copies per year; escalating costs (presstime, June 1981, p. 46); price increases well ahead of inflation; recession and unemployment; British enthusiasm for the video cassette recorder (current household penetration: 34 percent); and all the leisure opportunities now available to fill every waking minute.

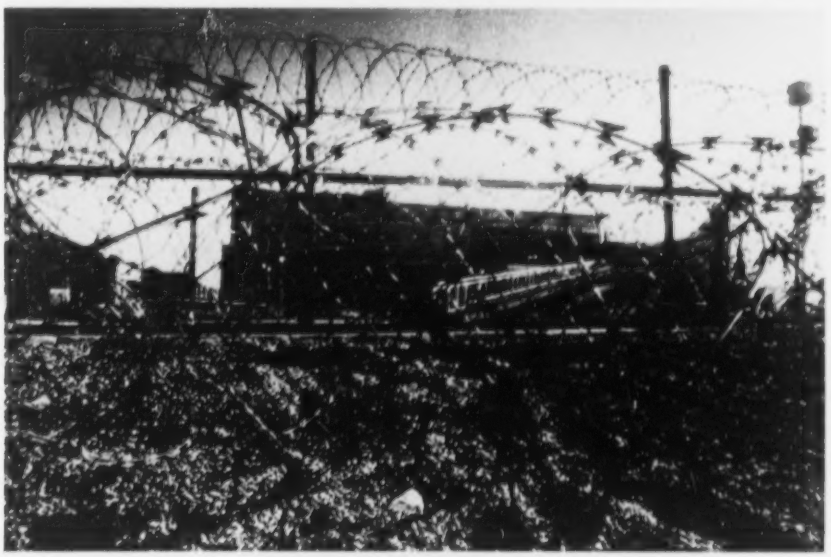
In Britain, therefore, there is little or no evidence of any decline in interest in the printed word.

The intriguing question is what sort of state the industry would be in had these negative factors not been at play over this period.

However, Fleet Street realized it must reduce its cost base to survive in the face of strong competition from new launches—two new national dailies and two Sunday papers this year, with even more planned for next year—because the majority of the national papers were operating either at very considerable financial loss or, at best, minimal return. Hence, the significance of the Eddie Shah initiative against the unions (see story, facing page)—it set in motion the revolution in financial and technical terms.

Today, three waves of events can be identified: the immediate consequences of Shah's successful defiance of the unions in 1983; the dramatic developments of this year; and what is still to come.

Knox-Peebles is group marketing director of London-based United Newspapers, a major newspaper and magazine publishing company.



News International's new plant in Wapping is protected by barbed wire mainly as a defense against angry print workers.

The first wave began with the Warrington riots in 1983; the appearance of new, aggressive proprietors who curbed union power; newspapers' moves to leave Fleet Street; the launch and initial collapse of Shah's Today newspaper; and the first moves in limiting the power of the wholesale distributors.

The second wave—what is happening now—is the launch of new publications by a generation that learned from the mistakes of its predecessors. These publications include the relaunch of Today, launches of The Independent and Sunday Sport, and a host of plans for the London market.

The third part, the most interesting, is yet to come. It is the "green fields" situation that for so long has seemed a utopian goal. Essentially, this final scenario presupposes that production constraints, in the mortally destructive sense of the past 20 years, are a thing of the past; that the planned moves out of Fleet Street have been successfully completed; that the use of printing capacity in the regions by London-based nationals has been successfully organized as currently planned; that nationals are beginning to produce the sort of return on capital that managements feel should be possible (approximately 15 percent); that computing power can be used to the fullest; and that London is supporting at least two, possibly three, evening dailies.

FORCES FOR CHANGE. There were four major forces which brought about this change: Shah (Today/News UK); Robert Maxwell (Mirror Group Newspapers/British Printing & Communications Corporation); Rupert Murdoch (News International); and computers. While the regional press has been making use of computer power for years, the national press is just beginning to enjoy its advantages.

Shah and Murdoch set the pace with electronic typesetting. Today incorporated electronic color scanning as well, and complete pages were transferred to press.

Within the first nine months of this year, the traditional print unions—the National Graphical Association (NGA) and Society of Graphical and Allied Trades (SOGAT '82)—made concessions that were unthinkable just two years ago. Publishing companies have begun the move away from Fleet Street and have started taking advantage of new technology in their new locations, leading to the new and planned launches.

Shah, with his total use of new technology and minimal workforce resulting in a hugely lowered cost base, seemed set to realize profits existing newspapers could only dream of—20 million pounds ($28.8 million) on revenue of 50 million pounds ($71.9 million). The fact that this has not

Shah (above), Maxwell (uppermost photo) and Murdoch (center) set the stage for major change. Also instrumental have been United Newspapers Chairman David Stevens (far left) and Conrad Black, a Canadian who owns a controlling interest in the Daily Telegraph.

Eddie Shah at the Fore of Controversy

If there is one name that stands out in the revolution in British newspaper publishing, it is that of Eddie Shah.

An ex-TV producer turned free-newspaper entrepreneur, Shah hit the headlines in 1983 in a fierce clash with the powerful-print union, the National Graphical Association, at his Messenger Group Newspapers in Warrington in the North of England.

The NGA's mass picketing over a closed-shop dispute and the ensuing violence brought Shah and the union into a court battle the union ultimately lost.

In 1985, Shah conceived the idea of Today, Britain's first national color tabloid, produced with state-of-the-art technology and a workforce only 20 percent of the size employed by other national newspapers.

Today was undercapitalized and failed to reach its advertising and circulation targets. This led to the paper's takeover by Lonrho Corp., already owner of The Observer and other papers. By that time, however, the bandwagon of change was unstoppable.

Shah has gone back into regional newspapering, using money from his shares in Today to purchase the Warrington Guardian series, rivals to his Messenger Group of free newspapers. Now a dispute with the NGA is looming there over an in-house practice by the union. *—Brian P. Knox-Peebles*

National Newspapers in Great Britain[1]

Sunday People (Mirror Group Newspapers)	3,031		

[1] As of June 1986

materialized is irrelevant. He triggered the revolution even though his target market—"middle England"—turned out to be largely illusory, and the circulation of his paper, now around 370,000, is a long way from the 1.5 million originally envisaged.

As Today was approaching publication early this year, the Mirror Group's Maxwell began a confrontation over the printing of his national newspapers, culminating in threats to close them and finally the shedding of 2,100 jobs. His contribution to the shakeout, in this sense, was enormous.

The other major factor in bringing about these rapid changes was Murdoch who in January 1986, ahead of the launch of Today, moved the four News International titles from the area around Fleet Street to Wapping. He bypassed the traditional print unions and reduced his 6,500 workforce by 5,500 people. This is the subject of continuing dispute.

Following this, came the rush to leave Fleet Street by the other national newspapers and move to the Thames Docklands development area. Cheap sites, the opportunity to install new presses often utilizing color printing, and the possibility of simultaneously reducing the workforce and introducing new work rules combined to lure publishers out of central London.

FUTURE PLANS. Major publishers' achievements and plans are as follows:

Maxwell's Mirror Group Newspapers is to move to the Docklands, and printing will be turned over to the British Newspaper Printing Corp., a BPCC subsidiary of which Maxwell is chairman. BNPC has ordered 20 high-speed, offset color presses from MAN-Roland of West Germany, at a cost of about 60 million pounds ($86.3 million). All Mirror Group papers should be offering color by July 1987, with 16 pages of live color every day in the daily papers and double that on Sunday. The emphasis is on high quality, high speed and all the latest news and sports coverage.

Meanwhile, Maxwell has achieved assurances on voluntary reductions in the labor force and the return of the five-day workweek at his two Scottish newspapers, the Daily Record and Sunday Mail.

• **Express Newspapers,** now part of United Newspapers, is developing its long-term production plans but has made no announcement. It has cut its labor force (once 6,800 strong) by more than a third without loss of a single copy.

• Production of the **Daily Telegraph** moved to Docklands at the end of September. Substantial workforce reductions of about 1,000 have been achieved from the 3,300-member staff, although the paper has simultaneously recruited a good number of new journalists. The daily and Sunday papers have been revamped and redesigned, with new features introduced, more foreign news and greater attention given to Scotland and the North of England in home news coverage. Color printing is available, although it is being restricted to ads initially.

• **The Guardian** is scheduled to move to Docklands in late 1987, and color presses will be installed. Color will be used for advertising initially. The print unions have agreed in principle to direct input.

• The **Financial Times** is to move to Docklands in 1988, and 55 million pounds is to be spent on further development of the paper. Restrictions on pagination and the number of copies that may be printed will no longer apply, and color printing will be feasible. Four hundred voluntary reductions in staff have been called for.

• Production of **Associated Newspapers** (Daily Mail, Mail on Sunday, The Standard of London and many regional titles) is also set to move to Docklands in 1988, while editorial, advertising and administrative offices may move to new quarters in central London.

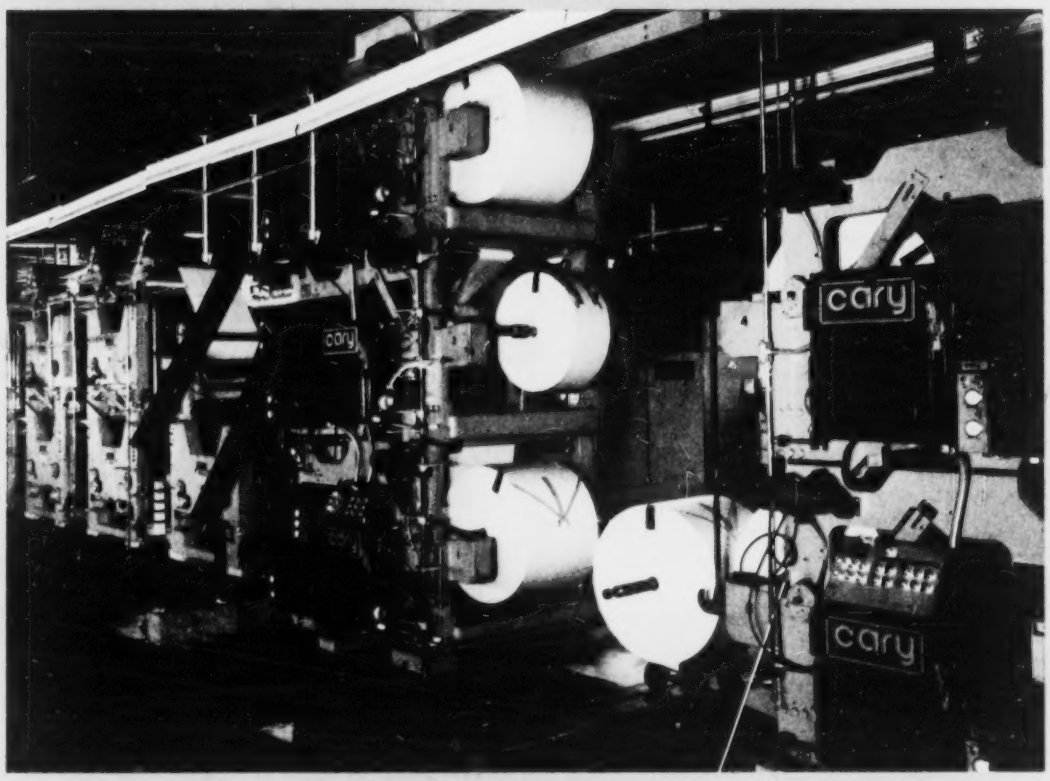
• **The Observer** has not opted for a move to the Docklands. Instead, it has decided to go for contract printing in the regions—shedding, in the process, 500 print workers' jobs. Its editorial offices will move from Blackfriars to Battersea. These moves should enable the paper to run on a lower cost base and help it combat assaults on its circulation from The Sunday Times and the soon-to-be launched News on Sunday.

• At its new Wapping base, **The Sunday Times** plans to print a 200-page paper by the end of 1987 and to introduce new supplements.

'86 AND '87 LAUNCHES. National papers launched in 1986 were Today (March) and Sunday Today, Sunday Sport (September), and the Independent (October).

Today's launch was disastrous, and the paper, always under-capitalized, had to be rescued three months later by Lonrho Corp. It is now being revamped and heavy promotion may effect improved circulation and greater advertising content.

For FAST Relief...



Put Cary Flying Pasters on Your Press

Relief From:

Spending millions of dollars for new press equipment.

By adding Cary Flying Pasters to your existing single-width press, you don't need double-width equipment!

Relief From:

Production deadlines.

You'll get your paper "on the street" faster, extending your editorial and advertising deadlines. And that means increased circulation and revenues.

FAST? You bet Cary is Fast!

With a Cary Flying Paster, the press NEVER stops or even slows down during the entire press run. A built-in automatic infeed and tension control speeds make-ready, provides perfect web control during press stops, and is the proven performance leader for running color.

Forget about "stop the presses" to change paper, getting back into register, roll stubs, and wasted newspapers.

Call Cary today. See why there are over 500 units in operation worldwide. Talk to us about our analysis of your needs, training, follow-up, and highly responsive service. Let us show you what "unsurpassed reliability" and "simplicity of operation" really mean.

Cary Flying Pasters. Take one – or up to 12 – for FAST relief.

Specializing in Converting Newspaper Presses to Commercial Heat-Set Presses.

Sunday Sport, a very cheeky, down-market publication, survived a ban on its advertising imposed by the ITV television network. It launched a 32-page tabloid, including 16 pages in full color. Printing is being done in two regional plants. About 500,000 copies were produced for its launch in London, the target is 1.7-million circulation within 18 months. Further launches in the North and the Midlands are planned.

The Independent, the new quality daily paper launched on Oct. 7, has opted for contract printing at four regional facilities. Good regional distribution of the paper should follow. Four out of a basic 24 pages will be capable of printing color, including the front and back.

Extensive prelaunch research was undertaken. A sample of 1,000 adults showed that 15 percent of those reading an up-scale paper were not entirely satisfied with it. About 30 percent of those who had changed their reading habits in the recent past had done so by taking an extra newspaper. This may indicate that the Independent would find a market as a "second" newspaper rather than as an alternative to a longstanding favorite.

Two new Sunday papers and three new London evening papers are scheduled for launch next year. News on Sunday, a politically left-of-center paper, the Sunday Globe; the London Daily News, a Maxwell paper; Associated Newspapers' Evening News, which was closed in 1980; and Murdoch's London Post, once planned for a 1985 startup.

But there are doubts about whether a market exists for another evening newspaper, let alone three more. A new evening paper would add relatively little to net circulation and advertising revenue. However, the new printing technology renders a launch more viable.

To confuse the marketplace even more, one entrepreneur is talking of moving the free-daily paper concept (Tuesday-Friday) from Birmingham to Manchester and London in 1987. This semi-national paper in three major conurbations could have an impact on sales of nationals.

SUMMING UP. British newspapering has entered a "phoney" war period. The declaration of intent has been made, and a few lightning and significant moves have been carried out. Beyond that, however, it is a matter of the various forces repositioning themselves.

During this limbo time, a great deal of logistical activity will go on. But it will not be until after the new plants are built, the moves made, and the new presses with their enhanced color capacity and state-of-the-art technology operational that the real battle will begin.

At the end of the revolution—beyond the hype and the miracles of modern technology—all that will have been achieved is what was possible, in its context, 250 years ago: namely, producing newspapers in a form readers want them and at a profit.

The recent past has been concerned with changing technology, lower operating costs and manning levels, but that was yesterday. All that was only a means to an end, not an end in itself. What British publishers have to understand, and act upon, is that new technology and increased profits have a value only in making it possible to provide better service to our readers. That, and only that, is what this revolution is about. □

To get the full story on printing plates, check out a second source.

Until recently, there's been little choice in photopolymer plates. But now there is a real choice. Because now there's nyloprint.®

nyloprint® goes to press in minutes, giving you stunning reproduction through millions of impressions. It's backed by a knowledgeable sales and technical staff in offices across the country. In turn, they're supported by a worldwide group of experts that's considered the best in the business. Now that's a real choice—from BASF, world leader in printing plates and processing equipment. For more information, call Christopher Webber, product manager, at 1-800-343-4700. BASF. Ahead in Photopolymer Performance.

COMMITTED TO EXCELLENCE

GOSS *Newspaper Products*

WE PUT OUR NAME ON

The introduction of a Goss press is an event of major significance. You can be sure it isn't undertaken lightly. The Goss Flexo press design first had to prove itself. And it has — convincingly. Under deadline pressure. Producing four-color 112-page newspapers and advance runs in the pressroom of a major metropolitan daily. Only a flexo press that measures up to that kind of evaluation, to our uncompromising standards of performance, reliability and ease of operation, could qualify for the Goss name, which represents a century of leadership.

The 70,000 cph Goss Flexo press incorporates advancements that make flexo a viable option for the industry today. As customer needs grow for color and paging, modular design permits the Goss Flexo press to grow with added units, halfdecks, full decks and upper decks. With a variety of cylinder arrangements, up to six colors can be printed. Uniform ink application is provided by an inker developed by Paper Converting Machine Company, our flexo partner and a leading manufacturer of flexo equipment for the packaging industry for 40 years.

Ink cleanup is made easy by an automatic washup system. The press is protected by an interlock system. Plating of units and halfdecks is fast and accurate with the Goss magnetic lockup. Simple, reliable press control is maintained

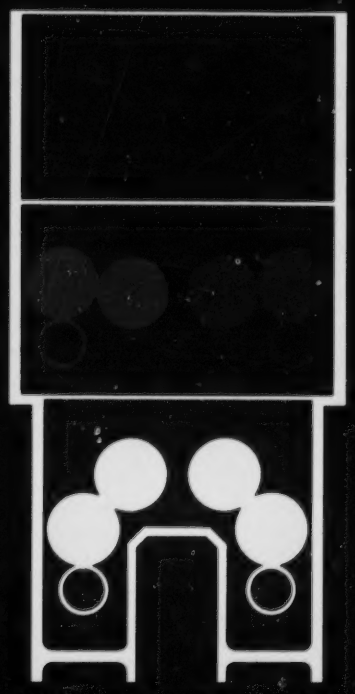
Goss **FLEXO**

FLEXO.

from a touch-sensitive unit panel or remote console. And the press is available in a variety of cutoffs, 50" to 60" web widths, and with a range of folders for product versatility.

In short, the Goss Flexo press can give you all of the recognized advantages of the flexo process in a high-volume pressroom. Start-up is reduced to an armful of papers. Very few on-the-run adjustments are necessary. Bright spot and process color is achieved with water-based flexo inks—and with no rub-off.

Above all, you can share our confidence in the process as carried forward by the Goss Flexo press—confidence earned by performance. We have the same commitment to leadership in flexo that we are known for in offset. A commitment characterized by continuing research, materials testing, extensive training and full support by the Goss parts and service network.



With the modular design of the Goss Flexo press units, you can expand to three, four, five or six colors by adding halfdecks, full decks, upper halfdecks and upper full decks whenever you need them. Goss Flexo units can replace all the units in a letterpress or individual units to increase the color capability of a press.

Goss Newspaper Products. First in offset. Now first in flexo.

For more information, contact Goss Newspaper Products, Graphic Systems Division, Rockwell International, 3100 South Central Avenue, Chicago, IL 60650. Or phone 312-656-8600.

AIDS
Reporting the Tragedy

BY MARGARET GENOVESE
presstime staff writer

A prominent public figure in Anytown, USA, is rumored as having acquired immune deficiency syndrome, better known as AIDS. Does the local newspaper publish the story?

A private citizen dies of complications from AIDS. Should the obituary mention AIDS?

Some people with the disease have made a point of publicizing the fact, including one daily newspaper editor. And there appears to be an emerging trend for survivors to acknowledge AIDS as the cause of death. But other AIDS victims and their families prefer to keep it secret, in large measure because so far in the United States the killer disease has predominantly struck homosexual and bisexual men and intravenous drug users.

This much is certain: The toll for AIDS victims will increase, and as it does, so will the ethical dilemma for editors on whether, how and when to identify them.

So far, there does not seem to be any consensus on this issue. Even individual editors are not sure what their newspaper's policy should be.

For example, following the death of a prominent Bostonian, reporters for The Boston Globe talked to the man's family, close friends and doctors but were unable to confirm widespread rumors that he had AIDS. "Therefore, we never knew it" for certain, says City Editor Kirk Scharfenberg, "and, therefore, never had to confront the next question"—whether to publish the information.

In the case of private citizens, the Globe would abide by survivors' wishes and not publish such information if they so requested, according to Scharfenberg. However, the Globe has no policy on prominent people, and Scharfenberg admits, "I don't know what is the right policy." On one hand, he says, it is important to get word out that "real people" have AIDS. On the other hand, it is important to respect a person's privacy.

The potential magnitude of this growing problem for editors comes into better focus when the statistics and projections for AIDS victims are examined. According to the federal Centers for Disease Control in Atlanta, 26,875 cases of AIDS had been reported as of late October—and 56 percent of these had resulted in death. In the next five years, the number of AIDS cases is expected to increase tenfold—including a greater number as a result of heterosexual contact. The CDC estimates that by the end of 1991, about 270,000 people will have contracted the disease and about 179,000 of them will have died.

"I don't think we ought to be snooping into hospital records, laboratory records and doctors' records."

William Cox

AMONG THE LIVING. The AIDS story is "just fraught with extraordinary issues" both within and outside of the newsroom, says Bob Mong, assistant city editor of The Dallas Morning News. According to the CDC, the Dallas metropolitan area currently has the 10th highest number of reported cases of AIDS in the United States, 460.

"We have vigorously covered individual cases. We've covered the phenomenon. We've tried to stay up-to-date on the medical situation," says Mong.

However, the newspaper has yet to encounter a situation where it ascertained that a prominent resident had contracted the disease but declined to acknowledge so publicly. If that did happen, says Mong, someone from the Morning News staff would probably talk to the victim and to his or her family. "It's such an explosive, sensitive topic, we would want to be compassionate about it and try to get some sense about how they feel about it."

Other editors say the question of whether to print such a story would depend on the prominence of the person and whether the information could be verified.

"It depends on who it is," says Richard Harwood, deputy managing editor of The Washington Post. "If we knew that President Reagan had AIDS, I'm sure we would report it." But, he adds, "there are a great many people who have terminal diseases that we don't customarily publicize."

"It all depends on degree of prominence," agrees Kent D. Bernhard, executive editor of the Detroit Free Press. "If it is a person who is known among a real small circle of people, but very well-known, likely not. If it were a person who would be a major, major political figure who was ill, probably so, *if* I knew it.

"The thing is," he continues, "on the condition of anyone's health—whatever the illness would be—I would need to make certain we absolutely knew it, and I am a tough person to convince on a lot of scores."

Like Mong, Bernhard says he would approach the person and invite him or her to discuss the illness. "If we are talking about an extraordinarily prominent person—among the most visible people in a state, let's say, or a region—I think it would beg credulity to feel that that person would not at some point . . . acknowledge the illness. If you are a governor or mayor or president of a major corporation, that is just not the type of thing that will stay out of the public prints because you are too prominent."

But what if the person denies having the disease? "It's tough to report that they

have it when they are denying it," says Larry W. Tarleton, executive editor of the Dallas Times Herald. "I don't think we'd do that."

However, if the person died and a knowledgeable person came forward and said the victim had suffered from AIDS, Tarleton says he would report that, along with the victim's previous denial.

RECENT EXAMPLES. One of the very few cases in which a prominent living person was reported to have had AIDS was that of Perry Ellis, a New York fashion designer who died last May at the age of 46. The Daily News in New York reported on Ellis' hospitalization and said a hospital spokeswoman would not comment on reports by friends that the designer was suffering from AIDS.

In its obituary on Ellis, Newsday also mentioned speculation in the fashion industry that he was suffering from AIDS. "It had become such a widely rumored thing that his company had put out a disclaimer saying he didn't have AIDS," says Newsday Executive Editor Anthony Marro.

On the other hand, neither the New York Post nor The New York Times mentioned AIDS in their coverage of Ellis' death. Both cited the cause of death as "viral encephelitis."

"We, in no case, will report AIDS on the basis of a rumor or public speculation, no matter how rife that speculation might be," says Leonard Harris, a spokesman for the Times.

There are three situations in which the Times will report AIDS as the cause of death, Harris says: If a hospital spokesman says so, if the family says so, or if the deceased person has made the request in advance of death that the disease be identified.

One of those situations existed in August when Roy M. Cohn, a widely known New York lawyer, died at the age of 59. The Times' obituary quoted a spokesperson for the National Institutes of Health, where Cohn was being treated, as saying that the immediate cause of his death was cardiopulmonary arrest and that the death certificate also listed two secondary causes, dementia and "underlying HTLV-3 infections."

The next paragraph explained that most scientists "believe the HTLV-3 virus is the cause of AIDS." Finally, the Times obit reported that in newspaper and television interviews Cohn had repeatedly denied widespread rumors that his treatment at the federal hospital was the result of AIDS; he said he had liver cancer.

The Cohn case raised another issue, the use of medical records to confirm AIDS. About a week before Cohn's death, syndicated columnists Jack Anderson and Dale Van Atta reported that Cohn was suffering from AIDS, quoting from confidential medical records obtained by Van Atta.

"We, in no case, will report AIDS on the basis of a rumor or public speculation, no matter how rife that speculation might be," says a New York Times spokesman.

William Cox, a former managing editor of the Honolulu Star-Bulletin who disclosed last summer in a front-page column in the newspaper that he was suffering from AIDS, worries that if the press begins trying aggressively to identify who has AIDS, state governments will enact tougher privacy laws making it harder for the press to do its job.

"I don't think we ought to be snooping into hospital records, laboratory records and doctors' records. I think we are asking for big trouble with the public if we start doing that," he said in an Oct. 24 presentation to the Associated Press Managing Editors convention in Cincinnati.

Cox said he came forward about his illness because he is a journalist "who just couldn't live with saying 'no comment' to my friends and colleagues and others in the media" and because he wanted to "fight the stigma that comes from this damned disease." But, he added, "not everyone can be as open as I was. . . . There are people who don't want to be denied their livelihood or the support that usually is given by friends or family to people who are sick. I hope that we in the press aren't going to try to make that decision for them, that we're going to reveal that somebody has AIDS."

CAUSE OF DEATH. At some newspapers, the question of whether to list AIDS as the cause of death in the case of an ordinary citizen is moot. The Kansas City Star, for example, does not usually list the cause in its obituaries, according to City Editor Darryl W. Levings. That policy would not change in the case of AIDS, he says. "If I knew somebody died of cancer and I don't traditionally put that in, why would I go out of my way to put the person died of AIDS if I knew that?"

In This Case, 'We Hedged'

She wasn't exactly a prominent citizen. But when a local prostitute tested positive for AIDS antibodies and the Transcript-Telegram of Holyoke, Mass., learned about it, editors at the 23,888-circulation daily agonized about what to do.

"We wrestled with whether or not we should do a story telling people that a prostitute that did rather brisk business in town was carrying that disease—whether or not we owed it to our readers to tell them that," Managing Editor Robert V. Unger related at the recent convention of the Associated Press Managing Editors.

Ultimately, he said, "we hedged." The paper did not identify the woman by name, but ran a story saying "a city streetwalker" had been exposed to the AIDS virus.

The newspaper also included in the article an explanation of how AIDS is contracted.

The presentation of that kind of information was endorsed at the APME meeting by former Honolulu Star-Bulletin Editor William Cox, who suffers from AIDS. He said newspapers should be "less squeamish in reporting how you get this disease and what can be done to prevent it. I think we can do it without being graphic, and I think we can do it without street language. Since getting sick, I've heard from reporters who tell me their newspapers won't allow them to use the word 'condom.' " He urged newspapers to point out when erroneous statements are made about how AIDS is transmitted.

He also cautioned against using the phrase "innocent victims" of AIDS when referring to children with the disease. "That is saying then there must be people who are not innocent, who deserve to get it."

—Margaret Genovese

At the San Francisco Chronicle, the cause of death is always asked, says Edwin Epstein, deputy city editor. But if the family does not want it in the obituary, the newspaper abides by those wishes, whether the cause of death is "cancer or cirrhosis or AIDS."

The Atlanta Journal and The Atlanta Constitution include the cause of death in obituaries when it can be obtained. But it is his understanding, says Managing Editor Glenn McCutchen, that AIDS "is seldom, if ever listed as the cause of death." That is so because AIDS is caused by a virus that weakens the body's immune system and leaves it vulnerable to infection and disease, particularly pneumonia and cancer, which may then be given as the cause of death.

In the case of private citizens, few newspapers go beyond what is supplied by the family or funeral home to discover whether the underlying cause of death was AIDS.

The Washington Post is one newspaper that has assumed an aggressive policy in giving AIDS as cause of death in obituaries. Unlike some other big-city newspapers that run news obituaries only on prominent people, the Post will publish a news obit of "any private person who's lived in this community, in the way of being a permanent resident, for a substantial part of a lifetime regardless of rank, status or achievement," says obituary editor Joe Smith [presstime, Nov. 1983, p. 30].

In the case of private citizens, few newspapers go beyond what is supplied by the family or funeral home to discover whether the underlying cause of death was AIDS.

However, the paper's policy is to publish the cause of death in all cases, including that of AIDS victims. "We are not in a position of treating people differently," Smith says. If survivors request that the cause of death not be published, the Post gives them the option of canceling the obit request.

When the newspaper suspects the cause of death is AIDS, it will raise the question. "If we get an obituary of, say, a 36-year-old man, and we are told he died of pneumonia and he's never been married, I'd be suspicious," says Smith. "I think any reasonable person would be suspicious because 36-year-old people don't normally die of pneumonia."

If the person requesting the obituary denies that AIDS is the cause of death and the obituary writer is still suspicious, the Post will check further. Smith declines to say by what means. He emphasizes, however, that the Post never publishes a news obit for a private person saying he or she died of AIDS without telling survivors first and permitting them the option of withdrawing the obit.

An attorney working with AIDS victims in Washington strongly opposes the Post's policy. Mauro A. Montoya Jr., legal services coordinator for the Whitman-Walker Clinic, thinks obituaries of AIDS victims should be run without cause of death, if that is survivors' preference.

Lori Behrman, public information director for the Gay Men's Health Crisis Inc. in New York City, believes obits should list AIDS as the cause of death. While it's "very important to respect families' wishes," she also says that covering up the cause of death "makes this disease shameful to people, and it makes people think that there's something to hide when you have AIDS, and that's not the case."

Burr Van Atta, obituary writer for The Philadelphia Inquirer, says he has seen "a great deal" of change in the past year in the willingness of survivors to publicize AIDS as the cause of death.

"That's not an unusual position in many cases, whether you are talking about AIDS or cancer or brain tumors," he says. "The family will hope by making a point of announcing the cause to get support for research in the field—in other words, turn the death into a positive thing." □

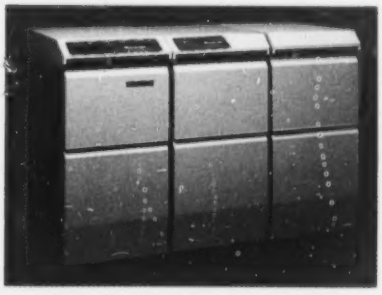
If you think the headline of this ad has two meanings, you're right. On both counts.

USA Today has selected Autologic's new APS-6 Laser Imager for full-page imaging and typesetting.

For a very simple reason.



With all due modesty, it's the best laser imager available on the market today.

It images full pages of text and graphics at high speeds. With high resolution: our top quality halftones have hard, crisp dots, giving you 1,000 dpi, or a 90 line-screen.

Its full page width gives you production flexibility. And it has the reliability that Autologic imaging systems have always been known for.

Another advantage is that it's driven by Autologic's exclusive Page Image Processor, allowing you to hook up additional devices (such as a proof printer) at a lower cost. All fonts will match. And software needs no modification.

So make the smartest imaging decision in the USA, today. *USA Today* did. Call Autologic Marketing Services to find out about our APS-6 Laser Imager.

WE ARE FLEX

We were one of the first to put our names on newspaper Flexo. Among PEC, W&H and K&B we have in production, or on order, 363 printing couples of Flexo Printing Equipment.

PEC now offers the newspaper industry the broadest array of Flexo Printing Equipment including:

- New Flexo units, decks, humps and multi color units
- Factory remanufactured units, decks, humps and multi color units
- Field Flexo conversions
- New folders — 3:2 rotary, jaw, and combination
- Factory remanufactured folders, size changes
- Field folder conversions, size changes
- New RTP's — 50" running belt
- Factory remanufactured RTP's
- Field upgrades on all RTP's
- New motor drives and press controls
- Complete all new K&B, W&H Flexo presses

The industry can now look to one company, PEC, for total Flexo responsibility.

CALL PEC TODAY TO DISCUSS YOUR FLEXO NEEDS

QUALITY CIRCLES

Higher efficiency, cost savings and better communications result when employee groups review procedures and problems

BY CLARK NEWSOM
presstime labor writer

Since they were first introduced at newspapers in the early 1980s, "quality circles" have spread from the production department to the advertising department, from the maintenance crew to the circulation department and even to the newsroom. Today, quality circles are giving employees a greater opportunity than ever to take part in molding the newspaper operation.

The concept is simple: A group that usually consists of about eight employees from a department meets for an hour a week on company time to "deal with things in the work area that they can fix," as John R. McGovern, employee relations director of the Long Beach (Calif.) Press-Telegram, puts it.

Typically, the group contains both blue-collar and white-collar employees and is led by a supervisor. Most of the time, quality circles attain permanent status, although in some cases they dissolve after a few years of problem solving.

Currently, there are at least 176 circles operating at 14 daily newspapers, and the number is still growing.

Their accomplishments range from improved lighting in the pressroom, to new supply cabinets that improve inventory control in the advertising department, to a composing room tote board that indicates the number of pages remaining for an edition.

The concept was introduced in Japan—at the instigation of American behavioral scientists—in the 1960s. It made a return trip across the Pacific Ocean and started taking hold in U.S. industry in the early 1970s. Participants identify and analyze problems in their department, develop solutions and recommend them to management. They steer clear of personnel problems and matters covered by a labor agreement.

Although some newspapers and other companies have adopted different names, "quality circles" remains the predominant name. There's even an International Association of Quality Circles, a Quality Circles Journal and a Quality Circle Institute that trains program coordinators.

NEWSPAPER PIONEERS. More than 100 of the quality circles at U.S. dailies are at nine newspapers owned by Knight-Ridder Inc., the group that brought the concept into the newspaper business. In 1981, its Detroit Free Press started it all by establishing 12 circles, now increased to 27.

"As we have matured, so have the types of projects," says Gary A. Kleinhenn, who once sold classified ads for the paper and now is its quality circles manager.

Some of the results at the Free Press include:

- At one group's urging, the newspaper installed 748 interior storm windows, resulting in energy savings estimated at $100,000 annually.
- Seven steps to increase safety and productivity were established at the recommendation of one circle in the pressroom.
- A circulation department circle put together a pamphlet for district managers to use in the orientation of new carriers.
- An advertising department circle prepared a booklet explaining the Detroit market for national advertisers.

With quality circles, "people (employees) are in the decision-making process and know top management is listening," Kleinhenn says. He reports a mix of open and tacit support from union leaders at the newspaper, adding that many union stewards participate in circles.

But from a national perspective, labor leaders are a lot less sanguine. Organized labor does not take "a 100 percent negative attitude" toward quality circles, but it does have some problems with them, says Murray Seeger, director of information for the AFL-CIO. He says circles have been used by some companies to undermine unions by developing alternative lines of communication that bypass the union structure. And, he says, there are examples outside of the newspaper industry where management has used circles "to nip union organizing efforts in the bud." On the other hand, he says that the United Auto Workers and Ford Motor Co. have worked together on circles that have been "very effective."

The composing room quality team at The Virginian-Pilot and The Ledger-Star of Norfolk transformed an ad storage system from cardboard boxes (left) to neat, hanging plastic jackets (above).

Effectiveness is a major reason why eight Knight-Ridder dailies have followed the Free Press' lead and established circles. Marge McCollum, corporate manager of training for the 28-member newspaper group, says "the quality-circle process works because people work." It's a matter of "people contributing their unique skills and talents," she says.

As Knight-Ridder's quality-circle manual states, "There is a growing awareness that the creative capacity of a newspaper's professional, technical and support people is an immeasurable resource and that using this human energy can pay rewards far beyond the time and effort needed to harness it."

KEYS TO SUCCESS. For a quality-circle program to succeed, McCollum and other experts say it must have a long-term management commitment and must be integrated into a company's goals.

In the same year the Detroit Free Press began its pioneer work in the field, another newspaper launched a quality-circle program but with different results.

John C. Ginn, president and publisher of the Anderson (S.C.) Independent-Mail, says he became aware of quality circles through general business literature and contracted with a consultant to get a program started.

Enthusiasm waned, and the program in Anderson faded away last year after reaching a peak of six circles. But Ginn says the program was not a failure, and he was not disappointed with it. It was "a good experience" and "made a contribution" to the newspaper, he says.

Richard A. Roberts, training and development manager at The Orlando Sentinel, says that what happened in Anderson is not unusual. A small group that meets regularly for a couple of years can reach the point of "What do we do next?" he says.

Indeed, quality circles went through an evolution in Orlando after they were instituted in mid-1982 as part of a broad-based productivity program. Their name has been changed to "employee involvement groups," and they meet on a "project need" basis rather than regularly.

"We got away from the structured concept," Roberts says. "The climate here has always involved employees in the decision-making process through such means as a suggestion system."

COORDINATING PROGRAMS. As indicated by the Orlando experience, quality circles have gone through a number of changes in the United States, Roberts says, adding that "they didn't work exactly as envisioned at smaller companies."

"People learn communication and problem-solving skills they can use in many areas of their lives."

Even so, there is "still a lot of interest" in quality circles, says Geri Wilson, an assistant vice president at Hayes & Associates, a Winston-Salem, N.C., human resources training and consulting firm.

Hayes & Associates helped get a quality-circle program started at The Virginian-Pilot and The Ledger-Star of Norfolk in 1983. Sharon L. Plawin, quality teams coordinator at the newspapers, was trained by Hayes to be the "facilitator," or program coordinator.

The Norfolk papers started with three teams—two in advertising and one in technical services. The number has grown to 34 in all departments except the newsroom. The program has "opened up tremendous communications between departments," Plawin says.

As examples of ideas produced by the teams, Plawin notes that in the pressroom, where there are five teams, additional lighting was installed on the half deck of the press, and the machine shop welded a step on the press to make it easier to reach the angle bars. A team in the classified advertising department "did a lot of research" to select the best headset for telephone salespeople. Outside salespeople now carry pocket tape recorders to make notes, as suggested by another team.

"It takes time, and people get impatient," Plawin says, "but people learn communication and problem-solving skills they can use in many areas of their lives."

Other newspapers have used outside consultants to get their programs off the ground. McGovern of the Long Beach Press-Telegram was trained as a facilitator in 1984 by Sperry Information Systems in Princeton, N.J. There are four circles at the newspaper: "Phone Mates" (classified advertising), "Retail Action Faction" (retail advertising), "The Achievers" (circulation single-copy sales) and "Rubber Band Bandits" (circulation home delivery). Selecting names is one of the initial steps in the quality-circle technique of consensus decision making.

The names give "a sense of identity" to the groups, McGovern notes.

The Press-Telegram plans to add another circle soon. "We want to expand on a controlled basis so we can manage it," McGovern says, adding that the current four circles require from six to eight hours a week of his time. He believes a newspaper can operate with 10 or 12 circles without a full-time coordinator.

There is a full-time coordinator at the Philadelphia Inquirer and Daily News, where there are 33 circles, including a newsroom team of copy editors. Joseph B. Chandler, formerly transportation manager, was trained in 1983 by Organizational Dynamics Inc. of Burlington, Mass. Since the first teams met in 1984, "we've had steady growth," Chandler says, noting that 283 employees have participated as team members.

With growth and experience has come the emergence of a common language, Chandler says. Now, "Everyone understands what 'cause-and-effect analysis' means," he says.

The Tallahassee (Fla.) Democrat began its program in January of this year with three circles, including one in the sports department called "The Huddle" that produced an electronic stylebook. The other circles are in circulation home delivery and inside classified advertising. "We hope to start two more next year," says Doris S. Dunlap, director of employee and community relations, who acts as facilitator.

Tallahassee's program got under way five months after the one at the San Jose Mercury News, where five groups are convening from time to time.

Says Training Director Roberta (Bobbie) Gibbons, quality circles "tend to do housekeeping things first." For example, the newspaper's circle in retail advertising decided to tackle the problem of time wasted looking for forms and supplies. It presented a solution to management that involved construction of a new supply cabinet. The project was approved, and the new cabinet containing all needed forms not only saves time but has improved inventory control.

In Texas, quality circles were introduced at The Beaumont Enterprise earlier this year. Coordinator Mamie I. Meek, formerly assistant news editor, took a leave from the newsroom in January to investigate quality circles with the encouragement of Publisher George B. Irish.

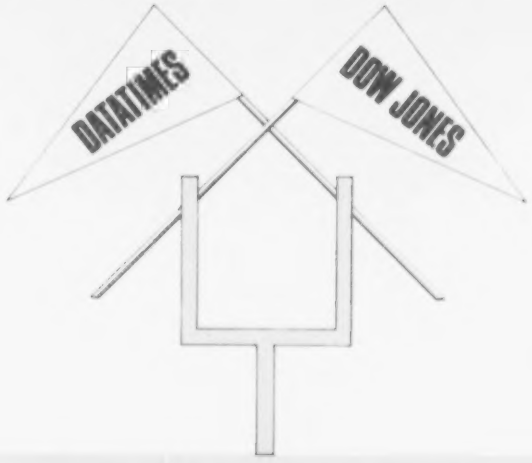
Meek says she found a valuable resource in her own backyard—the John Gray Institute at Lamar University. A pilot circle proved successful, and the newspaper now has 11 circles with two more planned in the circulation and editorial

departments. "The results to date have been phenomenal," says Irish.

"Quality circles are a wonderful way to introduce the concept of participation to newspaper people and getting them involved in the decisions that affect their jobs," says Meek. She reports that a proposal by the pressroom circle to improve lighting in the pressroom has been adopted. And a mailroom circle solved a mailing-list problem that yielded a considerable reduction in paper waste.

Although quality circles are set up within individual departments, their projects often overlap into other areas of the newspaper. Meek says she believes that quality circles "will tear down barriers between departments."

The No. 1 Draft Choice Signs with DataTimes.



Dow Jones News/Retrieval® is coming online to DataTimes with the best information line-up in business: *The Wall Street Journal, Barron's, Forbes, Inc., Financial World*, PR Newswire, Dow Jones News Service®, and more.

You know DataTimes. We help America tackle its business information needs with online newspaper database access from the country's leading newspapers and newswires including *The Washington Post, The Dallas Morning News*, AP Newswire, *The San Francisco Chronicle*, and many more.

You know Dow Jones. The leading business information source. Period.

Together, we're the greatest offense in the game of business. When you need data on any person, company or subject for business or other kinds of news, it's online with DataTimes. Easy research with easy access from any computer terminal, *anywhere!*

Now, you can gain impressive yardage against the competition without manually searching through a stadium-full of old newspapers, magazines, files, and microfiche.

Call DataTimes today and get over 40 business and financial databases from Dow Jones News/Retrieval *plus* 28 of the country's leading newspaper and newswire services.

DataTimes and Dow Jones News/Retrieval. The winning information strategy. And your best offense in the game of business.

VARIOUS NAMES. The widespread acceptance of the concept of quality circles in places like Beaumont hasn't always applied to the name itself. Wilson of Hayes & Associates says she prefers "employee problem-solving teams" as a more descriptive term than "quality circles."

And like The Orlando Sentinel, the Contra Costa Times in Walnut Creek, Calif., labels its teams "employee involvement groups."

"More and more people want a say-so in their (work) environment," says Personnel Director Gail A. Cutler. The company is using a program developed by the American Productivity Center in Houston.

Also in California, the Los Angeles Times created what it calls "TEAMS"—an acronym for Times Employee Action Means Success. William E. Sperry, manager of employee participation programs, says he was "uncomfortable" with the term "quality circles."

The Times' first teams were started a year ago in the production area, and there are now 25 of them in all departments but news and sales.

Sperry, who received his training at the Quality Circle Institute in Red Bluff, Calif., says the newspaper is "looking at $400,000 in first-year savings" resulting from the program. For example, a recently completed project that involved a change in the conveyor belts that bring rolls of newsprint into the warehouse reduced damage, saving an estimated $50,000 a year in newsprint outlays. "It cost $600 to implement with a four-day return on investment," Sperry reports.

At the Times, there are from eight to 10 employees on a team, Sperry says. "We found that large groups of 18 to 20 did not work," he says, because all of the team members did not get to participate. "We've seen a personal growth in employees," he says, and there is "no problem in getting volunteers."

Regardless of differences over terminology, the quality-circle concept has a bright future, specialists in the field say.

The International Association of Quality Circles—which itself is considering a possible name change—reports steady growth in membership. Founded in 1977 with 100 companies, there are now about 4,000 member companies, according to Ned Hamson, editor of the organization's Quality Circles Journal.

Hamson says there are 300,000 circles in the United States involving 2.4 million people. The Cincinnati-based association also represents firms in 36 foreign countries, where membership "is growing by leaps and bounds," he says. □

Armotek's ULTR-A-LOX® precision engraving system delivers perfectly identical anilox cylinders for newsprinting.

ULTR-A-LOX cylinders don't need a pretty picture to tell their story. It's a story being told from coast to coast and border to border in EVERY SUCCESSFUL NEWSPAPER FLEXOGRAPHIC PRESS.

ULTR-A-LOX cylinders don't promise anything in the future—They deliver successful printing today, every day, and everywhere.

At Armotek the committment to supplying the newspaper industry is over six years old and growing. In fact, we've increased capacity 30 percent in 1986 alone. When newspaper flexography needs output capacity, Armotek is ready.

Call Armotek for more information. Or better yet, call any newspaper printing flexographically. They already know the ULTR-A-LOX success story.

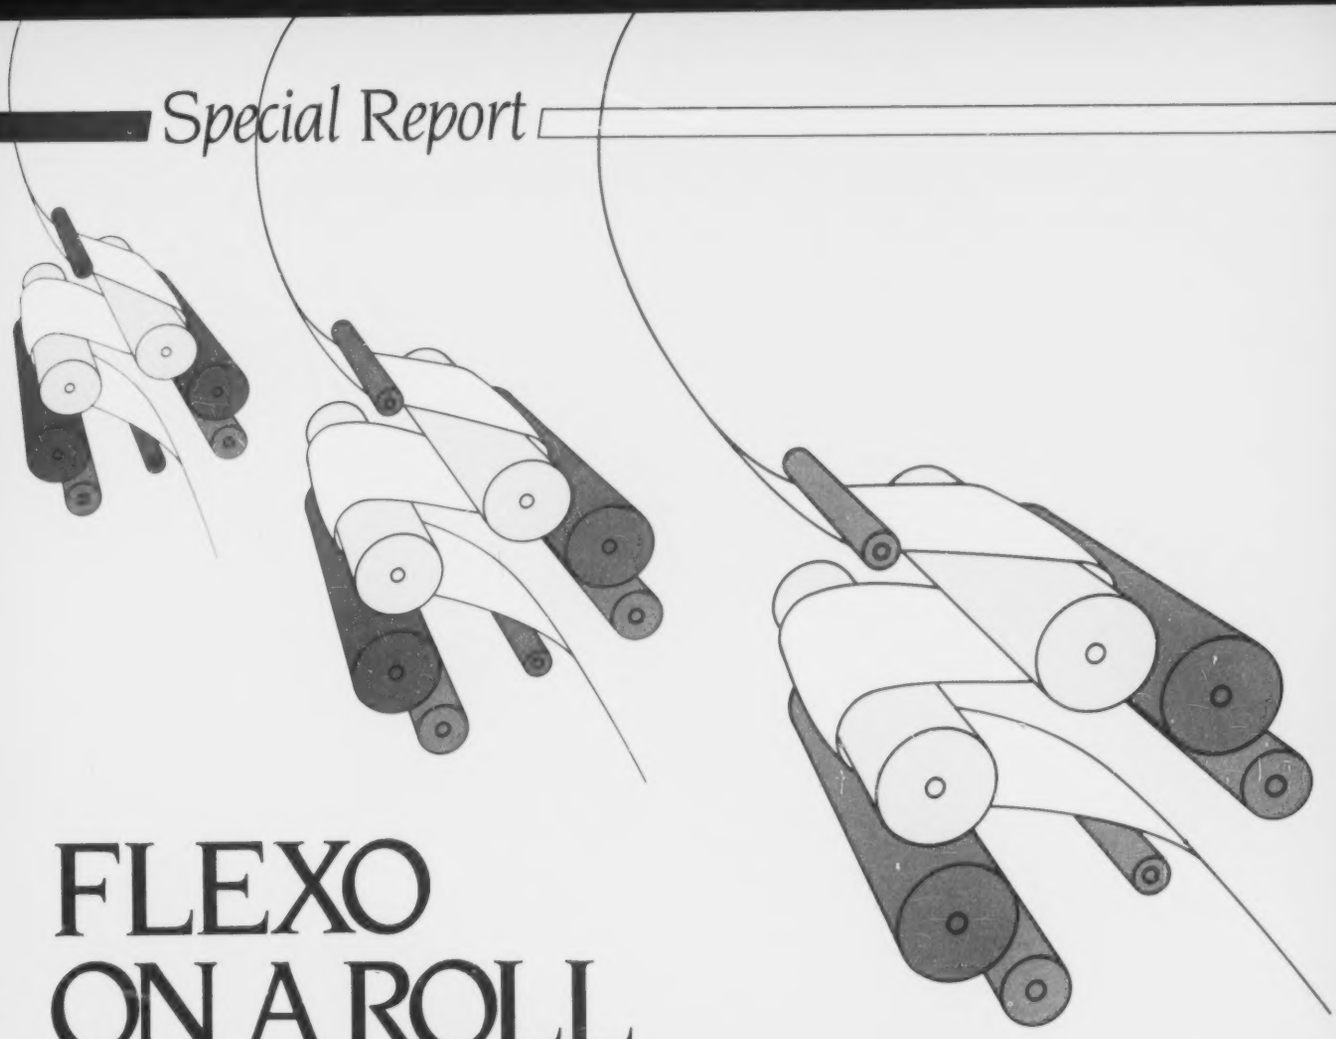
Special Report



FLEXO ON A ROLL AT NEWSPAPERS

Skepticism is giving way to acceptance, as flexography proves itself in newspaper pressrooms. Executives no longer question if it will claim a share of the newspaper press market, but how much.

BY ROSALIND C. TRUITT
presstime technical writer

Survival of the fittest.

While observing wildlife on the west coast of Africa in the mid-19th century, naturalist Charles Darwin formulated his theory of evolution, arguing, among other things, that only the strongest and most capable win the struggle for existence.

Today, newspaper production experts draw similar parallels when discussing the competition between three printing processes: offset, flexography and letterpress.

Which printing process is fittest as 1986 comes to an end and the 1990s approach? Not long ago, the answer to that question was fairly simple.

By the early 1960s, newspapers had concluded that letterpress printing was going the way of the dinosaur, and a search for an alternative began. Such headlines as "Nation's Weekly, Daily Newspapers Continue Rush to Offset" became commonplace, and a monolithic shift toward offset printing seemed certain.

Offset, which offers high-quality reproduction, continues to dominate the market among daily and weekly newspapers in the United States and Canada. And as recently as a year and a half ago, debate still raged over whether newspaper flexography, or "flexo," would even work.

Now, flexo has proved itself, and the debate centers around how large a share of the newspaper printing-press market it will claim in years to come.

The consensus is that newspapers currently printing offset are

unlikely to switch to flexo any time in the near future because, as a rule, offset presses are no more than 10 or 15 years old and remain quite servicable.

However, according to ANPA data, more than 300 daily newspapers in the United States and Canada still use letterpress units to print an estimated 35 percent of daily circulation in the two countries. They represent a potentially lucrative market for press manufacturers.

Michael H. Bruno, a graphic arts consultant, notes in a report titled "Status of Printing in the USA—1986" that 16 percent of *all* types of printing is now being done flexographically, and he predicts the figure will increase to 18 percent in 1990 and to 21 percent by 1995.

Most experts predict that in newspaper publishing, flexo will steadily gain market share but will not—at least in the foreseeable future—eliminate offset. They see a coexistence developing, and a peaceful one at that because many of the same companies that manufacture offset presses are expanding into flexo. Nine companies either manufacture or plan to manufacture flexo presses, and four companies convert letterpress units to flexography.

"Flexo's about to explode," says George Cashau, ANPA director technical research. "There's no doubt it's come of age, and a great many newspapers are on the verge of either purchasing it outright or testing. It won't be until the 1990s that you see widespread use, but it's coming." Although no North American newspaper currently is relying on flexo for all of its printing, usage is increasing steadily. Since 1981, the number using flexo has gone from one to six, and at least five others have either bought flexo presses or agreed to begin testing them in the next 12 to 18 months.

"A lot of people out there placed press decisions on hold because they were hoping there would be a better alternative to offset," says Jerry S. DeHimer, director of operations for The Journal and The Bulletin in Providence. Those papers have been printing flexographically since 1981—longer than any other North American newspapers. And DeHimer says, "We now know flexo offers that alternative."

It is difficult to ascertain how many newspapers have actually delayed press purchases to await flexo test results in Providence and elsewhere, but press manufacturers and newspaper executives alike speculate that hundreds of millions of dollars of letterpress presses will need to be replaced or modernized in the not-too-distant future.

Knight-Ridder Inc., for example, has more than 300 letterpress units printing every day in its newspaper plants around the country, and Scripps Howard newspapers have more than 100. The Miami Herald and The Press-Telegram in Long Beach, Calif., both owned by Knight-Ridder, have been testing flexography for several years; testing will begin at the end of this month at Scripps Howard's Knoxville (Tenn.) News-Sentinel and at The Knoxville Journal, which is independently owned.

Test results will guide Knight-Ridder and Scripps Howard in deciding whether other newspapers they own will adopt flexo. Both groups are leaning in that direction company executives say.

"Most newspapers did not want to be the first developer of flexo printing but wanted someone else to do the development work," observes John Pascarella, sales manager for M.A.N.-Roland (USA) Inc. "If it was successful, they planned to come in at a later date. Now the development work has progressed to the point where newspapers must consider it."

Robert Mrak, vice president of newspaper flexo for the U.S. subsidiary of the Italian press manufacturer Cerutti Inc., says there is "absolutely no question that flexo has arrived and that interest will continue to snowball." He says the sales contacts he makes at newspapers indicate nearly everyone in the business now believes it is just a matter of time before flexography becomes at least as popular as offset.

With some newspapers it already is. "We feel flexo has arrived. It's gone beyond the research-and-development stage," says Boykin S. Wright, vice president-production for The Miami Herald. "That's not to say we won't continue to see developments in flexo, just as we continue to see developments in offset, but flexo is a viable printing process right now."

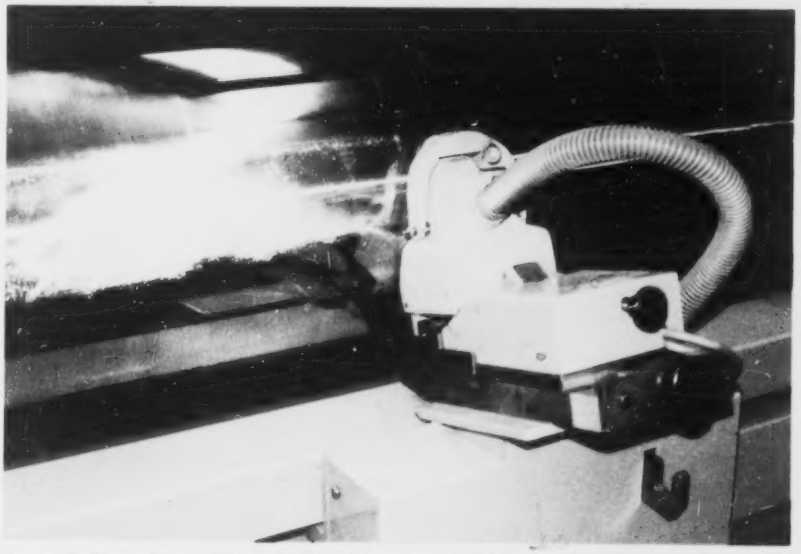
THE ATTRACTION. Flexography, the longtime workhorse of the packaging industry, has drawn this kind of attention from newspapers because testing to date has proved that flexographic presses are simpler to operate, cheaper to run and cleaner to use because they print with water-based inks.

Early on, proponents of newspaper flexo argued that the presses would be lighter weight and cheaper to make—in stark contrast to the hulking, energy-gobbling monsters that presses had become by the mid-1970s. At least part of their speculation has been borne out.

Although they are indeed lighter, new flexo presses cost about as much as new offset presses—in the neighborhood of $1 million per unit. One reason is that the folders, reel stands and other components that have nothing to do with the actual printing are the same for both processes.

But flexographic presses do offer savings in terms of reductions in newsprint waste, electricity consumption and staffing requirements. Overall, they are also cheaper to maintain.

In the past year or so, improvements in ink and plates and



Armotek electronic engraver cuts 4,600 cells per second in the anilox cylinder.

increased expertise in the use of the process have encouraged some newspapers to order flexo presses without first testing them in their plants.

Two California dailies, The Monterey Peninsula Herald and The Modesto Bee, this year became the first to do so when they placed the initial orders for the new Goss flexographic press.

Newspaper executives and press manufacturers alike say the current enthusiasm for newspaper flexography can be attributed to the fact that newspapers like The Miami Herald, The Journal and The Bulletin of Providence, and The Washington Post are publishing newspapers with flexographically printed pages every day.

The Providence papers and the Post, in particular, have received considerable interest.

The pioneering work in Providence demonstrated that flexography can print black-and-white pages in a daily newspaper production environment. Starting in January, The Journal (morning, circulation 88,607) and The Bulletin (evening, 119,310) will install the first of 18 units of a new Windmoeller & Hoelscher and Koenig & Bauer flexo press that will print process color. When that Journaltlex press is up and running, the Providence dailies will become the first newspapers in North America to be printed entirely on flexo units.

In that regard, the New World is a bit behind the Old. In April 1985, Il Gazzettino, a daily in Venice, Italy, became the world's first all-flexo newspaper. Since then, four other Italian newspapers have followed suit. (See story, p. 43.)

At The Washington Post, attention has centered on the agreement the newspaper has with the Graphic Systems Division of Rockwell International (Goss) to test an eight-unit Goss letterpress press converted to flexo and to provide detailed financial information about the cost of running it in comparison to the newspaper's offset presses.

When Thomas Might, the newspaper's vice president production, offered the first detailed comparison of flexo and offset costs at a workshop session during last summer's ANPA trade show in Atlanta, there was a virtual stampede to the front of the packed meeting room to pick up copies. Comparing such costs as labor, materials, newsprint waste and electricity, Might's figures showed it was $14.24 cheaper per ton of newsprint used to print flexographically than offset (*pressstime*, July 1986, p. 44).

Flexo has sometimes demonstrated drawbacks that include plate plugging, inks drying too fast or not quickly enough and plates that are more costly.

FLEXO DEFINED. For a new kid on the newspaper block, flexography has been around for a long time.

Two years ago, Might put it this way: "We are not inventing a new printing process, we are stealing it. Not only that, we are stealing a process where technical evolution seems endlessly and rapidly improving reproduction quality as it grows."

Indeed, though testing of flexography for newspapers began this decade, the process has been popular with the commercial packaging industry for more than 60 years.

Flexographic presses offer versatility because they can print on a variety of materials—from foils, plastics and papers to boards and films—and on webs as narrow as an inch and as wide as six feet. The box of disposable diapers showing a sweet-faced infant, the wrapper around whole-wheat bread and the shopping bag featuring a splashy department-store logo more than likely were printed flexographically.

Flexography, simply defined, is a direct-relief printing process that uses photopolymer plastic plates on web presses. The flexibility of the plates, which can be wrapped around a cylinder, give the process its name.

The process involves far fewer components than does offset printing. (See illustration, facing page.) Flexo uses a so-called "anilox" roller, a plate cylinder, an impression cylinder and a "doctor blade." The anilox roller is engraved mechanically, electronically or with lasers to produce thousands of microscopic cells of various shapes, sizes and depths.

The roller is fed ink from a trough, and the cells on the roller transfer ink to the plate. The doctor blade in the trough scrapes excess ink from the roller that contacts the plate. The shallow relief plate is buttered by a foam cushion.

The field of vendors

The nine companies that manufacture or plan to manufacture new flexographic presses for newspapers in North America are:

Graphic Systems Division (Goss)
Rockwell International
3100 S. Central Ave.
Chicago, Ill. 60650

Koenig & Bauer-Egenolf
604 E. Le Grande Ave.
Indianapolis, Ind. 46203

M.A.N.-Roland (USA) Inc.
333 Cedar Ave.
Middlesex, N.J. 08846

M.I.P. (Mitsubishi Lithographic Presses) North America
Newspaper Press Division
85 W. Algonquin Road,
Suite 500
Arlington Heights, Ill. 60005

Motter Printing Press Co.
Newspaper Flexo Division
P.O. Box 1562
York, Pa. 17405

OFFSET

FLEXO

Although letterpress is also direct-relief printing, flexo's shallow relief plates and the cushioning produce a "light kiss" printing impression that yields sharper images than letterpress.

Yet unlike offset, which can be used with extremely fine screens in excess of 85 lines per inch, flexo performs best in the 65-to-85-line screen range and does not reproduce well on coated stocks such as one might find in a news magazine. Newsprint, which is coarser, poses no problem.

There is a distinction between true flexography, such as has been tested in Providence, Miami, Long Beach and other locations, and modified flexo, which involves the installation of an anilox inking system but few other alterations on a letterpress press. In true flexo, the printing plate is inked directly by the anilox roller. In a modified version of flexo, the anilox roller supplies ink to two form rollers, which in turn ink the printing plate. True flexo can be either a completely new press or a new flexo unit that is "shipped into" an existing superstructure, including folder and reel stand. In modified flexo, the inking system alone is changed. An important feature of the anilox system is that it is "keyless", that is, it has no keys that must be manually adjusted during a press run to keep densities in the proper range [presstime, Nov. 1986, p. 60].

PROS AND CONS. Flexography's supporters cite a number of its advantages over conventional letterpress and offset, namely:

- Reduction of newsprint waste
- Little or no ink mist in the pressroom
- Use of water-based inks that produce cleaner impressions with no rub-off on readers' hands
- Less "show through" from the opposite side of the page, which allows use of a lighter weight paper
- Keyless inking
- Improved ink mileage
- Reduction in press maintenance and manning
- Consistent printing throughout the press run
- Sharp printing dots. Examine a flexographically printed newspaper page and letterpress page, and the difference is noticeable. On the flexo page, halftones are sharper and columns of type stand out more clearly.

Even with those advantages, though, flexo's staunchest supporters admit that flexo print quality, while superior to letterpress, doesn't approach offset quality. Yet.

"You have to balance a number of things, and there are both advantages and disadvantages," says John R. Rodney, production director of the Portland [Maine] Press Herald and the Evening Express, which will begin testing a Motter Printing Press Co. flexo unit with a color hump in February. The tests will determine whether flexo or offset will replace the Portland papers' Hoe letterpress presses. "Is the lack of rub-off more important than having the capability to run a 100-line screen?" he asks, citing one of the tradeoffs.

Of all of flexo's documented advantages, the two mentioned most often are the reduction of newsprint waste and the elimination of rub-off thanks to the use of water-based inks.

In offset printing, a delicate balance of water and ink must be achieved, which often means hundreds of unacceptable copies are printed before salable quality is achieved. Keyless inking eliminates the need for human tinkering and also makes the printing uniform from one press line to another. Del Ilmer of Providence says he never seriously considered offset for his newspapers, arguing that it is "a chemical process, not really a printing process. I would need chemists, not printers, to operate it."

The principal advantage to water-based inks is that readers don't get smudged with ink. That's because the ink dries quickly. Oil-based inks never dry completely.

Two newspapers, the Fort Lauderdale News and the Sun-Sentinel, have actually designed a little logo that is printed on the front page of sections to indicate they have been printed flexographically and won't soil readers' clothes or blacken their hands. The papers, which also use offset and letterpress presses, have not said whether they plan to expand their flexo commitment.

Other advantages of water-based inks have to do with brightness and disposal. Such inks do not give a gray cast to the printed page, as oil-based inks often do because oil particles are attracted to newsprint fibers. The result is that flexo produces a "whiter" page. The oil content of traditional printing inks also is causing some waste-disposal problems for newspapers [presstime, Oct. 1986, p. 6].

On the negative side, flexo has sometimes demonstrated drawbacks that include plate plugging, inks drying too fast or not quickly enough, slippage of the cushioning beneath the plates, and plates that are more costly yet inferior to offset plates in terms of quality.

Generally, observers say flexographic presses for newspapers have evolved more quickly than have ink and plates. However, research in those areas seems to be resolving many of the

problems. Some of the newspapers that recently ordered flexo presses did so in the belief that plate and other technology will be much improved by the time the presses are up and running a year and a half to two years hence.

SLOW TO EVOLVE. If flexo's advantages outweigh its disadvantages, why did it take so long to adapt it for newspaper publishing?

William D. Rinehart, ANPA vice president/technical, says the slow evolution can be traced to the different demands of newspaper and package printing. Flexo printing for the packaging industry involved printing at slower speeds than newspaper printing, continual stopping and starting of the presses, and the simpler demands of printing on just one side of the web.

The biggest stumbling block, however, was that the flexo plates originally used for commercial printing took several hours to prepare for the press. Hardly feasible for newspapers. Once the lighter weight, more easily produced plastic plates were developed in the mid-1960s for letterpress use, the idea of flexography for newspapers began to take hold.

ANPA was first to explore the possibility that flexography could work for newspapers, and economic factors were the motivation, Rinehart says. As far back as 1975, the Association's Board of Directors voiced concern over rapidly rising prices for newspaper presses. This led to the development of the ANPAPRESS®, a modified flexographic unit featuring anilox inking. It was first demonstrated to press manufacturers in September 1977. When the manufacturers showed little interest and in fact virtually scoffed at the idea, Rinehart says, ANPA decided to go to a field test. In May 1978, an anilox inking system was retrofitted to a single-width Goss letterpress press at The Gloucester County Times in Woodbury, N.J. It performed well.

When manufacturer interest still was not forthcoming by 1979, the Board established a Special Press Design Committee to see that the new inking system would be developed for widespread newspaper use.

Subsequently, the first double-width ANPAPRESS was tested at the Boston Herald American (now The Boston Herald) in 1979. The prototype unit used an anilox inking system but also employed what researchers termed a "unique cylinder arrangement and drive assembly as well as hollow cylinders to reduce size, weight, power consumption and noise levels effectively."

Several press manufacturers say that research and development costs have been $30 million to $40 million —money they believe is well-spent.

In the early days of their testing, ANPA technical researchers used oil-based inks for anilox systems. They later switched to water-based inks because of the print quality they offered, particularly for colors, and because they were environmentally appealing.

As flexographic-style printing became more and more promising for newspapers, interest among press manufacturers mounted. ANPA received a patent for the ANPAPRESS, and licenses were issued for a nominal fee to manufacturers. They were encouraged to develop and improve upon the original design.

Tokyo Kikai Seisakusho received the first license, and in 1980, TKS introduced its version of the modified flexo press at The Quad-City Times in Davenport, Iowa.

Eventually, 18 other manufacturers received licenses. But well into the 1980s, some of them continued to disparage the notion that flexographic printing would make major inroads at newspapers. "I know that people were excited when Goss put their name on a flexo press (last summmer), but they're really latecomers," says James C. Leatham, director of marketing for Motter. "But we've been pioneers in proving to the newspaper industry that flexo works, and we've spent the past five years doing just that. We were committed to flexo long before it became popular with newspapers . . . and we've learned a lot along the way."

Erwin Jaffe (third from left), then director of the ANPA Research Center, demonstrates ANPAPRESS to manufacturer representatives in September 1977.

PASSING THE TEST. As the adaption of flexography to newspapers has unfolded, the focus has been on testing by newspapers and press manufacturers. Several press manufacturers say that research and development costs have been in the range of $30 million to $40 million—money they believe is well-spent.

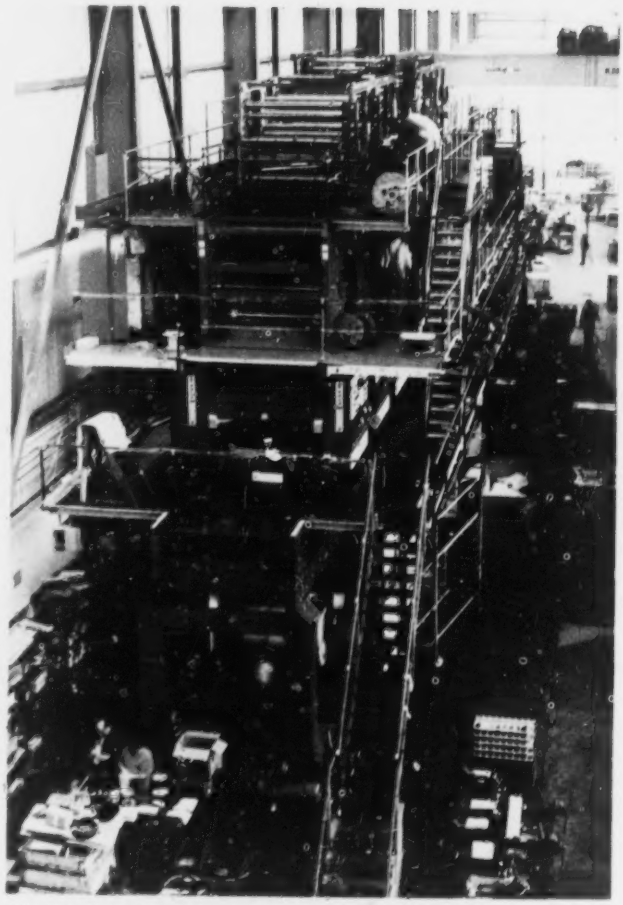
At Motter, where extensive flexo testing of ink, newsprint and plates is done at the company's York, Pa., plant, Special Projects Manager Warren Weaver comments: "It's tough going into newspapers with a product you're not sure will succeed or fail. If you fail too often, the newspapers may not want to see you again. By testing the various components in a non-production environment first, manufacturers can feel more confident when they approach the newspapers. We change only one parameter—that is, ink, paper or plates—at a time, so we can determine which interact most effectively."

ANPA will soon begin its own flexo tests of inks, newsprint and plates at The Newspaper Center in Reston, Va., when the Technical Research Department starts using a TKS letterpress that has been converted to flexography [presstime, Oct. 1986, p. 61].

Several of the newspaper pioneers, however, are no longer in the flexo field. The Daily News of New York City, the Atlanta Journal and Constitution, the Sarasota (Fla.) Herald Tribune, and The Tennessean and the Nashville Banner all tested flexo and either decided to stick with their old presses or to purchase offset when the time came to buy. Basically, they felt the technology was not ready for daily newspaper production.

One manufacturer also dropped out of the picture—Koppers Inc., which made the flexo press that was tested at the Daily News in New York. Its 1985 withdrawal resulted from the company's assessment that the market was not ready for flexo.

The earliest field testing of newspaper flexo took place in Providence, where DeHimer says he began thinking about the technology's possible application for newspapers some 10 years ago—about the same time ANPA was beginning its flirtation with anilox inking.



Windmoeller & Hoelscher and Koenig & Bauer erect new flexo press for the Providence Journal-Bulletin in K&B's Würzburg, West Germany, plant.

After Motter demonstrated a flexographic press at the annual ANPA trade show in 1981, it was shipped to Providence for the tests. In the five years since then, numerous representatives from other newspapers and from newsprint, ink and plate companies have made the pilgrimage to Providence to see for themselves the work being done there. "I wish in the beginning I had decided to charge $1 a tour," DeHimer jokes. "The money would pay for a very nice vacation."

Pressroom Superintendent Thomas J. Pendergast has kept a journal since the tests began. The book contains newspaper clippings from various press runs plus notations on everything from plate thicknesses and ink densities to the procedure for cushioning the plate and the number of copies that were printed.

It documents such early problems as plate plugging and swelling, second impression set-off (when wet ink on the web makes an impression on the next plate it contacts) as well as successful efforts where ink densities of 1.05 percent were achieved without any rub-off. "We've done an awful lot of testing here. It's been more like a lab, really," Pendergast says.

After testing the Motter unit for about a year, the Providence papers added a prototype unit from Windmoeller & Hoelscher Corp.'s Flexo Newspaper Group. Currently, two W&H flexo units print about half the pages of The Journal and The Bulletin, which average 64 pages per edition, at speeds of about 60,000 newspapers per hour.

In Providence, the flexo units stand in sharp contrast to the letterpress press. The flexo units have a few light smudges of ink here and there, but the oily, black ink used in the letterpress operation coats the letterpress press and leaves a slick film on the floor.

Cleaning up the flexo press units is easy, Pendergast points out, as his pressmen use plain water, not a chemical solvent, to flush out the rollers and doctor blades. Waste water is stored in a tank on the floor below the pressroom and used to mix with the water-based ink in the next press run.

VIVID COLOR. The success of the Providence tests of black-and-white printing led the newspapers to order 18 new units of Windmoeller & Hoelscher flexo. Installation should be completed by March 1988.

When the newspapers are completely flexo, Providence will use process color extensively. The newspapers began limited four-color testing several months ago, and DeHimer reports, "The color leaps off the page at you."

The most extensive U.S. test thus far of flexo color has been at the Fort Lauderdale News and Sun-Sentinel. Jim Robinson, vice president and production director, says the two papers have experimented successfully with four Windmoeller & Hoelscher flexo units, a four-color half deck and two single-color units. About 1.3-million copies of the News and the Sun-Sentinel are printed flexographically each week.

The Fort Lauderdale newspapers began producing sharp, consistent process color nearly a year ago Robinson says. "We've made a number of improvements in color and also in the printing of black halftones since we started." He adds, however, that "there's still work to be done in the area of black ink chemistry in reducing plugging. That hasn't been solved to our satisfaction yet.

"We are confident that as more people get involved in flexo, more experimentation will take place with ink, plates and other elements, and a resolution will be found," Robinson says. His papers have been working closely with NAPP Systems (USA) Inc. and with Hercules Inc. to test new plates. They also use plates from W. R. Grace & Co. In addition to the four flexo units, the Fort Lauderdale dailies have 14 letterpress units and 14 offset units.

In nearby Miami, Wright of the Herald also reports high-quality color reproduction with flexo. The Herald is using seven flexo units and four color halt decks. However, with a total of 102 letterpress and offset units, flexo is producing a small percentage of the total output. Primarily the front and back pages are printed flexo because they are the ones readers see and touch first.

"The key to flexo is the brightness of the water-based inks," Wright says. "The color just bangs off the sheet. It prints very crisply and looks very dramatic. We had a little trouble with black inks. They had a tendency to run on the gray side, but a change in ink viscosity took care of that."

As was the case with all flexo pioneers, the Herald experienced some early problems with inks drying too quickly or sticking on the plates. "The ink companies have made tremendous strides since that time," he says.

Miami uses new M.A.N.-Roland units that were slipped into existing superstructures, including the folder and reel stand.

Rather than utilizing slip-in units, The Washington Post had a Goss letterpress press completely reengineered. The Paper Converting Machine Co. manufactured the inking system for the Goss flexo prototype that is being tested in an operation that also uses three 10-unit offset presses and 100 letterpress units.

Reports Vice President/Production Might: "We have generally been happy with the [flexo] process. You make little improvements, little refinements along the way. I don't think anyone would consider flexo a risk any more. We get the newspaper printed and out the door, but I don't know if I would say it's out of research and development yet. I think *offset* is still in R-and-D." Problems with press drives and clutches have been resolved, he says, as have some early registration problems.

Journal-Bulletin's Pendergast (left) and electrician Pete Mederios check ink flow valve on flexo unit in Providence pressroom.

"The key to flexo is the brightness of the water-based inks. The color just bangs off the sheet. It prints very crisply and looks very dramatic."

DECISIONS, DECISIONS. For every newspaper that has decided in the past two years to go for flexo, many other papers remain undecided.

In Portland, Maine, for instance, Production Director Rodney says he is awaiting the results of tests to be conducted there beginning early next year. Previously, Rodney worked with ANPA/RESS technology at The Express of Easton, Pa., so he has witnessed newsprint waste reduction and other anilox benefits first-hand. But Rodney says he won't make a recommendation to Portland management until he sees how the Motter flexo unit there performs. A decision on what kind of press to buy is expected by next fall, and the new units would be installed by the end of 1989. Rodney says the testing may well lead to a selection of offset instead of flexo.

For those who remain on the fence, the recent recognition of flexo by the giant Goss company is one more factor to consider in assessing flexo's future in newspapering. Goss's participation in the flexo tests at The Washington Post surprised some observers, as did the company's announcement earlier this year that it would manufacture a flexo press.

As the largest press manufacturer in the world, Goss is so powerful and had seemed so reluctant to adopt the concept for newspapers that its testing and the subsequent product line expansion were widely viewed as the printing industry's final imprimatur for newspaper flexography.

"You have to give Goss credit for their marketing strategy," says Wright of The Miami Herald. "They convinced the newspaper industry that offset was the ticket. They virtually owned the offset market, and the last thing they wanted was for flexo to develop."

Not so, says Lester A. Kratt, Goss vice president and general manager. "We are not married to any one process. We don't necessarily want to be the first. We want to be the best. We want to produce the best printing process for our customers." Kratt says that he does not foresee a time when flexo will surpass offset in sheer numbers, adding that he believes flexo is still in the experimental stages and needs the challenge of more extensive daily newspaper production.

When Goss announced it would market a flexo press, Kratt said: "With the flexo press, the industry has a 'win, win' option—flexo or offset. The choice no longer hinges on the viability of a flexographic press design. It is now solely a matter of individual requirements and preferences."

Kratt's view is seconded by A.J. Schipke, director of sales and marketing for the flexo operations at Windmoeller & Hoelscher. "Flexo will not replace offset, and I expect both processes will undergo further advancements," he says. "I do not see that flexo will diminish the R-and-D efforts in offset. Rather it will probably result in more R-and-D dollars being spent in the research of anilox offset."

In fact, that seems to be the prevailing expectation: Flexography will continue to increase its share of the newspaper

market, but the demand for offset will continue as improvements are made to that process. In a Darwinian sense, both species will survive.

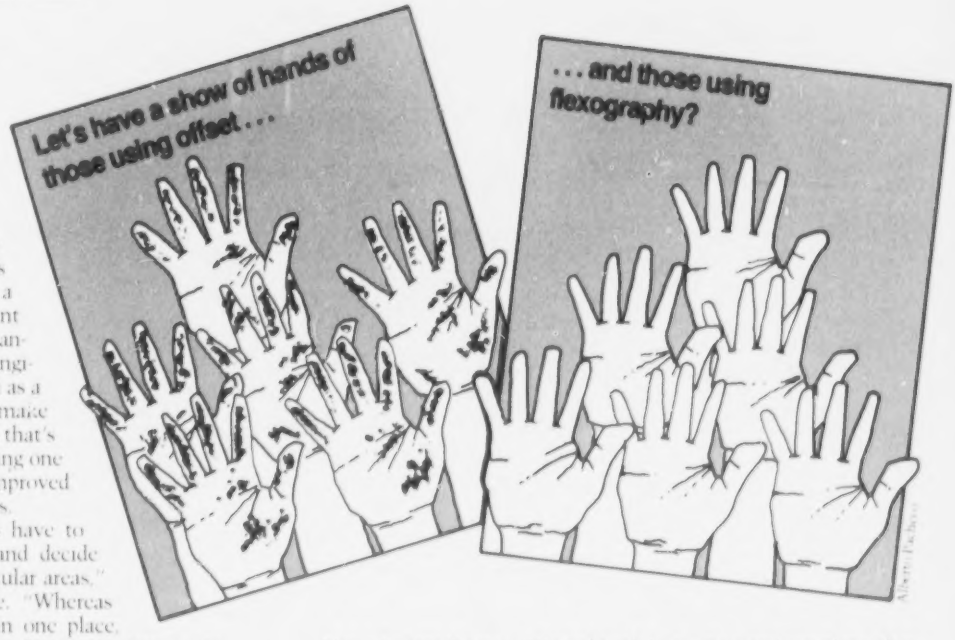
Growth is also expected in the business of converting letterpress presses to flexography. Neal Eaton, a spokesman for Publishers Equipment Corp., one of the companies that handles such conversions, says a re-engineered press may cost half as much as a new flexo press. It would not make much sense to convert a letterpress that's absolutely worn out, but modernizing one in fairly good condition offers improved print quality at great savings, he says.

"I think newspaper executives have to evaluate their own marketplace and decide what they need in their own particular areas," says Robinson of Fort Lauderdale. "Whereas offset might serve your purpose in one place, flexo might be better somewhere else. No two situations are alike, and decisions must be based on the needs of an individual area."

Among the newspaper organizations planning to test flexo before deciding which way to go are the Knoxville dailies and the San Francisco Newspaper Agency.

In Knoxville, Joe Horner, assistant general manager for the News-Sentinel, says: "We feel with letterpress and our plates that we do as good a job of quality printing as anyone else with letterpress, but we know it doesn't approach the quality of offset. We want to see what flexo can do for us."

At the News-Sentinel's parent company, Scripps Howard, National Production Manager Ralph Eary says only half jokingly "I'd like to see the whole world go flexo. It doesn't get a mess all



Italian newspapers take the flexo lead in Europe

While the number of newspapers testing flexography steadily increases in North America, interest has been slower to catch hold in most of Europe and the rest of the world.

A notable exception is Italy, where eight newspapers are using new Cerutti flexo presses. The first newspaper in the world to go completely flexo was Il Gazzettino in Venice. Lorenzo Jorio, managing director, says 1.2 million copies of the newspaper are printed flexographically each week.

"We are very satisfied by our choice to change from letterpress to flexo as we now have a more productive printing facility and improved printed newspaper," says Jorio, adding that he expects to see further improvements in printing quality.

Four other Italian dailies have joined Il Gazzettino in the all-flexo orbit: Il Tierreno in Livorno, La Republica in Milan, and IPSOA of Rome and Milan.

In addition, three other Italian newspapers print with flexo in conjunction with other printing processes. They are Il Mattino of Padua, Giornale Di Sicilia of Palermo and La Republica of Bari.

Observers say flexography has gained a toehold in Italy because Cerutti, which is located in Casale, did a good job of selling the merits of the printing process and also convinced the newspapers there that exchange rates and other factors made buying from an Italian firm attractive.

Not everyone in Europe is convinced flexo is the best course to take at this time, however. A.J. Schipke, director of sales and marketing for the Flexo Newspaper Press Group of Windmoeller & Hoelscher Corp., a West German company, says there is still a great deal of support for offset.

"Europeans have spent a considerable amount of time and money developing their offset market," he points out. "Offset press designs and methods of operation differ greatly for the shorter-run, high-quality European market. What they see from flexo right now is an intriguing process that falls short of their quality demands."

W&H has teamed up with another West German company, Koenig & Bauer, to sell flexo presses to the Guardian of London and the London Daily Mail, as well as to two newspapers in West Germany and one in the Netherlands. Many European newspapers are monitoring developments there, much as North American newspapers have tracked the progress of flexo testing at papers like The Journal and The Bulletin in Providence.

Modified flexo also has taken on an international flavor, as newspapers in Australia, Switzerland, the Netherlands and Japan are currently printing on letterpress presses equipped with anilox inking systems.

One such newspaper is Yomiuri Shimbun of Tokyo—the world's largest circulation daily newspaper, selling about 13.6 million copies a day. It has been using a modified version of the ANPAPRESS constructed by the Japanese press firm, TKS, since 1981. All of the newspapers' 81 presses were converted to anilox over a five-year period that ended this year.

Anilox inking and flexo have yet to conquer the world, but their presence is being felt. —*Rosalind C. Truitt*

over you when you read the newspaper, and it answers the ecology question. Flexo has a lot of things going for it. We just don't have the [ideal] plate yet."

In San Francisco, Lawrence L. Ingram, vice president and production director of the agency that prints the San Francisco Chronicle and San Francisco Examiner, says the letterpress presses there "should have been replaced a long time ago."

"My personal opinion is that flexo has already proven itself as a way to print newspapers," he says. "We want some experience with it, testing it in a production environment before we evaluate whether it's right for us and make a final decision."

But for every newspaper that has made some kind of commitment to flexo, dozens more remain undecided.

An example is The Wichita [Kan.] Eagle-Beacon. But Production Director Jack Breen says he doesn't regard flexo as an experiment any longer, and he indicates the Eagle-Beacon is leaning toward choosing flexo over offset as a successor to its aging letterpress presses.

"The proof is in the pudding," Breen comments. "They're getting the newspaper out every day in Miami and Long Beach and other places. I believe the process has proven itself. I know there are still bugs to be worked out, but that's even true of letterpress—and look how long it's been around. You can't sit around waiting for every little thing to be perfect. Somebody has to try it. Every day that goes by, more and more experience is gained, and the process gets better."

Testing and Use of Flexographic Printing by U.S. Newspapers

Newspaper	Equipment used	Flexo or Modified Flexo	No. of Units	Start-up	Color	Result

Crash Course Prepares Minorities For Newspaper Management

BY J. FRAZIER SMITH

(Editor's note: The Multicultural Management Program is a four-week training program sponsored by the School of Journalism at the University of Missouri. The program is an effort to increase the number of minority media managers by showing how a journalist's cultural background is an asset and not a liability. The next session is Sept. 13-Oct. 9, 1987. For information, write MMP Director Ben Johnson, Box 838, Columbia, Mo. 65205; [314] 882-1581.)

Fifteen of this nation's minority journalists got together recently at the University of Missouri to be immersed in the subject of newspaper management, a field mostly filled by white males.

The event, called the Multicultural Management Program, was a raving success. I know because I was one of the 15 fellows who made the program's maiden voyage in Columbia, Mo.

Yes, this is a self-congratulatory admission. And, no, I am not ashamed. I'm never ashamed of acquiring more education, because I'll never lose its reward.

The program teaches that diversity in the newsroom and in newspaper management—diversity in the form of minority journalists who can offer broader viewpoints and insights—should be an asset and not a liability.

I adopt this ideal wholeheartedly. But I am sure there are some, perhaps many, among you who are saying, "I guess now you fellows want to take over your newsrooms and become managers based on one short course."

Believe that none of us who occupied that bunker of a conference room at Gannett Hall for four weeks—probing and assaulting our lecturers from American newsrooms large and small, role-playing through the several case studies presented us, and creating our own five-year strategy for The Dallas Morning News in its competition with the Dallas Times Herald—think we know it all. At least not yet.

But also believe that we, having gone through the course, now have the basic tools to assume newsroom management posts very soon, at least theoretically.

It was no easy course to navigate, this management program.

Program leaders—Executive Director Ben Johnson of the Detroit Free Press and his wife, Associate Director Mary Bullard-Johnson—bombarded us with practical

Smith, 26, is a sports copy editor for The Cincinnati Enquirer. He attended Texas Christian University and holds a bachelor's degree in journalism from Indiana University.

Mike Davis

Discussing a small-group exercise are MMP participants (from left) Deborah Howell of the St. Paul Pioneer Press, Guillermo Martinez of The Miami Herald, Eneid Routte-Gomez of the San Juan (Puerto Rico) Star and Rodney Brooks of USA Today.

and theoretical definitions of multiculturalism during the first week. We learned from industry leaders such as Monte Trammer, assistant to the publisher of the Poughkeepsie (N.Y.) Journal, that managers are chosen largely because they are liked by their bosses.

That first week caused many of us to wonder aloud why we had been chosen by our bosses for the program. Was it because our bosses perceived us as being like them?

The second and third weeks we searched the American Society of Newspaper Editors' management handbook and other documents to dissect the heavy subjects of management style, the ethical considerations behind running a newsroom, and the economic considerations of newspapering with emphasis on being almost Scrooge-like in maintaining and fattening the bottom line. After all, this is a business.

And now I know the concepts of preprints versus run-of-paper advertising. I know why advertisers keep both eyes peeled on CPMs (cost per thousands). I know about setting values and making business and personnel decisions based on those values. I know about the need to increase revenues annually while trying to maintain journalistic integrity.

After hearing from Austin (Texas) American-Statesman Publisher Roger Kintzel, newspaper analyst John Morton and others, we spent the fourth week formulating our game plan for The Morning News and how we would earn money for and expand the horizons of that newspaper. We decided to expand its commitment to adding cultural diversity to its staff and to its marketing, circulation and production plans. Our overall plan for the paper is contained in a 116-page report.

Perhaps the most stunning gem to emerge from the program is that one white woman, two Hispanic women, one Native American woman, five black women and six black men took to each other so well and created an everlasting, family-like bond. We even created a fraternal organization of sorts, tagged Mu Mu Pi (as in **M**ulticultural **M**anagement **P**rogram).

It's kind of like the American patchwork quilt in real life.

We often joked of traveling en masse to a newspaper in the Pacific Northwest (where one of our lecturers works) and, after managing somehow to be hired, run the paper as we'd been taught. We also sat silently and listened in horror to how one major Midwestern newspaper mishandled a situation involving white and black staffers.

But reality being what it is, we realize that our central mission in all of this is to spread the message of the multicultural imperative for journalism. We have to teach it despite the silence we're bound to receive from our colleagues—black and white and Native American and Hispanic and Asian American.

The key, of course, is to have this message echoed from the publisher's office in every newspaper in the country.

The time to open the gates of power in newsrooms and share the making of news decisions with minorities passed long ago. Once our readers see us covering them with reporters—and managers—from all cultures, then and only then will they accept us as true and fair newspaper representatives of their towns and cities. □

Newspaper Management Systems
A Proven, Effective, Productive Solution.

"We use Collier-Jackson's Newspaper Management Systems because they specialize in the newspaper industry. One software philosophy for all systems makes it easier on everyone — from the DP technical coordinators to the operators at the terminal screen."

Thomas D. Shaw

For the Shaws, Family Is What It's All About

BY MARGARET GENOVESE
presstime staff writer

The B.F. Shaw Printing Co. owns five daily and 10 non-daily newspapers in Illinois and Iowa. But the company's general manager says it's not a newspaper chain. "We don't consider ourselves a 'chain' or a 'group,'" says Thomas D. Shaw. "We consider ourselves a 'family of newspapers.'"

If a person's driving force could be summed up in one word, that word for Shaw would be "family." As much as it dominates his business view, so does it define his personal life.

In the business context, Shaw explains why he refers to the company's newspapers as a "family": Although all the newspapers bear the Shaw name, they have "strong autonomy," and so long as they stay within certain performance standards, they have the freedom to "be themselves"—like members of a family.

He ought to know about families and newspapers. His family has been in the newspaper business for 135 years. Now 38, he entered the business at the age of 22, two years older than his great-great-grandfather Benjamin F. Shaw was in 1851 when he took over as publisher of the then five-month-old Dixon (Ill.) Telegraph, the company's flagship newspaper.

Today, when some family newspaper firms are foundering, the Shaw family enterprise is flourishing into the fifth generation and is the oldest one with continuous family ownership in Illinois. In addition to its newspapers, it has 12 shoppers and seven commercial printing operations.

Edward H. Jenison, publisher of the independently owned Paris (Ill.) Beacon-News, calls the company "healthy and high level" and "probably the most outstanding family-dominated group" in the state. The Shaws, he says, "are all professionally competent, they are civic-devoted and they just do an all-around good job."

The company has headquarters in Dixon, a community that has received considerable attention as the hometown of President Reagan. Coincidentally, company founder B.F. Shaw was one of 12 editors who met in 1856 and founded the Republican Party in Illinois. Also present at the meeting was a former one-term congressman, Abraham Lincoln.

Later, Shaw left the state for a time and went west looking for gold. When that didn't pan out, he got a job as a printer in Colorado and set type for the first edition of the Rocky Mountain News in Denver before returning to Dixon.

B.F.'s great-great-grandson Thomas Shaw also ventured to Colorado as a young man—to study business at Colorado College in Colorado Springs. While in college, he worked for a circulation promotions company and sold subscriptions for the Colorado Springs Gazette. After graduation, he, too, returned to Dixon and joined the newspaper.

Shaw began in the circulation department and then, like many newspaper heirs, embarked on a management training program, spending time in each department. When the general manager died in 1975, he took over the position and held it until last May when he was named general manager and chief operations officer of the entire company.

Shaw says his goals are "two sided." On the business side are plans to increase profit and improve the editorial product.

Then there is "the family side." His primary job there, he says, is to try to ensure continued family unity, which is all-important if the company is to achieve its business-side goals.

Two other fifth-generation Shaws—his cousins—also are active in the business. William E. Shaw is publisher of the Dixon paper; Robert A. Shaw is publisher of Northwest Newspapers, a division composed of a daily in Crystal Lake, Ill., and several weeklies. All three are in their 30s; Thomas is the oldest.

Their fathers also hold positions in the company. Thomas Shaw's father, B. Douglas Shaw, is chief executive officer and E. K. Shaw is president. Thomas Shaw's grandfather, Benjamin T. Shaw, is chairman of the board and publisher emeritus in Dixon.

Robert Shaw describes his cousin as "a real high-energy type" of person. "Some companies get kind of stale and stagnant; I think he's real open-minded to change."

That attitude reflects the history of the company, which long has been in the forefront of newspaper innovation. Its newspapers were among the first in the Midwest to go to offset printing. Today, Thomas Shaw is enthusiastic about Apple Macintosh personal computers and LaserWriter printers at his newspapers.

Although it constantly gets purchase offers, the company, owned by a trust established by Thomas Shaw's great-grandmother Mabel Shaw, is not for sale. On the contrary, Shaw says it may buy additional dailies in the 10,000-20,000 circulation range and large suburban weeklies. "Although we more than likely will not be able to compete with the top-dollar offers of some of the bigger groups, if the owners have a concern for the paper's role in the community and the existing personnel that are there, we feel we have a lot to offer," he says.

The future of the company someday will be in the hands of the sixth generation of Shaws, and a few already are showing an interest in the business. Although he decided early that he wanted to go into the family business and "never looked back," Shaw says there is no pressure on family members to enter the business.

A deeply religious man, Shaw recently headed a church school building fund drive and teaches Sunday school to third graders. His business stationery contains this biblical quotation: "Any enterprise is built by wise planning, becomes strong through common sense, and profits wonderfully by keeping abreast of the facts."

But it is family that dominates his personal life, as much as it does his business. He and his wife, Tammy, have five children, ranging in ages from two to 12. Their youngest was adopted from a Korean orphanage.

The Shaws also are licensed foster parents. Their home has enough space to accommodate a large family, says Thomas Shaw. "We have space in our hearts, too."

How FMC systems keep business in motion

FMC systems integration. The power to offer you a complete line of roll handling equipment, software, and technical service. Designed to work in harmony. Keeping complex systems in motion, reliably and efficiently, day after day.

That's why the nation's leading dailies have turned to FMC for over twenty-five years for their roll handling needs. Because FMC knows the newspaper business can never stop.

If you're looking for a total roll handling system—start with a good role model. Contact FMC Corporation, Material Handling Systems Division, 3400 Walnut Street, Colmar, PA 18915. Answers to Newspaper Prayers Depend on Greater Commitment

BY ROLFE NEILL

Measured against the journalism of 100 years ago, we are doing an excellent job. But when we compare ourselves against the standards of what we should be—and of what we are capable of becoming—then I think we must give the American press a mediocre grade. Perhaps a C, certainly no more than C+.

There are at least four "unanswered prayers" in our business, and they go like this:

- Lord, why don't they respect us?
- Please, Lord, increase my circulation penetration.
- Honest, Lord, I would hire one if I could find a good one.
- If I paid more, Lord, would I have a better staff?

Respect. Folks don't respect newspapers as much as they once did. There are many reasons, of course, and chief among them is that respect for all institutions has declined; it doesn't matter if it's the papacy or the presidency.

But there's another reason that we've slipped with the public. This time it's performance-based: People often don't like what they read in the newspaper we sell them. Or in other cases, they are unhappy with what we have failed to print.

All of this falls under the rubric of credibility, a topic much discussed in recent years. Those of us who believe we lack sufficient credibility frequently find ourselves arguing with other newspaper brethren who think that it's love we seek from the reader. It's respect I want, not love. Unfortunately, many credibility repairs go unmade because defensive newspaper people see this whole area of discussion largely as self-abasement.

The public is suspicious of us based on its contacts with us. When it's an event or subject about which they have personal knowledge, they often spot inaccuracies or incompleteness in our accounts. They are frustrated at trying to pierce the "iron curtains" of our offices. When they do talk with us, they often deal with reporters and editors whose values differ greatly from theirs. Religion, sex, traditional patriotism—we are different in so many ways from our readers. We don't need to become like them, but we must acknowledge those differences. Having done that, we can set about the corrective offsets in our news reports.

Rolfe Neill

Take the matter of religion. Ours is a religious nation. The biggest crowds on Sundays aren't at the pro football games but in the community's churches. Yet you would never know that from reading Monday's newspaper. That's because the average newspaper person doesn't see much news in religion. In fact, newspaper people are anti-organizational by instinct, and that's why so much of the press is indifferent to the many warrens of organized civic life about us. Most city editors might be astounded to know what Jonathan Kozol discovered as he interviewed hundreds of illiterates throughout America. What is the No. 1 reason these people yearn for the capacity to read? They confided to Kozol it's so they can read the Bible.

Circulation. Please, Lord, increase my penetration. The number of customers we can deliver to advertisers is the cornerstone of our rate card. We start with sensitizing editors, but that's just a beginning.

The public is suspicious of us based on its contacts with us.

Most folks in our newsrooms would be surprised to learn that we're rewriting 60, 80 or 110 percent of our home-delivery base every year. Let them knock on some doors trying to sell the paper. Have them take phone complaints for several days in the circulation department. Tie part of the editor's compensation to the circulation numbers. Why shouldn't his or her pay be linked to increased penetration? After all, circulators don't design the product; they merely try to overcome all the inherent defaults in order to make the sale.

When you see your editor and circulator having lunch together occasionally, when you see one of them in the other's office every day, then you know you're on the way to increased penetration.

If you tolerate late copy, let editors bust press times, permit the editor to stop the press without consulting the circulation manager for its effect on delivery schedules—then you are perpetuating editorial privilege at the expense of other departments. An editor who does not respect deadlines does not respect other people.

Minorities. Honest, Lord, I'd hire one if I could find a good one. Our nation is about 20-percent minority, with Hispanics the fastest growing segment and one that will in a few decades outnumber blacks. Yet, 60 percent of our newsrooms have not a single minority employee. Nationwide, only 6 percent of our newsroom employees are minorities.

Lay aside morality for a moment and just consider the pragmatic marketing question: How can you design a product for people about whom you know little or nothing and with whom you have little or no contact? The answer is that we can't—and don't.

Back to morality. A pluralistic country cheats itself when one of the principal

Neill is chairman and publisher of The Charlotte Observer. This article is adapted from his recent speech to the New England Newspaper Association.

organs responsible for preserving democracy is itself a ghetto. When the only glasses through which society is observed are worn by a white, middle-class reporter or editor, the view is bound to be incomplete.

But where do I find one? We need to look for more than one, but we know that the minority pool of potential employees isn't as large as the white group. But there is minority talent available if we will:

- Search for it with diligence. The American Society of Newspaper Editors has a very helpful program to assist in minority recruitment. ANPA also is finally revving up.
- Recognize that for some minority hires, individualized attention must be given to help them achieve job success.
- Encourage an acceleration of minority talent accumulation by supporting programs in schools and business that provide special opportunity.

Incidentally, for our newspapers to make all this happen, it is not sufficient to say there is a commitment. There must be an *inconveniencing* commitment. The three steps outlined entail extra effort and a greater-than-ordinary willingness to make sure minority hiring succeeds.

Publishers and editors must believe in the program enough to insist on implementation. Can you think of a better way to celebrate the 200th birthday of our Constitution next year than practicing its percepts within our own shop?

Newsroom staff. Lord, could I get better people if I paid better money? Addressing newspaper capitalists, do I really need to answer that question? We do need to be mindful of the pool from which we draw. Does it concern us that we get the young people who score only at the national average on their SATs? That is, 906.

Conservative critic Irving Kristol says media today are infected with a "mindlessness. . . . One reason for that mindlessness is that the quality of people now entering the media is very poor. . . . On the whole, bright students do not go to schools of journalism. The very bright go on to work in the sciences. Those at the second level go to professional schools, such as law, or on to graduate work in the humanities and social sciences. At the third level, students go into schools of business; at the fourth level, students go into schools of journalism and, at the fifth level, students go into schools of education."

Our critics expect better of newspapers—and so should we. A newspaper begins with a vision shared by an editor and a publisher. The reality of that vision is accomplished through a staff. Hiring on the cheap and hoping to get a year or two from young people before they move on is a longstanding approach by a majority of newspapers. Yet these same newspapers regularly have pre-tax margins of between 15 and 30 percent, or more.

We will never raise the level of journalism until we get better minds into our newsrooms.

The publicly traded newspaper companies have price-to-earnings ratios of 20, 21. Contrast that with the stock market as a whole where the average is more like 15. Newspapers command these 30 percent premiums because they make money far above the average of any of the advertisers who support them. Is it too much to ask that we spend some of these profits in recruiting, training and retaining a better staff?

We will never raise the level of journalism until we get better minds into our newsrooms. Are we willing to settle for the mindlessness described by Kristol?

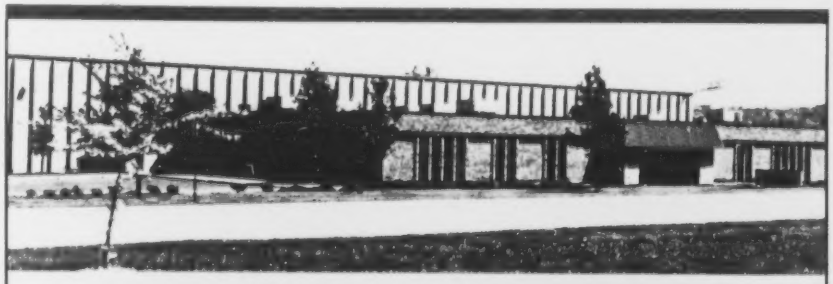
If newspapers had brighter people who were more knowledgeable about economic matters, then we wouldn't have slept through the breakup of AT&T. The oil crisis of the 1970s would have been written about in a way that prepared the American people. We would avoid the trap of over-dramatizing every baby step in medical and scientific research. The list of our inadequacies is long, horrifyingly long. But it costs money to attract and keep smart people. Starting salaries for J-school graduates who entered daily papers last year was $13,500. Contrast that with $17,500 in the humanities, $18,500 in social sciences, $24,900 for computer sciences and $27,500 for electrical engineers.

Ours is a trade, to be sure. But for most of us, it's also a calling. We do care about what goes into our newspapers. We do aspire that tomorrow's edition be better than today's. But we're deluding ourselves to think we can achieve and sustain excellence without paying the necessary assessment.

Frank Munsey was a newspaper conglomerator of the last century. I don't know what his "unanswered prayers" were, but I can tell you what William Allen White wrote of him when he died:

"Frank Munsey, the great publisher, is dead. Munsey contributed to the journalism of his day the talent of a meatpacker, the morals of a money changer and the manners of an undertaker. He and his kind have about succeeded in transforming a once noble profession into an eight percent security. May he rest in trust."

If our obituaries were in tomorrow's newspaper, what would they say of our stewardship?



PROFIT FROM OUR EXPERIENCE

The experience we've gained from serving the printing industry for 75 years can help you in making equipment decisions ideally suited to your capacity and needs. So when it comes to pre-owned web offset presses, add-on units, type-setting systems or auxiliary equipment, come to the source.

LEGISLATION

Tighter information curbs sought

The director of the Central Intelligence Agency wants Congress to enact a law that "unequivocally" makes it a crime to leak classified government information to the press.

William J. Casey said the espionage conviction of former Navy analyst Samuel L. Morison for supplying classified photographs to a British publication has stirred up debate about "the proper reach of the espionage statutes."

"There has been a great hue and cry that Morison is not a spy," Casey said in a Nov. 14 speech to the Communications Law Program of the Practising Law Institute in New York City. "That's bunk. Nobody said he was a spy. He was convicted of violating a section of the law which prohibits the disclosure of classified U.S. government information to unauthorized persons. That's exactly what he did."

Nonetheless, Casey said he believes the "national interest" would be best served by a new law that "unequivocally expressed Congress' intent to punish unauthorized disclosures of classified information." He said the law should apply to persons who "intentionally disclose classified information, knowing or having reason to know" it is classified.

Morison has appealed his conviction to the 4th U.S. Circuit Court of Appeals. ANPA is considering filing a friend-of-the-court brief in the case [presstime, May 1986, p. 59].

In a related development, a survey of high-ranking federal government officials (including members of Congress) who served between 1963 and 1983 found that 42 percent had leaked information to the press. Nearly 500 responded to the survey that was conducted by Martin Linsky, lecturer in public policy at the John F. Kennedy School of Government at Harvard University.

Among the leakers, 78 percent said they did it to counter false and misleading information; 40 percent said they did it to develop good relations with the press.

COURTS

Washington Times in tussle over issue ad

The District of Columbia Superior Court denied a request that it order The Washington Times to carry a full-page, issue-oriented advertisement.

The Coalition for Constitutional Justice and Security had sought a temporary restraining order and a preliminary injunction that would have required the Times to publish the ad Nov. 3.

In a suit filed Oct. 24, the coalition charged that the Times breached its contract with the organization when it rejected the advertisement after accepting copy and payment.

The parties are conducting settlement negotiations, according to their attorneys.

The advertisement in question featured the headline: "Could Nicholas Daniloff Get a Fair Trial in the Soviet Union? Can Anyone? Then Why Is a U.S. Agency Cooperating with the KGB to Turn American Citizens Over to Soviet Justice?"

The Times contends "it has a right to make determinations as to what advertisements to carry in its newspaper, just as the United States Supreme Court has established on numerous occasions," said its attorney, Allen V. Farber.

Newspapers win two New Jersey libel cases

The New Jersey Supreme Court issued two decisions expanding protection of the press in libel cases in that state.

In the first case, the court said "actual malice"—the standard applied in cases involving public figures—must be proved in cases where a private person, "with sufficient experience, understanding and knowledge," enters into a transaction that "implicates a legitimate public interest."

The ruling overturned a $1-million jury verdict awarded a former bank official in a case involving The Courier-News of Bridgewater.

In the second case, the court said actual malice must be proved in cases involving some consumer products. It reaffirmed lower-court decisions dismissing a suit brought by Dairy Stores Inc. against Sentinel Publishing Co. of East Brunswick.

REGULATIONS

More newspapers adopt racial-balance ad policies

A group of five daily newspapers in the Washington, D.C., metropolitan area has adopted a policy requiring real estate display advertisers to have blacks account for at least 25 percent of the people shown in their ads.

Acting at the urging of the Lawyers' Committee for Civil Rights Under Law, The Journal Newspapers also agreed that the Equal Housing Opportunity logo will appear in the ads in the size specified in the U.S. Department of Housing and Urban Development's fair housing advertising regulations. The agreement is virtually identical to one adopted earlier by The Washington Post [presstime, Sept. 1986, p. 38].

In other developments relating to federal and state fair housing laws:

- The Los Angeles Times has entered into discussions with the California Department of Fair Employment and Housing to resolve a complaint filed by a local fair housing council that it accepted real estate display ads depicting only blacks, only Asians and mostly Hispanics.
- The Justice Department's Civil Rights Division has clarified its Fair Housing Act enforcement policy, saying it will not take action where sexual preferences are stated in ads involving shared facilities—generally advertisements for roommates or housemates. It said the position is consistent with HUD's advertising regulations.

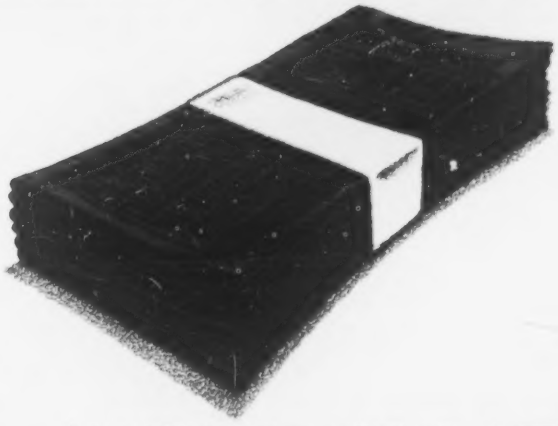
The division issued the clarification in response to questions that arose after it filed suit against the Clarion-Ledger of Jackson, Miss., alleging that the newspaper had violated the act by publishing housing rental ads that indicated limitations or preferences based on race, religion or sex. The case was resolved by consent decree [presstime, Sept. 1986, p. 38].

'Smokeless' rules issued

By Feb. 27, 1987, all print advertisements for smokeless tobacco products must carry one of three health warning messages in a circle-and-arrow format.

The final rules, issued Oct. 24 by the Federal Trade Commission, differ somewhat from those originally proposed [presstime, Aug. 1986, p. 36]. They require larger messages in some cases.

WHAT'S BLACK AND WHITE AND GREEN ALL OVER?



A newspaper that's benefited from the libel and privacy seminars of Mutual Insurance.

Preventing libel and privacy suits can save a newspaper a lot of money, but keeping up with the rapid changes in the law is a difficult task. That's why the reporters and editors of so many newspapers attend "How To Prevent Libel and Privacy Suits," a seminar offered by The Mutual Insurance Company of Hamilton, Bermuda.

Offered in half-day and full-day sessions, this seminar presents the facts behind recent cases affecting the current status of libel and privacy law, using actual stories, columns, cartoons, and photographs to illustrate important concepts. Seminar leader Barbara Dill is an experienced professional in the field of libel and privacy law, whose incisive commentary and exciting classroom method have been hailed by editors, reporters, and photographers across the country.

Offered to publications insured by Mutual as well as to press associations, this seminar gives journalists the insight they need to do their jobs with a minimum of risk. For more information on this unique opportunity, contact Barbara Dill at (305) 856-2965.

Newspapers urged to consider voice mail for their operations

Two important developing trends in telecommunications for newspapers are voice mail as a means of reducing costs and as a revenue-generator, according to Deborah Walker, ANPA telecommunications specialist.

Voice mail was introduced several years ago as a "glorified answering machine," Walker told participants at ANPA's telecommunications seminar Connections 1986, which was held Nov. 18-19 in Washington, D.C.

Voice mail has evolved into practical applications for every newspaper department, she said. For instance, instead of having to make repeated phone calls or being placed on hold:

- News sources can leave messages for reporters who are tied up on other phone calls.
- Customers can leave messages for circulation distributors regarding delivery problems.
- Salespeople can spend more time on the road without missing important calls.
- Managers can leave instructions for employees.

Besides lowering phone costs, voice messaging also is emerging as a way for newspapers to increase revenue, she said.

In classified advertising, newspapers can provide an optional voice mailbox service—for an extra fee—that frees the customer from having to sit by the phone. Instead, the customer can collect all the calls at his or her leisure. Similarly, classified ads can be taken by the newspaper electronically, eliminating the need for employees to wait for the phone to ring.

In display advertising, an advertiser can list in the ad a telephone number for shoppers to call. A caller could listen to a description of merchandise and order it by phone. The newspaper charges the advertiser for the service on a per-call basis or on a flat fee, depending on how the rates are worked out, Walker said.

"Newspapers that are learning to consider telecommunications as part of their strategic business plans are finding that it's worth the effort," she said.

The workshop, second of its kind sponsored by the Association, attracted 54 participants from the newspaper business and featured 20 speakers who came from newspapers across the country and from segments of the telecommunications industry. □

Electronics are being employed to speed distribution of press releases, other data

Electronic mail and FM radio are being used more frequently to speed distribution of press releases and other information originating in Washington, D.C.

In November, an electronic mail service known as U.S. Newswire began transmitting press releases from Capitol Hill.

U.S. Newswire is the creation of William McCarren, former marketing director of PR Newswire of New York City, a wire specializing in financial news releases.

Already on line for the new service are major wires, press galleries in the U.S. Capitol and Washington bureaus of most of the nation's largest newspapers, McCarren said.

An older, established service is a Dialcom, which is used by eight federal agencies including the Department of Agriculture and NASA. Dialcom offers news releases usually within minutes of their release for a minimum charge of $25 a month.

The FM radio transmission service, Infowire, is operated by MultiComm Telecommunications Corp., formerly Mutual Broadcasting System. It transmits transcripts of press briefings, speeches and interviews via satellite to FM radio stations throughout the United States. The stations then broadcast the data over inaudible frequencies to personal computers and print-out machines.

Recipients already include media companies, other private businesses and embassies.

For example, members of the Utah congressional delegation can now transmit press releases, announcements and other messages directly to the Washington bureaus of The Salt Lake Tribune, The Deseret News, Scripps League Newspapers and other Utah news outlets. Infowire Director C. Patrick Thorne, a former Utah newspaper reporter, arranged the Utah congressional-media hookup as a test for the Infowire system. □

ANPA concerned over possible Bell ad service

ANPA has filed comments in U.S. District Court recommending that if Southwestern Bell Corp. is allowed to form an advertising company as it has requested, it should not be allowed to provide the advertising services to its own subsidiaries.

ANPA's comments are in response to Southwestern Bell's latest effort to enter the advertising brokerage field by preparing ads and placing them in the media.

The Justice Department recommended Oct. 30 that Southwestern Bell Corp. be granted a waiver to do so. ANPA stated in its comments Nov. 13 that Justice had failed to address the possibility that the company would have the incentive and opportunity unfairly to undercut advertising competitors.

ANPA said Southwestern Bell could do this by having its advertising subsidiary sell the service at excessively high rates to Southwestern's other subsidiaries, including its regional operating telephone company, four Yellow Pages and directory companies and two telephone-distributing firms.

The profits from the excessive rates could be used by Southwestern Bell's advertising subsidiary to undercut prices of advertising competitors elsewhere and drive smaller advertising brokers out of business, ANPA contended. And Southwestern Bell telephone users would pay for the excessive rates, it added.

If a waiver is issued allowing Southwestern Bell to set up such an advertising subsidiary, the proposed order should be modified to prevent the company from providing the services to its own telephone operating company and other subsidiaries, the Association said.

The motion for the waiver and ANPA's responding comments are now before U.S. District Judge Harold H. Greene, who presided over the breakup of AT&T [presstime, Nov. 1986, p. 54].

Greene earlier restricted similar waiver requests concerning the insurance business.

Meanwhile, on Nov. 14 NYNEX Corp., another of the seven Bell regional companies, also filed a request for a waiver to enter the advertising business. NYNEX said in a letter to the Justice Department it would agree to be bound by the same terms proposed for Southwestern Bell. □

Telecommunications equipment listed in ANPA publications

Many newspapers are paying too much for telecommunications equipment and receiving too little, according to a report prepared by the ANPA Telecommunications Department.

The report, titled "It's For You," is based on a survey conducted last winter. The survey shows, according to Deborah Walker, ANPA telecommunications specialist, that many newspapers do not know what their telecommunications equipment is costing, and that they could be receiving far better service for less cost.

The 13-page report in magazine format has been sent to all member newspapers.

In addition, newspapers that participated in the survey will receive a copy of *It's for You: A Newspaper's Guide to Telecommunications Equipment, Management and Consultants.*

The 112-page guide contains alphabetical lists, by state, of every ANPA-member newspaper that has installed telecommunications equipment, the type of the equipment, and names, addresses and telephone numbers of the person to contact at the newspaper for additional information. Circulation figures are included so newspapers of the same size can compare their telecommunications needs.

A second section of the guide contains lists of telecommunications equipment companies by state, the equipment and services they offer, and the names of individuals at newspapers who have used these companies.

Additional copies of the "It's For You" executive report are available for $5 each for ANPA members, and $20 for non-members. The resource guide is $30 each for members and $60 for non-members. There is a reduced price for an order of both books: $32 for members and $75 for non-members.

Bell sues Cox over cellular sale

Cox Enterprises Inc. of Atlanta has been sued by PacTel Mobile Companies for more than $100 million because, PacTel charges, Cox reneged on a promise to sell its share of a cellular telephone and pager company to PacTel.

Cox announced last April 8 it was going to sell its 90-percent interest in the St. Louis-based cellular system, which is called CyberTel [presstime, May 1986, p. 66]. PacTel alleges that it bid on the cellular system on June 18 and was told by bankers handling the sale that its bid was the largest received.

The suit was filed after Cox announced it would sell its 90-percent share to David A. Bayer, president of CyberTel and holder of the other 10 percent. The sale price was not disclosed.

A Cox spokesman said the firm views the suit as frivolous and without merit.

PacTel is a subsidiary of Pacific Telesis, one of the seven regional Bell operating companies.

IT'S FOR YOU

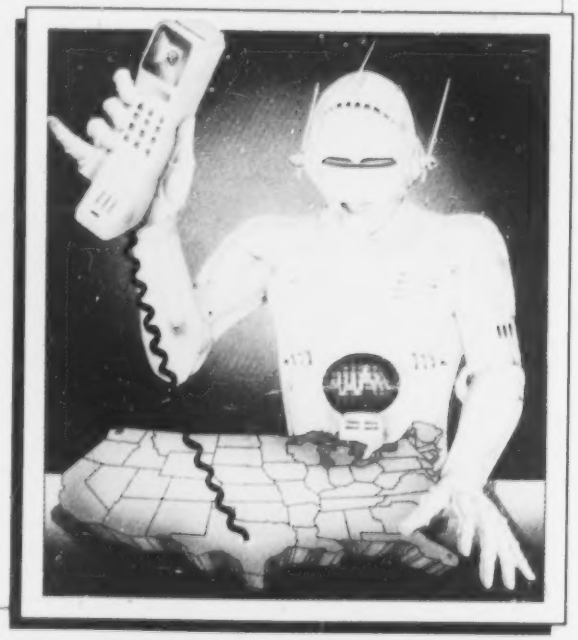
A Newspaper's Guide to Telecommunications Systems & Services

Are you getting the most for your telecommunications dollar? Find out in **IT'S FOR YOU**—a two-volume report based on a survey conducted by ANPA's Telecommunications Department that highlights newspapers' telecommunications activities.

- Volume I: ***An Executive Report*** on newspaper telecommunications management practices. What works, what doesn't work, and why.
- Volume II: ***A Resource Directory*** listing equipment and telecommunications contacts at individual newspapers, plus a special consultant list that highlights member-recommended telecommunications consultants with *newspaper experience.*

Telecommunications is playing an increasingly important role in the way newspapers do their jobs. Make sure your newspaper is on the right track—order your copies today!

For order information, please call the ANPA Telecommunications Department at (703) 648-1140.



Postal Affairs

ANPA asks action in label case

ANPA said its three-year-old complaint against third-class, postcard-like detached labels should be considered by the Postal Rate Commission and should not be dismissed as the U.S. Postal Service wants.

Postal authorities based their motion to dismiss partly on the claim that ANPA has "failed to prosecute," or not carry through, its complaint against the labels.

The Association said Nov. 17 in comments to the commission that the USPS assertion "is nothing more than an attempt to avoid a hearing that the record clearly shows to be warranted." ANPA charged in the complaint that detached labels constitute an "unclassified type of service" that does not bear a "fair and equitable" portion of mailing costs.

Complaint proceedings have been held up because the Postal Service made two requests for delays "to permit it to pursue settlement talks on which it never formally reported to the commission," ANPA said.

Detached labels are used by some mailers for third-class pieces presorted to the carrier-route level [presstime, Nov. 1986, p. 55]. The cards, which are delivered at the same time as the third-class mail piece they accompany, carry the address of the recipient. There is no separate charge for the card, although its weight is included in figuring the cost to mail the primary third-class piece.

Increasing numbers of newspapers are using third-class detached labels for nonsubscriber delivery, members of the ANPA Postal Committee have noted. □

TMC appeal argued

A three-judge panel of the 4th U.S. Circuit Court of Appeals is weighing arguments in ANPA's appeal of rules that effectively prohibit use of second-class mail for total-market-coverage programs.

ANPA and the U.S. Postal Service presented oral argument in Baltimore Nov. 10. At issue is a postal-rule change requiring newspapers' second-class TMC programs to qualify independently for a second-class mailing permit [presstime, April 1986, p. 50].

The Association reiterated that second-class TMC programs, if done properly, do not violate the old postal rules and that the changes were unnecessary. □

World Press

Lara accused of terrorist affiliation

A State Department official has told the American Society of Newspaper Editors that Colombian journalist Patricia Lara was refused entry into the United States in October because of "her membership in and activities in support of terrorist organizations and her role as a Cuban operative."

In a Nov. 17 letter to ASNE President Michael G. Gartner, Elliott Abrams, assistant secretary of state for inter-American affairs, said Lara serves as a liaison between Cuban intelligence services and the M19, a Colombian guerrilla movement. Abrams said Lara has served in a "key capacity" in at least one administrative committee of the M19 and "has played an important role in enabling the M19 to carry out its terrorist activities."

Abrams also castigated press organizations, saying they "rushed to the defense" of Lara "in complete ignorance of the facts." He called it a "kneejerk" reaction.

Lara has denied the charges.

Lara was not allowed into the country to attend an awards ceremony at the invitation of Columbia University's Graduate School of Journalism [presstime, Nov. 1986, p. 59]. □

Fifth Mexican journalist murdered

The murder of a publisher brought the 1986 death toll among Mexican journalists to five.

Ivan Menendez Macin, 38, was shot and his body left in the trunk of a car in Mexico City. Menendez Macin was publisher of the Spanish edition of a French weekly, Le Monde Diplomatique. According to published reports, at least 27 Mexican journalists have been slain in the past 15 years [presstime, Aug. 1986, p. 47]. □

Ban on Journal ends

The Malaysian government has rescinded its three-month ban on distribution of The Wall Street Journal. This followed a ruling of the Malaysian Supreme Court that expulsion of the paper's Malaysian correspondent Sept. 26 was unlawful [presstime, Nov. 1986, p. 59].

The Journal resumed distribution in Malaysia Nov. 14. The three-month ban had been scheduled to expire Dec. 29. □

Circulation

ABC board limits liability

The Audit Bureau of Circulations Board of Directors gave final approval Nov. 14 to a proposal that will limit the board's liability in circulation disputes.

Under the revision of Bylaw 2.17, a member is prohibited from making any monetary claims against ABC for any action or negligence short of intentional misconduct. A companion measure, also passed, provides for creation of a six-person panel to which an aggrieved party can appeal an ABC decision. The measures have been under discussion for more than a year [presstime, Sept. 1986, p. 47].

Four days before the board voted, the Dallas Times Herald sued The Dallas Morning News and the ABC in a dispute over circulation data. [See story below.]

The board also scheduled for future discussions the question of how bulk sales should be shown in audit reports.

The board met in conjunction with the ABC's annual meeting, at which members re-elected three newspaper directors: James M. Moroney Jr., chairman and chief executive officer of the A. H. Belo Corp., owner of The Dallas Morning News; Thomas B. Sherrill, vice president/marketing, The Dispatch, Columbus, Ohio; and R. David Threshie, publisher of The Orange County [Calif.] Register. □

Dallas circulation feud results in lawsuit

The Dallas Times Herald has brought suit against The Dallas Morning News and the Audit Bureau of Circulations, accusing the Morning News of fraudulently inflating its circulation data.

The Times Herald also said the ABC "knew or had reason to believe" the circulation figures were incorrect and asked a Chicago federal court to bar the release of any further Morning News circulation numbers unless they are verified by an independent audit. The Times Herald is also seeking an unspecified amount in damages.

Burl Osborne, president and editor of the Morning News, said: "We would welcome an ABC audit, and we are confident it would validate the Morning News' paid circulation as previously stated." ABC audit figures as of Sept. 30 show the Morning News at 390,987 daily and 531,417 Sunday; and the Times Herald, 246,370 daily and 338,963 Sunday. □

Standden predicts strong growth for newspaper advertising

The Newspaper Advertising Bureau has predicted that newspaper advertising expenditures will increase 45 percent over the next five years from an estimated $26.9 billion in 1986 to "more than $39 billion" in 1991.

That is assuming newspapers' share of all advertising expenditures holds steady near 27 percent—where it has "stabilized" over the last four years.

However, NAB President Craig C. Standen said he is optimistic that "we'll beat this forecast. I think we're going to increase our share . . . and I'm confident we'll still be the number-one advertising medium at the turn of the century."

Standen made his remarks to The Times Mirror Co.'s conference for securities analysts Nov. 5 in New York City. He said the outlook for newspaper advertising is "bright" for three main reasons:

- "We are in a position to capitalize on our large and continuing investments in new technology, investments which allow us to improve our product and simultaneously control our costs."
- Newspapers are taking action that will "help us compete more effectively, especially against television and direct mail."
- "For the first time in history, the newspaper business is planning its own long-term future, on an industry-wide basis, through the Future of Advertising project."

Standen noted that newspapers have improved their ability to meet the "differing needs of different kinds of retailers." For example, many now can provide saturation coverage of households around store locations, can match stores' charge-account lists with subscriber/non-subscriber databases, and meet other needs such as those of specialty retailers that want "demographic selectivity and the right kind of an editorial environment in which to display their merchandise."

Newspapers' improvements in zoning, coupled with total-market-coverage programs, also improve "our ability to compete for preprint business against shared mail," Standen said. "In this area, we're in the best shape we've been in since the shared mail challenge began in 1980."

Standen noted that more than 700 daily newspapers now offer TMC programs that can reach 28 million non-subscriber households every week, in addition to newspapers' daily paid circulation of 64.7 million, according to the Audit Bureau of Circulations.

Classified is still healthy and has grown by an average of 15 percent a year since 1980, he said.

National advertising, newspapers' smallest ad category, has grown 11 percent a year since 1980, Standen continued. But there has been a "historical downtrend in national advertising share," and newspapers are engaged in various programs to change the tide, he said.

One such effort is the Future of Advertising project, in which "130 senior newspaper executives from all areas of the business" are addressing a variety of topics including pricing, distribution, quality reproduction and readership [presstime, May 1986, p. 50]. □

Standardization efforts extend to credit applications

Continuing the move toward standardization spearheaded by the Newspaper Advertising Bureau's Future of Advertising project, the next area addressed will be credit applications.

At the October meeting of the Advertising Media Credit Executives Association, a committee was formed to examine the subject and to present recommendations to AMCEA at next year's meeting. Lawrence F. Murphy, general credit manager of The New York Times, is committee chairman.

Standardization of credit applications follows standardization of advertising invoices, which was originally worked out in committees of several newspaper associations and approved by their boards before a final form was issued recently by the Future of Advertising project. Organizations that worked on the 29-element Standard Advertising Invoice, or SAI, include NAB, ANPA, the International Newspaper Financial Executives, and the International Newspaper Advertising and Marketing Executives [presstime, June 1986, p. 64].

Copies of a new publication, "The Standard Advertising Invoice," are available without charge from NAB, 1180 Avenue of the Americas, New York, N.Y. 10036; (212) 921-5080. □

Creative Newspaper 11 showcases outstanding newspaper ads

Creative Newspaper 11, the annual compilation of award-winning advertising, is now available from the Newspaper Advertising Bureau.

The 48-page, two-section publication features the 19 winners of NAB's top award, the Athenas (Awards To Honor Excellent Newspaper Advertising), plus other outstanding ads. The 84 ads included in Creative Newspaper 11 were selected from more than 5,000 entries in 19 categories.

The panel of judges included Ed McCabe, then New York office president and creative director worldwide of Scali, McCabe, Sloves; Agi Clark, senior vice president and executive creative director of

Creative Newspaper 11 features 84 ads.

N.W. Ayer; and Jay Chiat, chairman and chief executive officer of Chiat/Day.

Two advertising agencies each won two Athenas: Hal Riney & Partners of San Francisco, and Bozell, Jacobs, Kenyon & Eckhardt of Minneapolis.

Approximately 100,000 copies of Creative Newspaper 11 will be distributed to ad agency personnel as well as to the ad departments of manufacturers, marketers and retailers.

Newspaper members of NAB may order copies for $1 each, plus postage. The cost to non-members is $5 plus postage. □

Some dailies coloring comics; syndicates offer mixed reviews

For nearly a century, artists have drawn color comics for Sunday papers, black-and-white for dailies. Now, an increasing number of newspapers, on their own, are coloring weekday comics.

"Comics are made for color. Ever seen a black-and-white comic book?" asked David Burgin, who lays claim to the title of "Colored Comics King" for introducing daily color comics to The Orlando Sentinel in 1982 when he was editor there, and again to the Dallas Times Herald in October, soon after he became its editor.

"I'm surprised more papers don't do it," said Burgin. "It's really easy to do."

The added color has received mixed reviews from the cartoonists and their syndicates.

Coloring comics requires "a combination of primitive techniques and state-of-the-art technology," according to George A. Beidler, vice president and executive editor of the Tribune-Review in Greensburg, Pa., which started daily color comics Nov. 3.

For that daily and about a dozen others, coloring comics works like this:

The comics page is pasted down in its standard black-and-white format and then photographed to form a single negative. Afterward, the page is covered with an overlay, and selected areas are colored in with a marker. The overlay is then passed through a scanner, which separates colors into red, yellow and blue.

The three color separations are printed to blend with the black-and-white negative, just as a color photograph is reproduced.

For papers that already have large scanners, the actual cost for coloring comics is small, except for the potential loss of revenue from a color ad. Because there are a limited number of pages with color capability at most papers, a color comics page could take the space that might otherwise have gone to a color ad.

In Dallas, the colored comics at the Times Herald supplanted a color weather map similar to the one being carried by its cross-town rival. "I said, 'OK, Morning News, you can have your color map,'" said Burgin. "So we have a competitive difference. . . . 'I'm hoping it's a competitive advantage."

The St. Louis Post-Dispatch is believed to be the first U.S. daily to have published four-color daily comics regularly, beginning in 1965.

Orlando began coloring comics in 1982.

Initially, staff artists made separate Amberlith overlays for each color, painstakingly cutting along the lines drawn by the cartoonists. Then the paper switched to a Fluoro-graphics process, in which a staff artist makes the separate overlay for each color but indicates color tones in shades of grey.

Still going it alone, St. Louis has not switched over to scanners, preferring to invest the additional time it takes with Fluoro-graphics to get a sharper image, said Ed Kohorst, graphics director for news art.

Coloring comics also predated scanners at Florida Today of Melbourne, which had a full page in its inaugural issue, March 21, 1966, when the paper was called Today and was published in Cocoa, Fla. With color in every section on a daily basis, a color comics page "just goes with the flow," said Art Director Shawn Vitt.

But in Greensburg, where much of the paper is still black-and-white, people notice, said Beidler. "When you get to the comics, you can't fly by them," he observed.

While newspaper staff artists try to key weekday colors to cartoonists' Sunday renderings, there appears to be little communication between papers with hand-colored comics and the cartoonists or their syndicates.

Some artists and their syndicates welcome the added color, but others have expressed reservations about the quality of the newspapers' home-grown color.

"I think it's great," said Mort Walker, creator of "Beetle Bailey." "I think it would be wonderful if they [comics] were all printed in color. Everything looks better in color," he added.

"The artists love it" said King Features Comics Editor Bill Yates. "I think it's a real plus."

On the other hand, Lee Salem, vice president and editorial director of Universal Press Syndicate, said, "We are going to have to start looking more closely, because the artists themselves are raising some questions."

"Some papers do an adequate job. Some papers do a better-than-adequate job. Some papers do a less-than-adequate job," he said. When newspapers use Sunday color as a guide, they can follow the artist's intentions with the main characters, but there can be problems "when it comes to secondary characters or something more freewheeling, like 'The Far Side.'"

"We have seen such mixed results that we really haven't come up with a policy," says Salem, "but we may be forced to."

—*Marcia Ruth*

FOI Day will be observed again

Thanks to a joint resolution of Congress signed by President Reagan Oct. 27, Freedom of Information Day will be commemorated again in 1987.

The measure calls on federal, state and local governments and the citizenry to observe FOI Day March 16 with appropriate programs, ceremonies and activities.

FOI Day was first observed on that date this year. March 16 was the birthdate of James Madison, fourth President of the United States and one of the authors of the Bill of Rights to the Constitution [presstime, April 1986, p. 48]. □

SPJ, SDX contemplates restructuring

The Society of Professional Journalists, Sigma Delta Chi, is studying whether the activities and structure of the organization should be changed to improve its performance in meeting the needs of journalism.

"We're going to rethink and redefine what the organization should be," said Robert H. Wills, president of SPJ,SDX and editor of the Milwaukee Sentinel.

Robert H. Willis

He added, however, that nothing will be done "to detract from the very basics of the society, which have always been the standards and principles of journalism" with emphasis on freedom-of-infomation issues, professional development and related matters.

Wills, who was elected president at the society's annual convention Nov. 12-15 in Atlanta, has named a six-person committee to study what changes may be necessary. Also, partly as a result of Executive Officer Russell Tornabene's recent announcement that he will resign late next year, the group will examine the organization's managerial needs.

For the shorter term, but in conjunction with long-range plans, Wills has set a number of other goals and has appointed task forces to meet them.

The main thrusts are "the two M's: membership and money," he said. A membership decline in recent years has strained the organization financially. "Because a large part of our income comes from dues, it is essential that we regain lost membership," Wills said. A membership program announced earlier this year will be continued [presstime, Sept. 1986, p. 46].

In other money-raising efforts, The Quill magazine of SPJ,SDX will beef up its advertising sales program. It has hired a full-time advertising manager, James W. Schaefer.

And Wills has named a marketing task force headed by society Secretary Paul M. Davis of Chicago's WGN-TV "to look over the rest of the society to see if other revenue sources exist."

Other task forces will look at:

• **Image.** SPJ,SDX member E. Bruce Harrison, who owns a Chicago public relations firm, will head a task force that "will get some specifics in front of us" for resolving "confusion" that exists about the organization's nature and mission.

• **A possible name change.** The name has been a source of discord since the words "Society of Professional Journalists" were added, in a superior position, to the Greek "Sigma Delta Chi." The organization in 1981 decided against changing its name to "American Journalism Association." In 1982, it voted narrowly against dropping the "Sigma Delta Chi" portion of the name. Also in that year, it imposed a five-year moratorium on the time-consuming, name-change issue [presstime, Dec. 1982, p. 20].

Wills said the issue is active once again, however, partly because some people—even members of the press—mistakenly believe the Society of Professional Journalists, Sigma Delta Chi, is two organizations. He said he "wouldn't be surprised" if the name were changed to something other than "Sigma Delta Chi" or "Society of Professional Journalists."

• **Possibly easing admission rules.** Current rules prohibit public-relations practitioners from joining but allow journalists to continue their membership if they shift to the public-relations field. "This could be a first step to loosening the restrictions," Wills said. "There is a motherlode of talent out there that the society should be taking advantage of."

Other new SPJ,SDX officers elected in Atlanta are President-elect James F. Plante of NBC News and Treasurer Carolyn S. Carlson of the Associated Press. □

Design book ready

The seventh edition of *The Best of Newspaper Design* features the winners of the annual competition of the Society of Newspaper Design.

The 208-page book contains more than 400 examples of excellence in newspaper graphics, selected from more than 9,600 entries submitted by about 300 newspapers from eight countries.

The publication is available for $25 from SND, The Newspaper Center, Box 17290, Dulles Airport, Washington, D.C. 20041. □

Expanded AP stylebook arrives

The latest and 20th printing by the Associated Press of its *Stylebook and Libel Manual* is about 20 percent larger this year—an additional 20,000 words.

If you have a copy of the edition printed in 1977, "you can probably survive," said stylebook Editor Christopher W. French. Yet each revision adds "some things we generally understand but are just coming into the language."

Among the nearly 80 new entries is a section on computer technology, as well as explanations of some generally non-Western religions and medical conditions (AIDS, Alzheimer's and Legionnaire's diseases) that have been featured prominently in the news lately.

The new revision also contains an updated Libel Manual, with case citations and analyses through July 1986.

Usage of new space-technology terms is addressed in the stylebook. For example, the abbreviation "SDI" should not be used on first reference and "has to be defined properly," said French. On the other hand, "we do allow for the use of 'Star Wars' on first reference," he said, "because Star Wars has become a commonly known or understood synonym for zapping nuclear weapons in space." Once mentioned, however, "then you have to define just what you are talking about."

Originally, said French, the stylebook was intended for domestic use, with entries "oriented to the United States." But in this year's revision, entries on predominantly non-Western religions have been expanded to correct "widely held misunderstanding of Islam and Buddhism and Hinduism, all of which have been prominently in the news."

Although called a stylebook, it is not focused solely on grammar and usage. Said French: "The whole idea of style is to be able to write a story in such a way that nobody can misunderstand."

AP has scheduled a 50,000-book press run, which will bring to over 700,000 the number of AP stylebooks published in this format since 1977.

The cost is $5.75 plus postage. Order from AP Newsfeatures, 50 Rockefeller Plaza, New York, N.Y. 10124-9990. □

Media are slow to change their use of language

For the eighth consecutive year, a study of language usage in U.S. newspapers and magazines shows print media holding the line against rapid change.

In almost every case where editors were given a choice of words, "the conservative, old-fashion English won out," reported Richard L. Tobin, adjunct professor at Indiana University's School of Journalism, who conducts the annual survey.

Chief among this year's findings is the overwhelming rejection of profanity. Of the 150 newspapers and 50 magazine editors participating in the survey, 92.6 percent said they would not print profane language in their publications. Some editors said they would make an exception if the profanity was used by a public figure.

"If it's a family newspaper," most editors would suggest a "four-letter-word" by publishing only the first letter and then dashes or "just avoid it," said Tobin.

Another thing they appear to be avoiding is the choice between "Miss," "Mrs." and "Ms." when referring to women [presstime, Dec. 1985, p. 10].

"During the height of the women's movement, 'Ms.' came in and was used by an awful lot of newspapers in this country," Tobin noted. But this year, he said, three-fourths of the editors questioned said they not only avoid "Ms." but also "no longer use any kind of honorifics," including "Mr." for men.

By a 3-to-1 ratio, editors said they "do not use 'chairperson' at all," Tobin reported. In general, they use "chairman" and sometimes "chairwoman".

The study also found editors prefer:

- "OK" (with or without periods) to "okay"
- "TV" to "tv"
- "theretofore" to "hitherto"
- "occur" or "happen" to "transpire"
- "100,000 people" to "100,000 persons." □

Hard Versus Soft News: What's the Best Fit for Your Market?

The "mix" of newspaper content affects readership. Knowing the order of importance of national and international news, local news, sports, business, and other content types in your market can help your newspaper understand adult information needs.

Analysis of tough strategic problems is our business.

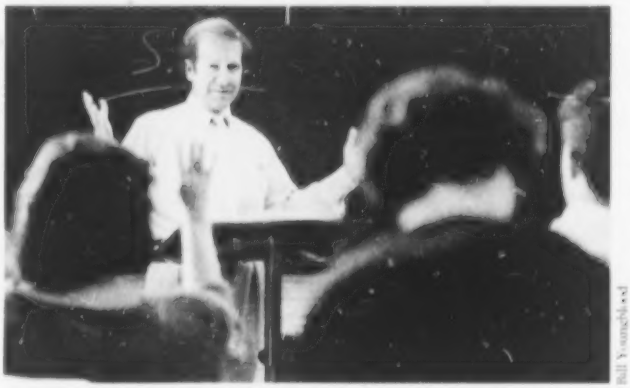
Many fellowships offered to newspaper journalists

With the addition of some new programs and the dropping of others, the total number of mid-career journalism fellowships remains about the same. But the level of interest varies more than usual among the 50 or so major programs.

Major liberal arts programs—such as the Nieman Fellowships at Harvard University and the John S. Knight Fellowships at Stanford University—reported a slight drop in the number of applicants last year. [See story, p. 64.]

But some of the specialized programs—such as the Walter Bagehot Fellowship Program in Economics and Business Journalism at Columbia University—report increased numbers of applicants. And interest in fellowships tailored to the needs of individual journalists—such as those offered by the Gannett Center for Media Studies and the Alicia Patterson Foundation—is on the rise.

Overall, the mid-career programs listed here range from a week to a year and offer various combinations of travel, seminars courses and hands-on experience.



Bill Youngblood

Fromson teaches a class at USC's Center for International Journalism.

A financial crisis at the Journalists in Residence program at the University of Michigan, described in presstime's last annual listing of journalism fellowships [presstime, Jan. 1986, p. 44], has been alleviated by more than $500,000 in contributions and $2.7 million in commitments made so far this year.

"I think we are becoming a success story," said Director Charles Eisendrath, who reports a major program revision. Combining the liberal arts tradition begun by the Nieman Foundation nearly a half century ago with the more recent trend toward specialized fellowships [presstime, Dec. 1985, p. 6], Michigan will now divide enrollment in its fellowship program between mid-career journalists seeking a year of liberal arts and those with specific career objectives.

Meanwhile, Harvard and Stanford are continuing their traditional programs, which allow journalists to pursue course work of their choice at the universities, while participating with other fellows in a core program of seminars.

Each of the three programs accepts up to 12 experienced U.S. journalists. Tuition is free. Fellows receive stipends for living expenses: $17,000 at Harvard, $18,000 at Michigan and $20,000 at Stanford. Deadlines are Jan. 31 at Harvard, March 1 at Michigan and Feb. 2 at Stanford.

For information, contact:

• Nieman Foundation, Walter Lippmann House, 1 Francis Ave., Cambridge, Mass. 02138; (617) 495-2237.

• John S. Knight Fellowships, Department of Communication, Stanford University, Stanford, Calif. 94305; (415) 723-4937.

• Journalists in Residence, University of Michigan, 2072 Frieze Building, Ann Arbor, Mich. 48109; (313) 763-2400.

All three programs include a few foreign journalists.

BUSINESS AND ECONOMICS. Applications for Columbia University's Bagehot Fellowships in Economics and Business Journalism were up 25 percent last year.

For 10 print and broadcast journalists with at least four years' experience, the Bagehots provide an academic year of university courses and special seminars plus a stipend of about $14,000. There is one minority fellowship. Deadline is April 3. Contact Mary Bralove, Bagehot Fellowship Program, Graduate School of Journalism, Columbia University, New York, N.Y. 10027; (212) 280-2711.

At the University of Missouri, the Herbert I. Davenport Fellowships offer a month-long program in June to 20-25 journalists with a minimum of three years' experience. Deadline is April 1. Contact James K. Gentry, Business Journalism Program, School of Journalism, University of Missouri, P.O. Box 838, Columbia, Mo. 65205; (314) 882-7862.

The American Bankers Association offers two Hughes Fellowships to financial editors and reporters to attend a two-week session at the Stonier Graduate School of Banking at the University of Delaware in Newark, Del. Contact Barbara Scotland, American Bankers Association, 1120 Connecticut Ave. N.W., Washington, D.C. 20036; (202) 663-5404.

The National Press Foundation offers seven fellowships to journalists for another two-week program—in August at the Graduate School of Banking of the University of Wisconsin at Madison. Deadline is June 1.

The NPF also sponsors 12 journalists for a one-week tour of Wall Street financial institutions. The October tour includes such places as the New York and American stock exchanges and investment banking firms. Deadline is Aug. 1.

For both programs, contact NPF, National Press Building, Washington, D.C. 20045; (202) 662-7350.

The financial daily, American Banker, no longer offers fellowships for graduate study and paid internships.

LAW AND PUBLIC POLICY. New this year is a program sponsored by the Gannett Foundation in conjunction with the National Press Foundation. The Paul Miller Washington Reporting Fellowships are designed for working journalists who can take part in the program without taking a large block of time from their jobs. With experienced Washington journalists as teachers, 12 print and broadcast journalists will spend two days a month developing sources and expertise on Capitol Hill. Contact Paul Jarensch, Gannett Co., P.O. Box 12310, Arlington, Va. 22209; (703) 284-6727.

Yale Law School offers a master's degree to up to five journalists who take an academic year away from their jobs. The stipend covers tuition, but newspapers are encouraged to pay living expenses. Deadline is Feb. 1. Contact Jamienne Studley, Yale Law School, Box 401-A Yale Station, New Haven, Conn. 06520; (203) 432-1685.

The Kiplinger Graduate Program in Public Affairs offers 10 full-year fellowships to the School of Journalism at Ohio State University. Journalists with at least three years' experience in public affairs reporting are eligible for the

program, in which they can earn a master of arts in journalism degree. Stipends of $18,000 cover tuition and living expenses. Deadline is Dec. 13, or Feb. 1, with special permission. Applicants must take the Graduate Record Examination by Feb. 1. Contact John Wicklein, Kiplinger Program, School of Journalism, Ohio State University, 242 18th Ave., Columbus, Ohio 43210, (614) 292-2607 or 292-6291.

Two programs offer practical experience in government to a variety of professionals, including a few journalists.

The White House Fellowship program places 11-19 people at the senior staff level in the White House, cabinet departments or other government agencies. A salary range of approximately $50,000 is negotiated individually. Deadline is Dec. 15. Contact President's Commission on White House Fellowships, 712 Jackson Place N.W., Washington, D.C. 20503, (202) 395-4522.

The American Political Science Association includes a few journalists in its Congressional Fellowship Program of about 45 professionals. They receive $20,000 for the November-through-August program, combining jobs on Capitol Hill with APSA seminars. Deadline is Dec. 1. Contact Catherine E. Rudder, Congressional Fellowship Program, APSA, 1527 New Hampshire Ave., N.W., Washington, D.C. 20036, (202) 483-2512.

SCIENCE AND TECHNOLOGY. The major fellowship aimed at improvement of science and technology reporting is thriving, but others are in danger for lack of interest or funding.

Now in its fifth year, the Vannevar Bush Fellowship offers about eight print and broadcast journalists an academic year at the Massachusetts Institute of Technology. Fellows audit courses, participate in twice-weekly reporting seminars and do individual research. The $20,000 stipend includes a $2,000 relocation allowance. Applicants should have at least three years' experience in the field. Deadline is March 1. Contact Victor K. McElheny, Room E40-373, MIT, Cambridge, Mass. 02139, (617) 253-3442.

For the second year, the Marine Biology Laboratory at Woods Hole, Mass., offers science writers an opportunity to observe and participate in research, lectures and lab sessions of graduate-level courses in such disciplines as embryology, marine ecology, microbiology, neurobiology, neural systems and behavior, parasitology and physiology.

For the summer of 1987, there are four sessions of eight weeks and three of four weeks.

Supported by a grant from the Carnegie Corp., with additional funding from the Foundation for Microbiology, the stipend covers tuition, housing and transportation for seven journalists. Contact Pamela L. Clapp, MBL, Woods Hole, Mass. 02543, (617) 548-3705.

Aiming at both science and business writers, Carnegie-Mellon Fellowships provide tuition and a stipend for several experienced reporters and editors to attend graduate-level executive programs at Carnegie-Mellon University's schools of management, engineering and science. Deadlines vary depending on programs selected. Contact Bernard P. Goldsmith, Carne-

PAUL MILLER

WASHINGTON REPORTING FELLOWSHIPS

Applications being accepted.

The Paul Miller Washington Reporting Fellowships program is designed to help Washington-based print and broadcast bureau chiefs and staffers do a better job of developing locally oriented news stories in the nation's capital.

Beginning in Spring 1987, 12 fellows will spend two days a month for 12 months meeting with experienced Washington journalists, visiting the places where local news originates, learning how to obtain information, and getting to know prominent newsmakers and behind-the-scenes news sources.

Eligibility The fellowships are designed primarily for journalists currently or about to be assigned to Washington by any regional or national newspaper, wire service, or radio or television station maintaining a bureau in Washington. Applicants' employers must endorse applications and affirm recipients will be permitted to attend all sessions.

Selection Fellowships will be awarded based on applicants' potential to provide superior coverage of locally oriented news in Washington for readers and audiences across the country.

Schedule Applications are due January 15, 1987 and recipients will be announced in February 1987. Classes start in April 1987.

Location Many of the sessions will be held at the National Press Club in the National Press Building at 14th and F Streets, N.W. Others will take place on Capitol Hill.

Faculty The associates who will teach the sessions include experienced Washington reporters, analysts and other Washington-based experts.

Fees The fellowships are tuition-free. Meals, and when applicable, transportation and lodging will be provided.

Affiliation The fellowships are an operating program of the Gannett Foundation of Rochester, N.Y., in cooperation with the National Press Foundation, and using the facilities of the National Press Club.

Additional information and application forms are available from:

Paul Miller Washington Reporting Fellowships

P.O. Box 12310, Arlington, VA 22209, Phone: (703) 284-6727

Some programs experience drop in applications

Directors of mid-career fellowship programs are divided on the reasons some year-long programs are experiencing a decline in applications while others have increasing numbers of applicants.

Some attribute the trend to complications arising when a journalist's spouse cannot easily take a year off from a job. Others blame the media for not granting enough money so that participants can swing it financially.

"My own view of life is it is tandem couples that are creating a problem for everybody," said Howard Simons, director of the Nieman program at Harvard, where applications dipped below 100 for the first time last year.

James V. Risser, Simons' counterpart at Stanford's Knight program, where applications also dropped slightly, agreed: "The journalist may be able to get leave from an employer, and the spouse either can't get leave or has to get leave without pay, so it (the fellowship) becomes a real financial burden." With the loss of both incomes, "you're looking at a $20,000, $30,000, $40,000 bath," said Simons.

Another reason for the drop, the program directors said, is general instability in the newspaper business. "There has been a lot of turmoil—papers merging or going out of business or being bought—and I think some people are afraid to be away from their jobs for nine months," Risser said.

But Everette E. Dennis, director of the Gannett program at Columbia University, where applications went from 85 to over 200 last year, has stern words about media companies' lack of support for mid-career fellowships. He said the companies should allocate more money for program grants or continue salaries while journalists are on fellowships.

"I think it's unconscionable that some fellowships offer so little money. No wonder people who are single have trouble, and for people who are married it's almost impossible," said Dennis. "In effect, the individual has to fund the program."

In contrast to the set stipends of $17,000 at Harvard and $20,000 at Stanford, the Columbia program matches salaries and gives an allowance of up to $1,000 a month to make up for New York City's high cost of living. The program also helps find housing for fellows, jobs for spouses and schools for children.

"I have never met anybody who used a family as an excuse," said Dennis.

"If you want to blame anybody for this, blame the commmunication companies for not being willing to support their people," he said. "People shouldn't have to take a financial bath to take a fellowship."

gie-Mellon University, Box 10, Pittsburgh, Pa. 15213; (412) 268-2000.

The Council for the Advancement of Science Writers is expanding some programs and has discontinued others.

Continuing are the four to six Nate Haseltine Fellowships of up to $2,000 for journalists pursuing graduate-level programs in science reporting. Deadline is June 1.

For the second year, the council is offering traveling fellowships to CASW's annual New Horizons in Science briefings, which will be at Carnegie Mellon University in Pittsburgh in 1987. Now covering up to $1,000 in travel and accommodations for five journalists, the program is designed for people from small to mid-size papers who have not previously attended this meeting. Deadline is Oct. 1.

For both CASW fellowships, contact William J. Chromie, CASW, 618 N. Elmwood, Oak Park, Ill. 60302; (312) 383-0820.

Discontinued for lack of funds were CASW fellowships for journalists to work in the public information offices of major research universities. Also discontinued were plans to launch a writers-in-residence program in scientific laboratories.

Citing a dearth of applicants, the National Association of Science Writers has discontinued its fellowships for a month's study at Duke University.

INTERNATIONAL. Now in its second year, the Center for International Journalism at the University of Southern California offers fellowships to mid-career journalists as well as students to complete a master's degree program in international journalism.

The program runs a full year, with two semesters of academic work and the equivalent of one semester working in Mexico City. Deadline is March 31. Contact Murray Fromson, Center for International Journalism, USC, Los Angeles, Calif. 90089; (213) 743-7329.

Also focusing on Latin America are two other programs:

The Inter American Press Association offers U.S. or Canadian journalists a year to study and report in Latin America, while Latin American journalists come to North America. This year, five $6,500 fellowships are open to U.S. journalists with a working knowledge of Spanish or Portuguese. Deadline is Aug. 1. Contact Zulay Chirinos, IAPA Scholarship Fund, 2911 N.W. 39th St., Miami, Fla. 33142; (305) 376-3522.

The National Press Foundation provides tuition and travel expenses for seven journalists to attend an intensive Spanish-language course at the Guernavaca Language School in Mexico. Because instruction is individualized for students at various levels of language fluency, journalists may select a three-month period between September and May. Deadline is June 1. Contact National Press Foundation, National Press Building, Suite 1160, Washington, D.C. 20045; (202) 662-7350.

Two Hawaii-based fellowships for Asian studies continue.

The Jefferson Fellowships offer six U.S. print and broadcast journalists an eight-week program in March and April. Half of this time is spent traveling in Asia, the other half studying with their Asian-Pacific counterparts at the East-West Center in Honolulu. A stipend covers travel expenses, and news organizations sending journalists are encouraged to continue their salaries during the U.S. part of the program. Contact the curator, Jefferson Fellowships, East-West Center, 1777 East-West Road, Honolulu, Hawaii 96848; (808) 944-7666.

The Gannett Fellowship Progam in Asian Studies at the University of Hawaii offers an academic year of study to six mid-career journalists. Deadline is March 1. Contact Gannett Fellowship Committee, Center for Asian and Pacific Studies, University of Hawaii, 1890 East-West Road, Honolulu, Hawaii 96822; (808) 948-6394.

After 13 years, however, another Asian fellowship may be discontinued or revised—an annual exchange of 10 U.S. and 10 Japanese journalists sponsored by the International Press Institute and the Japan Newspaper Publishers and Editors Association. The Japan-U.S. Friendship Commission has withdrawn funding for the U.S. stay of the Japanese journalists. Contact Thomas Winship, chairman of the American Committee of IPI, 3 School St., Boston, Mass. 02108; (617) 929-2931.

Columbia University's Graduate School of Journalism continues to screen candidates for two European programs.

The John J. McCloy Fellowship offers two U.S. journalists a month of study in West Germany, and two West German journalists the equivalent in the United States. The Paris-based Journalists in Europe program includes two U.S. journalists among more than 30 journalists from other countries in an eight-month program. Fellows publish articles in Europ magazine and are encouraged to write other articles during the program. Applicants must be under 35 when the program begins, have at least four years' experience as journalists, and be fluent in French.

Deadline for both programs is Feb. 1. Contact Donald Shanor, Graduate School of Journalism,

Columbia University, New York, N.Y. 10027; (212) 280-3837.

Journalists may also be included in international fellowships designed for a variety of professionals.

Fulbright Fellowships, which offer study abroad in specific areas requested by various countries, has a number of positions open in the field of communications and journalism. Among these are projects in Malaysia, Guatemala, Singapore, Morocco, Turkey, Russia, the Philippines and the People's Republic of China. Some are lecture and travel grants, which include money for travel and expenses for three months to a year. Contact Council for International Exchange of Scholars, 11 Dupont Circle N.W., Suite 300, Washington, D.C. 20036; (202) 939-5400.

The Rotary Foundation of Rotary International sponsors fellowships for more than 1,000 professionals up to the age of 50. Applicants must be nominated by a local Rotary Club. They may not be members themselves or related directly to members of Rotary. Deadlines vary according to local schedules, but final recommendations of the local clubs are due July 15. Contact The Rotary Foundation, 1600 Ridge Ave., Evanston, Ill. 60201; (312) 869-1100.

The Robert Bosch Foundation Fellowship Program includes journalists among up to 15 professionals. They serve internships, first in national government and later in state or local government or private industry. The stipend includes travel to seminars in West Berlin, Paris and Brussels as well as travel from the United States and a monthly living allowance. Deadline is Oct. 15. Contact David Schluckebier, Robert Bosch Foundation Fellowship Program, The Carl Duisberg Society, 425 Park Ave., New York, N.Y. 10022; (212) 593-3004.

Highly experienced journalists are eligible for two fellowships offered by the Council on Foreign Relations. Journalists have been included among recipients of the International Affairs Fellowships, which place professionals in high-level jobs in government or the private sector. Applicants must be between the ages of 27 and 35. The stipend is $30,000.

The CFR also offers the Edward R. Murrow Fellowship for one year of reading, study and writing as well as participation in programs of the center. The stipend is based on the individual's pay but is not to exceed $60,000 a year, prorated for the nine months of the fellowship.

Deadline is Oct. 31 for the International Affairs Fellowships and March 2 for the Murrow Program. Contact Kempton Dunn for the former and Margaret Osmer-McQuade for the latter at CFR, 58 E. 68th St., New York, N.Y. 10021; (212) 734-0400.

MINORITIES. Since 1980, ANPA has offered fellowships to minorities employed by newspapers to attend regularly scheduled newspaper-business seminars. Fellowships are also available to minority journalism educators. The 25 fellowships for 1987 cover tuition, board and travel expenses. Deadline for seminars in the first half of the year is Jan. 23. Contact Nancy Osborn, ANPA Foundation, The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041; (703) 648-1053.

Beginning its second year is a Multicultural Management Program at the University of Missouri to improve management skills for mid-career professionals. Although the four-week program is open to everyone, it is designed to improve understanding of the importance of a diverse, multicultural news staff. (See story, p. 46.) Scholarships cover travel, tuition and living expenses for the four-week session. Newspapers are encouraged to continue to pay salaries for journalists who attend Sept. 13 through Oct. 9. Deadline is May 31. Contact Benjamin Johnson, Multicultural Management Program, School of Journalism, University of Missouri, P.O. Box 838, Columbia, Mo. 65205; (314) 882-1581.

Continuing its three-part program, the Institute for Journalism Education offers fellowships for reporters, editors and managers at

Fellowships

We're looking for creative men and women

Who care about the news media

■ The Gannett Center for Media Studies, an institute for the advanced study of mass communication and technological change, invites applications for its 1986-87 fellowships.

■ Fellowships are given to people from the news media or higher education who examine major issues and problems facing the mass media and society, with special attention to freedom of expression, media economics, new communication technology, professionalism, minorities and women, and the education and training of journ dists.

■ *Terms of fellowship:* Fellows will be in residence at Columbia University for three to 12 months. Stipend based on present salary. Office space, clerical and research assistance and other benefits will be provided.

■ *Types of fellowships:* Fellowships are awarded to persons at three levels of attainment—senior fellowships for mature individuals with substantial national reputations, fellowships for accomplished persons at midcareer, and research fellowships for those with 5-8 years of experience.

■ *Application procedure:* Applicants should submit a letter of application, a brief summary of their project, a resume, references, and publications or work samples. Applications are due February 1, 1987; appointments announced in April.

■ *Selection criteria:* Fellowships will be awarded on the basis of (a) the significance and the quality of the project, (b) the applicant's ability to carry out the work, and (c) relevance of the project to the resources of the Center and its New York location.

■ *Requirements for fellows:* Fellows must be in full-time residence and not engage in outside employment or consulting. Participation in weekly seminars and dissemination of fellowship projects is required.

■ *Apply to:*

Residential Fellowship Program
Gannett Center for Media Studies
A Gannett Foundation Program at Columbia University

three universities in different cities.

Now in its third year is IIE's Management Training Center. Applicants for about 20 positions must be sponsored by their newspapers, but some fellowships are available to papers with less than 100,000 circulation. Offered in cooperation with the J.L. Kellogg Graduate School of Management and the Medill School of Journalism of Northwestern University, the Aug. 2-through-Sept. 27 program is divided between classwork and practical experience. Contact Pearl King, IIE Management Training Center, Kellogg Graduate School of Management, Leverone Hall, 2001 E. Sheridan Road, Room 3-080, Northwestern University, Evanston, Ill. 60201; (312) 491-2691.

The 8-year-old IIE editing program includes about 12 participants with at least one year's experience on a newspaper or in other media. In addition to their classwork, they produce a weekly newspaper and work on the copy desk of Tucson's dailies during the June 8-Aug. 1 session. Deadline is Feb. 1. Contact Diane Madrid, Editing Program for Minority Journalists, Journalism Department, Franklin Building 101M, University of Arizona, Tucson, Ariz. 85721; (602) 621-5777.

Now in its 17th year is IIE's 11-week reporting program open to minorities with little previous newspaper experience. The 15 participants in the June 1-Aug. 15 program are guaranteed job placement upon graduation. Deadline is Feb. 1. Contact Daphne Rejmer, Summer Program for Minority Journalists, IIE, School of Journalism, University of California, Berkeley, Calif. 94720; (415) 642-5962.

For Hispanic reporters, there are two year-long programs: One is sponsored by the National Association of Hispanic Journalists and funded by the Adolph Coors Co. The other is sponsored by the National Puerto Rican Coalition and funded by the Gannett Foundation. For $14,000 from Coors and $15,000 from Gannett, reporters work with Hispanic Link News Service, which distributes columns and features in Spanish and English to about 200 newspapers. Deadline for both occurs in late summer or early fall. Contact Charles Ericksen, Hispanic Link News Service, 1420 N St. N.W., Washington, D.C. 20005; (202) 234-0737.

INDEPENDENT STUDY. For the third year, the Gannett Center for Media Studies will sponsor 12 to 15 media professionals (about half of whom are journalists) to work on independent projects for three months to a year. Fellows also participate in the activities of the center at Columbia University. Based on current salary, the stipend covers office space, research assistance and sometimes other expenses such as domestic travel. Deadline is Feb. 1. Contact Residential Fellowship Program, Gannett Foundation Program at Columbia University, 2950 Broadway, New York, N.Y. 10027; (202) 280-8392.

The Alicia Patterson Foundation offers about five journalists $25,000 fellowships for a year's work on a specific project. Stories based on this research are published in the quarterly APF Reporter. Applicants must be print journalists with at least five years' experience. Deadline is Oct. 1. Contact Alicia Patterson Foundation, 655 15th St. N.W., Suite 320, Washington, D.C. 20005; (303) 688-8666.

Ohio State University offers a stipend of $25,000 plus a year's residence in the newly restored home of James Thurber. The "writer-in-residence" will teach a non-fiction writing course and serve as writing coach for the staff of The Columbus Dispatch. Applicants must have had a book published by a major publisher. Deadline is Dec. 15. Contact Thurber House, 77 Jefferson Ave., Columbus, Ohio 43215; (614) 464-1082.

The Society of Professional Journalists, Sigma Delta Chi, offers an annual $10,000 Eugene C. Pulliam Award to an editorial writer for work-related study and travel. Deadline is Sept. 2. Contact Pulliam Fellowship, SPJ/SDX, 53 W. Jackson Blvd., Suite 731, Chicago, Ill. 60604; (312) 922-7424.

The Scripps Howard Foundation presents 10 Ellen B. Scripps Fellowships of $20,000 each to journalists pursuing graduate studies in accredited programs. Requests for an application must be received by Dec. 20. Contact Scripps Howard Foundation, 1100 Central Trust Tower, Cincinnati, Ohio 45202; (513) 977-3035.

The Fund for Investigative Journalism gives about 40 grants a year in amounts ranging from a few hundred to a few thousand dollars to journalists working on special projects. The fund will support both investigative reporting and news media criticism. Applications are considered throughout the year. Contact Howard Bray, FIJ, 1755 Massachusetts Ave. N.W., Room 503, Washington, D.C. 20036; (202) 462-1844.

The National Press Foundation offers up to five $2,000 grants to journalists working on topics that make a contribution to the improvement of journalism. Applications are accepted throughout the year. Contact NPF, National Press Building, Washington, D.C. 20045; (202) 662-7350.

Canadian journalists with five years' experience in print or broadcasting are eligible for Southam Fellowships for one year of study at the University of Toronto. The program pays two-thirds of regular salary for at least three journalists. Deadline is Feb. 28. Contact Southam Fellowships, Office of Student Awards, Koffler Student Services Center, 214 College St., University of Toronto, Toronto, Ontario, M5T2Z9; (416) 586-7956.

The Heritage Foundation offers grants of from $2,500 to $10,000 to one journalist a year for expenses associated with an independent research project. Deadline is March 31. Contact Herbert B. Berkowitz, The Heritage Foundation, 214 Massachusetts Ave. N.E., Washington, D.C. 20002; (202) 546-4400.

—Marcia Ruth

1987 Gavel Awards

Share with us what you have done to foster greater public understanding about the law, the courts and the judicial system.

Deadline for the 30th Annual Gavel Awards program is February 1, 1987.

The competition is open to books, newspapers, newspaper magazine supplements, magazines, wire services/news syndicates, radio, television, films and theatre.

Materials published, broadcast, or produced during the period of January 1, 1986 through December 31, 1986 are eligible for consideration.

For complete information and official entry forms, please contact: Peggy O'Carroll, Gavel Awards Competition, American Bar Association, 8th Floor, 750 North Lake Shore Drive, Chicago, Illinois 60611 (312/988-6137).

Debunking the myth that TV news is the prime source of news

BY GUIDO H. STEMPEL III

"Of course, we know that most people get most of their news from television." That statement is to be expected from people connected with television. It has been surprising and troublesome, though, to hear it so often from newspaper executives, especially in light of growing research evidence to the contrary.

It is thus with some delight to report on a book that begins: "This book is about a myth, one of the most pervasive of our myth-dominated age"—that television is the main source of news for most people.

In *The Main Source* (Sage Publications, Beverly Hills, Calif.), John P. Robinson, director of the Survey Research Center at the University of Maryland, and Mark R. Levy, associate professor of journalism at the same university, present detailed findings dealing with all media. They address both short-term and long-term effects and discuss implications of their findings for how news should be presented. They then offer this conclusion:

"Television news should not be considered the public's main source of news. Of the many studies examined . . . not one indicated superior information gain by television news viewers when compared to the gain by users of other media. In some research, TV news viewers emerge as less well-informed than non-viewers, and that seems particularly true among those who claim TV is their main source of news."

The myth, of course, will not die easily, but perhaps it will begin to wither on the vine as the evidence from this book catches up with it.

• • •

Studies of how people find out about major news events indicate that they get their first word from other people or TV. These studies, however, have for the most part dealt with national or international events. Now a study done at Indiana University gives us some insight about how people find out about a major local event and about the role of the newspaper.

The subject was a fire at a fraternity house early Sunday, Oct. 21, 1984. One person was killed and 34 injured. The timing of the event minimized initial media coverage.

Walter Gantz, Kathy Krendl and Susan Robertson of the Department of Telecommunications at Indiana surveyed 293 students enrolled in an introductory mass media and society class that draws students from the entire campus.

They found that 80 percent of the students heard about the fire first from other people and that nearly all of them sought information from other sources. There was radio and television coverage on Sunday, and television was the most relied upon, most informative and most trusted source that day.

However, when newspaper accounts became available Monday, newspapers became the most trusted, most relied upon and most informative source in the eyes of the students by a wide margin. When respondents were asked what single source was most "helpful/informative" overall, 62 percent mentioned a newspaper, 25 percent mentioned a broadcast news source and 12 percent mentioned other people.

The study is reported in the Summer 1986 Journalism Quarterly.

• • •

Perhaps the most discussed single aspect of USA Today has been its weather coverage with the color map. Most of us are aware of some newspapers that have greatly expanded their weather coverage since USA Today came on the scene.

A study in the Summer 1986 Journalism Quarterly by Douglas A. Anderson and Claudia J. Anderson of the School of Journalism and Telecommunications at Arizona State looks at the national trend in weather coverage by daily newspapers. They sent a questionnaire to editors of 165 randomly selected dailies and received replies from 109, or 66 percent.

About 82 percent of the respondents said their newspapers devote a quarter page or less to weather news and graphics on the average day. However, 52 percent said their papers devote more space to weather than they did three years ago, and 38 percent said their papers devote more space to weather graphics.

Although 27 percent agreed that USA Today provided the impetus for increased coverage, 60 percent said it was reader desires that provided the impetus. □

Stempel is distinguished professor of journalism at the E. W. Scripps School of Journalism at Ohio University, Athens, and editor of Journalism Quarterly. He is a regular contributor to presstime.

Research use spreads to all departments

With the Newspaper Research Council beginning its 10th year, reports at its latest semiannual meeting show that research is being used increasingly throughout the newspaper.

Katherine Fanning, editor of The Christian Science Monitor, described at the Oct. 26-29 meeting in Boston how research was used to make editorial changes. Good editors, she said, need to know who their readers are, what their interests are and how well readers' needs are being met.

Research can help editors "fine tune" their papers, Fanning said.

Another editor told the gathering that more research is needed on single-copy sales. Jay Harris, executive editor of the Philadelphia Daily News, said such sales account for a growing percentage of newspaper purchases, particularly in large cities. "Home delivery as a means of obtaining a daily newspaper is poorly suited to the preferences and requirements of an increasingly large segment of the American population," he said.

Although home delivery has declined in recent years, with only 65 percent of households getting both weekday and Sunday home delivery, single-copy sales account for 39 percent of all newspaper purchases, Harris said, citing a 1982 study by the Newspaper Advertising Bureau. For papers with circulations over 500,000, the average figure is 56 percent, and for some it is as high as 80 percent, he said.

Research can help both advertisers and editors overcome widely held misperceptions of who these buyers are, said Virginia Dodge Fielder, vice president of news and circulation research for Knight-Ridder Inc., who teamed up with Harris to make the presentation on single-copy sales. "The demographic profile of single-copy readers is not that which is suggested by the stereotype-laden, conventional wisdom among advertisers," she said. "We need research and promotion to drive home the point."

Rather than "a group with 'poor demographics'—too many blacks, poor people, apartment dwellers and the like," said Harris, regular buyers who account for about 50 to 60 percent of single-copy purchases "are exactly the sort of predictable customer that most advertisers want" [presstime, Jan. 1985, p. 50]. □

Education

First Amendment Congress examines students' free-speech rights

Members of the news media, school administrators, teachers, parents and students often do not see eye-to-eye on issues having to do with education and free speech. But at a conference on "Schools in a Free Society," sponsored by the First Amendment Congress, representatives from these groups found a lot of common ground.

For instance, the 110 participants passed a resolution embracing the "tenet" that student rights of free speech and press are protected by the First Amendment. They recommended that school officials help students exercise these rights.

Another resolution urged professional journalists to monitor student journalism programs and act as "resources" and "problem solvers."

The Nov. 9-11 conference in Williamsburg, Va., was intended to facilitate dialogue on such topics as student press rights, media coverage of educational issues, and censorship of textbooks and other school materials. "It did exactly what we wanted it to—it stimulated people," said Judith D. Hines, president of the First Amendment Congress.

Like other conferences sponsored by the organization, the one in Williamsburg was designed to bring the press together with other segments of society "to express their concerns, their enthusiasms and frustrations at each other," explained Hines, who is vice president and director of ANPA Foundation. She called the conference an example of the First Amendment in action: "If you give enough people a chance to speak the truth as they see it, you come to some level of knowledge and agreement."

The conference featured debates, panel discussions, role playing and a hypothetical case study in student press ethics.

Among the other resolutions adopted were those urging better recruiting and preparation of journalism teachers and advisers, that there be greater recognition for the role of the education writer, and that education writers and school administrators strive to have a better understanding of one another. □

First Amendment lawyer Richard M. Schmidt Jr. leads discussion in colonial setting.

Panel favors continued ACEJMC recognition

A committee of the Council on Postsecondary Accreditation has recommended that the current accrediting organization for college journalism programs continue to be sanctioned.

The Committee on Recognition's recommendation would extend for the maximum, five-year period the official recognition of the Accrediting Council on Education in Journalism and Mass Communications. The COPA Board will consider the recommendation April 17.

COPA is one of two national agencies that formally recognize ACEJMC as the accrediting body for J-schools. The other agency, the U.S. Department of Education, will conduct a hearing Dec. 2 on ACEJMC's petition for re-recognition. □

Transportation

Reagan clears way for public sale of Conrail

President Reagan Oct. 21 signed legislation clearing the way for Conrail to be sold to the private sector through a public sale.

The sale procedure is included in the Omnibus Budget Reconciliation Act designed to reduce the federal deficit by about $12 billion.

Conrail is listed as a $2 billion revenue raiser. The signing of the bill culminated a five-year effort by the U.S. Department of Transportation to sell the government's 85-percent stake in the railroad [presstime, Oct. 1986, p. 64].

The legislation bars railroad companies from acquiring more than 10 percent of Conrail stock for one year, and bars nonrailroad firms from buying more than 10 percent for three years.

Longshoremen approve 3-year contracts

The International Longshoremen's Association voted to approve three-year master and local contracts with the ports of Boston, New York/New Jersey, Baltimore, New Orleans, Hampton Roads, Va., and Mobile, Ala. Dockworkers in Providence voted on a master contract but were still negotiating a local contract at press time.

Meanwhile, union leaders and management resumed bargaining at the port of Philadelphia/Wilmington after ILA members rejected a contract proposal [presstime, Nov. 1986, p. 72].

In Canada, negotiations continue between management groups and British Columbia members of the International Longshoremen's and Warehousemen's Union. ILWU members have worked without a contract since December 1985. □

Rail to buy trucker

Union Pacific Corp., parent company of the Union Pacific Railroad Co., said it will buy Overnite Transportation Co. of Richmond, Va. Overnite is the nation's fifth-largest general freight trucking company.

The $1.2-billion acquisition must be approved by the Interstate Commerce Commission. UP will be the second railroad company to buy a major truck line under deregulation. □

Firing upset in drug-test case

An arbitrator has overturned the discharge of a truck driver at The Baltimore Sun for refusing an order to submit a urine specimen for a drug screen.

Arbitrator Joseph M. Sharnoff decided that in the circumstances of the case, a two-week disciplinary suspension was appropriate.

The decision is believed to be the first in the newspaper business involving a refusal to take a drug test. A decision is expected early next year in another arbitration over the discharge of a mailroom employee at Albuquerque Publishing Co. for refusing to submit to a test [presstime, July 1986, p. 74].

The Baltimore Sun driver, who had worked for the company since 1975, was on a midnight-to-6:30-a.m. shift and was fired June 27.

According to information presented during the arbitration proceeding, the incident leading to the man's discharge occurred on the night of June 25 when he got into his truck to wait for the transportation department dispatcher to call him to move his truck into position for loading. When he did not respond to several calls, the dispatcher sent another driver to see if he was in his truck and to tell him to move it.

The second driver found the grievant sitting in the truck with his eyes closed and his feet on the steering wheel. The driver spoke to the grievant several times without getting a response. He then shook him. When the grievant still did not respond, the dispatcher was alerted.

Sent to the scene, another employee tried unsuccessfully to wake him. An ambulance was then called, and paramedics used smelling salts on him. The grievant finally awoke but appeared dazed and unaware of his surroundings.

The shift supervisor told the grievant he would not be allowed to drive that night and suggested he go to a hospital to be checked, but he refused. According to the supervisor, the driver's pupils were dilated and his speech was slurred. The grievant left on his own, and the incident was reported to the fleet manager.

The grievant, represented by Local 355 of the Teamsters, met with the fleet manager the afternoon of June 27. He was accompanied by the union steward.

According to the fleet manager, the grievant responded to questions by repeating them, his speech was slurred, his pupils were dilated, and he was loud and abusive. The manager decided to end the meeting and instructed the grievant to go to the company's medical department for a urinalysis. He was told he would be fired if he refused to have the urinalysis, or if he submitted to the test and it was positive.

The decision is believed to be the first of its kind in the newspaper business.

The grievant said he was going to call his attorney and left with the steward. Several minutes later, he returned to the office and told the manager that his attorney was going to meet him at the medical department. According to a nurse, the grievant reported to the medical department and took a specimen bottle into the men's room. But he returned the bottle empty, saying he was unable to provide a specimen at that time. The nurse said he was loud and abusive. She then asked the driver to meet with the company's employee assistance counselor.

The grievant spoke briefly with the counselor and said he would not take a drug test. He was then discharged.

In the arbitration hearing, the union contended that the grievant had fallen into a deep sleep June 25 because he had recently started a television repair business and had gotten little rest. The grievant said he had been using a nasal inhalant that might have inhibited his ability to respond to the smelling salts. He also said that his attorney had advised him not to take the drug test and that he had acted on this advice.

The union did not dispute the company's right to require an employee to take a drug test while at work if there is reasonable cause to believe the employee is under the influence of drugs. But it emphasized that the company did not require the grievant to take a test the night of June 25, when it might have had grounds to do so. The union pointed out that on the day the grievant met with the manager, he was neither at work nor about to start working.

Finally, the union said that if the company had a suspicion that the long-term employee had been taking drugs, it could have referred him to its drug counseling program, rather than attempting to force him to take a drug test.

Arbitrator Sharnoff said that "in the particular circumstances of this case," there was not "just cause" for discharge. One reason, he said, was that the grievant was not at work during his meeting with management. A drug test two days after the incident would not resolve the question of whether he had been under the influence of drugs or alcohol at the time of the incident, the arbiter said. The company "presumably could have, but did not," require the grievant to take a test immediately after he was awakened that night, he said.

Another reason for not sustaining the discharge, Sharnoff said, was that the grievant was acting on the advice of his attorney.

"This is considered to be very significant in light of the absence of any compelling reasons for ordering the grievant to take the test at that time," he said. "In the circumstances, the test had little or no value in terms of the investigative purposes of the meeting, i.e., to find an explanation for the grievant's actions on June 25, 1986, and the test would have had little or no value with regard to the grievant's next actual operation of a company vehicle. In these particular circumstances . . . the grievant was privileged to refuse to obey the order and was not obligated to follow the well-accepted rule of 'follow the order now and grieve later.'"

Sharnoff said the grievant's physical appearance and his actions during the meeting with company officials, which they suspected were attributable to drugs, were not "conclusive" evidence of drug use.

The arbitrator said that nothing in his Oct. 20 decision was intended to rule on the propriety of the company's ordering a drug or alcohol test under other circumstances. —*Clark Newsom*

Social Security reminder

The maximum Social Security tax paid by both employees and employers will rise to $3,131.70 in 1987 from the current maximum of $3,003.

Effective Jan. 1, the wage base subject to the F.I.C.A. tax will expand from $42,000 to $43,800.

The payroll tax rate for employees and employers will remain 7.15 percent.

Court says jury should decide independent-contractor case

A California appellate court has ruled that a jury must decide whether an adult carrier delivering The Tribune of San Diego was an independent contractor or an employee.

The company that publishes The Tribune, Union-Tribune Publishing Co., has petitioned the California Supreme Court for a hearing on its contention that the carrier was an independent contractor.

The case arose when a substitute carrier's car was involved in an accident with another vehicle. The other driver, who was injured, sued the carrier and the company. The carrier settled with the plaintiff, leaving the company as the only defendant.

A San Diego County Superior Court judge had granted summary judgment in favor of the company, but the Court of Appeal found "triable issues of fact."

"We do not think newspaper publishers should be insulated from liability involving newspaper carriers by simply arranging compensation to be the difference between wholesale and retail price, by avoiding the appearance of 'control' and by not specifying, for example, exactly how a paper should be folded or delivered," the court said in its 2-1 ruling.

The dissenting judge said that whether an individual is an employee or an independent contractor should be a question of law. "To treat it as a question of fact for a jury would permit a jury in one case to conclude the contract creates an employer-employee relationship and in the next case to conclude the same contract creates an independent contractor relationship," the judge said.

(Brose v. Union-Tribune Publishing Co., CA 4th Dist. Div. 1 D003705)

Washington Post cancels Guild agreement

The Washington Post canceled its labor agreement with the Washington-Baltimore Newspaper Guild Nov. 3. The parties are in negotiations for a new agreement to replace the one that expired July 9.

Lawrence A. Wallace, vice president/industrial relations, said the company terminated the contract because "we thought it was time for the Guild to get serious" about negotiating a settlement. The company took the same action during negotiations in 1976 and 1983.

Termination of the contract means that the company is no longer obligated to arbitrate grievances, Wallace said. Other provisions covering wages and working conditions remain in effect. He said there were 40 Guild proposals and 10 company proposals still on the table in late November.

The company also has filed a "unit clarification" petition with the National Labor Relations Board seeking to exempt 51 positions now included in the bargaining unit.

BLS reports decrease in newspaper injuries

In its annual report on work-related injuries and illnesses, the U.S. Bureau of Labor Statistics reported a decrease at newspapers in 1985 compared with 1984.

BLS said the "incidence rate" for every 100 full-time workers declined from 6.5 in 1984 to 6.0 in 1985 [presstime, Dec. 1985, p. 49].

The figures were below the incidence rate for non-durable manufacturing, which was 9.8 in 1984 and 9.6 in 1985.

For all industry, the incidence rate was 7.9 in 1985, compared with 8.0 in 1984.

Guild certified at Toronto daily

The Southern Ontario Newspaper Guild has been certified as bargaining representative for a unit of part-time circulation clerks at The Globe and Mail of Toronto.

The Ontario Labor Relations Board certified the union after it submitted an application supported by a majority of the 15 employees.

With the addition of the new bargaining unit, the Guild now represents six different units at the newspaper. The others are full-time circulation clerks, circulation district managers, maintenance-delivery workers, editorial employees and advertising employees.

Newspaper white-collar labor agreements subject of ANPA study

An employee's birthday is a paid holiday in 104 out of 194 labor agreements covering white-collar employees at newspapers, according to a study by the ANPA Human Resources Department.

Published in November, the annual "Topical Summary of White Collar Contracts" covers 118 agreements with The Newspaper Guild, 39 with other AFL-CIO-affiliated unions and 37 with independent unions.

The five-day, 37½-hour workweek is most prevalent, appearing in 88 of the contracts. The five-day, 40-hour week is in 69 contracts.

The maximum vacation is six weeks, which is stipulated in 20 contracts. The length of continuous service required before getting that amount of vacation ranges from 10 to 35 years.

Thirty-eight contracts now call for a safety committee on video display terminals, compared with 33 last year.

Only 24 of the contracts have a duration of more than three years.

In other areas:

- A car allowance of 20 cents per mile is provided in 20 agreements, with one providing a high of 36 cents per mile.
- Twenty-three contracts provide for job-related educational courses paid in whole or in part by the publisher.
- Thirty provide additional insurance for employees on "hazardous" assignments.
- Funeral leave is provided by 162 contracts.

Copies of the report have been distributed to ANPA-member newspapers on the mailing list for the Labor & Personnel Relations Letter. Other members may obtain one by contacting the department at The Newspaper Center in Reston, Va.

Reagan signs bills

President Reagan, as expected, signed two employment bills passed by the 99th Congress. The legislation eliminating the age-70 ceiling from the Age Discrimination in Employment Act was signed Oct. 31. The law is effective Jan. 1, 1987. The bill providing for criminal and civil penalties for employers who knowingly hire aliens not authorized to work in the United States was signed Nov. 6. The law became effective upon the signing [presstime, Nov. 1986, p. 68].

Judge rules Guild is not 'successor' to former union

A federal judge has ruled that The Cincinnati Enquirer is not obligated under an expired labor agreement to arbitrate a dispute over the firing of a photographer.

U.S. District Judge Carl B. Rubin found that Local 9 of The Newspaper Guild was not a "successor" to a former independent union at the newspaper and therefore had no rights under the agreement. He agreed with the company's argument that where no contract exists, a court is without authority to order arbitration.

Background for the dispute dates to 1981, when the newspaper and the Enquirer Editorial Employees Professional Association reached an agreement extending through Feb. 29, 1984. In 1983, the company was informed that members of that independent union had voted to affiliate with the Guild. The company, however, refused to recognize the Guild as successor to the independent union.

The Guild subsequently filed a representation election petition with the National Labor Relations Board. In the election that followed, the employees voted in favor of the Guild. The company recognized the Guild as bargaining representative after it was certified on Dec. 24, 1984—10 months after the EEEPA contract expired. (The Enquirer and the Guild are now in negotiations for an initial contract.)

The photographer was discharged last January for insubordination, and the company refused the Guild's demand for arbitration over the firing because there was no contract between the two sides.

Judge Rubin held that because the Guild was not certified as bargaining representative until after the independent union's contract expired, "the Guild does not succeed to EEEPA's right under the contract and cannot compel arbitration under the successorship theory."

In granting the company's motion for summary judgment, Rubin also said that disputes that arise after the expiration of a contract need not be submitted to arbitration.

(The Cincinnati Newspaper Guild v. The Cincinnati Enquirer Inc., USDC SD Ohio W.D. Civil No. C-1-86-371)

Vote of retired pressman retains union

A pressman who retired in 1976 from The Daily News of Longview, Wash., but who did some part-time work for the newspaper was declared eligible to vote in an NLRB decertification election. And on the basis of his vote, the union won the right to continue representing pressroom employees.

In the election, other participants cast three ballots in favor of retaining Local 747 of the Graphic Communications International Union, and three in favor of no union.

To win an NLRB election, a union must win a majority of the votes.

The ballot in question was cast by retiree Rhodes Cox. The company challenged it on the basis that he was a temporary or "on-call" employee.

However, the board's regional director in Seattle, John D. Nelson, agreed with the union that Cox's vote should be counted. Nelson found that in the three months preceding the election, Cox averaged 8.6 hours of work weekly. With respect to the eligibility of on-call and part-time employees to vote, he said the board has determined that such individuals are eligible if they regularly averaged four hours of work per week in the quarter preceding the election.

(Westmedia Corp. and Walker and Graphic Communications Union Local No. 747, Case 19-RD-2513)

Court upholds union in Wilkes-Barre strike paper case

The 3rd U.S. Circuit Court of Appeals has denied an appeal by The Times Leader of Wilkes-Barre, Pa., of a decision upholding Local 120 of The Newspaper Guild in a dispute over the union's involvement in a strike paper.

The Times Leader sought to overturn an arbitrator's decision that the union did not violate a labor agreement by preparing to publish a competing paper—the Citizens' Voice—before striking the newspaper in 1978. The Times Leader filed its appeal after a federal judge refused to vacate the arbitrator's decision [presstime, June 1986, p. 94].

The 3rd Circuit, saying "no substantial question" had been presented, granted the Guild's motion for summary action.

(Wilkes-Barre Publishing Co. v. Newspaper Guild of Wilkes-Barre, USCA3 No. 86-5334)

NLRB issues complaint against Calif. daily

The NLRB has issued a complaint against The Sacramento Union based on charges filed by Northern California Newspaper Guild No. 52.

The Guild charged that the newspaper violated the Taft-Hartley Act by declaring an impasse in bargaining for a new agreement and by implementing a 15-percent wage cut [presstime, Sept. 1986, p. 60].

A hearing before an administrative law judge is scheduled to begin Jan. 27.

Additional arbitration awards

Baltimore Sun, Guild: Joseph M. Shamoff sustained the discharge of a part-time circulation department telephone clerk for disconnecting customer calls without responding to them.

Harrisburg (Pa.) Patriot and Evening News, Guild: Seymour Strongin upheld the discharge of a switchboard operator for excessive absenteeism.

Milwaukee Journal and Sentinel, GCIU: Joseph B. Kerkman awarded pressmen weekly wage increases of $23, $21 and $20 each year in a new three-year contract.

(Full texts are available from the ANPA Human Resources Department at The Newspaper Center, Reston, Va.)

Recent contract settlements

Denver Post, Guild: Three-year agreement covering editorial and commercial employees; retroactive to Oct. 1, 1985.

Seattle Times, GCIU: Four-year agreement covering photoengravers; retroactive to June 16, 1985.

(Details in December 1986 ANPA Labor & Personnel Relations Letter.)

Waste newsprint-fired furnace may burn used ink, too

Since 1979, The Ellsworth (Maine) American has burned its newsprint waste in a furnace that heats the pressroom and mailroom. Now the company that manufactures the furnace is conducting research to determine whether waste ink can be burned in it as well.

That would make the furnace, called a wood boiler, not only energy efficient but also ecologically efficient.

"There are tons of waste ink out there, and incineration seems a good way to dispose of it," said James Russell Wiggins, editor and publisher of the weekly newspaper. "Disposal of waste ink is a major concern for newspapers these days."

However, William D. Rinehart, ANPA vice president/technical, cautioned that only the most preliminary kind of research has been conducted in North America on the possibility of burning waste ink in such a manner. He said newspapers "shouldn't get their hopes up" that such a solution will be quickly forthcoming.

Rinehart said burning is used in Europe and Japan where landfills are scarce. Newspapers truck waste ink to municipal incinerators where it is burned at high temperatures without smoke or vaporized ink escaping from the incinerator.

Newspapers' concern about disposal of oil-based waste ink is growing, as landfill space dwindles and as some newspapers face cleaning up sites where ink was once deposited [presstime, Oct. 1986, p. 6].

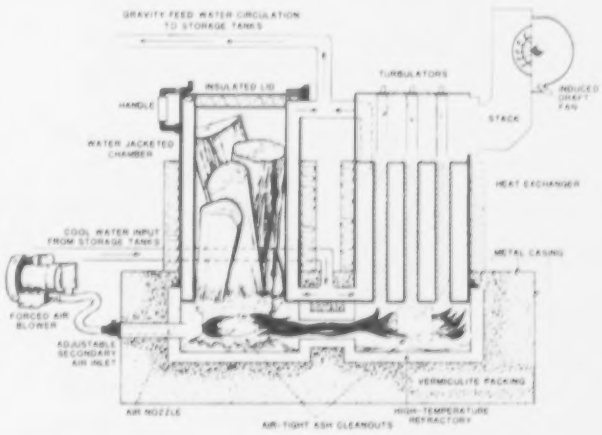
The furnace that is getting all of the attention has been operating at The Ellsworth American for seven years. It supplements a conventional oil-burning furnace. By burning leftover newsprint in the so-called "stickwood" furnace, the newspaper reduced fuel-oil bills by nearly two-thirds [presstime, Feb. 1980, p. 51].

The system was invented and designed by Richard C. Hill, a professor of mechanical engineering at the University of Maine in Orono, who worked with a grant from the U.S. Department of Energy. About 1,000 such systems have been installed, primarily in New England and Canada.

The wood-burning systems are located largely in commercial establishments, ranging from apartment buildings to coin laundrys, though a few are in private homes.

According to Edward C. Noyes, president of Madawaska Energy, Hollis Center, Maine, the company that manufactures and markets the furnaces, The Ellsworth American is the only newspapaper using the system.

Publisher Wiggins said he saw one of the units operating in a building and realized: "If you can burn wood, why not build a bigger system and burn newspapers?" He said the furnace is extremely efficient and has performed well over the years.



Schematic shows Biomaster's burning process.

No adaptations were necessary to burn newsprint rather than wood, Hill said.

The furnace works on a simple principle. Hill's aim was to achieve clean, high-temperature burning that would provide maximum heat for each pound of wood burned.

Hill's furnace was designed to burn wood gases that normally end up as smoke or creosote, the oily compound that coats chimneys.

A blower forces oxygen into the combustion chamber, where fuel is fed and burned. The blower and a draft fan combine to keep the combustion chamber hot and the air circulating vigorously. By doing that, the gases burn more efficiently, and temperatures of 1,400 to 1,800 degrees Fahrenheit are obtained. A water jacket around the combustion chamber controls the temperatures.

Another draft fan draws the gases through a tunnel between the combustion chamber and into the heat-extracting chamber. Pipes from the water storage boiler run between the combustion chamber and the heat extractor. The gases heat the water, which is then pumped through the system and into three space heaters. Air from the space heaters blows across the hot water, heating the room.

The American, an offset-printed newspaper, burns about 80 to 100 pounds of newsprint waste per week. Previously, waste newsprint was sent to a landfill.

The furnace, which Madawaska markets as the Biomaster, was conceived when energy conservation was front page news. It was particularly attractive to those heating with fuel oil when oil prices escalated rapidly in the 1970s. These days, with fuel oil the cheapest it's been in years, many Americans aren't concerned with energy conservation. Hill thinks that's a mistake.

"I believe we'll pay later for the energy wasted now. Conserving energy now should be just as important as it was in the mid-1970s," he said.

INK AS FUEL. Noyes of Madawaska said research into burning ink focuses on determining whether the furnace is capable of burning liquid ink or whether the ink should be solidified prior to incineration. Preliminary research indicates the gases emitted by newspaper inks may burn as well as the gases from newsprint or wood.

Hill does not think it would be too difficult to burn ink, though he cautions that any such adaption of the furnace would be subject to local and likely state and federal environmental approval. Such

Any color scanner makes separations.

Good news! Now there's a scanner that can handle the daily grind of producing the daily paper.

Our extremely reliable SG-608 is truly a workhorse of a different color. That's because it features a unique red-laser dot generator for greater on-the-job dependability and up to twice the service life with less downtime and fewer maintenance headaches.

The SG-608 lets you routinely handle the quick turnarounds and high-volume production that are a way of life in the newspaper business. And, unlike most scanners, you don't have to be a genius with computers to set up and operate one.

The economically priced SG-608 is probably all the scanner you'll ever need. But it's also the logical place to start if you're considering a complete page make-up system later on.

When we designed the SG-608, we had one thing in mind—reliability. That's because we understand: If you don't get your paper out today, there may not be a tomorrow.

approvals were required for the original furnace design.

One theory for incinerating the ink would involve diluting it with kerosene and then dripping it onto the newsprint prior to burning. Or a metering valve might be used to drip the ink directly into the furnace, Hill said.

Because of the high temperatures in the furnace, he said, the gases emitted by the burning ink—just as those from the newsprint—would burn cleanly and not cause any air pollution. Further research will determine if that is true.

At the furnace manufacturing firm, Noyes reported that "we're not very far along in the research, but we did try soaking the newsprint in the waste ink and burning it. That's kind of messy, though, and we believe there must be a simpler way of doing it."

He believes the furnace could be adapted to serve newspapers of all sizes.

Madawaska will conduct further waste ink-burning tests in the near future, Noyes said. Meanwhile, he and Hill are in the process of constructing a prototype for a larger furnace that might better suit newspaper needs. —*Rosalind C. Truitt*

TECHNOLOGY NOTES

• Computer Peripheral Sciences Inc., Denville, N.J., has **acquired the primary assets of Cuneiform Systems Inc.,** the Nashua, N.H., typesetting company that shut down earlier this year [presstime, Sept. 1986, p. 64].

CPS purchased the assets, which include the Copy Processing System, a typesetting system used by newspapers, at an auction in October. The company is negotiating with Information International Inc. of Culver City, Calif., to develop an interface between the Triple-I pagination system and the Copy Processing System.

Cuneiform had about 100 newspaper customers.

• Hell Graphic Systems Inc. **acquired Xenotron Inc.**

Hell is a West German firm with U.S. corporate offices in Port Washington, N.Y. Xenotron, a British firm, has U.S. headquarters in Woburn, Mass.

Both companies manufacture electronic prepress equipment. For the near future, Xenotron will continue to operate independently.

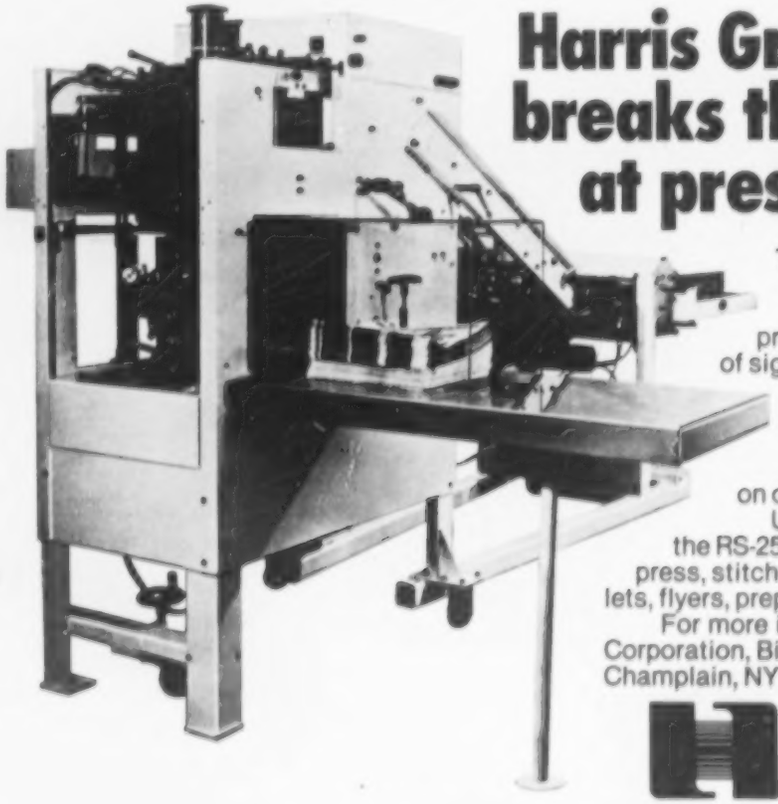
• Crosfield Electronics Ltd., a British firm that has acquired Hastech Inc., Muirhead Data Communications Ltd. and Composition Systems Inc. in recent months, announced the **formation of a new sales and marketing arm** to handle the company's various product lines [presstime, Aug. 1986, p. 54].

The new unit, Crosfield Data Systems Inc. of Glen Rock, N.J., will market text-processing systems, communications facsimile equipment, ad and pagination workstations, and a variety of color systems for newspapers.

• Two Massachusetts firms, Compugraphic Corp. of Wilmington and Texet Corp. of Arlington, announced they will manufacture and market **desktop publishing systems** integrating Texet's software with Compugraphic's hardware.

• Compugraphic also formed a new division, **Font Technologies**, to manufacture and market fonts for electronic printing and desktop publishing.

The new division will have access to more than 1,700 typefaces in the Compugraphic library.



Harris Graphics RS-25 breaks the bottleneck at press delivery.

The RS-25 works directly inline with most standard press deliveries to produce counted, compressed, and compensated stacks of signatures, 4 to 96 pages, at rates up to 70,000 cycles per hour.

It significantly reduces manning requirements and improves stack quality so follow-on operations are more efficient.

Used inline with slitter/trimmers, the RS-25 produces stacks of glued-on-press, stitched-on-press, or unbound booklets, flyers, preprints, and other material.

For more information, write Harris Graphics Corporation, Bindery Systems Division, Champlain, NY 12919.

Printing problems delay publication of ink book

Printing and distribution of ANPA's new run-of-paper color ink book, planned by the end of this year, has been delayed because of production problems.

According to Peter P. Romano, ANPA director/technical services, it is now hoped the book will be ready for sale late next spring.

The new book, the first revision since 1981, also will be the first to combine both letterpress and offset inks into one volume. The *ANPA-COLOR™ AD-LITHO™ AdPro®* book will give guidelines for ink color, strength, shade and chemical content.

Romano said the colors must be printed precisely and consistently from book to book because advertisers and newspapers demand uniform color standards. That precise color reproduction hasn't been possible because of tinting and toning problems during test press runs. ANPA and the firm that is printing the book have been unable to pinpoint and resolve the problems, he reported.

ANPA researchers updated the book by dropping old colors and adding new ones [presstime, June 1986, p. 42]. ☐

Technical committees draw up agendas

The ANPA Technical Committee and the ANPA/TEC '87 Arrangements Committee will meet Jan. 13-14 at The Newspaper Center in Reston, Va.

The Technical Committee's eight task forces will meet individually, then issue reports to the joint assemblage.

The ANPA/TEC panel will make plans for the 1987 trade show in Las Vegas. ☐

Equipment exchange

For sale: Hell DC300 color scanner. Currently running outstanding color daily. Operator training available as well as film processor and all associated equipment for a turn-key installation. Contact Richard Kashner, commercial color manager, Press Enterprise Inc., 3185 Lackawanna Ave., Bloomsburg, Pa. 17815; (717) 784-2121.

Editor's note: Exchange notices are published without charge as a service to ANPA-member newspapers.

Canadian shipments overseas surge

Canadian newsprint shipments worldwide increased by 19 percent in September from September 1985. Shipments to the United States were up 11 percent, while those overseas increased 93 percent.

The growth in shipments to the United States reflected, in part, newsprint buying prior to the Oct. 1 announced price increase [presstime, Nov. 1986, p. 70]. The increase in overseas sales was helped by the increased value of the European currencies in relation to the Canadian dollar.

Shipments from Canadian mills for the first nine months increased 3.9 percent from the same period of 1985. Those to the United States rose 1.5 percent, those within Canada were up 6.8 percent and overseas shipments increased 13.8 percent. Domestic shipments from U.S. mills increased 2.1 percent during the period, and U.S. shipments overseas were up 23 percent.

Newsprint consumption by all U.S. users was 2.1 percent higher in September. Their consumption for the first nine months of the year was 3.5 percent above that for the same period of 1985.

Consumption by U.S. daily newspapers increased 2.2 percent in September and 3.2 percent during the first nine months.

Estimated newsprint consumption, 1985-1986 (thousands of metric tons)

New tax law prompts brisk end-of-year buying and selling of newspapers

A flurry of additional buying and selling of newspaper properties can be expected by the end of this month because of the changes in the tax laws that take effect Jan. 1, analysts say.

Beginning next year, the tax on capital gains rises from 20 percent to 28 percent for individuals and 28 percent to 34 percent for corporations [presstime, Oct. 1986, p. 12].

Commented Christopher Shaw, chairman of the New York investment banking firm, Henry Ansbacher Inc.: "I think the first six months of next year will take place in the last six weeks of this year."

BUSINESS ROUND-UP

Among the recent newspaper-business activities were these:

• **Worrell Enterprises Inc.** announced it will buy 25 Harte-Hanks newspapers and three shoppers by Dec. 31. Harte-Hanks earlier had announced plans to sell 56 of its smaller newspapers, amounting to 15 percent of revenue. Worrell will grant Tucker Sutherland, president of Harte-Hanks Newspapers, an option to buy nine of the newspaper properties. Sutherland said he plans to leave Harte-Hanks in order to form his own company and bid on some of the Harte-Hanks papers. The sale to Worrell will leave 31 smaller media units Harte-Hanks plans to sell.

• **Gannett Co.** announced it will buy the Arkansas Gazette from the family of Judge Carnick White Heiskell for $51 million. The Gazette (morning, circulation 126,346) has been in a prolonged and bitter circulation and advertising battle with the rival Arkansas Democrat (morning, 81,420).

• **Knight-Ridder Inc.** agreed to purchase all outstanding shares of The State-Record Co. of Columbia, S.C., for about $311 million. State-Record publishes six daily newspapers: The State (morning, circulation 116,342) and The Columbia Record (evening, 29,398); The Sun-Herald (morning, 48,033) of Biloxi, Miss.; The Sun News (morning, 28,222) of Myrtle Beach, S.C.; the Starkville (Miss.) Daily News (morning, 6,730); and the Daily Times Leader (evening, 3,743) of West Point, Miss. The company also publishes two non-dailies.

Knight-Ridder also announced plans to reduce employment throughout its Newspaper Division in the next 14 months to contain expenses.

P. Anthony Ridder, the division's president, said the reductions will probably number in the hundreds and will come through attrition and, if necessary, through layoffs. An estimated 90 percent of Knight-Ridder's more than 22,000 employees are in the division.

• Standard & Poor's Corp. lowered **The Times Mirror Co.**'s long-term credit rating from AA minus to A plus, citing its $350-million debt from acquiring The Baltimore Sun. Subsequently, Times Mirror improved its cash position by completing the sale of two television stations for $200 million and agreeing to sell its Graphic Controls Corp. subsidiary, which makes a variety of products including coated imaging papers, for $146 million.

• Stockholders at **The Journal Co.**, publisher of The Milwaukee Journal and the Milwaukee Sentinel, turned down an offer by Affiliated Publications to buy the company for $626 million.

The offer was rejected by heirs of the Donald B. Abert family who hold 10 percent of the stock and have veto power over any sale. After the tender offer, more than half the employee shareholders signed a pledge not to sell their stock, a company spokesman said. Affiliated is publisher of The Boston Globe.

• Twenty-six plaintiffs who sued the **Evening News Association**, charging stock fraud, have settled out of court. The company, previous owner of The Detroit News and other media properties, had bought back stock from shareholders in 1984 for $250 a share. After Gannett purchased ENA for $1,583 per share, plaintiffs charged that ENA had neglected to disclose pertinent facts about the stock's worth. The Detroit News reported the plaintiffs settled for an additional $350 a share, ending a three-week civil trial.

• **American City Business Journals** will complete two major acquisitions before the end of the year.

American announced it will acquire Business Journals Publications Corp., based in St. Louis, for $40 million. Business Journals owns 10 publications.

American will also acquire Scripps Howard Business Journals, which operates 10 publications, for $24 million.

• **Pulitzer Publishing Co.** announced it will offer 1.4 million shares, or about 10 percent of the company's common stock, for sale to the public at about $30 a share. Industry sources estimated that Joseph Pulitzer Jr., Michael Pulitzer and their cousin, David Moore, will retain about 90 percent of the company. The company's properties include the St. Louis Post-Dispatch.

• The **St. Louis Globe-Democrat**, which foundered twice in recent years but managed to stay afloat, ceased publication, apparently for good.

Owners William Franke and John Prentis pronounced the paper out of business on Oct. 29, 10 minutes after the Missouri Supreme Court refused to hear an immediate appeal on the constitutionality of using public revenue bonds to bail out the financially troubled paper.

The Globe-Democrat had planned to use the $15 million in bonds mainly to buy presses [presstime, Nov. 1986, p. 75].

But a St. Louis lawyer sued, challenging the constitutionality of the bond issue. When the state Supreme Court said a lower court would have to hear the case before it ruled, the owners said no one would buy the bonds under such a legal cloud, and they folded the 134-year-old paper.

As of Sept. 30, the Globe-Democrat had daily circulation of 141,108, compared with 308,279 for the Post-Dispatch. The Globe employed about 340 persons, Prentis said. —*Gene Goltz*

Curtis seminar reports available

A summary of the third annual J. Montgomery Curtis Memorial Seminar at the American Press Institute is now available.

Called "Attracting and Retaining Newspaper Readers," the seminar brought together 21 newspaper executives from various departments—circulation, marketing, research, advertising and news.

Copies of the 24-page summary booklet were mailed to newspapers and related organizations in the United States and Canada. Additional copies are available from API, 11690 Sunrise Valley Drive, Reston, Va. 22091. □

Women discuss career blocks

Women's status in the media and their slow rise to the top were main topics of discussion at the International Women's Media Project, as women journalists from 38 countries met Nov. 12-15 in Washington, D.C., to discuss common issues.

Compared to other media, newspapers do not rate high, according to panelist Jean Gaddy Wilson, who presented some results of her five-year study in one of the opening sessions [presstime, Oct. 1986, p. 31].

In general, women make up about 36-37 percent of all media workers—at daily newspapers, television stations and radio stations. However, Wilson noted that while broadcast stations of all sizes are "fairly consistent in the percentage of women they hire," women are hired more frequently at the smallest newspapers which generally pay lower salaries. Women make up 55 percent of the workforce at papers under 10,000 circulation but only 28 percent at those over 100,000, she said.

Women from 38 countries attended the conference in Washington, D.C.

Consequently, female journalists in general are paid less in relation to their male colleagues when they work for newspapers than when they work for other media. In what Wilson calls the "top 30" jobs at dailies and broadcast stations, women are paid the same or more than men "roughly one-fourth of the time in radio, one-fifth of the time in television and one-sixth of the time at newspapers."

On the business side, newspapers also lag behind. In the top sales jobs at television stations in the top 75 markets—roughly half of all TV stations—proportionately "more women are hired and paid better than at the top 10 percent of newspapers," she told the group. However, Wilson predicted that "the best professional area for women" in the media will be sales, where "they are paid more equitable salaries" compared with men.

Using Wilson's statistics as a base, discussion centered on subtle situations that keep women from ascending to top management positions.

In her introductory remarks, Katharine Graham, chairman of The Washington Post Co., observed that although much progress has been made in their employment status in the media, women "have not advanced in satisfactory numbers to the upper levels. Women have yet to shatter the so-called 'glass ceiling'—the invisible barrier separating middle-management women from the power positions."

In a speech three years ago, Graham said "women will get to the top the same way men do, not with artificial aids or special deals, but by working harder and being better."

However, in her Nov. 12 address, she made a strong plea for some assistance to women, particularly in the area of child care.

"In order for women to be able to remain on the job long enough to gain the seniority they need to win the top spots, the conflicts of career and child care must be resolved," she said.

Without resolution of such conflicts, "my own great fear now is that women have peaked," said Karen Elliott House, foreign editor of The Wall Street Journal. But House, like most of the journalists present, urged women to "push for everything that ought to be theirs."

"It is time that we came together as a force," said USA Today Publisher Cathleen Black, urging women not to be afraid to be seen as "troublemakers."

Many participants also pointed out that the issue of women's representation in the media encompasses more than equal opportunity for employment. More women are needed for the same reason the media need more minorities, they said.

"We are a multicultural, racially diverse society. I think it is wrong that what is presented to the public as the news of the world is filtered ultimately through white male eyes," said panelist Carole Simpson, a correspondent for ABC News who led a move to improve the status of women in her company.

"I think it is real important to have Hispanics. I think it is real important to have Asian-Americans. I think it is real important to have blacks, to have women, to reflect the cultural diversity of the nation, as it is not being reflected now," Simpson said. —*Marcia Ruth*

Recent acquisitions

Ingersoll Publications Co. of Princeton, N.J., acquired Anderson (Ind.) Newspapers Inc. which includes The Anderson Herald, daily circulation 21,244, the Anderson Daily Bulletin, circulation 15,324, and two Michigan dailies: the Sentinel-Standard of Ionia, circulation 4,795, and The South Haven Daily Tribune, 2,632.

Lincoln Publishing Inc. of Des Plaines, Ill., acquired The Daily Gazette, Sterling, Ill., circulation 13,933.

Scripps Howard of Cincinnati is acquiring the Naples (Fla.) Daily News, circulation 32,568.

Eagle Newspapers of Salem, Ore., acquired the Sunnyside (Wash.) Daily News, circulation 3,231, and merged it with a weekly into the Daily Sun-News.

Westward Communications of Dallas acquired Douglas County Publishing Co., publisher of two Colorado dailies: the Douglas County Daily News-Press of Castle Rock and the Parker Daily News-Press, combined circulation 6,119. □

Press associations: changes in command

The **Society of Newspaper Design,** at its annual workshop Oct. 23-25 in San Juan, Puerto Rico, elected the following new officers:

- *President*—Margaret Balough, Austin (Texas) American-Statesman
- *First Vice President*—Anton Majeri Jr., Chicago Tribune
- *Second Vice President*—Robert B. Covey, The Seattle Times
- *Secretary*—Nanette M. Bisher, The Orange County (Calif.) Register

The **Newspaper Research Council,** at its fall conference Oct. 26-29 in Boston, elected the following new officers:

- *President*—Eleanor McConnell, Chicago Tribune
- *Vice President*—Steven Seraita, Branham Newspaper Sales, New York City
- *Secretary*—Edward Etchak, The Record, Hackensack, N.J.

The **Associated Press Managing Editors Association,** at its annual convention Oct. 21-24 in Cincinnati, elected the following new officers:

- *President*—Robert E. Rhodes, Corpus Christi (Texas) Caller and Corpus Christi Times
- *Vice President*—Robert Giles, The Detroit News
- *Secretary*—Diane Benison, The Evening Gazette, Worcester, Mass.
- *Treasurer*—C. Donald Hatfield, Tucson Citizen

The **International Newspaper Financial Executives,** at its annual convention Oct. 12-15 in Boston, elected the following new officers:

- *President*—H. Graham Woodliet Jr., Richmond (Va.) Newspapers Inc.
- *First Vice President*—Barry Peckham, The Dallas Morning News
- *Second Vice President*—David F. Licko, Reno Newspapers Inc.
- *Secretary*—John M. O'Brien, The New York Times
- *Treasurer*—Ronald J. Pollina, Eagle-Tribune Publishing Co., North Andover, Mass.

Black, Hispanic journalist groups unite to improve hiring

Organizations representing black and Hispanic journalists have agreed to work together to encourage more minority representation in the communications industry.

After a November meeting in Philadelphia, the boards of the National Association of Black Journalists and of the National Association of Hispanic Journal-

Albert E. Fitzpatrick

Manuel Galvan

ists issued a joint statement. It said in part that "news and media organizations should not seek to divide us by playing one group against the other, saying 'We've hired a minority.'"

According to the statement, "'Minority' really refers to several groups with differing backgrounds, which have all been denied full participation in the communications industry. The hiring of one from a particular group does not present a true representation of all minorities."

To strengthen minority hiring, the boards agreed to:

- Create a team to monitor press coverage of minorities and the hiring and promotion practices of the media
- Request that local chapters of NAHJ and NABJ encourage minority junior and senior high school students to choose journalism as a career
- Advocate early identification of minorities with a potential for management and their placement on a managerial track.

Both presidents—NABJ's Albert E. Fitzpatrick, director of minority affairs for Knight-Ridder Inc., and NAHJ's Manuel Galvan, a reporter for the Chicago Tribune—urged cooperation with other minority organizations on these issues.

NABJ moved its office to The Newspaper Center in mid-September [presstime, Sept. 1986, p. 44]. NAHJ's office is located in the National Press Building in Washington, D.C.

Letters

Reaction to syndicates story

In an otherwise delightful and informed article about syndicates (November special report), presstime has omitted a number of critical facts about two of the television service companies of United Media—TV DATA and TV EXTRA.

Unfortunately, your readers are left with the impression that (1) Tribune Media Services specializes in customized guides and supplies most of the larger dailies with television listings and by inference must be a major supplier of listings; (2) United Media "concentrates on TV books," implying that our major business is the publication of TV UPDATE magazine and not the supplying of television listings. . . . The facts are as follows:

(1) United Media's affiliate, TV DATA, is the major supplier of television listings in the world, serving over 2,500 clients with a combined circulation in excess of 65 million. TV DATA is nearly two-and-one-half times larger than Tribune in this area. In addition, TV DATA also "specializes" in customized listings, supplying an unprecedented selection of grids, rolling logs, etc. to client publications including such "larger dailies" as The New York Times, The New York Post, Boston Globe, Los Angeles Herald-Examiner, Chicago Sun-Times, Philadelphia Daily News, Washington Post, Miami Herald, Detroit News and Toronto Sun—to list just a few.

(2) In the television services area. . . . While TV UPDATE magazine is important to us, and represents a logical extension of both our listings and syndicate divisions, we do not concentrate on "complete TV books" as stated in presstime. Our basic business is providing television listings.

The article . . . creates a false impression by its exclusion of correct information about United Media's television service companies.

Kathleen Mitsud
Director of corporate communications
United Media
New York, N.Y.

• • •

Imagine my dismay when I read your article in the latest issue of presstime and discovered:

a. You didn't quote me, and

b. It was the best piece I have read on the subject of syndicates to date.

Nice work and congratulations.

John B. Matthews
Vice president, news & features sales
Tribune Media Services
Orlando

Marcia Ruth's special report on syndicates is outstanding in all respects: well-written, comprehensive, informative, lively—an excellent business, news and feature story. That she put a tremendous amount of research time and energy into the report is evident, given the complexity of the subject. I applaud her all the more. My only regret is that space required that the story end after nine pages; I was ready to keep reading on. . . .

Also, congratulations to Marion Lewenstein for her timely and important article on "Editors in business schools."

Promotion manager
Los Angeles Times Syndicate

Competition in Canada

Hello down there! Have you ever heard of Canada? It's the second largest land mass in the world, by far the largest trading partner of the United States and most of us speak English. Many of us are members of ANPA.

How could presstime do a feature article on competitive newspaper cities (November) with *no* reference to developments in Canada? Toronto has three increasingly profitable daily newspapers. Calgary has two successful newspapers. Edmonton has two. Montreal has three.

The Toronto Sun Publishing Corporation (Toronto Sun, Calgary Sun, Edmonton Sun) has defied industry folklore during the past 15 years and introduced three new daily newspapers in competitive cities and all three of them are profitable.

This experience is quite relevant to all of North America. Shame on you for looking no further than the end of your nose!

'Hello Ken, this is rewrite: Stop the presses!'

Clark Kent would be envious. His own phone booths right in the newspaper building.

At The Columbian in Vancouver, Wash., though, the booths are in the pressroom, and they serve a different purpose for Ken McAllister, supervisor of the Goss Community press.

Prior to construction of the plywood-frame booths in October, McAllister was accustomed to making several trips per shift to his office on the floor above to take telephone calls from other members of the staff. That's a problem when coordinating the press run with people throughout the building, or when an advertising representative wants to give the final go-ahead to run an ad.

The phone booths, which were constructed in the newspaper's carpentry shop, have glass windows and are topped with soundproofing material. The entrances are covered with the kind of long, heavy plastic strips often found shielding frozen foods in the grocery store.

According to McAllister, the phone booths are a quiet oasis amid the din of the pressroom.

This insert is a real rag

The headline, "The news hangs only by a thread," was the appropriate beginning of an insert that was carried by a French daily newspaper. The insert was printed on cloth.

A public relations move by French textile manufacturers, the 16-page supplement to the Paris tabloid Liberation extolled the virtues and variety of fabric and fashion.

The press run of 160,000 used 110,000 square meters of cloth and cost the advertiser 2.5 million French francs, or about $375,000.

There were unconfirmed reports that the Oct. 8 edition was stitched into garments by some enterprising readers. Which could lead to a new slogan for the feisty, independent daily founded in 1973 by Jean-Paul Sartre: "All the news we print will fit."

Newspaper numbers

400—number of column lines on a typical broadsheet newspaper page.

227—number of U.S. journalists who lost their lives while covering wars and other conflicts since World War I.

450—number of newspaper executives who serve on committees or boards of ANPA and ANPA Foundation.

26—number of states that have reporters' "shield" laws.

The Eastern-Pan Am shuttle war has drawn newspapers into the fray. Eastern offered Washington-New York-Boston passengers one free daily before newcomer Pan Am provided up to six (above). Eastern upped its offering to three.

They won't win a Pulitzer for this one

More graduates of Northwestern University's Medill School of Journalism have received the Pulitzer Prize than of any other J-school in the United States.

Or have they?

The claim was stated in press releases issued by Northwestern's University Relations Department in connection with a recent ceremony honoring Medill's 13 Pulitzer-winning grads.

The Pulitzer Prize office at Columbia University says it cannot confirm or deny the boast. "They didn't get that information from us," says Edward M. Kliment, administrative assistant, who reports that the office is working on a computerized database that "someday" may be able to retrieve that kind of information.

Meanwhile, Northwestern's PR operation probably will not win any awards for investigative reporting in the way it came up with that determination. According to Kenneth J. Wildes Jr., director of university relations, his staff contacted only two other journalism schools—at the University of Missouri and Columbia University. "We figured that the 'big three' J-schools would probably garner more than anyone else," he says. Missouri replied that it had 10 grads with Pulitzers; Columbia could not supply any numbers.

If any other school can come up with more, he adds, "By God, let them step forward."

The perfect Christmas gift

Among the legendary selection of high-ticket items offered by Neiman Marcus in its 1986 Christmas catalogue is a "lifetime" subscription to The Wall Street Journal.

For $6,000, the subscription will run 100 years, with the provision that it may be passed on to designated heirs on the death of the original subscriber.

"The People & The Press," One of a series.

Does President Reagan get better press than FDR did?

Chances are, you think the President gets good press.

In fact, you probably think the press is much more apt to deal fairly with his administration than with social and political issues generally.

These were just two of the things we learned when we commissioned The Gallup Organization to conduct the most comprehensive investigation ever of public attitudes toward the press.

Our study explored how people felt about every aspect of every news medium — bias, accuracy, sensationalism, credibility. You name it; Gallup asked about it.

With one exception.

We made no attempt to plot trends. We saw our study as the first in what we intend to be a series of Times Mirror investigations that monitor public attitudes toward the press over time.

So it came as a surprise to discover that Gallup had done a survey 50 years ago that asked people the same fairness question about the Roosevelt Administration...

And that people gave the same answer.

The same majorities felt the press was fair to the Roosevelt Administration in 1935 and the Reagan Administration in 1985.

The more things change, the more they stay the same.

What do you think?

The primary purpose of our study — and the ads and Times Mirror Forums around the country that discuss it — is to learn more about how people like you see our business.

To that end, we'd like to engage you in a dialogue about that business, to learn your views of issues like fairness.

So send them to us. Write our chairman, Robert Erburu, Times Mirror, Times Mirror Square, Suite 100, Los Angeles, CA 90053.

He's also the person to write for a summary of our study or an annual report. Or you can call our public affairs people at (213) 972-3946.

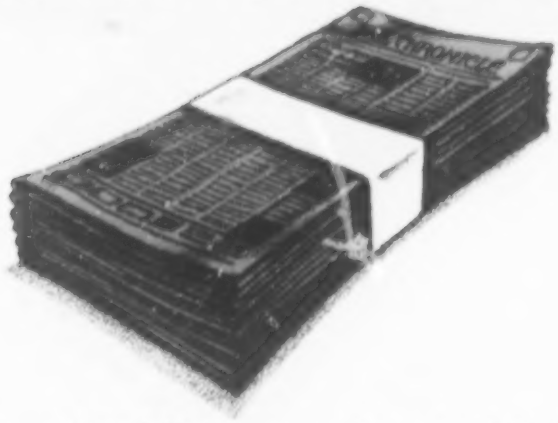
SPECIAL REPORT

Newspapers Prune Some Holdings, Head Back To Basics

'87 Economic Outlook

WHAT'S BLACK AND WHITE AND GREEN ALL OVER?



A newspaper that's benefited from the libel and privacy seminars of Mutual Insurance.

Preventing libel and privacy suits can save a newspaper a lot of money, but keeping up with the rapid changes in the law is a difficult task. That's why the reporters and editors of so many newspapers attend "How To Prevent Libel and Privacy Suits," a seminar offered by The Mutual Insurance Company of Hamilton, Bermuda.

Offered in half-day and full-day sessions, this seminar presents the facts behind recent cases affecting the current status of libel and privacy law, using actual stories, columns, cartoons, and photographs to illustrate important concepts. Seminar leader Barbara Dill is an experienced professional in the field of libel and privacy law, whose incisive commentary and exciting classroom method have been hailed by editors, reporters, and photographers across the country.

Offered to publications insured by Mutual as well as to press associations, this seminar gives journalists the insight they need to do their jobs with a minimum of risk. For more information on this unique opportunity, contact Barbara Dill at (305) 856-2965.

SCRIPPS HOWARD NEWS SERVICE-COVERING THE U.S.

Scripps Howard News Service has grown more than 1,000 percent in less than three years.

Why this rapid growth? Editors across the country say it's because they find lively enterprise, tight editing and compelling content in the highly usable daily package.

Small-town dailies. Major metro markets. Our more than 200 clients agree that Scripps Howard is in tune with the typical newspaper's needs.

Our clients span the continent: Lewiston (Maine) Sun-Journal; Providence Journal-Bulletin; New York Daily News; Carroll County (Md.) Times; Winter Haven (Fla.) News-Chief; Indianapolis Star; Chicago Tribune; Kenosha (Wis.) News; Minneapolis Star and Tribune; Kansas City Star; Kansas City Times; Bartlesville (Okla.) Examiner-Enterprise; Fort Worth Star-Telegram; Houston Chronicle; Yuma (Ariz.) Daily Sun; San Diego Tribune; Vista (Calif.) Morning Press; San Francisco Examiner; Seattle Times.

Every single client is important.

INDEX VOLUME 9, NUMBER 1 JANUARY 1987

Special Report *Having branched out into non-newspaper fields years ago, many newspaper companies now are pruning back their properties. The drive to diversification has slowed, and the trend now is "back to basics"—print publishing, and to a lesser extent, broadcasting. In concentrating on their core businesses, newspapers are reflecting a trend in industry in general: "to dance with the one who brought you." Cable TV companies, newsprint mills and videotex ventures are among the ancillary businesses being divested.* 22

Flat forecast *Analysts foresee no great economic peaks or valleys for the newspaper business this year. Modest growth are the watchwords.* 6

Cashing in with 401(k)s *Tax-deferred savings plans are the fastest-growing employee benefit programs in the newspaper business.* 12

Out-of-country classroom *Opportunities have grown for journalists from developing countries to obtain training in the United States and elsewhere.* 16

Weeklies' revolution *Desktop publishing systems are enhancing profitability—and attracting entrepreneurs—for weekly newspapers.* 18

Purse strings *As money matters become more complex, most newspapers today don't make a major move without consulting the controller.* 32

On assignment in Nicaragua *Covering the Hasenfus trial, Milwaukee Journal reporter found helping hands extended by colleagues in Managua.* 36

Firing line *Dismissing an employee is a delicate job, but most newspapers have managed to avoid legal entanglements.* 37

Essay: Retaining readers *Editor Daniel J. Warner Sr. says the key to keeping readers is to give them stories that touch their hearts.* 38

Profile: Robert E. Page *Well-traveled, hard-driving, the Chicago Sun-Times publisher and part-owner thrives on competition.* 40

Manhattan meetings *New York City dailies will soon begin negotiating for new labor contracts, but the results no longer set precedent.* 56

"Constitutional" Convention *Inaugurating the Association's second hundred years, ANPA 101st Annual Convention will have a constitutional theme.* 70

CHAIRMAN'S CORNER

ANPA Foundation leads the way in many vital programs

Literacy projects. Minority opportunity programs. "A Celebration of Citizenship."

Add these to ANPA Foundation's regular agenda of Newspaper in Education, journalism education and First Amendment programs, and it becomes obvious that the pace of activities at our Foundation has quickened considerably.

The Foundation has developed a variety of programs to help newspapers get involved in local literacy campaigns. A hard-hitting slide show, used in presentations to newspaper organizations last year, now is available for use by local newspapers in their own communities. A development packet has gone to all newspapers, filled with suggestions, articles, ads and comics for use in setting up literacy programs.

Alvah H. Chapman Jr.

Through training seminars and on-site visits, the Foundation offers every newspaper an opportunity to serve its community and itself through literacy projects tailor-made to local needs.

ANPA members also have responded to the call for special programs to enhance opportunities for minorities in newspapering. More than $600,000 has been pledged to the five-year Foundation effort.

A manual on recruiting and retaining minority employees has gone to all newspapers. The new Newsletter on Minorities in the Newspaper Business goes to 13,000 newspaper professionals. Work of the intra-industry task force has increased attention to minority concerns in the form of job fairs, convention presentations, ad campaigns, employment surveys, a speakers bureau, and a seminar for CEOs on hiring and advancing minorities. Latest among these projects is a mentor program matching minority high school journalists with reporters at local newspapers.

The first *total-newspaper* job fair last fall brought representatives from 95 news organizations to Boston to talk with 246 minority applicants.

And as we move into 1987, the bicentennial of the U.S. Constitution offers newspapers an opportunity to honor both the document and the entire system of government for which free speech and free press stand as the cornerstone. ANPA Foundation will provide curriculum materials, articles, promotional art and advertisements throughout this bicentennial year.

On Sept. 16, in cosponsorship with press and education groups and the Commission on the Bicentennial of the U.S. Constitution, the Foundation will help organize a day long "Celebration of Citizenship" to be offered to every school in the country in preparation for the next day's 200th birthday observance. (See story, p. 47.)

We owe a vote of thanks to Ed Heminger of The Courier, Findlay, Ohio, and Charles Brumback of the Chicago Tribune Co., in their roles as chairman and vice chairman of the Foundation Trustees, respectively, for guiding these vital new programs. These moves toward literacy, equality and a more active citizenry will not succeed overnight. We need to commit ourselves and our organizations to them for the long term. Our Foundation is pointing the way.

ECONOMIC OUTLOOK

1987 will be a year of modest growth for newspapers, with a better second half than first half, analysts predict

BY GENE GOLTZ
presstime staff writer

Despite continuation of a rather sluggish economy, growth in newspaper advertising will probably outpace the U.S. gross national product this year. And the economic outlook for newspapers appears brighter in the second half of the year than in the first half, most industry analysts say.

Overall, it will hardly qualify as a banner year for newspapers, the analysts predict. But they foresee no recession, no great inflation and a slight decrease in interest rates.

At the 14th annual PaineWebber Inc. conference on The Outlook for the Media, observers were virtually unanimous in predicting no big surprises for 1987, no sudden changes up or down, and little to cheer about—or be excessively gloomy about.

"I don't think there will be any boom or bust in retailing in 1987," said Edward T. Parmalee, vice president/marketing of Knight-Ridder Inc., "but modest growth should enable newspapers to realize retail advertising linage gains in the range of 1 percent and a 6.5-percent increase in ad revenue for 1987."

There will be little to cheer about—or to be excessively gloomy about.

Parmalee predicted growth in advertising revenues for newspapers in 1987 as follows: national advertising, up 3 to 4 percent; retail, up 6.5 percent; classified, up 6.5 to 7 percent.

He said national will improve in the second half, but not beyond 4 percent.

Advertising expert Robert Coen, senior vice president and director of forecasting at McCann-Erickson Worldwide, predicted U.S. advertising expenditures in all media will increase by 7.6 percent in 1987 to $109.8 billion, about the same rate of increase as in 1986.

Coen's figures for newspaper advertising growth in 1987 are a shade more optimistic than Parmalee's: national advertising, up 4.5 percent; retail, up 7 percent; classified, up 8 percent.

"The U. S. economy appears to be resting on a sluggish plateau with no compelling force for change," John M. O'Brien, controller of The New York Times, told the Dec. 8-12 PaineWebber gathering in New York City. "Modest growth, accompanied by a low rate of inflation, is the ready description for 1986 and a likely assessment for 1987."

Observers cited several factors in explaining why a more robust economy does not appear to be in the cards this year, including weak labor markets and 7-percent unemployment nationwide. Among other reasons:

- The low price of oil continues to contribute to economic stagnation in the oil patches of the South, Southwest, Alaska and some other U.S. areas. Agriculture in the Midwest remains similarly hard-hit by depressed farm prices. A severe drought in the Southeast and elsewhere last year caused a drag on the economy in those areas.
- So far, the decline of the dollar has failed to have much favorable impact on the foreign trade balance.

• The new tax law is expected to inhibit growth in rental housing, commercial structures and durable equipment because the investment tax credit has been eliminated and depreciation schedules have been dramatically lengthened.

IMPACT ON NEWSPAPERS. These economic factors will have a crucial bearing on newspapers' 1987 economic fortunes.

"Construction of apartment buildings has already fallen," said O'Brien of the Times, "and contracts for new office buildings have been declining sharply."

He said projections show that real fixed investment will drop 1.2 percent, and housing starts will fall 8 percent in 1987. These factors will contribute to decreased real estate advertising, according to some forecasters.

Knight-Ridder's Parmalee also discussed the real estate scene. He noted that the continued decline in interest rates would normally stimulate real estate advertising, but that there is an oversupply of condominiums and commercial office buildings in many parts of the country, which means that advertising by developers "may be a little bit softer next year."

Parmalee said he expects similar weaknesses in the retail sector. "The economic climate isn't expected to be conducive to a strong retail sales year," he said. This is due to "a record level of consumer installment debt" and to "declining confidence in the economy. Nevertheless, it has been the case certainly over the last 10 years that retail advertising in newspapers basically continues to outperform the underlying economic climate."

Parmalee said he believes there will be "further erosion" in run-of-paper food advertising, which in many markets has largely shifted from ROP to free-standing inserts.

Classified ads could suffer not only from a weak real estate market but also from a reduction of automotive advertising, Parmalee said. "It's just going to be very, very tough, I think, for major [auto] manufacturers and dealer associations and the dealers to continue to advertise at the torrid pace they have been doing over the past four years in newspapers," he said.

Counterbalancing the lackluster economic forecast is the fact that total newspaper advertising has exceeded the GNP over the past few years.

Yet a note of warning was sounded in this regard by newspaper consultant Christopher Burns, who spoke to the annual International Newspaper Financial Executives conference in Boston in October.

In charting the relationship between the GNP and newspaper advertising over the past two decades, he said he found a distinct parallel: When GNP decreases, so does advertising in approximately the same ratio.

When there are exceptions, as there were in the early 1960s and again in 1982-84, a correction takes place later, Burns said. So, he added, despite the fact that newspaper advertising recently has exceeded the rate of GNP growth, a correction is bound to take place. "And when it [newspaper advertising] pulls back, it's probably going to take 2 or 3 percent of your [ad] revenue with it."

"The economic climate isn't expected to be conducive to a strong retail sales year."

"MIXED SIGNALS." Parmalee estimated that newspapers would end 1986 with total advertising rate increases of slightly under 6 percent, despite predictions by some analysts of up to 7 percent.

"Keep in mind," Parmalee said, "some industry linage and revenue estimates for 1986 may have considerable variations in regional and local newspaper situations. I've never seen, frankly, in the entire years I've been in this business, wider fluctuations in advertising performance within regions and from newspaper to newspaper."

This is due, he said, to the depressed economy in the oil-producing and agricultural areas and the booming economy in regions like the Northeast, where newspapers are outdistancing the rest of the country by far.

Nonetheless, Parmalee outlined a "modestly healthy scenario" for 1987. It is based on continued modest economic growth, stable or slightly lower interest rates, inflation not exceeding 4 to 4.5 percent, and disposable income growth at the rate of about 5 percent.

This means, he said, that newspaper advertising revenue should grow at a minimum of 6 percent in 1987.

O'Brien agreed there will be significant variations in newspaper situations, depending on the regional economy. "The signals are mixed," he said.

In general, he expects newspaper ad-rate increases "in the 5-to-8-percent range." The stronger markets will be in the Northeast and in other places where newspapers show circulation gains, enabling them to effect higher rate increases.

"I thus see the first half of 1987 being a bit of a struggle," O'Brien added, "particularly if fourth-quarter [1986] consumer spending on durable goods is accelerated, as consumers seek to take advantage of interest and sales tax deductions before they are eliminated in 1987."

The second half of the year will be better, O'Brien predicted, with an attendant pickup in advertising. This should result in pre-tax profits for the newspaper industry in the 10-percent range, he said.

The second half of '87 also should benefit from the tax law changes because

many consumers will then begin feeling the effects of tax reductions, O'Brien said. But he pointed out that because the full tax decrease does not take effect until 1988, some analysts have forecast flat or decreasing advertising volume this year.

CONTROLLING COSTS. The less-than-optimum year that they see ahead will also be buffeted by rising costs, according to newspaper executives and analysts.

James Keeley, vice president/operations for The Dallas Morning News, said salary expenses—the largest cost item for most newspapers—will escalate in the printing and publishing industries during 1987 by 4.6 percent to 4.8 percent.

In sections of the country with stagnant or downward economies, the increases will be closer to 4 percent, he told the Outlook for the Media conference.

These projections are less than those for all American industry during 1987. The American Compensation Association projects 5.2 to 5.4 percent wage increases for all industries, Keeley said.

In addition to salaries, fringe benefits will be more expensive. Health insurance costs are expected to escalate 15 to 25 percent, Keeley estimated.

Because they can't control the cost of newsprint, publishers will have to tighten up elsewhere.

Also going up is the cost of newsprint [presstime, Nov. 1986, p. 70].

In response to increasing expenses, Kevin Gruneich, media analyst for the First Boston Corp., said newspapers may be expected to exercise a greater degree of cost control in 1987. Because they can't control costs in newsprint, publishers will have to tighten up elsewhere, and that may mean reductions in staffing, particularly in production areas, he said.

On the revenue side, observers said many papers may raise circulation as well as advertising prices. In his presentation to INFE, consultant Burns actively recommended circulation price hikes. Circulation revenue dropped from 31 percent of a newspaper's total revenue in 1970 to 21 percent in 1985, he observed, saying this trend ought to be reversed.

Other analysts, however, recognize that publishers are reluctant to raise prices for fear of losing subscribers. "Some of the groups that were more aggressive a year ago are going to be a little more cautious in circulation prices increases" in 1987, Gruneich said.

Summing up their expectations for the new year, analysts and newspaper people alike said it would not be drastically different from 1986.

Said O'Brien of The New York Times: "The economic outlook . . . would seem to indicate that 1987 would be the same as 1986, with those [newspapers] currently doing well experiencing further gains, and those struggling seeing more of the same."

Parmalee of Knight-Ridder agreed. "In short," he said, "I think 1987 will be very similar to this year when it comes to advertising." □

Gannett Fellowships in Asian Studies for Journalists

University of Hawaii

1987-88 ACADEMIC YEAR

OPPORTUNITY for up to six American journalists, preferrably mid-career, to broaden their knowledge of Asia through an academic year of Asian studies at University of Hawaii–Manoa.

COMMENCING August 15, 1987. Concluding May 31, 1988. Partially funded trip to Asia follows.

FINANCIAL SUPPORT: Stipend $16,000. Tuition and fees. Economy round trip to Hawaii from continental U.S. or comparable air fare costs. Portion of travel costs for Asia trip.

PROGRAM includes area and language study focused on a country or region of Asia. Some 400 courses with Asia-related content are taught at University of Hawaii.

DEADLINE: March 1, 1987.

ADDRESS for application forms: Gannett Fellowship Committee, Center for Asian and Pacific Studies, University of Hawaii, 1890 East-West Road, Honolulu, Hawaii 96822.

1st in a series of seven Knight-Ridder 1986 Pulitzer Prize-winning stories.

Some people think the American press is too powerful.

Ferdinand Marcos, for one.

For 20 years, rumors circulated that the Marcoses and their friends were stashing away a fortune overseas.

But the public had no proof.

Reporter Lewis Simons of the San Jose Mercury News had made several trips to the country dominated by Ferdinand and Imelda Marcos. Conversations, he recalled, "often led to comments like – you know she owns such-and-such. And he owns so-and-so."

Simons wanted to find out how much of this was fact, and how much was fiction.

He plugged into every rumor pipeline in the Philippines. Weeks turned into months.

Simons sent back a massive file.

San Jose Mercury News reporters Pete Carey and Katherine Ellison took over. They sifted through thousands of pages of legal documents from California to New York.

On June 23, 1985, they broke the story. It documented how the Marcoses and eight associates were "systematically draining vast amounts of wealth from their nation and hiding it overseas."

They owned banks, condominiums, office buildings, mansions and other properties in the U.S. and Europe. They had spent $10 billion since 1979.

The stories created a political tidal wave.

There were calls for impeachment.

Marcos promised early elections.

The rest, really, is history.

Corazon Aquino is the new Philippine president.

Pete Carey, Katherine Ellison and Lewis Simons won the 1986 Pulitzer Prize for International Reporting.

The whole project was a gigantic effort. A year of research, reporting and writing. Of probing elusive offshore holding companies and dummy corporations. Then, staying with the follow-up.

Most papers, regardless of size, wouldn't have invested that kind of effort on a story 7,200 miles away.

But the San Jose Mercury News is a Knight-Ridder newspaper.

KR

KNIGHT-RIDDER

We never underestimate the American people.

Knight-Ridder, winner of an unprecedented seven Pulitzer Prizes in 1986, is a nationwide communications company with eight television stations, cable systems, business information services and 34 daily newspapers.

The 401(k) Factor

Now popular at newspapers, these tax-deferred savings plans emerge from the new tax law relatively unscathed

BY CLARK NEWSOM
pressetime labor writer

The fastest-growing employee benefit program in the newspaper business is the "401(k)," tax-deferred savings plan.

As recently as 1982, no newspaper was known to have adopted such a payroll-deduction plan, which allows workers to put pre-tax dollars in a company-sponsored savings program. Such programs, also known as "salary reduction plans," are generally viewed as supplements to pension plans [pressetime, March 1982, p. 9].

Today, 401(k) plans—named after a section of the U.S. tax code—are so prevalent at newspapers and have received so much publicity that the term hardly needs explanation.

Newspapers' tax-deductible contributions to these plans vary widely, from zero in some cases to dollar for dollar—up to a certain limit—in others.

At The Tampa Tribune, for instance, employees can contribute up to 6 percent of their salaries, with the first 3 percent matched dollar for dollar. Employees have a choice of three investment options—in the stock of the Tribune's parent company, Media General Inc., in an equity fund of common stocks of major companies, or in a money-market fund invested in government securities. The company's contributions are invested in Media General stock, and the Media General Employees Thrift Plan is the largest individual shareholder.

The employee is not required to pay taxes on the savings until the funds are withdrawn.

Fortunately for most of the thousands of newspaper workers who have signed up for 401(k) plans, the Tax Reform Act of 1986 generally will not have a major effect on them. Highly paid individuals will be most affected.

In late 1985, as part of the tax-revision process, the Treasury Department had proposed ending the highly popular 401(k)s, but subsequent protests to Capitol Hill kept the plans alive.

Under the act, beginning this year there is an annual limit of $7,000 that an employee may contribute to a plan. The cap had been $30,000. There also is a 10-percent penalty tax on most early withdrawals of funds before age 59½ years.

The Times Mirror Co.

EARLY WITHDRAWALS RARE. Kenneth G. Wyatt, personnel manager of The Virginian-Pilot and The Ledger-Star in Norfolk, and other newspaper personnel relations specialists say that very few employees have been putting $7,000 or more into their plans each year, and early withdrawals have been rare.

The Norfolk dailies introduced their plan on July 1, 1985, under the name Savings Plus. Employees there may deposit from 1 to 4 percent of their gross pay into the plan. The company contributes 50 cents for each dollar the employee pays into the plan.

Under federal tax law, the employee is not required to pay taxes on the savings until the funds are withdrawn, when he or she may qualify for special tax treatment because of retirement or by forward averaging income over a five-year period. Forward averaging, however, will not be available for those under age 59½.

An employee may withdraw from the savings for "hardship" reasons, such as paying medical bills, purchasing a home or sending children to college. But this year, for the first time, these types of withdrawals are subject to a 10-percent penalty—the same as for early withdrawals from Individual Retirement Accounts. The penalty is waived for employees over age 59½, and there are several other special exclusions. Also, effective Jan. 1, 1989, withdrawals will be limited to the contributions made, excluding investment earnings.

Benefits specialists say the ramifications of many of the new tax provisions will not be fully apparent until the Internal Revenue Service issues final rules and regulations. "We're still waiting for the IRS regulations defining hardship," says Harry Gross, a partner in the defined contribution divison of Kwasha Lipton, a benefits consulting firm in Fort Lee, N.J. Accessibilty to funds is important to employees, especially younger workers, he says, and the future of 401(k)s depends on that accessibilty.

Among the first newspapers to start a

401(k) plan was the Telegraph Herald in Dubuque, Iowa. In fact, when the plan was launched in 1983, the company was the first in Dubuque to make one available to employees, according to Gerarda Lahey-Keppler, employee benefits manager. Thirty-five percent of the employees eligible to participate in the plan now belong to it, she says.

At the Indianapolis Star and News, the 401(k) plan is regarded as "a tremendous employee benefit," says David B. Wright, vice president and business manager of the newspapers and secretary-treasurer of Central Newspapers Inc., the parent company. The "Savings Plus" plan covers all employees of the company's dailies in Indianapolis, Muncie and Vincennes, Ind., and in Phoenix. The plan was launched Jan. 1, 1985, and Wright reports that 82 percent of the company's employees currently participate in it.

Under the Central Newspapers program, employees may contribute up to 5 percent of their pay with the company matching 25 percent of those contributions.

The plan is a supplement to the company's pension plan, and Wright says, "It's relatively simple to administer compared with a pension plan."

Employees receive a quarterly statement of their accounts, which is "something tangible," he says. "It's much more meaningful to employees than the annual pension statement."

Wright says some employees were skeptical when the plan was announced, asking "What's in it for the company?" While the company's contribution is tax-deductible, he says there is no significant financial benefit to the company. The benefit to the company comes from the "good will" generated, he says.

The plan at Central Newspapers was introduced with the assistance of the management consulting firm Towers, Perrin, Forster & Crosby of New York City, which provided promotional material and training on how to explain the plan to employees in a series of meetings.

CONTRIBUTIONS VARY. The 401(k) plans are administered in various ways at newspapers. For example:

• At Scripps Howard, the company matches 50 cents on every dollar up to the first 6 percent of salary saved. "It's one of our most popular employee benefits," says Robert E. Brophy, vice president of human resources.

The same formula is applied by three newspapers in The Times Mirror Co. group—Los Angeles Times, The Morning Call of Allentown, Pa., and Newsday of Long Island, N.Y.

The company's contribution is tax-deductible, but its biggest benefit is the "good will" generated.

• At Harte-Hanks Communications Inc., employees also may contribute up to 6 percent of their base salaries, and the company matches [illegible] percent of the contribution.

• At Dayton Mead Garage, employees may contribute from 1 to 10 percent of their salary. Dayton does not make matching contributions to the 401(k) plan, but it has a profit-sharing plan completely funded by the company, according to Personnel Director Cleatus B. Carroll.

• At The News and Observer and The Raleigh (N.C.) Times, employees may put in up to 6 percent of their earnings. The newspapers match 100 percent of the first 2 percent and 25 percent of the next 4 percent.

• At The Orlando Sentinel, the company matches 25 cents on the dollar up to 4 percent of contributions.

• At the Lexington (Ky.) Herald-Leader, employees may invest from 1 to 20 percent of their pay (up to the $7,000 salary-reduction cap) into the plan. The first 10 percent is deducted from gross earnings and everything above that from after-tax earnings. The newspaper matches 50 cents for each dollar invested up to 6 percent.

• The New York Times Co. matches 50 cents on the dollar up to 6 percent of contributions. An additional 4 percent can be contributed that is unmatched.

The surge in 401(k) plans among newspapers is reflected in U.S. business and industry overall. The Labor Department's Bureau of Labor Statistics reports that a 1985 survey of about 1,500 companies employing 100 or more workers found that 26 percent of the employees were in some type of 401(k) plan.

the most experienced firm in newspaper executive recruitment.

Publishers, corporate executives, general managers, editors, managers in all departments—we're the industry professionals at recruiting these key people for newspapers of all sizes. We take pride in the quality of our personal service—it has earned us many close, long-term relationships. Have You Looked At Your Yellow Pages Directory . . . Lately?

Your Best Source for New Revenue is in the Yellow Pages!

Yellow Pages advertising is the nation's fastest growing major advertising medium. In 1985, $6.8 billion were consumed by Yellow Pages advertising with estimates for 1987 ranging from nine to eleven billion dollars. The majority of those dollars will be coming from your local advertisers. With the current trends toward pre-prints from R.O.P., the local advertiser will be vital to your long-term profitability and success. Yellow Pages are competing head-to-head for your local advertising dollars.

What can be done about the Yellow Pages growth?

How many dollars are in your Yellow Pages directory?

How much is a half-page ad?

When does your Yellow Pages close?

When should you approach the Yellow Pages problem?

Over the last four years of competitively selling against the Yellow Pages, Steve Wasser and Mark Rood of American Consulting Services have developed a marketing program for the newspaper industry which teaches your account executives how to convert overspent Yellow Page dollars into newsprint contracts through a "consultant sell" approach. Released in March this year, their training has proven to be measurable and extremely cost-effective for every size newspaper. If you are a results-oriented, bottom-line manager, call the results people today. Our number is located at the bottom of this page.

Third World Training

Foreign journalists in increasing numbers are signing up for programs aimed at enhancing their professional stature

BY MARCIA RUTH
presstime staff writer

The dramatic growth in training for foreign journalists—primarily from developing countries—is vividly portrayed by the contrast in program directories published a decade apart.

More than half-an-inch thick, a new directory prepared by the Center for Foreign Journalists lists about 350 training programs in 70 countries for journalists outside their own borders. Ten years ago, a thin compilation prepared by ANPA listed 24 programs in a handful of nations.

Why the increase?

"It's very simple," says Thomas Winship, who followed his 1985 retirement as editor of The Boston Globe with the founding and presidency of the new Center for Foreign Journalists in Reston, Va. "I don't see any possible way that we can bring the First and the Third World together and make them understand each other unless the level of communication is ever so much more professional in the developing world" he says.

"We believe in it," says Andrew Barnes, editor and president of the St. Petersburg Times, which for the past seven years has had a unique exchange with The Nation, published in Kenya by the Aga Kahn. "We believe we can help people in Kenya to have a better functioning country by having better functioning journalists," he says.

Last year, about 1,600 foreign journalists participated in the more than 30 programs based in the United States.

Moreover, the numbers of programs and applicants appear to be growing. "The need has always been there," says George Krimsky, executive director of the Center for Foreign Journalists. "But as we get into the business of trying to identify the need, more and more people are stepping forward" [presstime, July 1986, p. 68].

Established in 1985 to coordinate the efforts of other organizations, as well as provide new programs of its own, CFJ doubled the number of programs originally planned for its first year of operation. By the end of 1986, in excess of 500 journalists from more than 100 countries had passed through CFJ's doors at the American Press Institute in Reston, Va.

There are more examples of rapid growth in the field.

Established in 1983, the Alfred Friendly Foundation is now receiving applications at a rate of 15 for each of 10 six-month fellowships it awards to foreign journalists for work on U.S. newspapers or newsmagazines.

Also in the third year of a similar program, the American Society of Newspaper Editors got eight applicants for each of its 12 six-week fellowships, which include about a month on U.S. dailies.

Participation by individual newspapers is also on the rise. According to a recent CFJ survey, 43 dailies have served as hosts to at least one foreign journalist, with another dozen papers interested in doing so.

And the New York-based Institute of International Education reports that in the academic year 1984-85, more than 4,000 foreign nationals studied some form of communications at American universities, a 10-percent increase over the previous year.

With this growth has come a variety that most of those active in the field consider a plus. "I'm for every kind of program you can get, because there is such a vast need out there," says CFJ President Winship.

But with growth has also come increased difficulty in funding.

"Competition for the dollar has increased dramatically," says Paul Sherburne, executive director of the World Press Institute, which for 25 years has run a training program based at Macalester College in St. Paul.

VARIETY COMMON. In terms of numbers, the largest group of foreign journalists in the United States are "visitors," about 1,200 a year, of which just over half are in government programs, primarily sponsored by the U.S. Information Agency.

According to CFJ's Krimsky, the distinction between "visitors" and other foreign journalists is that the latter spend at least part of the time working and/or observing at a news organization.

CFJ estimates that about 350 mid-career journalists are studying and/or teaching in U.S. universities, about 100 in organized programs and 250 on their own.

Only about 100 foreign print journalists are enrolled in more structured training programs, and these are supported primarily through private funding and the cooperation of specific newspapers and newsmagazines.

Roughly speaking, major programs in this category vary from the "hands-on" training of the Friendly and ASNE fellowships, to the "experiential" learning of the seven-month program of the World Press Institute, which gives 10-15 "early career" journalists a comprehensive view of

Former President Carter speaks to World Press Institute fellows.

American culture. This year, for example, the Minnesota-based program took participants to places as varied as New York City's Harlem and a Hopi Indian reservation, as well as to meetings with top officers of multinational corporations and senior government officials.

"We try to bring as many perspectives as we can put together," says WPI's Sherburne.

On their own initiative, about 20 foreign journalists a year attend programs designed for U.S. journalists at API and at The Poynter Institute for Media Studies in St. Petersburg. Responding to "a substantial number of requests," the Florida institute began its first seminars in Spanish in 1985. After two in 1986, Executive Director Robert Haiman says he is "testing the waters a bit" before adding more.

API does not plan to increase foreign participation in its intensive seminars, says Executive Director Frank Quine. Krimsky says CFJ plans to schedule more seminars built on the API model but exclusively for foreign journalists.

Adopting another strategy, the World Press Freedom Committee funds training programs abroad rather than bring foreign journalists to the United States. "We find that having programs right in the home environment seems to work better than in the United States," says WPFC Vice Chairman George Beebe, retired associate publisher of The Miami Herald.

Since 1977, WPFC has made 84 grants totaling more than $500,000 to assist journalists and journalism schools in developing nations. In most cases, WPFC works cooperatively with local, regional or other international organizations, with small to mid-size programs tailored to specific needs.

In addition, the organization sends its own trainers—primarily retired U.S. editors and executives—to conduct courses and seminars abroad.

Robert Hewitt, curator of the Jefferson Fellowships at the East-West Center in Honolulu, agrees that for entry level journalists, on-site training works better, particularly at such centers as the Press Foundation of Asia in Manila, Philippines. The Jefferson Fellowships, however, are designed for mid-career journalists—an equal number of Americans and Asians.

At the mid-career level, program directors agree that what takes place is more education than training, particularly in programs that include foreign along with U.S. journalists. "We're not training anybody. They are training themselves," says Charles Eisendrath, director of the recently renamed Michigan Journalism Fellows program at the University of Michigan, where foreign and U.S. journalists work on individual projects and attend core seminars during the academic year.

And editors at a variety of papers agree that several types of learning take place in programs for foreign journalists.

In a month on a 8,900-circulation Vermont daily, a Malaysian journalist in ASNE's program "learned an incredible amount about the openness of the American system," says Norman Runnion, editor of the Brattleboro Reformer.

As for the benefits to the host paper, foreign journalists "bring a world view to the newsroom and better prepare us to deal with the society as a whole," says William A. Hilliard, editor of The Oregonian in Portland, whose paper has also received foreign journalists from several different programs. □

'Desktop Publishing' Spurs

BY MARGARET GENOVESE
presstime staff writer

The weekly newspaper industry is enjoying an economic renaissance, and so-called "desktop publishing" is a principal reason.

In fact, according to some observers, desktop publishing constitutes a "revolution" that is sweeping smaller newspapers in general.

Says William P. Monroe, executive director of the Iowa Newspaper Association: "It's the biggest, single technology smash to hit us since the advent of offset (printing). That's what the publishers are saying. It's really, really hot."

This is true even though some people maintain that a newspaper sacrifices type quality when it goes to a desktop-publishing system.

The trend toward desktop publishing is one of the many reasons that the weekly industry is "better equipped and more healthy than it has been in quite awhile," says Richard A. Nafsinger, president of the National Newspaper Association, an organization made up primarily of non-daily newspapers.

Overall computerization of newspaper publishing and the resultant labor savings are among other reasons he cites. But Nafsinger, president of Eagle Newspapers of Hood River, Ore., talks at greater length about the benefits of desktop publishing. The only daily in his group uses this new technology, and he says it is being considered for some of the group's 17 non-dailies.

For some operations, the technology can be an economic lifesaver, because it uses relatively inexpensive personal computers and plain-paper laser printers, as opposed to more costly mainframe computer systems and phototypesetters requiring photographic paper and darkroom developing chemicals.

Several years ago, a large weekly paper "could easily sink $50,000 to $100,000" in an editorial front-end system and phototypesetter, says William C. Sniffin, editor and publisher of the Wyoming State Journal of Lander. "Now we are seeing systems (of PCs and laser printers) in the $15,000 to $20,000 range that can do the same job as well and save 75 cents on the dollar in production supplies."

The 4,000-circulation Lander semiweekly switched to plain-paper typesetting last April, using three different brands of PCs and an Apple LaserWriter Plus printer. (The phrase "desktop publishing" reportedly was coined by the president of a computer software firm to describe Apple Computer's publishing system. It refers to the fact that the equipment, in contrast to bulky, conventional typesetters, can be placed on a standard-size desk.)

"I am spending less money to pay for my bank note to buy my equipment . . . than I was paying every month just for photochemicals and typesetting paper," says Dennis F. Herrick, publisher of The Sun, a 2,000-circulation weekly in Mount Vernon, Iowa. That newspaper has been produced on an Apple computer system for one year.

Herrick says he also was attracted to desktop publishing because it eliminated his newspaper's darkroom "chemical dependency," a change that he considers an environmental plus.

In addition, such a system is versatile. The same PCs that set advertising and editorial body type and headlines can help lay out a page, keep track of circulation and business accounts, generate mailing labels and print business letters.

For some newspaper operations, desktop publishing can be an economic lifesaver, because it uses relatively inexpensive personal computers and plain-paper laser printers.

"It's a natural for the weeklies," says George Cashau, ANPA director technical research.

No one knows how many weeklies have gone to desktop publishing, but whatever the number, it is expected to grow. "At this time, only a large handful have it," says Raymond C. Jones, executive director of the Pennsylvania Newspaper Publishers Association, which has offered seminars on the subject. But he predicts that "within a year or two" all Pennsylvania weeklies are going to have at least partial systems.

One broker who specializes in selling weekly newspapers says desktop publishing is making the field more attractive to buyers.

For a newspaper grossing between $100,000 and $250,000 a year—generally those with circulation of between 1,000 and 2,000—it can be the difference between making a "marginal living" and making a "pretty good living," says newspaper broker James F. Hicks of Buffalo, Wyo. "Weeklies, where the guy worked like the devil and made $20,000 to $25,000 a year, can now, if they have the guts, retool and increase their profitability considerably."

Add a modem and a facsimile machine, and an owner gets the possibility of centralizing production, circulation and bookkeeping functions for a group of weeklies in one plant, he says.

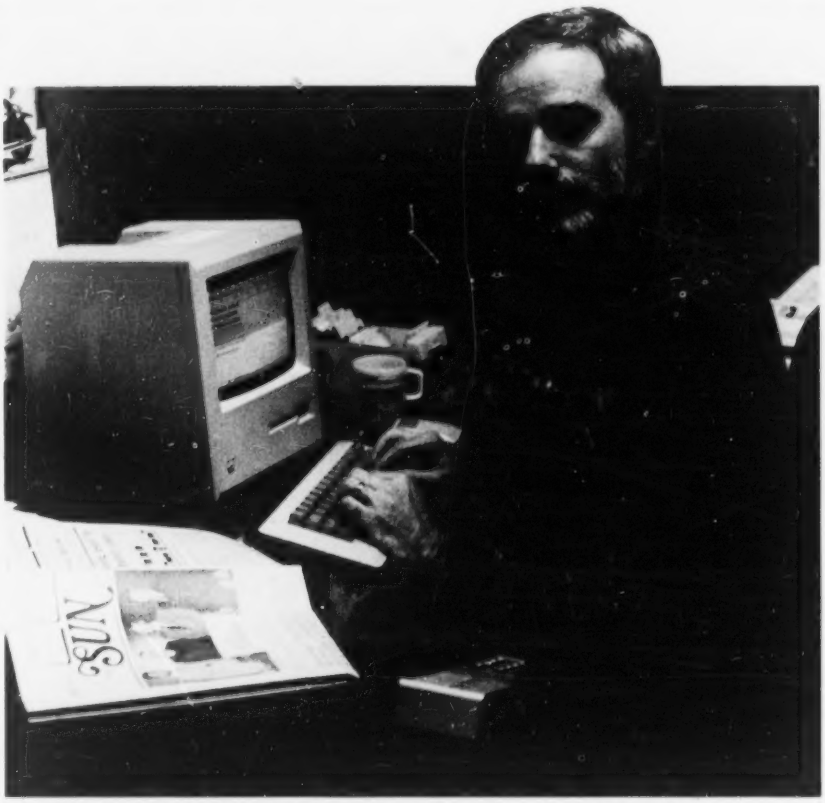
Until desktop pubishing came along, the future for small community newspapers appeared bleak, according to Hicks. But no more. "I think that the small-town newspaper does, in fact, have a pretty bright future."

ECONOMIC FACTORS. NNA's Nafsinger agrees that the outlook for weeklies is good, with some caveats.

In those areas of the country where the economy is hurting—particularly those dependent upon agriculture, mining, timber or energy—weekly newspapers are suffering along with everyone else, Nafsinger says.

He adds that many papers are concerned about the trend toward large, regional retailers and away from small, independent merchants who have been

Weeklies



Iowa Publisher Herrick's desktop system eliminates his paper's "chemical dependency."

the "linchpin" of weekly newspaper advertising sales.

However, on the whole, Nafsinger says the industry is "healthy and vital and putting out better newspapers than it ever has in the past."

Among weeklies' vital statistics:

• American Newspaper Representatives, the advertising-representative firm owned by NNA, will list in its 1987 directory 7,419 weekly newspapers (paid- and free-circulation) in the United States, with a total circulation of 46.9 million. This constitutes a decrease in numbers but an increase in circulation from four years ago, when the comparable figures were 7,626 U.S. weeklies with circulation of 44.3 million (presstime, June 1983, p. 42).

• In 1985, the most recent year for which figures are available, advertisers spent an estimated $1.5 billion in weeklies and shoppers, says James G. Conaghan,manager of economic and media analysis for the Newspaper Advertising Bureau. This is an increase from NAB's figure of $1.25 billion for 1982.

The relative health of the industry may be reflected on the acquisition front. "I think we are starting to see newspaper groups looking more seriously at weeklies," says newspaper analyst Bruce Thorp of the brokerage firm Lynch, Jones and Ryan in Washington, D.C.

He points out that the pool of dailies is diminishing; that larger groups are buying smaller groups, which often contain some weeklies; and that an increasing number of weeklies are developing the kind of strength that can lead to daily publication (presstime, Dec. 1985, p. 24).

Asked to identify trends in the weekly field, a half-dozen state press association managers mentioned such things as acquisitions and mergers and the addition of total-market-coverage publications. However, far and away the most frequently mentioned development was the movement toward desktop publishing.

DESKTOP DELIVERANCE. In West Virginia, for example, the number of newspapers using the systems is approaching one out of every four, according to William F. Childress, executive director of the West Virginia Press Association. Most of these papers are weeklies.

West Virginia's newspapers discovered desktop publishing almost by default, says Childress. It began when floods in November 1985 damaged or destroyed typesetting equipment at a number of papers in the state. Publishers had difficulty replacing their machines with conventional typesetting systems in time to meet production demands.

The press association, which had become familiar with the desktop-publishing concept, contacted Apple Computer dealers who put together desktop-publishing packages for beleaguered publishers, Childress explains.

The WVPA now offers training on Apple's Macintosh system and even has its own unit, which Childress says he is ready to take to the rescue of the next West Virginia newspaper with an emergency.

In 1984, The Mapleton Press became the first newspaper in Iowa to implement desktop publishing. Publisher Edward M. (Mike) Lyon became so enamored of the Apple equipment and software that he began selling the system in cooperation with an Apple dealer.

Since then, Lyon has helped 21 publications—most of them weeklies—put similar systems in their plants. Many other publishers have expressed an interest in making the change to desktop publishing when existing equipment needs replacement, or even sooner, he says. "We can see it just spreading very rapidly."

Another publisher-turned-desktop-publishing entrepreneur is Patrick J. Morgan, who last year sold his daily newspaper,

West Virginia's newspapers discovered the technology almost by default when floods in November 1985 damaged or destroyed typesetting equipment at a number of papers.

the Standard in Excelsior Springs, Mo., to devote all his time to marketing the new technology. He says at least one of the major phototypesetting vendors has decided it simply cannot compete in price in "the lower end of the marketplace"—smaller weeklies—and is leaving this market to desktop publishing.

Morgan in June 1985 started his own company, The Electronic Publisher Inc., a "value-added" reseller for Apple. He has sold systems to 70 newspapers, most of which are weeklies.

DRAWBACKS. Although weekly publishers praise their desktop-publishing systems, there are some downsides.

"The quality [of typography] is not as good," says newspaper design consultant Edmund C. Arnold. He calls headline-size type "not good, but passable." Body type presents less of a problem, because it is so small the "ragged edges" of the laser-produced characters are not noticable.

Another handicap, Arnold says, is that a limited variety of typefaces is available with the systems.

Some of the systems cannot hyphenate, other observers note.

"The quality [of typography] is not as good," and there is a limited variety of typefaces.

However, Arnold and others say these problems eventually will be remedied. And even now, weekly publishers using the systems say they are more than satisfied with the quality.

"We don't take this newspaper business lightly," says Sniffen, whose Wyoming newspaper has won more than 40 national awards in the last 15 years. "We would not have switched to this system if we felt it wouldn't produce a good quality newspaper for us."

Hernck in Iowa says he has "never had a single reader come in and say 'this newspaper looks funny.'" But many have said, "Boy, the paper looks nice.'"

Some people see other drawbacks.

Natsinger worries that weeklies with commercial printing operations may lose some customers who set up their own desktop-publishing systems.

Others say desktop publishing may bring about new competitors for existing weeklies. "If I were an entrepreneur fresh out of school, an idealistic young person who wanted to change the world, I'd buy myself a Macintosh and a LaserWriter and go to town," says Michael Abrams, associate professor of journalism at Florida A&M University and coauthor of a book on desktop publishing. "I wouldn't even have to spend as much as I would spend on a new car."

Indeed, desktop publishing has already produced some weekly offspring. For example, the free-circulation Metro News of Chicasaw, Ala., just celebrated its first anniversary of publication.

"There are only two of us putting out this paper," says Advertising Director Nancy Welch. "The only way in this world that we can do it is because we have this desktop publishing." □

2nd in a series of seven Knight-Ridder 1986 Pulitzer Prize-winning stories.

Why do they have to show things like this in the newspaper?

© 1986 Knight-Ridder, Inc.

Yes, this is a grisly picture.

But in a glance, readers understood the enormity of what happened to the White City. No amount of words could equal this image and those that came with it.

It began on November 14, 1985.

Colombia's long-dormant Nevada del Ruiz volcano erupted. Photographers Carol Guzy and Michel duCille of Knight-Ridder's Miami Herald were dispatched to the Colombian town of Armero.

It was known as the White City because of its extensive cotton and rice crops. Now a brown tidal wave of mud, ash, melted snow and rocks had cascaded down the slopes.

Armero was no more.

To get to the scene, Guzy and duCille, along with two Miami Herald reporters, rode for five hours over twisting, fog-covered roads. Then, when the roads ended, they faced a five-mile walk. As they approached Armero, the mud was hip-deep.

Carnage and corpses surrounded them. Throughout the area, the roar of the eruption had been replaced by the quiet of dying.

Only 20 percent of the town's 28,000 inhabitants had survived.

Guzy and duCille sent back gut-wrenching pictures. They knew they'd be painful to print. But from a human perspective, they'd captured the truest pictures of the trauma and the tragedy of Armero. DuCille recalls, "I was shooting close-up shots of a dead baby, and all the time thinking, 'My God, this could be my son.' They were about the same age."

The Herald's pictures and stories about the devastation in Armero created an immediate, compassionate reaction in South Florida. Thousands of Herald readers brought food, clothing and medical supplies to local fire stations. Eventually, twelve truckloads of relief supplies were sent to Colombia.

Carol Guzy and Michel duCille won the 1986 Pulitzer Prize for Spot News Photography.

The Miami Herald had sent two reporters and two photographers 1,500 miles to get the story. A chartered jet had to be used to get the pictures back to Miami before deadline. In all, it was a herculean feat.

By comparison, no other news organization's coverage came close to the Herald's.

But The Miami Herald is a Knight-Ridder newspaper.

KR

KNIGHT-RIDDER

We never underestimate the American people.

Knight-Ridder, winner of an unprecedented seven Pulitzer Prizes in 1986, is a nationwide communications company with eight television stations, cable systems, business information services and 34 daily newspapers.

NEWSPAPER COMPANIES GO BACK TO BASICS

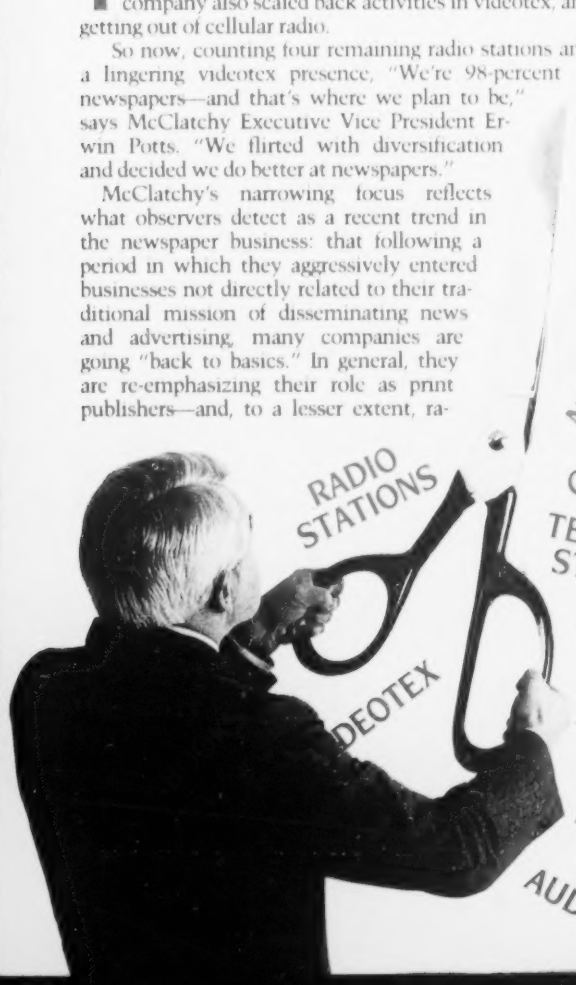
After an era of diversification, many firms are selling off peripheral holdings and focusing time and resources on their core business

BY C. DAVID RAMBO
presstime staff writer

In the late 1970s McClatchy Newspapers saw great promise in owning cable television systems, so it purchased four. Last year, however, McClatchy sold its cable holdings. The company also scaled back activities in videotex, and it is getting out of cellular radio.

So now, counting four remaining radio stations and a lingering videotex presence, "We're 98-percent newspapers—and that's where we plan to be," says McClatchy Executive Vice President Erwin Potts. "We flirted with diversification and decided we do better at newspapers."

McClatchy's narrowing focus reflects what observers detect as a recent trend in the newspaper business: that following a period in which they aggressively entered businesses not directly related to their traditional mission of disseminating news and advertising, many companies are going "back to basics." In general, they are re-emphasizing their role as print publishers—and, to a lesser extent, radio/TV broadcasters—and de-emphasizing their involvement in other enterprises.



Certainly, newspaper companies' holdings remain a colorful lot. They include community newspapers and shoppers; magazines; books; syndicated feature services; commercial printing subsidiaries; paper mills and timberlands; television programming—even TV networks; videotex, audiotex and other high-tech means of delivering information; cellular radio and paging systems; direct-mail firms; educational services; and more.

There are some that stray even more boldly from the usual pattern: among them, a catfish "ranch" owned by Donrey Media Group, a T-shirt printing operation at The Bulletin of Bend, Ore., and the Oklahoma Publishing Co.'s Opryland theme park near Nashville [presstime, June 1984, p. 26].

But on the whole, the drive to diversity has shifted to a lower gear. In the words of James N. Longson, vice president/corporate development of Tribune Co. of Chicago, media companies are "consolidating, refocusing."

Even passage of the Tax Reform Act of 1986, which reduced the tax benefits associated with acquiring new companies starting this year, did not fuel a late-'86 diversification frenzy. It may have played a role, however, in the "consolidating, refocusing" that Longson described, as newspaper companies generally emerged from the tax-law-induced buying spree as more heavily involved in core businesses than in recent times.

Observers in late December were awaiting final word on how year-end deals would reshape the newspaper business. Although no one knew for sure the number of transactions that would be concluded on or before Dec. 31, Owen Van Essen of the brokerage firm Lee Dirks & Associates, Birmingham, Mich., predicted that this month there would be 30 or more announcements about newspaper sales.

Another expert who thinks diversification has ended, at least for now, is consultant Ellen Berland Gibbs, president of Communications Resources Inc., New York City. "Newspaper companies are saying newspapers are going to be the backbone" of their business and that newspapers will remain strong, at least in the foreseeable future.

Some analysts observe that newspaper companies have proven they can weather competition posed by broadcasters, cable, shoppers, direct mailers and others, and that they need not buy such properties for fear of losing ad revenue to them. Competitors of all sorts have "been around long enough so that we can see that newspapers will survive that onslaught," says Bruce Thorp, newspaper securities analyst of Lynch, Jones & Ryan in Washington, D.C.

Evidence of the perceived value of newspaper operations is the ever-increasing prices paid for them.

"Overall, I am seeing as much interest in daily newspapers as I've ever seen" in seven years of working as a newspaper broker, says Lee Dirks. Out-of-the-mainstream purchases "sometimes . . . prove to be exciting, but sometimes they prove less attractive than [executives] thought they'd be," adds Dirks, a newspaper stock analyst before starting his own brokerage firm.

Christopher J.H.M. Shaw, chairman of the investment banking firm Henry Ansbacher Inc., New York City, says another reason for newspapers' more modest diversification activity is that most media-related expansion opportunities already have been explored. There are "no new media coming along" that newspapers can capitalize on, "other than satellite, which is marginal," he says. Newspapers are using satellite technology mainly for transmitting facsimiles to faraway printing sites.

Charles Cherney, Chicago Tribune

Tribune Co.'s WGN-AM makes an impressive appearance on Chicago's Michigan Avenue.

The trend applies to newspapers in Canada as well as to those in the United States. Canadian newspaper executives say diversification there is at low tide, following an era in which some firms collected impressive non-newspaper properties. Among those holdings are Torstar Corp.'s Harlequin Romance novels and Quebecor Inc.'s array of legal, educational and other books including many French-language volumes.

There are exceptions to the consolidation trend, of course. In fact, Dirks says "diversification will continue, but that's true even as some companies prune some operations."

And the extent of companies' re-emphasis on their core businesses depends largely on the makeup of those companies and how they define their missions.

Tribune Co., for example, is a communications firm with major broadcast holdings although newspapers contribute most of the company's overall revenue and profit. The firm sold its cable properties last year, Longson says, so that it could concentrate its efforts in the electronic media on broadcast television and radio.

Diversification can change a company's entire focus. Park Communications originally was a broadcast company that had no newspaper holdings prior to 1972. Park then owned as many broadcast stations as permissible under Federal Communications Commission rules and saw newspapers as the best channel for expansion.

Park now owns 31 dailies, 23 non-dailies and about 35 shoppers. The newspaper division in 1985 generated more revenue than the broadcasting side, and Robert J. Rossi, vice president-newspapers, says newspapers are expected to maintain that lead.

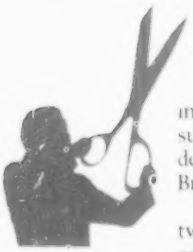
Perhaps one of the most dramatic "back to basics" steps of recent vintage was taken by Harte-Hanks Communications Inc. The company announced in November it will sell 56 of its 115 operating units to better "focus on our five core businesses"—newspapers, television, advertising shoppers, direct marketing and cable TV.

Although the entities being sold represent nearly half of the company in number of units, they contributed only 15 percent of annual revenue. They were "too small to make a significant contribution to Harte-Hanks overall" or were "in markets which don't fit our strategy," says President and Chief Executive Officer Robert G. Marbut.

BUY-AND-SELL BINGE. There are many other examples of recent activity in the media marketplace, some spurred by the new tax law but all in keeping with the overall trend. Among them:

- The Times Mirror Co. has divested 80 percent of its newsprint-manufacturing firm as well as a paperback book publisher, a graphic-arts supply business, another subsidiary that made products for medicine and science, some cable TV systems and three of its seven television stations. It also sold the Dallas Times Herald because of a soft local economy and strong competition. But last year, it bought A.S. Abell Co., publisher of The Baltimore Sun plus four magazines and owner of TV stations

In general, they are re-emphasizing their role as print publishers—and, to a lesser extent, radio/TV broadcasters—and de-emphasizing other enterprises.



in Baltimore and Richmond, Va. (Times Mirror subsequently sold the TV stations.) In separate deals, it also acquired National Journal and Broadcasting magazines.

• A.H. Belo Corp. of Dallas said it will sell two of its four radio stations. "Belo intends to concentrate its resources in the newspaper publishing and network-affiliated broadcasting businesses," says Robert W. Decherd, chairman and chief executive officer.

• Although its parent firm, Thomson International, is heavily diversified in oil and other interests, the Thomson newspaper organization in North America plans no diversification beyond a half interest of Augusta Newsprint Co. of Augusta, Ga. And Thomson Newspapers continues to grow. Its latest acquisition was The Times & Alleganian Co. of Cumberland, Md., raising the number of papers in the group to 154: 39 dailies and 13 weeklies in Canada, and 97 dailies and five weeklies in the United States.

• Scripps Howard sold 10 weekly city business publications to a competitor. It also sold Berkley Small, its newspaper vending-machine and circulation-supply unit. Meanwhile, Scripps bought its first daily in 21 years, the Naples (Fla.) Daily News. "It's back to basics time," explains William R. Burleigh, senior vice president/newspaper publishing. Gilles Champagne, senior vice president/corporate development, says, "There is a mood in the country right now that you go back to what you know how to do best."

• Southam Inc. of Toronto cut way back on videotex activities conducted through its Infomart unit. In the past year, Infomart "has been downsized to something less than half" of its previous structure, says Paddy Sherman, president of the Southam Newspaper Group.

In a number of cases, newspaper companies are feeding the trend not so much by what they are doing, but by what they are *not* doing. Copley Newspapers postponed plans to form a partnership with some other newspaper companies to produce newsprint. And even though it probably could have entered the software business successfully, Dow Jones & Co. has not done so. It has opted instead to remain in the "information business,"

While most newspapers have sold their cellular radio interests, The Washington Post Co. maintains partial ownership in two systems.

Paying high prices that some newspapers have commanded would have been "so dilutive to earnings it would have been harmful" to the company.

observes analyst Thorp. "There are ample examples to show that media companies are interested only in media companies," he adds.

That "interest" sometimes becomes passion, judging from the high prices that have been paid for some newspaper properties. Investment banker Shaw says while Gannett Co. paid 2.8 times annual revenue for the Louisville newspapers last May, that was modest compared with multiples of 5.5 and 8.5 that some other companies paid for newspapers late last year.

Harte-Hanks' Marbut says the new tax law and lower interest rates helped to elevate newspaper prices toward year-end. Prices now could come down, he believes, especially if interest rates reverse course.

But until then, the big price tags are deterring some media companies that say they would like to expand more heavily into newspapers.

Ross F. Hamachek, vice president-planning and development, noted in The Washington Post Co.'s 1985 annual report that many properties in its three "traditional lines of business—newspapers, television stations and magazines—became available" in the previous several years. But those with "characteristics warranting our attention were sold at prices we were not prepared to pay."

Consequently, the company since 1981 has invested $650 million in other areas, including 53 cable systems acquired from Capital Cities/ABC Inc., cable sports programming, cellular telephone partnerships, and a company that prepares students to take various academic, professional and licensing examinations.

The high price of newspaper properties also has curbed activity at Multimedia Inc. of Greenville, S.C.

"We very much would like to have additional newspapers," says Donald J. Barhyte, president of Multimedia's newspaper division and treasurer and chief financial officer of the parent organization. Lately, though, the company has found it "could buy other properties for a better price." Paying high prices that some newspapers have commanded would have been "so dilutive to earnings it would have been harmful" to the company, he says.

ROOTS OF DIVERSIFICATION. Although many newspaper companies may be pruning limbs that yield little fruit, the history of newspapers in this century has been, for the most part, one of branching out. In the 1920s, for example, newspaper publishers were pioneers in radio. A couple of decades later they were among the first to take a chance on television.

In recent years, their entrepreneurial spirit led them to invest in cable TV, new computer-based information systems, cellular radio and other fledgling products of new electronic technology. Along the way they added a long list of more traditional communications holdings such as book companies and magazines.

For many firms, changes in their names alone tell the story of expanding beyond the newspaper business. Harte-Hanks

Newspapers is now Harte-Hanks Communications. Gannett Newspapers is now Gannett Co. Knight-Ridder Newspapers last year became Knight-Ridder Inc.

"'Newspapers' was no longer an accurate description of our company," says a Knight-Ridder spokeswoman. "We wanted to be seen as a company that has more than newspapers."

Some of the reasons behind diversification are just as clear: to broaden a company's financial base, to enhance fiscal health, to guard against potential competitors who might enter those budding fields if they are left unattended by newspapers.

From a financial standpoint, broadcast usually proved the most profitable offshoot. Benjamin M. Compaine, executive director of Harvard University's Program on Information Resources Policy, notes that in broadcast's infancy the Federal Communications Commission even "encouraged" newspapers to get involved in broadcast.

Through the years there has been a decrease in the newspaper business's ownership interest in radio, both in actual numbers and in the percentage of the total. In television, however, newspaper ownership of the major VHF stations has risen on both scores.

In radio, the Evening News Association, parent firm of The Detroit News, owned one of the first commercial stations: WWJ, which went on the air in Detroit Aug. 20, 1920. By 1950, according to data presented in Compaine's 1982 edition of *Who Owns The Media?*, U.S. newspapers had ownership in 23 percent of the 2,086 AM stations and 37 percent of the 733 FM stations. But by 1985, newspapers' ownership had dropped to just 5.2 percent of the 4,799 AM stations and to 6 percent of the 3,839 FM stations, according to an analysis of data from *Broadcasting Cablecasting Yearbook* and *Television & Cable Factbook*.

In television, the company that owns The Milwaukee Journal and Milwaukee Sentinel filed the first commercial broadcast television application, resulting in the FCC's authorizing

Dow Jones' subsidiary Richard D. Irwin Inc. publishes *Corporate Pathfinders* and other top-selling business-related volumes.

Ingersoll Owns Nothing But Newspapers—and Plans to Keep It That Way

While many large newspaper companies are returning to basics and dropping some of their peripheral holdings, Ingersoll Publications Co. is an exception in that it never diversified in the first place. It has eschewed all but the traditional printed newspaper.

At year-end, Ingersoll was made up of 34 dailies and 115 weeklies mainly in the Northeast, Midwest and California. Its strategy, as enunciated by Chairman Ralph Ingersoll II, is simple: "We publish newspapers. There is no grand design in it. It is all I know about."

When asked to comment further at the New England Newspaper Association's convention last October, Ingersoll was even more blunt. "First of all," he said, "I do not know anything about broadcasting. And secondly, I don't like most broadcast people."

Ingersoll Publications, which is privately owned, is expected to show revenue of about $300 million in 1986, according to Advertising Age. The publication says the company is about the 50th-largest U.S. communications firm from a revenue standpoint. As of mid-1986, it was ranked as the 19th-largest newspaper publisher in terms of total daily circulation.

Ingersoll Publications is an outgrowth of an 11-newspaper group originally managed by Ingersoll's father, Ralph Ingersoll, who died in 1985.

He was a noted New York journalist whose enterprises included PM, a well-known but short-lived New York City daily.

After a much-publicized falling out with his father—which included filing suit against his late father's estate—Ralph Ingersoll II went on to build up the newspaper group with financial backing from E.M. Warburg, Pincus & Co. (Warburg, Pincus is the company that last year bought direct-mailer Advo-System Inc.) and the investment banking firm of Drexel Burnham Lambert.

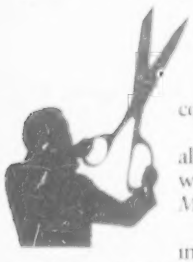
Ingersoll Publications' biggest purchase occurred last August when it acquired The New Haven (Conn.) Register and Journal-Courier for about $185 million.

Another Ingersoll holding is Suburban Newspapers of Greater St. Louis, two dailies and 39 weeklies that encircle the city and contributed to the recent demise of the St. Louis Globe-Democrat.

Ingersoll has said he intends to keep buying regional dailies and putting together groups of community newspapers. And the company's track record suggests it will remain strong financially. One of the biggest reasons is Ingersoll's much-publicized practice of cost-cutting and attention to income margins.

"My conception of a well-managed newspaper," Ingersoll told Forbes magazine last fall, "is the difference between a 10-percent profit margin and a 30-percent profit margin."

—C. David Rambo



commercial service to start July 1, 1941.

By 1950, 42 percent of the 98 TV stations—all VHF—in the United States were affiliated with newspapers, according to *Who Owns the Media?*

By Jan. 1, 1986, that proportion of ownership interest had increased to 45.6 percent of the 298 outlets in the top 100 U.S. markets, according to a study conducted for the National Association of Broadcasters. Counting the 297 UHF stations, newspapers' ownership of all TV stations in the top 100 markets was 29.6 percent, the study shows.

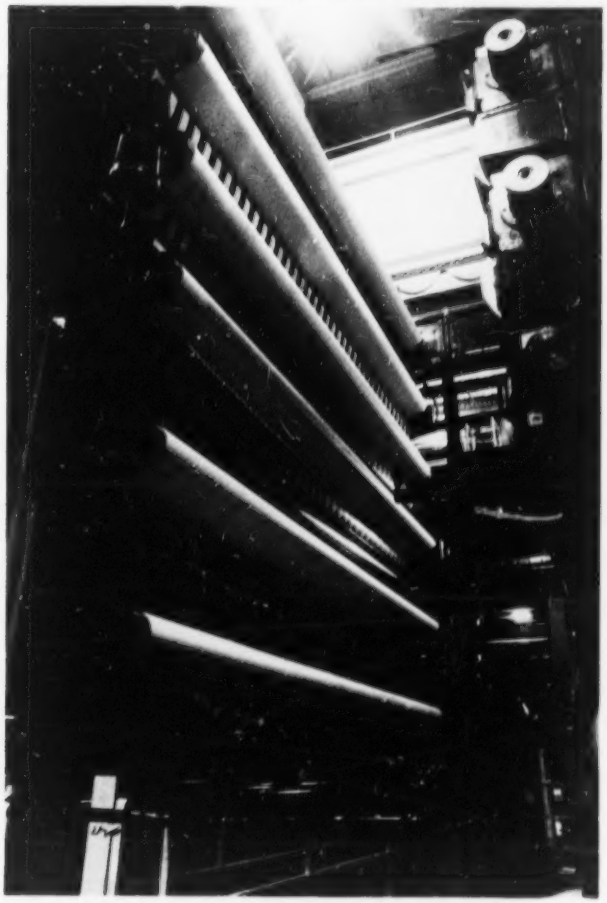
Newspaper ownership of broadcast has been affected by evolving FCC policy that can be viewed as four main thrusts.

First, the commission encouraged the mature newspaper business to invest in broadcast to bring stability to the then-young enterprise.

Next, the FCC in the 1950s imposed rules restricting the number of broadcast stations one company may own. It said a single company cannot own more than seven TV stations and seven each of AM and FM radio stations.

In 1975, the commission focused its restrictive actions directly on newspapers and adopted cross-ownership rules that, with the exception of some already-existing situations, prohibited a newspaper from owning a broadcast station in the same market where it publishes.

Finally, the commission two years ago eased the multiple ownership limits—raising the maximum number of each broadcast outlet one company can own to 12. It plans to lift the restraints entirely in 1990.



The New York Times Co. has partial ownership in Madison (Maine) Paper Industries, a newsprint producer.

Another contributing factor in the "back to basics" trend is that newspaper companies are naturally bullish on newspapers.

The effect of these developments has been seen in such cases as Tribune Co.'s 1985 sale of the Daily News of Los Angeles when it purchased KTLA-TV, an important feather in its broadcast hat. Tribune Co. "replaced" its newspaper loss by later acquiring Daily Press Inc. of Newport News, Va.

Adding KTLA to its TV-station lineup boosted Tribune Co.'s reach of U.S. viewing households to nearly 19 percent—the fourth-largest reach and the highest of any company not affiliated with a TV network. Interestingly, the company with the greatest household reach through network television, Capital Cities/ABC Inc., also has deep newspaper roots.

The policies on multiple ownership at first dampened acquisition activity, but the buy-sell pace picked up when the reins loosened in 1985. "Almost immediately after the new '12-12-12 rule' went into effect, the ownership of the television industry began to undergo significant structural change," says Herbert H. Howard, professor of broadcasting and assistant dean at the University of Tennessee's College of Communications, who conducted the National Association of Broadcasters study.

Scripps Howard was among firms buying more television stations and now has the most of any newspaper company: nine. Taft Broadcasting is the only company that owns the limit of 12.

Another field in which newspapers have been deeply involved over the last 20 years is cable television. There generally are no curbs on newspapers' owning cable. But with several newspaper firms selling their interests, the overall participation seems to be leveling off.

In June 1981, 15.7 percent of the 4,637 cable systems in the United States had some degree of newspaper ownership, according to *Television & Cable Factbook*. An analysis of more recent data from the same source indicates that the percentage was virtually unchanged in 1985, when about 15.8 percent of the 6,844 U.S. systems had some newspaper-company affiliation.

A separate analysis by *Television & Cable Factbook* shows that among the largest 100 cable systems as of Oct. 1, 1986, franchises that were owned at least in part by newspaper companies reached 16 percent of cable subscribers.

REASONS FOR LEVELING OFF. The newspaper business is not alone in throttling back diversification activity. Marbut and others say changes reflect trends throughout industry. Many businesses have found they need to "focus on things that make the most difference," the Harte-Hanks CEO says. "It's obviously in vogue to dance with the one who brought you."

One of the reasons is the recent slowdown in the economy.

Another is that companies found that when their adjunct businesses needed special attention because of strong competition or another situation, "they weren't prepared to support them in the nitty-gritty battles," Marbut says. The feeling is that when things get tough, "I'd rather shoot my bullets to benefit my own business."

Other executives say that cable television and other endeavors simply turned out to be more trouble than they were worth. "As it turns out, cable was not nearly as great a threat to newspapers as some people once thought it might be," says McClatchy's Potts. "And it turned out to be not as easy to run" as some had thought, he adds.

On the other hand, Potts observes an ironic twist to the cable story: It is contributing to the fragmentation of electronic media. That, in turn, benefits newspapers. "Cable television may turn out to be our best friend in the long run," he says.

Another contributing factor in the "back to basics" trend is that newspaper companies are naturally bullish on newspapers. Newspapers historically have generated impressive revenues and profits. Moreover, many of the executives who lead diversified communications firms got their start in the newspaper business.

Even among large companies that have diversified heavily into broadcast and other profitable areas, newspapers usually are still at the top of the heap when it comes to making money. Newspaper divisions of the 14 largest, publicly owned media companies on average contribute the most in revenues and operating profits—sometimes referred to as profits before taxes and depreciation. (See graph, p. 30.)

Maintaining profits is especially important for public companies because they are under constant stockholder pressure to show good performance. In the process, executives say, public companies might have less leeway in taking on ventures with high current costs but potentially high future profits.

Analyst J. Kendrick Noble Jr., first vice president of PaineWebber Inc. of New York City, says shareholder pressure probably was a factor in Times Mirror's decision to discontinue a consumer videotex service last year and to "focus on fewer lines of business, although in the media field."

Robert F. Erburu, Times Mirror's chairman, president and chief executive officer, characterizes the company's recent string of transactions as "redeploying assets . . . to further concentrate on those activities which are central to our mission as a media communications company."

OTHER EXAMPLES. The consolidation movement is also reflected at Gannett. "I don't think you could say we are diversifying any more," says Douglas H. McCorkindale, vice chairman and chief financial and administrative officer.

Already the biggest company in terms of U.S. daily circulation, Gannett's expansion plans emphasize buying more papers although the company remains "interested in anything in the media business," McCorkindale says.

But it has no designs on book publishing, he says, nor does it currently intend to delve more deeply into electronic services than its USA Today Update—an interactive data-retrieval service. Such services are "not a major factor at this time," he says.

Operation of cable television systems, in which Gannett was involved but left a long time ago, also looks doubtful. Although Gannett has submitted losing bids on cable systems through the years, there always were other properties—usually newspapers—that "presented, at least in our minds, a better future return," McCorkindale says. "That doesn't mean if the right opportunity came along, we would not take a look at it," however.

In fact, one such opportunity came along in mid-December when Gannett announced plans to form a television production company with former National Broadcasting Co. Chairman Grant A. Tinker. The operation will be located at Laird International Studios in Culver City, Calif., which Gannett also said it would buy for $24 million.

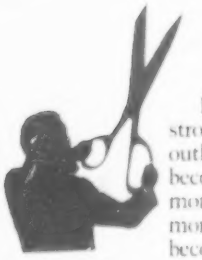
At Pulitzer Publishing Co. of St. Louis, which has both newspapers and broadcast stations, "We want to stay in newspaper properties because that's what we know," says Nicholas G. Penniman IV, senior vice president/newspaper operations. Books and magazines "are out of our ballwick."

Pulitzer has expanded into community newspapers because the purchase prices have been reasonable and because they offer long-term growth, Penniman says.

Multimedia, founded in 1968 through a merger of two newspapers and three TV stations, expanded in the 1970s with television programming and cable systems.

A large firm that says it will own nothing other than newspapers is Ingersoll Publications, with 34 dailies and 115 weeklies. It continues to buy up newspapers at a fast clip. (See story, p. 25.)

Another company that says it will own newspapers exclusively is Media News Group, a 3-year-old, fast-growing group that now consists of 26 dailies and 18 non-dailies. It was MNG that last year acquired the Dallas Times Herald from Times Mirror. The "prospects are zero" for the firm to buy broadcast stations or anything other than newspapers, says President W. Dean Singleton. "We started the company with the intention of publishing newspapers, and that's what we're going to do."



Newspapers will become "a stronger and stronger vehicle" as the number of television outlets increases, Singleton says. "As there become more and more television stations and more and more cable systems and more and more channels on cable franchises, television is becoming fragmented more than ever before."

In past years, an advertiser could reach 90 percent of a market with a single broadcast buy, he adds, but now it is hard to get 60 percent. In fact, he says, covering a market via broadcast will be increasingly difficult short of "seven or eight buys."

SOME STILL EXPANDING. Although the "back to basics" trend is firmly nestled in many company ranks, several have no intention of "consolidating." One is The Hearst Corp., a communications centenarian that has become one of the most heavily diversified firms of its type. Its vast holdings now include 14 dailies, three weeklies, 13 monthly consumer magazines, 28 book-and business-publishing units, six television stations, seven radio stations, five cable systems, King Features Syndicate and other properties.

"Our growth plan . . . over the next several years will follow the same strategy we have had in place for about 10 years," says Frank A. Bennack Jr., president and chief executive officer. Future growth "will continue to come through acquisitions, expansion of existing properties, and new business starts such as our partnership in two major cable TV networks—Lifetime and Arts & Entertainment." Growth for the rest of the decade "and into the 1990s will adhere to the same strategy that has tripled our size in the past 10 years," he says. "The only caveat is that our expansion must be related in some way to communications."

Bennack says that in the last six years, Hearst has spent about $1 billion on acquisitions, including two major magazines, three TV stations, eight daily papers, a major book company, several cable systems and a syndicate.

Alberto Pacheco

As with the steam engine 150 years ago, "today nobody can be certain what form the needs and demands of the information society will take."

Another company that continues to charge full steam ahead with broad-based acquisitions is The News Corp., Rupert Murdoch's international media empire.

"There, we saw a newspaper company go Hollywood," says Tribune Co.'s Longson. The News Corp., through its U.S. subsidiary News America Corp., now owns Twentieth Century Fox Film, Fox Television Stations and Fox Broadcasting Co. which is seeking to become a fourth TV network in the United States.

News America trimmed its daily newspaper holdings in the United States to three last year when it sold the Chicago Sun-Times. [See profile, p. 40.] Two of the remaining Murdoch papers, the New York Post and The Boston Herald, are for sale. In a cross-ownership ruling, the FCC said in late November that Murdoch must sell the Herald within 18 months because of his company's recent purchase of WXNE-TV in Boston.

However, on a global basis, Murdoch continues to pursue newspaper opportunities. Late last year, he bid $1.2 billion (U.S.) for the largest media company in his native Australia, Herald & Weekly Times Inc. He also is acquiring a majority interest in Hong Kong's largest English-language newspaper, the South China Morning Post.

Worldwide, at the end of June 1986, newspapers accounted for 51 percent of The News Corp.'s revenues of about $1.36 billion (U.S.) and for 29 percent of the company's operating income. The previous year, newspapers accounted for 65 percent of revenue and 48 percent of operating income. The decrease reflected the entry into entertainment and other areas. Activities of The News Corp. also include airline and freight services, hotels and resorts, and computer software and related services.

The reason for broad communications diversification, Murdoch says, is to prepare for future communications needs, whatever they might be. "Just as 150 years ago nobody could be sure what the new technology of the steam engine would portend, today nobody can be certain what form the needs and demands of the information society will take," Murdoch said in The News Corp.'s 1986 annual report. "We believe The News Corporation is well-positioned to take advantage of these changing circumstances," he added.

A company that plans both to build up its core business of publishing newspapers and to diversify through cellular radio is Affiliated Publications Inc. of Boston, publisher of The Boston Globe. The firm made an unsuccessful overture last fall to The Journal Co. of Milwaukee, and company officials say openly they hope to acquire additional newspapers. Meanwhile, Affiliated has sold its nine radio stations to help finance growing investments in cellular through McCaw Communications, which is 45-percent-owned by the Boston company.

WHAT THE FUTURE HOLDS. Whether other media companies will resume vigorous diversification activities remains to be seen. According to some analysts, the current situation is just part of a

Holdings of 15 largest U.S. newspaper companies (by daily circulation)

	Dailies	Non-dailies	TV stations	Radio stations	Cable systems	Magazines	Book companies	Other (not necessarily all-inclusive)

continuing business cycle, and expansion into other areas probably will resume with the next swing of the pendulum.

There are no sure bets on the timing. Even looking ahead three to five years is difficult, says Gibbs of Communications Resources. Future developments will depend largely on success of existing acquisitions and on the economy. "It may sound simple, but that's what it boils down to," she says.

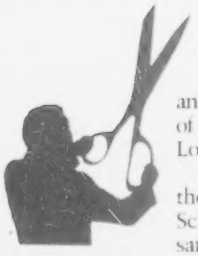
Some companies are preparing for the future by delving into computerized data-retrieval projects. Despite the shutdown last year of Knight-Ridder's Viewtron and Times Mirror's Gateway videotex services, executives say such new services still should be studied.

Lee Enterprises of Davenport, Iowa, is experimenting with an interactive audiotex service—an information-retrieval system using that ubiquitous communications instrument, the telephone. While computer-based videotex has usually turned out to be overly expensive, complicated and burdened by such concerns as violations of the user's privacy, audiotex (sometimes called the "voice information services industry") is relatively unencumbered. "Everybody knows how to use the telphone," notes Robert D. Ross, Lee's vice president of new ventures.

Without tipping his company's hand, the Lee executive says audiotex offers good lessons for newspapers in serving future communications needs. "There are opportunities" in providing over-the-phone services, he says.

Echoing international media magnate Murdoch, Ross observes that no one yet knows how the media mix will end up. That being the case, newspapers should obtain a better "understanding of marketing and retailing so we can better serve clients," he says.

Longson of Tribune Co. agrees. "We can't stop the world from changing," and therefore newspapers should participate to a greater degree than is now the case in the inevitable information evolution, he says. What is the best way to do so? "If I had the



answer to that question, we could add a couple of dollars per share to the bottom line, I think," Longson says.

Lee's audiotex venture, like most projects in their early stages, is not yet profitable. Lloyd G. Schermer, chairman and chief executive officer, said in the company's 1985 annual report that further development costs will be incurred.

However, a 3-year-old audiotex service operated by Dow Jones & Co. and called DowPhone is "nearing profitability, which Dow Jones sees as just around the corner," says Lawrence A. Armour, corporate relations director. DowPhone is part of Dow Jones' Information Services unit, which also includes the successful Dow Jones News/Retrieval Service, an interactive database.

Armour says Dow Jones will continue to have a strong commitment to print. Among its other holdings are The Wall Street Journal and 22 dailies that are part of the Ottaway Newspapers group, plus Barron's business weekly and book publishing. "At the same time, we are saying if they want it [information] electronically . . . we're going to be able to give it to them," Armour explains.

Knight-Ridder, although it abandoned Viewtron, remains a videotex player through its Business Information Services unit. One part of that unit is the Financial Information Group, which includes such things as Commodity News Service, Knight-Ridder Financial News and a system called MoneyCenter. Launched in 1985, MoneyCenter allows personal-computer users to analyze a variety of financial data.

Alvah H. Chapman Jr., Knight-Ridder chairman and chief executive officer, says business information services are the smallest but fastest-growing portion of his firm. Revenue from them rose 19.6-percent in 1985, totaling just under 5 percent of Knight-Ridder's overall revenue. Newspaper advertising and circulation revenue grew 2.9 and 3.5 percent, respectively, and together constituted about 89 percent of the company total.

There are few arguments that the newspaper will continue to be one of the strongest—if not the strongest—information sources.

Although it is conceivable that Viewtron or a similar service could be resumed given a sufficient market, Chapman says that is "not a very viable prospect in the short term."

He notes that newspapers are Knight-Ridder's mainstay. The company's most recent acquisition—for $311 million—was the State-Record Co. of Columbia, S.C., a group of six dailies and two weeklies published in South Carolina and Mississippi. It was the first time since 1980 that the company added to its group of newspapers. "Our philosophy is to become a diverse communications company, but not at a breakneck pace," Chapman explains. "For the long term, newspapers will be predominant in our company."

Executives of many other media companies make similar statements.

Tribune Co.'s Longson says the "newspaper franchise will be more important and stronger than it is today," especially with the fragmenting of broadcast and other proliferation of message outlets. The consumer "needs a single, reliable source" that will serve as the "starting point" in the quest for information. But to be most effective, newspapers must adapt to change. Instead of providing traditional, in-depth stories, Longson says, they may have to offer more abbreviated items serving as "the menu of information that will be important on a daily basis."

Gannett, too, is bullish on its newspaper operations, but it also keeps an eye on the future. McCorkindale says there is enough information "on the cutting room floor of USA Today" to satisfy most anybody's information needs. How people will want to receive that information—indeed, *whether* they will want it—is another matter.

There are few arguments, though, that the newspaper will continue to be one of the strongest, if not the strongest, information sources—and the centerpiece of most media firms' corporate lineups. "It remains one of the great bargains," says newspaper broker Dirks. "I'm just a great believer that the portable, clippable smorgasbord that [readers] get in their daily newspaper is a cost-effective package that will be very hard to improve upon." □

3rd in a series of seven Knight-Ridder 1986 Pulitzer Prize-winning stories.

Why was one of the biggest scandals in the country covered by only one reporter?

© 1986 Knight-Ridder, Inc.

Because no one else believed it could possibly be true.

On January 30, 1985, Arthur Howe reported in Knight-Ridder's Philadelphia Inquirer that the IRS had lost $300 million in tax payments made by 10,000 companies.

Week after week, Howe uncovered mounting evidence of a virtual breakdown in the IRS. Other reporters apparently couldn't believe this could be happening at the omniscient IRS.

The IRS stonewalled Arthur Howe. His questions went unanswered. So he cultivated sources inside the IRS. They told him of a complete collapse in IRS management and morale.

As many as one out of every three income tax returns was mishandled in 1985.

In Atlanta, a worker was caught flushing returns down a toilet.

In Memphis, difficult returns were marked with a big brown "X" – a signal to other workers down the line to destroy the returns.

In Santa Ana, Calif., a mail clerk couldn't keep up with the flood of correspondence. So he took 11,000 pieces of mail, with $800,000 in checks, home.

Arthur Howe uncovered evidence that the IRS was shredding returns. The agency denied it. And The New York Times, among others, ran editorials defending the Internal Revenue Service.

No other newspaper had ever taken on the IRS on such a broad scale. But for Knight-Ridder's Philadelphia Inquirer there was never a question of what to do – stay with the story.

By year's end, the IRS admitted to a nationwide breakdown of its system. And on its 1985 tax forms, the IRS apologized to every American taxpayer.

Arthur Howe won the 1986 Pulitzer Prize for National Reporting. He had written 58 stories in 15 months for The Philadelphia Inquirer. By comparison, other news organizations hardly touched the story.

But The Philadelphia Inquirer is a Knight-Ridder newspaper.

KR

KNIGHT-RIDDER

We never underestimate the American people.

Knight-Ridder, winner of an unprecedented seven Pulitzer Prizes in 1986, is a nationwide communications company with eight television stations, cable systems, business information services and 34 daily newspapers.

FINANCIAL EXECUTIVES

Don't call them "number crunchers." They are increasingly playing central roles at newspapers.

BY GENE GOLTZ
presstime staff writer

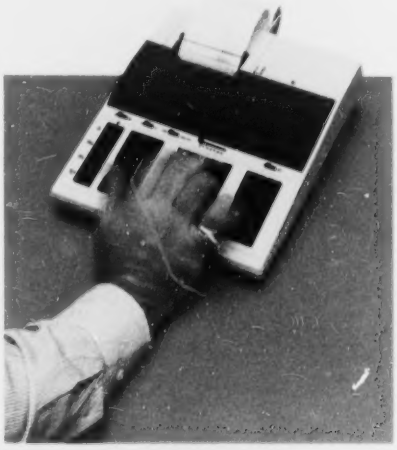
William Randolph Hearst is credited with fanning the flames of the Spanish-American War, if not with actually creating it. When illustrator Frederic Remington wired Hearst from Cuba in 1897 that all was peaceful and he wanted to return home, Hearst wired back: "Please remain. You furnish the pictures and I'll furnish the war."

There is no known record in any history book that Hearst consulted his chief financial officer before firing off the telegram and fomenting a war. Nowadays, however, it is doubtful that many editors or publishers would send a reporter into an adjoining state let alone another country without first checking the budget and conferring with the paper's financial chief who puts the numbers together.

In years gone by it seemed almost an ironclad tradition that the news people never talked to the money people at newspapers. Departments of the modern newspaper, however, are integrated to a degree unheard of in the past. And often it is the chief financial officer who brings them together.

Today, few heads of newspapers, big or small, will make a significant move without consulting the head financial wizard—whether he or she is called the chief financial officer, controller, chief accountant, number cruncher or bean counter.

"One of the things we kind of take for granted is that one of our top roles is to consult with the president and publisher on general policy matters and assist them in making decisions," says R. E. (Bob) Hallowell, vice president/finance at The Seattle Times.



NERVE CENTER. The increasing role of the financial officer is recognized on the news side too.

Ben J. Bowers, vice president and executive editor of the Greensboro (N.C.) News & Record, attended an MBA program at Harvard University in 1984 and learned to appreciate the financial point of view [presstime, Nov. 1986, p. 12]. At least now I know what they're talking about. I'm still not a number cruncher, but finance very definitely is a part of the overall strategic planning."

Today, Bowers talks with financial, advertising and marketing people as a matter of course. Key people from every department serve on the newspaper's marketing committee, and virtually no decisions of importance are made without every department contributing.

The finance department, says Bowers, is the nerve center of the committee. In fact, the committee is chaired by the firm's vice president for financial administration.

How does this approach work in practice? Bowers offers an anecdote.

The news department recently decided it would like to improve business coverage, he says. In the past, it would have simply done it. A couple more reporters would have been put on the business beat, and that would have been the end of it.

"But I'm already running in excess of the newshole I'm allotted," Bowers says, recounting the decision-making process. He brought the problem to the marketing committee, an approach that would have horrified editors years ago.

> *"The controller has a unique perspective, and he's an independent person."*

Someone on the committee thought a way out would be to publish a separate business tabloid to run on Mondays. But an unanswered question was whether it could sustain itself. The advertising director visited some newspapers that had published such tabloids successfully. Then he consulted with the finance people at the News & Record, and they came back with the answer that it could be done.

"We did this together," says Bowers. "That's the type of thing—I almost said 'product,' which is a word an editor could get shot for using some years ago—that comes out of talking with the chief financial officer and the marketing committee."

Richard F. Spears, chief financial officer at the Greensboro paper, carries the titles of vice president and business manager. He has two subordinates, a controller and assistant controller, both certified public accountants, or CPAs, who take care of day-to-day finances and short-term budget items. Spears concerns himself with long-term strategic planning, such as projections of how a new business would perform should the company acquire it.

PROVIDING INFORMATION. The Greensboro daily is an example of how modern newspapers use the talents of their finance people. "No more sitting in the basement counting beans," says Robert Kasabian, executive director of the International Newspaper Financial Executives, a professional association representing 1,100 executives from 800 newspapers around the world but predominantly in North America. Membership is growing, according to Kasabian. "Financial officers," he says, "are in the board rooms. We're in the publishers' offices, helping make decisions."

John O'Brien, vice president and controller of The New York Times and recently elected secretary of INFE, agrees that the role of the chief financial officer in most newspapers has changed dramatically in recent years. The Times is a prime example.

"We work very closely with editorial," O'Brien says. "This is a thing that's changed in the past 10 or 15 years. Now we're all part of the same game. . . .

"What the financial person used to do was present a profit-and-loss summary; he'd crunch all these numbers, and that's all he was invited to do. Gradually, everybody came to realize that his role is to

guard all the assets. So you find that this requires him to look in everybody's bedroom window. The controller has a unique perspective, and he's an independent person, and that's what the publisher needs. You never have enough information to run your newspaper."

The role of the financial officer, says O'Brien, is to give the publisher good information. "If he's going to get bad information, it is not possible for a newspaper to be profitable. If you're not making enough money, you're not going to be around."

Just in the three years since she has been controller at the Journal-Courier and the New Haven Register in New Haven, Conn., Pamela L. Erickson says her role has been evolving.

"We are getting more into sophistication of budgeting and cost studies in the newspaper business," she says. Computers, she says, may have added new elements to the business, but basically the publishers must rely on financial employees to interpret the numerical data as they did in the past.

"It's great to have a computer, but newspapers have had systems all along. Even if you're on a manual system, someone still has to interpret the information. It's great to print out numbers, but who's going to make sure that the numbers come out in the proper places?"

This evolving, broader role of the financial officer is what nearly all of them stress when asked how their jobs are changing.

Hallowell of The Seattle Times, who says he never uses the term "number cruncher" because he finds it demeaning, offers the following as only a partial list of what he does as chief financial officer: planning, safeguarding corporate assets, managing the financial resources, meeting the payroll, handling the cash, investing temporary assets, dealing with 10 to 15 local, state and federal tax jurisdictions, and filling out numerous tax reports each year.

At his paper, as at most other papers, the chief financial officer is a CPA rather than an MBA, or master of business administration, Hallowell says. Even so, the Times has plenty of MBAs in key positions. They include the company president, the controller, the treasurer, the vice president/circulation and the executive editor.

But the CPAs run most aspects of finance, says Hallowell, himself a CPA.

According to the Seattle executive, the finance manager "crosses all department lines." He is the main source of information for management, the one who furnishes the publisher or board of directors with critical information during consideration of acquisitions, other major purchases, or the direction the company can take in the future.

"You've got to decipher the data and tell the boss what it means," says INFE's president.

Another important area where the financial manager serves is as a "facilitator," Hallowell says. "He assists other operating managers in communicating their needs."

The individual in that position must have good rapport with everyone at the newspaper, he adds, inasmuch as he or she communicates with the board of directors, the shareholders, the employees, the owner.

Graham Woodlief, who was elected INFE president at the organization's 39th annual convention in Boston in October, says, "You've got to decipher the data and tell the boss what it means."

Woodlief, chief financial officer for the Richmond (Va.) Times-Dispatch and The Richmond News Leader, says necessary qualifications for a CFO include "professionalism, trust, no nonsense, consistency and discipline."

COMPUTERIZATION. Uzal Martz Jr., president, publisher and treasurer of the Pottsville (Pa.) Republican, agrees that finance people are consulted more than they used to be. The onset of computers had something to do with this, he thinks.

In 1968, when he joined the Republican, the paper, like most others at that time, had no computer system. Now it has eight different computer systems. As chief financial officer in addition to his other duties, Martz is responsible for all eight.

In circulation, for example, the computer has 65,000 households identified as subscribers, non-subscribers and in other categories. When the advertising department wants special information in a special demographic area, the finance department provides the answers.

"So in that sense, the financial department has taken on a broader scope of responsibilities," Martz says.

Computers, however, were only a part of the change that has taken place within the past few years, he says. "I definitely think financial officers are listened to more now than they were in the past, and I think one reason is because there is a greater complexity now."

Today, Martz says, the finance executive's main job is not simply to come up with the numbers but to evaluate those numbers. He or she has to tell the publisher (or in Martz's case, the board of directors) what the numbers mean, in the context of how they are presented.

It's a far cry from nearly a century ago, he says, when finance men wore green eyeshades and "paid the bills and kept track of what you had to pay. All you did then was move numbers around." □

Who at Hearst's William Morrow & Co., Arbor House and Avon Books comes up with the marketing ideas that have helped to produce so many best-sellers?

Everyone.

1 Wanda Chappell, director of subsidiary rights, *Arbor House*. 2 Chuck Thompson, production director, *Arbor House*. 3 Fern Edison, director of publicity and public relations, *Avon Books*. 4 Michael Kazan, publishing manager, *Avon Books*. 5 Paul Deykerhoff, jobber/trade sales manager, *Avon Books*.

The marketing ideas and talents of the people at our Hearst book companies have helped to move a steady stream of good books onto best-seller lists.

At William Morrow & Co., the staff helped place 17 best-sellers on the New York Times best-seller list in a recent 12-month period, including books by John Irving, Joseph Wambaugh, Sidney Sheldon, Ken Follett and Howard Cosell. At Arbor House, works by Elmore Leonard and Gerald A. Browne achieved best-seller status. And among Avon Books' best-selling titles were works authored by Colleen McCullough, Kathleen E. Woodiwiss, Johanna Lindsey and Shirley Busbee.

Throughout The Hearst Corporation, the innovative ideas of our people...all 12,000 of them working in more than 135 Hearst businesses...have helped Hearst become one of the largest and, we think, one of the best communications companies in the world.

There Are Colleagues in Nicaragua Ready to Help Visiting Reporters

BY FRANK AUKOFER

Pack journalism, as most of us understand it, is defined as a group of reporters from different publications who chase the same sources and swap information so they can all write the same story.

Though almost nobody admits to it, and good reporters and editors deride the practice, packs of American reporters dog every major story in the world. And their cooperative efforts are not always bad.

Where the pack encourages homogenization and discourages initiative, it should be condemned. But in special situations it also can function as a reservoir of professional courtesy and provide a newspaper with far better coverage than could be obtained otherwise.

That was precisely what happened when I traveled to Nicaragua to cover the trial of Eugene Hasenfus, who was captured by Sandinista troops after he parachuted from a cargo plane—carrying military supplies for Nicaraguan rebels—that was shot down.

Aukofer has been a reporter for The Milwaukee Journal for 26 years, the last 16 as Washington correspondent. He recently spent three weeks on special assignment in Nicaragua.

The Milwaukee Journal had a double local angle on the story. Hasenfus is from Marinette, Wis., a small city north of Green Bay, and Wisconsin is Nicaragua's sister state in the Partners of the Americas program.

Nicaragua is not an easy place to work, especially for a newspaper reporter with minimal Spanish who was dispatched there quickly to cover a breaking news event. Because I had been there briefly in 1983 as part of a trip through Central America for a seven-part series in the Journal, I had an inkling of what to expect.

Though Nicaraguans display little animosity toward American journalists, the bureaucracy is dense and cumbersome, transportation is difficult, and basic information is hard to come by without help. For example, there are no street addresses in Managua, and telephone books are dated and mostly useless.

Fortunately for me, the foreign press corps there—most of them Americans—contains some of the best journalism colleagues I've met in 26 years as a newspaperman. Everybody helped—with telephone numbers, advice, directions, rides, information, translations, facilities and "fills" from sidewalk interviews.

Not once did I encounter anyone who was even slightly hostile or reluctant to provide assistance. During the Hasenfus trial, for example, it was virtually impossible for one reporter to interview all the principals as they arrived and left. So we went in different directions and filled in each other later. With my poor Spanish, I was more of a consumer than a provider.

Working for an afternoon paper, I occasionally had to file on deadline. But there were no telephones available for international calls anywhere near the trial. At first, I was able to get back to my hotel, which was 10 minutes away. Later, however, the Sandinistas took over that hotel for official guests attending their 25th anniversary celebration and moved journalists to hotels in outlying areas.

When that happened, ABC News and The Washington Post, which have their bureaus in the same house in downtown Managua, let me use their telephones and other facilities. The Post's Edward Cody, an experienced foreign correspondent, also helped me sort facts from folderol. On occasion, I worked out of the AP bureau, and the NBC bureau helped me keep track of all scheduled events.

When I ran short of money and had little hope of getting any because of the U.S. trade embargo, NBC Bureau Chief Elena Calder came to the rescue. The Journal sent a check to NBC in New York, which authorized Calder to disburse dollars to me. Laura Lopez of Time magazine not only whispered translations but also helped bail me out of a money-exchange dilemma. I could easily list half a dozen others who made life easier so I could concentrate on my reporting.

Though I had all that help, I spent most of my time working on my own. I reported on the trial and also developed many other stories—some with local angles, some not. The Journal's coverage was unique and tailored to its readers, but it was far better than it might have been because of the professional courtesy of colleagues. Call it pack journalism at its best. □

Aukofer (right) listens during the trial of Hasenfus (center). Also listening is interpreter Jose Perez.

There's a Right Way To Handle Dismissals

BY PATRICIA P. RENFROE

Many successful newspaper executives maintain that one of the most important things they do—if not the most important—is hiring good workers. However, the flip side to that activity—discharging employees who are not productive—is becoming an equal challenge.

The necessary dismissal of poor performers can still be done, of course, but it's not as easy as it once was. The key is to establish a clear procedure and then stick to it.

Dismissing an employee involves trauma for both the employee and the organization. The goal is to minimize that trauma by treating the individual as humanely as possible and to protect the company by ensuring that former employees have no grounds for successful legal action.

It's this threat of legal action that is at the core of the recent lament of some newspaper managers: "We cannot dismiss poor performers. The government and courts will not let us."

In most cases, this simply is not true. Publishers and human resources executives report there have been relatively few legal actions taken against newspapers after firing employees for unsatisfactory work, poor attendance, or violations of company rules and policies. And in those instances when cases have been brought, newspapers have prevailed in the vast majority.

Avoiding legal action, they say, depends upon the establishment of formal procedures such as performance appraisals [presstime, Aug. 1986, p. 17] and progressive discipline actions. Both entail written records shared with employees and maintained in personnel files.

NECESSARY STEPS. Judith A. Szabados, manager of human resources at the Daily Herald of Arlington Heights, Ill., says a well-designed and properly administered appraisal system can be a major factor in helping an employee meet performance standards or in defending a dismissal decision should that become necessary. She says that the Herald system of new-employee reviews after 30, 60 and 90 days keeps managers in close contact with recent hires. The plan provides early insight to a worker's performance.

In addition, an annual performance review serves as an ongoing monitor of an employee's performance growth. It also documents that a dismissal decision is based on facts and not on supervisory whim.

A progressive discipline system is an effective way for newspaper managers to address poor attendance, tardiness and violations of policies and rules, from which most discharges at newspapers originate.

The system is set up to inform employees of problems and to direct that corrective action be taken. It is a formal system designed to apply pressure for improvement through multiple verbal and, finally, written warnings. Ultimately, it is the vehicle for discharging the employee who has been given every opportunity to meet prescribed improvement and has not done so. Managers' efforts to assist employees should also be documented as part of the plan.

At the Carroll County Times in Westminster, Md., employees reaching the written warning stage are notified they must show improvement in a given period, says Publisher Edward E. Beeler. Time limitations are imperative for both the employee and the supervisor because they keep everyone directed toward achieving a stated goal: improving performance or changing behavior.

EXECUTING THE PLAN. Accurate and fair administration of any discipline system is necessary not only from an operational standpoint, but also as legal support in a challenged discharge. Good administration hinges on several managerial steps.

First, supervisors need to know who in management should be informed about a problem and who has final authority to dismiss. At the Fort Myers (Fla.) News-Press, for example, no one is discharged without publisher approval. This is true also at Beeler's newspaper, where, he says, every piece of documentation crosses his desk for a final OK.

Other newspapers require department heads or supervisors to consult with the personnel department.

The actual dismissal is handled in most instances by the employee's immediate supervisor.

The second step is that every phase of the process should be documented, even verbal warnings. This can be done by placing a temporary memorandum in the personnel file noting that a discussion took place with an employee and listing changes the worker was told to make.

Written warnings often are in a specific format, sometimes even on a printed form. They can become a permanent part of the employee's file.

Complete documentation becomes important also in the increasingly difficult area of reference checking. How responsive a former employer can be when contacted by a discharged employee's potential employer is predicated in part on whether the information can be substantiated by the personnel file [presstime, Dec. 1985, p. 22].

While some managers believe that the employee should have a copy of any memorandum placed in his or her file, others disagree. So do some attorneys.

State laws vary on employee access to such files, but most states do allow access. Newspaper executives should be aware of the law in their state.

It is also advisable, say some managers, to think of how "you would want to be treated in such an instance." Surprises in the personnel files can lead employees to distrust management's motivation.

The third management step involves training managers and supervisors to use the process correctly. Executives should know the purpose of performance appraisals, the progressive discipline process and the various steps to be used. They also should develop skills to approach and hold discussions with employees.

Jo-Ann Bradley, human resources director at the Fort Myers daily, attributes her newspaper's low percentage of dismissals to proper training. "It is made clear here," she says, "that every supervisor is expected to implement all phases correctly—to seek improvement and not to jeopardize the newspaper."

Yet another step for managers is to educate employees about the various policies. Many newspaper employee handbooks briefly outline the policies. But experts say supervisors should further discuss them with subordinates.

Experts say that so long as newspapers adhere to these and other reasonable policies, their track record of fair and successful employee terminations will continue. □

Renfroe is ANPA manager personnel relations.

Readers (People) Respond Best To Messages From the Heart

BY DANIEL J. WARNER SR.

Those of us who attended the American Press Institute's J. Montgomery Curtis memorial seminar in September were asked to speak two minutes or so on the subject of attracting and retaining readers.

Somehow, the subject didn't hit quite right with me, until I started thinking of it not as attracting and retaining readers, but as attracting and retaining people. Like it or not, that's what readers are.

It caused me to think of various people in my lifetime I've tried to attract and retain.

There was Faith Dwelling in the third grade. When I tried to attract her, she stuck me with a pencil, the lead of which still is embodied in my left hand.

And Cynthia Lowry in the seventh grade. She was the 20-some-year-old sister of one of my friends, and I think I bemused her for about 10 minutes one Saturday afternoon.

There was DeeAnna Munns, and Beverly Brooks, and Susie and Barbara in high school, all of whom I managed to attract but failed to retain.

Finally, there was Janet. I attracted her at the age of 20 and have managed to retain her since.

I did it by being myself to her.

But newspaper editors, it seems, don't do that when they try to attract and retain readers.

I've done 18 or 20 API seminars, and in them I've had the opportunity to critique 600 to 700 newspapers.

You know what I find when I read those newspapers? I find that the editors and writers, and even photographers, somehow leave their humanity at the door when they come to work in the morning.

Instead of being human, they try to be important or significant. They talk about issues and such.

Once, in preparation for a seminar, I asked a group of editors to write out what they had personally done for a week and what they cared about as individuals. Then I critiqued their newspapers. Do you know that not one of the things they mentioned as personally doing or being important to them appeared in their papers. Instead, in the stories and in the headlines, they were full of words like meeting, budget, planning, program, agency, funding, implementing, welfare, sewerage, waste disposal and mass transit.

Daniel J. Warner Sr.

A recent job applicant proudly showed me a clip of a story he had done on how the federal budget might affect a certain local county. It was full of words like those above. It mentioned programs, agencies and issues. It didn't say a damned thing about people.

I said, "Who cares?"

He said, "This is important stuff."

I said, "Look, tonight after work I have to pick my son up at the bus, go home and talk about his class schedule for this year, hear my wife tell me about what a jerk her boss is, eat supper, clip the bushes out front, go to a church meeting to argue over whether we really want to give a lot of money to the poor, and then come home and play with the dog and maybe even my wife.

"What kind of a headline are you going to put on that story that makes me interrupt any of that to sit down and read the paper?"

He said, "I see what you mean."

If I am going to be attracted to a newspaper, I need to see on it front pages with pictures that show action and relationships and stories and headlines with words in them like life, death, love, family, mother, father, brother, sister, money, sex, children, neighbors, neighborhoods, tragedy, caring, hunger, desire and damned shame.

I need to see something in the paper that touches my feelings—that makes me feel elated, or brings tears to my eyes, or makes me damned mad or scares the beejeebers out of me.

I need stories that tell me about bravery.

Or wrongdoing.

Or success and failure.

I need stories that touch my life—*my* life. I need to know how the tax bill touches me, or how drugged-out fellow workers screw up my job security, or how the mayor will cost me money today or next year.

I need stories that are done with a sense of craft and caring. I want to know that some writer cared enough about me, the reader, to do it well.

I need stories that are exciting and lively. I have enough boredom and drudgery in my life.

I need a newspaper that doesn't deliver a monologue but invites me to a dialogue. We run a call-in column called SoundOff. Recently, I did a focus group where every reader declared that he or she read SoundOff daily.

When I asked why, one young man, shy until then, blurted out: "Well, people talk about things they are mad about, and when you read it you don't feel so alone anymore."

I need a newspaper that shows it cares about me. I need a newspaper so attuned to my world that when I read it I shake my head and say, "Wow." Such a newspaper is one that shares my values as a human being.

Let me give an example:

The day after the space shuttle Challenger exploded, newspapers across the country ran editorials saying NASA and the shuttle program should go on. That was an intellectual position I don't argue. But a day after Challenger exploded, it was an intellectual position that didn't matter.

What mattered was that a nation shared a common grief for Christa McAuliffe and her fellow explorers.

That's how we wrote our editorial—from the gut, not the head. Or, if you prefer, from the heart—the same way I wrote love letters to my Janet, who I won and have retained for nearly 30 years. □

Warner is editor of The Eagle-Tribune in Lawrence, Mass.

4th in a series of seven Knight-Ridder 1986 Pulitzer Prize-winning stories.

She's the best in the business at cops and robbers.

© 1986 Knight-Ridder, Inc.

Edna has relentless curiosity.

She dresses each morning to the cryptic crackling of police radios.

On her way to work, she often stops by police stations and scans the printouts to see if there were any intriguing overnight arrests.

Once at her desk, she'll phone an assortment of detectives. There isn't a cop in town who has to ask, "Edna who?"

Every city in the country has crime.

Only one has Edna.

Edna Buchanan covers crime and the cops for The Miami Herald. Edna's byline is on more than 200 stories a year.

All this in a newspapering age where the police beat is often considered a mere jumping off place for more "desirable beats."

Edna can't imagine a better assignment.

"Writing police stories is never dull," she says. "They're people stories, what makes people tick. What brings out the best in people or drives them berserk. You can't learn as much about people on another newspaper beat."

Edna fiercely follows up leads.

Edna hiked all over Coral Gables, Fla. looking for a hooded rapist.

He is still at large. But through her stories, the police know a lot more about him.

She tries to find out why life ends too soon for so many. Why a feisty boxing champ found depression a fight he couldn't win and killed himself. And there was her painful account of how a father felt compelled to kill his comatose 3-year-old daughter in her hospital crib.

For these and other stories, Edna Buchanan won the 1986 Pulitzer Prize for General News Reporting.

Edna has been developing her own police stories at the Herald for 15 years.

Many newspapers shift reporters from beat to beat so often they can never have this kind of crime coverage.

But The Miami Herald is a Knight-Ridder newspaper.

KR

KNIGHT-RIDDER

We never underestimate the American people.

Knight-Ridder, winner of an unprecedented seven Pulitzer Prizes in 1986, is a nationwide communications company with eight television stations, cable systems, business information services and 34 daily newspapers.

Robert E. Page

Chicago Sun-Times publisher thrives on competition

BY CLARK NEWSOM
presstime staff writer

Robert E. Page has been in highly competitive situations all his working life. He has faced the pressure of working in the wire-service business and has done battle for warring newspapers in San Antonio, Boston and, since 1984, Chicago.

Even when he started out at the old Illinois State Journal in Springfield, a morning paper, he was up against a competing afternoon daily.

Page still does not rest easy. But one thing has been different since last July. Now he can call *all* the shots as president, publisher, chief executive officer and part-owner of the Chicago Sun-Times. Then its president and publisher, Page headed an investor group that bought the paper last year from Rupert Murdoch's News America Publishing Inc.

At 51, Page still relies heavily on the personal touch as he leads his paper against the competition. For example, he narrates the radio and TV commercials for the Sun-Times himself. He also serves on the boards of a number of civic and charitable organizations. "He's very community-minded and very involved in community matters," says longtime friend Victor Strimbu Jr., a media lawyer in Cleveland. "He's an extremely able speaker." The deep-voiced Page has described himself as a person with "a television voice and a radio face."

Others characterize the slender, 6-foot Page as "urbane" and "extremely well-tailored." The image is quite a switch for a man who a former colleague says used to part his hair "right down the middle" and who was called "Fats" while growing up in Springfield. His family moved there from his native Lincoln, Ill., about 30 miles distant, when he was 3 years old. "That's true," Page says of his nickname as a teen-ager. "I was a fat, happy kid covering sports for the local newspaper."

Page started working in the sports department of the Illinois State Journal in 1952 when he was a 16-year-old high school sophomore. He says he got the job, which paid 80 cents an hour, through the paper's telegraph editor, a neighbor. Page continued to work for the paper through high school and college.

After graduating from Illinois Wesleyan University in Bloomington, he joined United Press International in 1960 as a reporter in the Des Moines bureau.

Page spent 20 years with UPI, serving as its Midwest business manager in Chicago between 1964 and 1967 before moving on to other executive assignments in New York City, Boston, London and Hong Kong. In 1972, while the Vietnam War was still raging, he was put in charge of the wire service's Asian operations; at 37, he was then UPI's youngest vice president. After returning to the United States in 1974, he became general manager—UPI's second-highest executive.

Robert E. Page

In 1980, two years before E.W. Scripps Co. sold UPI, Page left the wire service to join The Hearst Corp.'s San Antonio Light as assistant publisher and editor. In a statement at the time, he said he resigned not because of any concern over the future of UPI. Rather, he wanted the challenge of helping to publish a big-city newspaper in a competitive situation.

The following year he accepted an offer to join Murdoch's News America Publishing Inc. as general manager of the Light's rival, the San Antonio Express-News. When Murdoch bought the ailing Boston Herald American from Hearst in 1982, Page was sent there as publisher.

In January 1984, Murdoch acquired the Sun-Times and Page left a recovering (and renamed) Boston Herald to become president and publisher of the Chicago daily.

"Having worked as a reporter," says H.L. Stevenson, former editor-in-chief of UPI, "he's sympathetic to and understands the editorial process. He's not a bookkeeper type, but he has a quick grasp of figures and costs."

Page says he has no regional or national pretensions for the Sun-Times. "We view ourselves as a Chicago newspaper published by Chicagoans," he says. "Our goal is to produce a first-rate, quality newspaper that fulfills both its journalistic and community responsibilities in a high profile and traditional sense."

"He's done a remarkable job with the Sun-Times, particularly since he's taken over ownership," says J.P. (Jack) Clarke, publisher of The State Journal-Register in Springfield. "I think the Sun-Times does a better job of covering the city of Chicago than the (Chicago) Tribune."

Although Charles T. Brumback, president and chief executive officer of the Chicago Tribune Co., has no comment on his competitor's operations, he says, "I'm envious of anyone who can own their own newspaper."

Circulation averages for the six months ended Sept. 30, 1986, show decreases at both Chicago dailies. Each attributes the loss to Sunday price hikes and to the end of late-afternoon editions. Daily circulation of the Sun-Times dropped 1.7 percent to 612,686; the Tribune fell 1.2 percent to 744,969.

The investor group headed by Page is exerting efforts elsewhere. Like many other newspaper companies, the Sun-Times Co. is "very acquisition-minded," he explains. "We view ourselves as a growth company and our goal is to be bigger each year." In December the company took over Star Publications, a group of 12 twice-weekly papers in south suburban Chicago.

"Consumed by the newspaper business," Page says he does find time to exercise and enjoys walking—especially on the beach at Cape Cod, Mass., where he owns a home with his wife, Nancy Merrill, who has a weekly television talk show in Boston.

Page has two sons from a previous marriage. One is an executive with UPI in Philadelphia. □

LEGISLATION

A different look on Capitol Hill

When the 100th Congress convenes Jan. 6, the newspaper business' efforts to deal with a variety of press-related issues on Capitol Hill will be complicated by numerous leadership changes.

In response to the changes, ANPA's government and legal experts plan to launch a systematic program of contacting the chairmen of key congressional committees and their top staffers, according to W. Terry Maguire, ANPA vice president/general counsel.

At the top of ANPA's legislative agenda will be countering attempts to restrict tobacco advertising, overseeing implementation of recently enacted amendments to the Freedom of Information Act and monitoring telecommunications legislation.

"The most effective way to prepare ourselves for the next two years of the Congress is to make sure we have talked to the people in leadership positions at the earliest possible time," said Maguire.

The object of the contacts, he added, is to ensure a mutual understanding of views and to "avoid situations in which we may be raising concerns with people with whom we have not had the opportunity to lay the appropriate groundwork."

There are several new, key chairmanships in the Senate, where Democrats wrested control from the Republicans in the November election and now hold a 55-45 majority.

The Senate Commerce Committee, which has jurisdiction over telecommunications legislation, will get a new chairman in Ernest F. Hollings (D-S.C.).

In the last Congress, Hollings took no position on one telecommunications bill of keen interest to newspapers; it would have transferred jurisdiction over the AT&T consent decree from U.S. District Judge Harold H. Greene to the Federal Communications Commission. "He didn't feel he needed [a position] yet," explained Thomas W. Cohen, staff counsel for the communications subcommittee.

Former Chairman John C. Danforth (R-Mo.) introduced amendments to the bill that would have preserved what newspaper interests label the "diversity principle"—the concept that a monopoly telephone company should not control the information transmitted over its lines.

Maguire said the Association will be watching to see if telecommunications legislation materializes and in what form. Congressional action will be influenced by what takes place in other governmental arenas, particularly in Judge Greene's court, he said. [See story, p. 44.]

ANPA's legislative agenda is headed by tobacco advertising, FOIA and telecommunications.

Hollings is also viewed as a supporter of the "fairness doctrine," which imposes content requirements on broadcasters.

For the newspaper business, another key Senate panel is the Labor and Human Resources Committee, which will be headed by Edward M. Kennedy (D-Mass.). The committee shares jurisdiction with the Commerce Committee over legislation to restrict tobacco advertising. In the last Congress, Kennedy was a chief cosponsor of the bill enacted by Congress to require health warning labels on smokeless tobacco products, and he cosponsored a bill introduced by Sen. Bill Bradley (D-N.J.) to deny tax deductability for tobacco advertising expenses.

ANPA will continue to press its position that anything legal to sell should be legal to advertise, according to Maguire.

On the House side, Rep. Mike Synar (D-Okla.) is expected to reintroduce his bill to ban all tobacco advertising, according to ANPA Counsel René P. Milam. "We wouldn't be surprised if it's HR 1," she said, the number given to the very first bill introduced in the House at the beginning of each Congress.

Ernest F. Hollings

Edward M. Kennedy

Momentum appears to be growing to do something to restrict tobacco advertising. The New York State Bar Association has adopted a resolution calling for a ban on all forms of media advertising of tobacco products. It has submitted the resolution to the American Bar Association House of Delegates for consideration at its mid-winter meeting in February.

Because amendments to the Freedom of Information Act were passed and enacted late in the last Congress, attention is expected to turn to how the new law is implemented. On the House side, the Government Information, Justice and Agriculture Subcommittee is likely to conduct FOIA oversight hearings and to look at electronic information issues, privacy and, possibly, the government's information classification system.

Although Congress is not expected to consider additional major tax revision legislation, it will probably pass a bill making "technical" corrections to the tax bill enacted last year, said Martin Casey, ANPA manager-government and international affairs. "That creates a vehicle for substantive tax measures," such as legislation to deny deductability for tobacco ad expenses, he warned.

Casey also noted that in the last session, Congress called for a Treasury Department study of the effects of all existing exemptions to excise taxes, including the newsgathering exemption for long-distance telephone calls. The study must be completed by June 30. "We will certainly have to advise Treasury at some point of the wisdom of keeping that exemption," Casey said.

In the labor area, bills are expected to be introduced to raise the minimum wage; to provide a system of government notification to employees of hazardous working conditions; and to require employers to give workers unpaid child care leave.

Other initiatives ANPA will be watching for include efforts to repeal laws restricting lottery advertising, trade issues and tort reform.

According to Congressional Quarterly, 28 of the 535 members of the 100th Congress claim journalism backgrounds—20 members of the House, eight Senators.

—Margaret Genovese

COURTS

Antitrust suits heat up

A lawsuit described by defense counsel as a "classic shopper vs. newspaper" antitrust case apparently will go to trial in February in U.S. District Court in St. Paul.

In another antitrust action, two Pennsylvania newspaper companies have charged Ingersoll Publications Co. with attempting to monopolize local display, insert and classified advertising in the western suburbs of Philadelphia through its newspaper acquisitions.

In the Minnesota case, Applied Graphic Arts of Wadena Inc., publisher of the Circle Shopper in Wadena, has charged a number of parties with conspiracy to restrain trade and attempting to monopolize advertising in violation of sections 1 and 2 of the Sherman Antitrust Act.

Defendants include Wadena Newspapers Inc., publisher of the Wadena Pioneer Journal, a paid-circulation weekly, and a free-circulation shopper; Parta Printers Inc., publisher of weekly newspapers in nearby New York Mills and Perham; and the printing plant where the Pioneer Journal is published.

Mark R. Antinson, lawyer for the defendants, said the trial probably will begin in February.

In the Pennsylvania case, Ad Pro Inc. and LiebComm Inc., which own and operate newspapers in the western suburbs of Philadelphia, Nov. 4 filed suit in U.S. District Court in Philadelphia against the Ingersoll group, which owns and/or operates more than a dozen newspapers in Pennsylvania.

The two companies are seeking damages and divestiture of one or more of the newspapers.

Ingersoll Publications has not formally replied to the complaint. □

Morison appeal will get support from press

ANPA will join other press organizations in filing a friend-of-the-court brief in the appeal of the espionage conviction of former naval analyst Samuel L. Morison.

Morison was found guilty of espionage and theft of government property for providing classified photographs to a British defense publication.

The press organizations will argue in their brief to the 4th U.S. Circuit Court of Appeals that the statutes under which Morison was convicted were not intended to be applied to the dissemination of information to or by the press [presstime, Dec. 1986, p. 52].

Other parties to the brief include the American Society of Newspaper Editors, the Reporters Committee for Freedom of the Press and The Washington Post. □

COURT BRIEFS

• Responding to a request from the ANPA-American Bar Association Task Force, two ABA divisions have agreed to delete references to **impersonation of the news media** from a report containing recommendations for laws governing undercover law enforcement operations.

The report will be presented to the ABA House of Delegates in February [presstime, Nov. 1986, p. 54].

• The California Supreme Court has **overturned a $4.56-million libel judgment** against The Hearst Corp. and two reporters over a 1976 series of articles in the San Francisco Examiner. It had been the largest libel damage award ever upheld by an appellate court [presstime, March 1986, p. 43].

The California high court ruled that the defendants "did not harbor actual malice when they published the articles containing false allegations of official misconduct" involving the plaintiffs, San Francisco law enforcement officials.

• The Massachusetts Supreme Judicial Court has **dismissed a libel suit** against The Boston Globe and syndicated columnist Ellen Goodman over a 1983 column in which she commented on the outcome of a rape trial. The suit was brought by a defendant in the case, who was acquitted of rape charges but found guilty of malicious destruction of property for damaging the victim's car.

In granting summary judgment, the court ruled that the statements in question "are constitutionally protected statements of opinion."

• The U.S. Supreme Court has agreed to hear the appeal of the **securities fraud conviction** of former Wall Street Journal reporter R. Foster Winans [presstime, Aug. 1986, p. 37].

REGULATIONS

Justice Department won't expedite bid for Detroit JOA

Saying that the application by Detroit's two daily newspapers for approval of a joint operating arrangement poses a difficult question and presents "troubling legal issues," the Justice Department has indicated it will not be rushed into a decision on the matter.

Meanwhile, Nashville's two daily newspapers have notified the Justice Department of an alteration to their JOA.

The Justice Department's comments on the Detroit case came in Dec. 8 letters to two Michigan congressmen who had asked Attorney General Edwin Meese III to rule by that date on the application of the Detroit Free Press and The Detroit News.

"The Department is very much aware of the uncertainty created by delay and of the need for a resolution of this issue on the part of the applicants as well as their employees, advertisers and subscribers," said Assistant Attorney General John R. Bolton. "The difficulty of the question, however, and the unique issues presented by this application, require that substantial attention be given to the matter by senior Department officials. . . .

"Similarly, even the decision whether to hold a hearing is difficult, because it requires considerable analysis of the merits, which are factually complex and present certain troubling legal issues," he said.

"I read that letter basically to say, 'Be patient,'" said Lawrence J. Aldrich, senior legal counsel for Gannett Co., owner of The Detroit News.

Under the new JOA agreement in Nashville, the Newspaper Printing Corp., which had served as the business agent for both the Nashville Banner (evening, circulation 68,863) and The Tennessean (morning, 119,120), will be dissolved. The Tennessean, a Gannett paper, will assume the business functions for both papers. The Banner is owned by Brownlee O. Currey Jr. and Irby C. Simpkins Jr.

The new contract extends through 2022; the old one was to have expired in 1997 [presstime, Aug. 1985, p. 16].

Under the revised contract, the profit is split increasingly in favor of The Tennessean. The ratio goes from 70:30 under the previous agreement to 74.5 and 25.5. Then in 1989, the ratio is placed on a sliding scale until it reaches 83.5 and 16.5 in 2005. □

Videotex exodus continues

Shortly after Time Inc. pulled out as a partner in the Covidea videotex enterprise, The New York Times Co. withdrew as an information provider.

The Times supplied news, sports and other information to Covidea in a service called New York Pulse. A Times spokesman said the decision to cancel the service had been under discussion for months and had nothing to do with Time magazine's withdrawal. The Times' cancellation is effective Jan. 4.

Time Inc. was a minority partner in Covidea, with an estimated $10 million to $15 million investment, according to Advertising Age.

Covidea, started in the summer of 1985, is a telephone-based videotex system to businesses and homes in the New York area (**presstime**, Dec. 1985, p. 42). Other partners in the venture are AT&T and Chemical Bank, each of which put up about 45 percent of the estimated $150-million Covidea investment.

Time spokesman Michael Luftman said his company decided the videotex enterprise was not the direction it wanted to go, although Time said it will continue to provide editorial matter to Covidea.

The New York Times' withdrawal from the project was the latest in a succession of electronic-publishing abandonments by newspaper companies that once viewed the new services as potential competitors for news and advertising.

A recent study by International Resource Development found that electronic publishing has proven to have little impact on newspapers and other print publishing—in spite of the fact that the database-services market was expected to have revenues of $1.9 billion in 1986.

"A few specialized (print) directories will fall by the wayside, to be replaced by electronic equivalents, but we really don't see a devastation of the traditional newspaper or yellow pages industries," said Jean Buffham, IRD research analyst.

The IRD report also said the price of services must come down before videotex will be viable in the home. Meanwhile, it remains a tool for businesses that need quick, specialized financial information.

Among electronic-publishing ventures folded in recent years were:

- An experiment in teletext—a technology in which information is scrolled on a screen with little or no user control—that Time dropped in 1983 after investing $30 million. The service appeared on cable-TV systems in San Diego and Orlando.
- Keycom, a videotex venture of Field Enterprises Inc., Centel Communications Co. and Honeywell Inc., that last year folded its consumer operation while continuing service to some businesses in the Chicago area.
- Knight-Ridder Inc.'s Viewtron videotex service that shut down in 1986 after the company invested $50 million.
- The Times Mirror Co.'s Gateway videotex project in southern California that was terminated last year. The company will not disclose how much it spent on the project.

One of the few remaining consumer videotex projects is Trintex, founded in February 1984 and scheduled to start operations in two years. It, too, faces an uphill climb. One of its three partners, CBS Inc., decided Nov. 14 to relinquish its interest. Sears, Roebuck and Co. and IBM are the remaining equal partners in Trintex, which is supposed to feature electronic shopping and banking. □

TELECOMMUNICATIONS NOTES

- The Atlanta Journal and Constitution **discontinued a local video production operation** that had furnished programs to two cable TV systems since November 1984.

  The company, Video Edition, produced programs on local sports, news and community affairs.

  Minor J. (Buddy) Ward, president of Atlanta Newspapers, said because the company could not get more cable systems to carry the programs, the Video Edition project was unsuccessful, but it was "a valuable experiment."

- An electronic **voice-information service** capable of replacing 200 telephone operators handling 3,000 calls was successfully tested by NBC News in the general election last November.

  Call-It Co., a unit of Lee Enterprises Inc., furnished the system that enabled reporters conducting exit polls to phone in results. The calls were processed by a computerized "audio prompt/response system" in the NBC News computer room.

  A full-scale system could handle up to 250 telephone calls simultaneously, said Andrew Monteverde, NBC telecommunications manager for contracts.

AT&T wants review shifted from Greene to FCC

AT&T has asked a federal court to order the Federal Communications Commission to take over the job of determining what businesses the regional Bell operating companies may enter.

Five of the seven BOCs have opposed the request.

If granted, the motion, filed with U.S. District Judge Harold H. Greene, would remove the Justice Department from the task of reviewing new-business waiver requests. Currently, the Justice Department studies each new-business proposal from the BOCs and makes a recommendation to Greene for his approval or rejection.

AT&T Senior Vice President Alfred C. Partoll said the FCC is better qualified to review the requests. Under the AT&T proposal, Greene would retain the right of approval.

Spokesmen for the opposing regional firms said FCC review would be cumbersome and would cause substantial delay in efforts to expand their business activities. Spun off from AT&T in the divestiture that took effect Jan. 1, 1984, the regionals said AT&T's motion is an attempt to throw roadblocks in front of their attempts to enter new businesses in which AT&T itself is interested.

In a related development, ANPA has asked the Justice Department to make public the "Huber Report," written for the department by Washington consultant and lawyer Peter Huber following a year of study on the ramifications of the divestiture.

The Justice Department is expected to utilize the Huber document this month when it reports to Greene on the current status and problems of the telephone companies.

ANPA said the report should be available for public review and that "equity calls for its release" because some in the news media already have seen it.

Communications Daily, Telecommunications Reports, The Wall Street Journal and The New York Times are among publications that already have reported on contents of the report.

Communications Daily reported that the 1,000-page document calls the former BOCs financially healthy. Huber also concluded that there was no need for immediate action to loosen modified final judgment restrictions unilaterally, the publication said. □

5th in a series of seven Knight-Ridder 1986 Pulitzer Prize-winning stories.

The Pulitzer Prize-winning story no one wanted to read.

© 1986 Knight Ridder, Inc.

Breakfasts all over Kentucky were ruined that Sunday.

Right there, on the front page of Knight-Ridder's Lexington Herald-Leader, was a devastating article about a revered Kentucky institution. University of Kentucky basketball.

In stories as painful to report as to read, correspondents Jeffrey Marx and Michael York told in great detail how some Kentucky Wildcat basketball players had been paid to play.

After games, wealthy Wildcat boosters gave star players "hundred dollar handshakes." There were free meals and free clothes.

These are all serious violations of NCAA rules.

Many fans thought the payoffs were wrong, but the reaction of some was to blame the messenger – the Herald-Leader. Angry fans led a "Trash the Herald-Leader" rally. Several hundred canceled subscriptions.

Marx and York also reported on athletes at other colleges.

A Chicago high school all-American was promised $100,000 if he'd go to one of the Big Ten universities.

A Texas junior college player was offered $50,000 to transfer to a four-year school.

Others said that offers of $10,000 were common.

The series prompted an impassioned debate about under-the-table payments to players. The controversy led to reform. Paying cash to college players, once considered commonplace, even prestigious to some, had lost its respectability.

In Kentucky, booster groups were banned from locker rooms. Cars and speaking engagements had to be registered with the University.

Nationally, similar soul-searching and changes took place on many campuses.

Reporters Jeffrey Marx and Michael York worked for seven months and conducted more than 200 interviews to get this story. Their effort won the 1986 Pulitzer Prize for Investigative Reporting.

The editors of the Lexington Herald-Leader knew this would be both an important and a very unpopular series. Some news organizations wouldn't have risked reporting the story.

But the Lexington Herald-Leader is a Knight-Ridder newspaper.

KR

KNIGHT-RIDDER

We never underestimate the American people.

Knight-Ridder, winner of an unprecedented seven Pulitzer Prizes in 1986, is a nationwide communications company with eight television stations, cable systems, business information services and 34 daily newspapers.

Educators scorn intern drug testing

Two organizations representing journalism educators are urging newspapers and other media not to require students to pass drug tests before they can become interns.

A resolution requesting cessation of drug tests for interns was adopted by the executive committees of the Association of Schools of Journalism and Mass Communication and the Association for Education in Journalism and Mass Communication at meetings Dec. 5-7 in San Antonio.

The educators cited four reasons why they believe the tests should be stopped:

- The mass media should champion the rights of personal privacy.
- Routine drug tests without reasonable suspicion that a person has taken drugs constitute "unreasonable search and seizure."
- Drug tests are inaccurate far too often.
- Interns are students, not permanent employees.

The resolution originated with ASJMC, which received a complaint from the School of Journalism at the University of Southern California. According to the school's director, Bryce Nelson, several of its students have been required to undergo drug tests. "We do not approach it from wanting to protect the students," said Nelson. "We think it really does raise real questions of personal privacy, dignity and personal liberties."

In addition to bringing the matter to the attention of ASJMC, the school also wrote a letter of protest to The Times Mirror Co., whose Los Angeles Times was one of the newspapers requiring the tests.

Tom Johnson, publisher and chief executive officer of the Times, responded that the newspaper is committed to providing a "safe and productive work environment" and that it expects employees to arrive at work, and remain during work hours, "free of the influence of alcohol or drugs.

"Pre-employment drug testing, as distasteful as the subject may be, does provide an indication of a potential employee's ability to do this."

He said pre-employment physicals are required of full-time, temporary and part-time employees, including paid interns. Drug testing of interns is "far from a means of singling them out," he said. "It is rather, meant to give our employment practices the consistency—and impartiality—that other Times employees expect and deserve."

He also said he did not consider drug testing to be a violation of privacy rights.

The AEJMC executive committee also adopted resolutions opposing a current proposal to restructure the journalism school accrediting body [presstime, Nov. 1986, p. 51] and expressing "grave concern" over the status of scholastic journalism. [See story at right.]

The resolution relating to the Accrediting Council on Education in Journalism and Mass Communications called for "a speedy resolution" of the issue of the council's composition. The "protracted arguments" and "apparent indecision" in the matter are detracting from the council's credibility and its energy for its major concerns, the resolution states. □

Pacemaker Award winners named

Winners of the 1985-86 Pacemaker Award have been announced by ANPA Foundation, the National Scholastic Press Association and the Associated Collegiate Press.

The award honors excellence in high school and college newspapers.

Winners of the high school competition are: Union Street Journal, Cherry Creek High School, Englewood, Colo.; Clearlight, Clearwater (Fla.) High School; The Buzz, Bonneville High School, Idaho Falls, Idaho; Lance, Westside High School, Omaha; and Statesman, Woodrow Wilson High School, Portland, Ore.

Winners of the collegiate competition are: Metropolis, Miami-Dade (Fla.) Community College-New World Center; MATC Times, Milwaukee Area Technical College; The Crimson White, University of Alabama, Tuscaloosa; The Maroon, Loyola University, New Orleans; Kentucky Kernel, University of Kentucky, Lexington; and The State News, Michigan State University, East Lansing.

Panel issues secondary-school suggestions

After two years of study, a national commission has made five recommendations aimed at improving the status of secondary school journalism programs, including a call for so-called "academic-based" journalism courses to be supported as an essential component of the high school curriculum.

The recommendations were announced in Chicago Nov. 23 during the annual convention of the Journalism Education Association, a national organization of high school journalism teachers and publications advisers. JEA formed the commission to investigate the condition of journalism education in the nation's secondary schools [presstime, April 1985, p. 45].

According to John Wheeler, chairman of the Commission on the Role of Journalism in Secondary Education, "academic-based" journalism courses are those that "emphasize language arts communications skills," such as writing, interviewing, critical thinking and critical reading. Wheeler, a journalism teacher at Lyons Township High School in LaGrange, Ill., said the term was used in response to the erroneous notion that high school journalism courses are "cut and paste" exercises, interested primarily in the production aspects of school publications.

Other recommendations of the commission are that:

- Academic-based journalism courses carry credit toward graduation equivalent to that given any other language arts writing course.
- Colleges accept credit granted in academic-based high school journalism courses at the level that would apply to comparable advanced writing courses.
- Minimum standards be established for academically qualified journalism teachers.
- Minimum standards be established for curricula of academic-based journalism courses.

The commission also made several "procedural recommendations," including an appeal to local media to assume a more active role in supporting high school journalism by providing scholarships, internships, awards and equipment.

A full report of the commission's findings is scheduled to be available by February. □

NIE Week, '87 Conference scheduled for March

Two important Newspaper in Education events are scheduled for March.

The fifth annual Newspaper in Education Week will be observed March 2-6.

Then from the 18th through the 20th, the 1987 Newspaper in Education Conference will take place at Chicago's Westin Hotel.

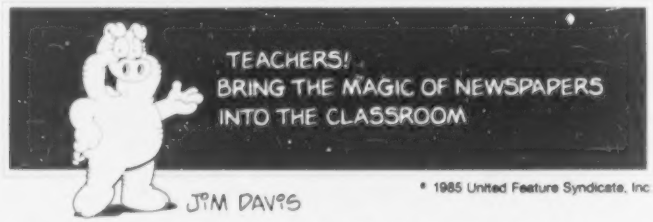
NIE Week, which promotes use of the newspaper as a classroom teaching tool, is cosponsored by ANPA Foundation and the International Reading Association.

Linda B. Skover, the Foundation's assistant director, said she expects participation to equal or exceed that of last year, when more than 500 U.S. daily newspapers provided about 3 million copies of newspapers to 30,000 schools. In addition, she said, an unknown number of U.S. weeklies participated, as well as newspapers in at least eight foreign countries [presstime, March 1986, p. 49].

An NIE Week booklet and camera-ready ads have been mailed to all ANPA-member newspapers.

The NIE conference, which is sponsored by ANPA Foundation, will include sessions on using newspapers to teach reading, writing, language arts, critical thinking, current events, earth science, economics and constitutional principles.

Registration costs $400 for employees of newspapers and educational organizations, and $525 for representatives of firms selling NIE materials and/or services. For more information, contact the Foundation at The Newspaper Center, Reston, Va. □



Camera-ready NIE Week ads feature Orson the Pig of comic-strip lore.

Audio-visual show available on literacy

An audio-visual program on literacy is available from ANPA Foundation.

The 20-minute program is available in two formats—slide tray for $50 and VHS-format videocassette for $40. It provides an overview of the illiteracy problem and describes specific newspaper literacy initiatives.

To order or to obtain more information, contact Ardis Pruess of ANPA Foundation at The Newspaper Center, Reston, Va.; (703) 648-1252. □

Newspaper Fund to stop J-school grad survey

The Dow Jones Newspaper Fund has decided to discontinue its annual survey of recent journalism school graduates, but an official of the organization expressed hope that someone else will take on the project.

The survey tracks such things as where graduates found work and at what salaries [presstime, March 1986, p. 48]. The Dow Jones & Co.-sponsored fund has conducted the survey each year since 1964, and Executive Director Thomas E. Engleman said, "Maybe it's time to turn it over to somebody else."

Engleman said the survey consumes a great deal of staff time and, for lack of computer facilities and statistical expertise, his organization has been forced to retain survey professionals for assistance.

He also noted that although the fund is interested solely in encouraging young people to consider newspaper careers, the survey covers all J-school graduates, including those preferring public relations, advertising and broadcasting.

The fund now intends to concentrate more attention on its minority programs, Engleman said. □

Year-long observance planned for bicentennial of U.S. Constitution

The newspaper industry is gearing up to help in this year's bicentennial observance of the U.S. Constitution.

"Working with former Chief Justice [Warren E.] Burger and the bicentennial commission, newspaper executives and companies already have initiated several nationwide projects which lend themselves well to local adaptation," said ANPA Executive Vice President Jerry W. Friedheim, vice chairman of the Communications Advisory Committee of the Commission on the Bicentennial of the U.S. Constitution [presstime, Nov. 1986, p. 75].

"ANPA Foundation will coordinate, with the nation's educators, 'A Celebration of Citizenship' in the schools in September. This fits in quite well with our industry's ongoing Newspaper in Education and literacy work," Friedheim said. "Newspaper companies also will join in national and local essay contests and provide advertising, billboard and other promotion space to the bicentennial."

According to Friedheim, the Advertising Council will produce two public service ad campaigns for the observance. One will have the theme: "The Constitution: The Words We Live By." The other, in conjunction with the Society of Professional Journalists, Sigma Delta Chi, will present this message: "If the Free Press Didn't Tell You, Who Would?"

The commission has agreed to cosponsor ANPA Foundation's Celebration of Citizenship, and to underwrite up to $202,443 in printing and postage costs.

The highlight of the Sept. 16 celebration will be a broadcast to school children in which Burger has been invited to read and explain the meaning of the preamble to the Constitution, and President Reagan has been invited to lead a recitation of the Pledge of Allegiance.

The commission has established a Communications Division to assist journalists in covering bicentennial events. The telephone number in Washington, D.C., is: (202) 653-2432.

In a related development, a new Newspaper in Education curriculum entitled "Using the Newspaper to Teach About the Constitution" is scheduled to be available this month. Designed for use in elementary, middle and secondary schools, the camera-ready publication may be obtained for $15 from ANPA Foundation at The Newspaper Center, Reston, Va. □

Blind can 'read' the newspaper through special audio service

The definition of "blindness" used by the National Center for Health Statistics is the inability to read a newspaper. Aiming at the substance if not the letter of the definition, a Michigan group hopes to change it, by enabling the blind to *hear* their daily paper.

Starting this month, a pilot program funded by the Knight Foundation will start with The Flint (Mich.) Journal.

Each day, blind subscribers will be able to read the latest paper by tapping into a computer through a regular touch-tone telephone. A two-digit code brings out the proper section, then previously taped articles are heard in sequence. If people are not interested in a particular story, they simply push one of the phone keys to pass on to the next one.

"It is the first time the blind will be able to read what they want when they want, and not be dependent on other people to read the paper to them," said James E. Doherty, executive director of Newspapers for the Blind.

Doherty rejects the idea that television or radio is enough of an information source, saying, "a newspaper is so much more than news." Blind people want the "depth" possible in newspapers, he said, and also items that are not generally on television or radio, like classified ads.

In addition to the initial $80,000 Knight grant for the Flint pilot program, Newspapers for the Blind was awarded $8,500 from the Gannett Foundation.

After start-up costs, the service will be self-supporting, said Doherty, with the blind paying the same for their verbal subscription as most people pay for their printed ones.

He added, "We're hoping dailies in other states will help get us started."

Job hotline opens for minorities

The Asian American Journalists Association has opened a 24-hour hotline in California for Asian Americans and other minority journalists seeking newsroom jobs. The number is (818) 961-2263.

Employers who want to post job and internship information should call AAJA headquarters in Los Angeles at (213) 389-8383, between 10 a.m. and 4 p.m. Pacific Time.

Information will be updated every two weeks.

SIPI says science coverage expands dramatically

In the past two years, the number of U.S. daily newspapers with science weekly sections has more than doubled, according to the Scientists' Institute for Public Information.

SIPI, a non-profit group dedicated to upgrading science coverage in the media, found science sections in 66 dailies in 1986—an increase of 38 since 1984.

For the purpose of the survey, a "section" was defined as "not less than a page-and-a-half of articles on science and technology that appear on the same day every week, in a clearly marked, regular space."

The Survey also revealed that an additional 81 dailies have science pages. A growing number of the sections are focusing on health rather than science and technology—35 percent in 1986, up from 18 percent two years earlier.

The first U.S. newspaper to launch a science section was The New York Times in 1978. But lately, smaller papers have joined the trend.

Guild members to vote on AP contract

Members of the Wire Service Guild will vote this month on a new two-year labor agreement with the Associated Press.

The tentative agreement was reached in December, when the current one-year contract expired. Kevin T. Keane, president and administrative officer of the Wire Service Guild, said the union's negotiating committee will recommend that the members ratify the new contract.

AP said the total wage package would add 2.5 percent to labor costs in the first year and 3.5 percent in the second. Wage hikes over the period would be $28 or $58 weekly, depending on the city.

ANPA wants mail 'piece' defined

What, exactly, is a "piece" of mail?

There are no U.S. Postal Service regulations that answer the question, and ANPA has asked for a ruling.

The Association's request came in the form of an amended complaint to the Postal Rate Commission about third-class detached labels. These address labels are separate from the materials they accompany but do not pay separate postage.

ANPA argued in its original complaint that detached labels constitute an unclassified type of mail service that does not bear a "fair and equitable" portion of mailing costs [presstime, Dec. 1986, p. 56].

But even more fundamental than that, the Association said in its amended filing Dec. 12, is the need to establish what the fuss is about. "ANPA has come to believe that resolution of this matter . . . inexorably rests upon the need for definition" of a mail piece. It added, "Common sense having been flouted by the current treatment of detached cards and consensus now absent, a classifying definition must fill the void."

ANPA said that once properly defined, the mail piece can be assigned "costs and rates within its class as deemed appropriate" in a separate rate case.

Renewal notices can travel via third-class mail

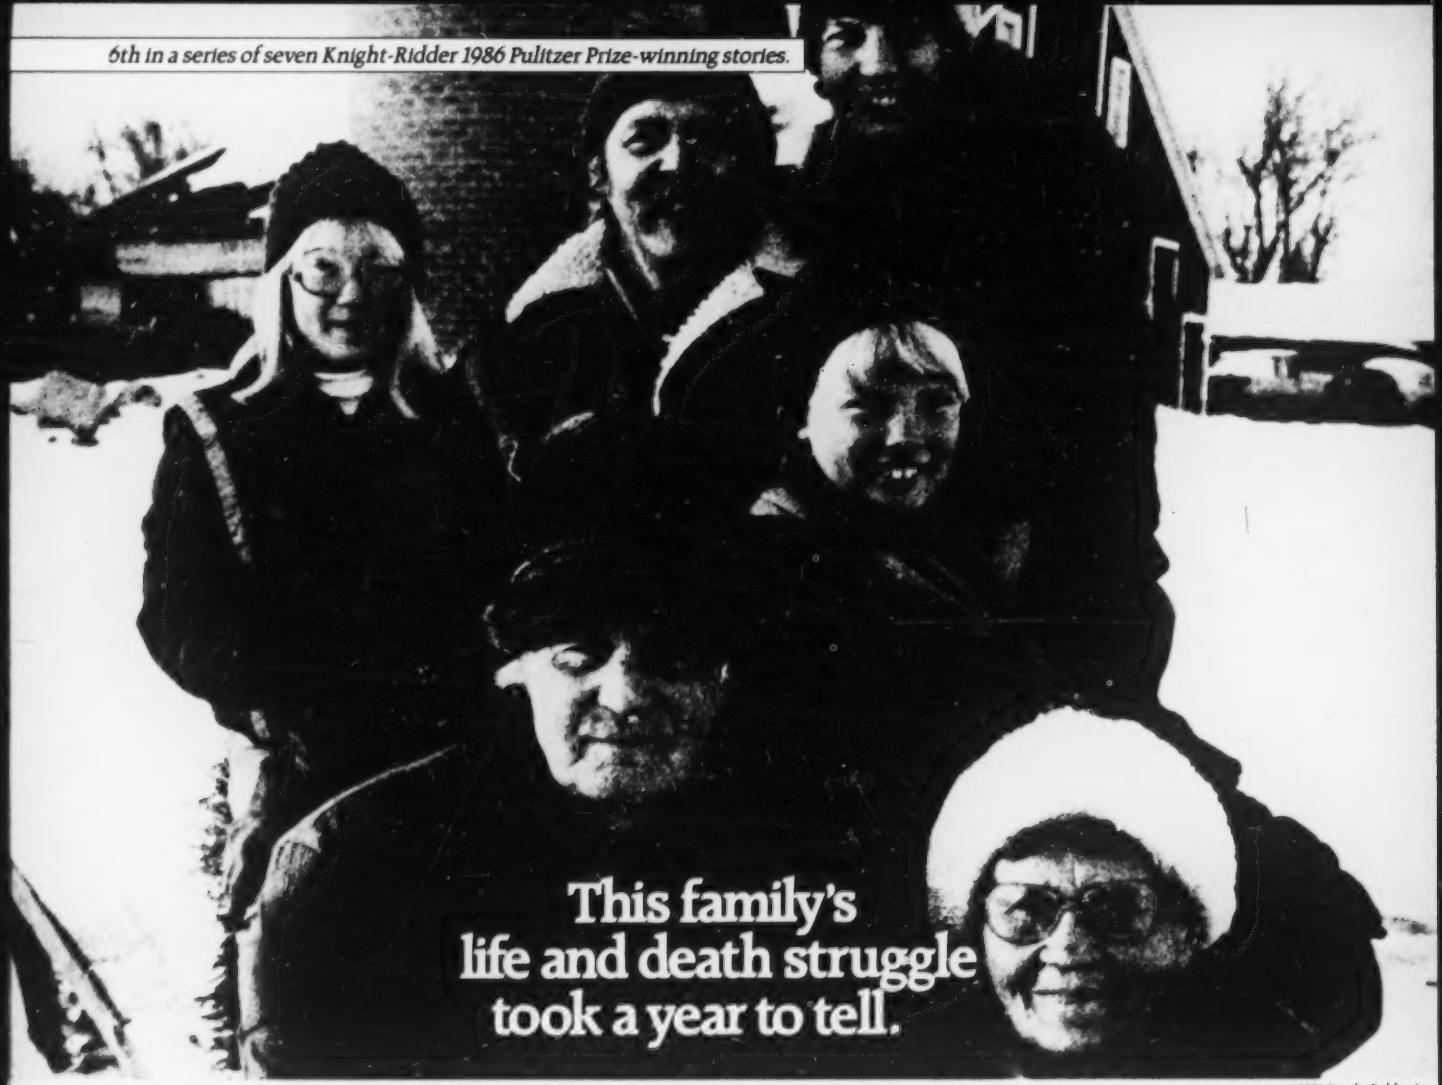
Postal authorities have clarified that newspapers may send subscription-renewal notices by third-class mail.

There had been confusion over use of third-class—as opposed to much more expensive first-class—for such purposes.

Responding to an ANPA inquiry, the U.S. Postal Service said printed subscription renewal notices that do not contain personal correspondence—and do not constitute statements of account—may be mailed at bulk third-class rates when sent in "identical terms to more than one person."

ANPA Assistant General Counsel Tonda F. Rush said not acceptable is a notice that says, "You have received the newspaper for six weeks and you now owe us" a specific amount of money. Account numbers may differ with each renewal notice.

6th in a series of seven Knight-Ridder 1986 Pulitzer Prize-winning stories.



This family's life and death struggle took a year to tell.

© 1986 Knight Ridder, Inc.

Life on the land has never been easy.

Now for thousands it has become impossible. So many farmers are losing their farms that the very fabric of rural society is being shredded.

The editors of Knight-Ridder's St. Paul Pioneer Press and Dispatch wanted their readers to become intimately involved with the plight of the Midwestern farmer.

Veteran columnist and reporter John Camp was put on the story for an entire year. He soon realized he was covering the crumbling of a culture which was tenaciously trying to preserve its basic values. But every time a farm failed, the rural ethos equating self-respect with self-reliance was further shattered.

Camp and his editors decided they would view the farmers' problems through the eyes and the toil of one Minnesota farm family. They chose the Bensons. Gus and Bertha, son David and his wife Sally-Anne, along with their two children. They all live and work on their 160-acre farm near Worthington, Minnesota.

In early 1985, small farmers, like the Bensons, were being driven off their farms in record numbers by an unrelenting combination of falling prices and rising debt.

Camp was with the Bensons from the first plowing of spring to a hurried harvest in a late fall blizzard.

"A farm year," Camp wrote, is "an accumulation of quick conversations behind hot waiting tractors, of grunts and warm drinking water exchanged on 100-degree days... of nights so dark and so far from the city that the Milky Way looks like Manhattan."

David Benson harvested the last of their crops in the snow of early November.

They'd made it through another year. Thousands of others didn't. So many farmers are leaving the land and the life, that "the infrastructure of rural society threatens to collapse," wrote Camp.

John Camp's sensitive reporting and eloquent prose won the 1986 Pulitzer Prize for Feature Writing.

Camp had made 23 trips to the Benson's farm, covering 8,500 miles to report the story. He wrote 20,000 words for the five-part series, "Life on the Land."

No matter how vital, few news organizations would have kept one of their best reporters on a single story for a year.

But the St. Paul Pioneer Press and Dispatch is a Knight-Ridder newspaper.

KR

KNIGHT-RIDDER

We never underestimate the American people.

Knight-Ridder, winner of an unprecedented seven Pulitzer Prizes in 1986, is a nationwide communications company with eight television stations, cable systems, business information services and 34 daily newspapers.

USPS proposes tighter rules on supplements

The U.S. Postal Service has proposed new rules that could hamper some newspapers when they include advertising supplements in copies delivered by mail.

"The intent is to rein in publications in which the supplements appear to have overwhelmed the publication itself," said Tonda F. Rush, ANPA assistant general counsel.

Among other things, USPS proposed to limit the number of supplement pages to the number of pages in the regular newspaper. It also wants to prohibit such things as product samples from eligibility as a newspaper supplement.

USPS also said it wants to tighten rules because in some "disturbing cases, 'supplements' have the appearance of being wholly independent publications. In other cases, the 'supplement' consists of more pages than the copies of the issue which are being supplemented. And in some instances, 'supplements' bear third-class permit imprints" even though publishers are delivering them via second-class publications.

"The intent of these changes is to clarify the existing regulations and to preserve the integrity of second-class mail," the Postal Service said.

Comments on the proposed rules are due Jan. 11. □

Commission accepts TMC complaint

The Postal Rate Commission said it will hear a complaint filed by four newspapers over second-class, total-market-coverage publications.

The commission rejected a request of the U.S. Postal Service that it dismiss the case filed by The Sacramento Bee, the Des Moines Register, The Tennessean of Nashville and the Nashville Banner. They said USPS improperly disallowed certain forms of second-class TMC [presstime, Nov. 1986, p. 55].

The commission said it will not decide the "legality" of postal rules in question but will conduct a mail classification proceeding to examine this "live controversy."

It added that the "right forum" for determining the validity of postal rules in question would be the U.S. District Court. □

Ad taxes, various legal issues highlight NAM conference

Prospects for restoring an exemption for advertising from Florida's sales tax improved as a result of the November elections.

But the deepening state budget deficit in Texas has made it likely that a tax on advertising will be adopted there.

Those were among the reports provided by state press association managers at the annual legislative conference of the Newspaper Association Managers Dec. 11-12 at The Newspaper Center in Reston, Va.

In addition to advertising tax matters, the managers were briefed on developments in areas including tort reform, open-records and open-meetings laws, and workplace issues.

Richard D. Shelton, executive director of the Florida Press Association, called the election last Nov. 4 a "breath of fresh air" for forces battling to reinstate the advertising exemption. Last year, the Legislature voted to eliminate a number of sales tax exemptions as of July 1 and established a commission to review the exemptions to determine whether any should be retained [presstime, Aug. 1986, p. 40].

According to Shelton, Gov.-elect Bob Martinez has said he would oppose elimination of exemptions that would affect the press.

On the other hand, Philip A. Berkebile, executive vice president of the Texas Daily Newspaper Association, reported that the chance of avoiding the imposition of a tax on advertising in his state's next legislative session looks "very bleak."

He described some legislators' attitude as "overtly hostile" toward the press, which has criticized the Legislature for not dealing effectively with the budget shortfall, now estimated in the range of $4.5 billion to $5 billion for 1987.

Berkebile also said it probably will not be possible to repeal the tax on circulation sales. The circulation exemption was removed in 1984 [presstime, April 1986, p. 60].

State Comptroller Bob Bullock, who had opposed a circulation tax because of the difficulty of administering it, has prepared a bill to make publishers liable for collecting it, Berkebile said. "Losing him [as a supporter] is a tremendous loss to us," he said.

The NAM group heard from Wally Snyder, senior vice president for government relations of the American Advertising Federation, about the State Legislative Alert and Action Coalition. AAF, the Association of National Advertisers and the American Association of Advertising Agencies established the coalition a year ago to fight ad taxes. □

WE'RE LOOKING FOR AN OUTSTANDING SLOGAN-AND-SYMBOL TO PROMOTE CLASSIFIED ADVERTISING IN THIS TARGET MARKET.

AND YOUR BIG IDEA CAN BE WORTH ONE THOUSAND DOLLARS.

The Yellow Pages have their walking fingers. Prudential has its piece of the rock. Allstate has its good hands.

Now it's time for the Classifieds of the U.S. and Canada to make their mark from Hudson Bay to the Gulf of Mexico and from the Bering Straits to the Florida Keys.

With an attention-grabbing slogan and symbol that powerfully identify — at a glance — the Classified Section as THE place to look for goods and services.

A slogan and symbol that can be widely promoted — and used in hundreds of newspapers and other media — for enormous impact and recall.

A slogan and symbol that can be your brainchild.

So put on your thinkin' cap. Create up a storm. Submit your entries now. As the winner, you'll receive $1,000, industry-wide envy and recognition, and your winning idea will blossom out in the 1987 NAB Creative Newspaper.

That's worth going after!

Final deadline for entries: February 15, 1987.

FOA Project Making Headway

After its first full year of operation, the Newspaper Advertising Bureau's Future of Advertising Committee reports specific accomplishments as well as much work still to be done.

"We think we can accomplish not a 'miracle on Madison Avenue' but measurable and significant progress," the committee's chairman, Harold W. Andersen, said in a report to the ANPA Board of Directors Dec. 5 in New York City.

The committee is "looking into corners that have not been examined before or certainly not examined in such a comprehensive way," said Andersen, chairman and chief executive officer of the Omaha World-Herald Co., and a former chairman of ANPA. But "there is no magic wand that we can wave over this business to come up with some quick, single-focused answer," he said.

As for the 10 task forces that have tackled various aspects of the newspaper business, "there are three logical outcomes," said Leo Bogart, NAB executive vice president and general manager. "Some will be winding up work completely in 1987," he told presstime. "There will be others that will say, 'We need more time,' and they will keep going. There will be others that say the areas are so important that they ought to be permanent items in some budget," such as that of NAB or ANPA.

Among the tangible accomplishments to date are several publications that have been distributed widely to newspaper executives and others.

By far the "best seller" is *Guide to Quality Newspaper Reproduction*, 40,000 copies of which have been printed in a cooperative effort with ANPA.

"How to Gain and Retain Readership," a detailed primer on strategies to make newspapers more compelling for readers, is another popular publication that sprang from the Future of Advertising project.

Several other FOA publications address the issue of standardizing some aspects of the newspaper business, a major objective of the committee:

- Completed several months ago are "Guidelines for Standardized Retail Research" and "The Standardized Advertising Invoice."
- Just released is "Standard Advertising Codes," describing a way to simplify newspapers' accounting and billing systems. These "codes" are based on the methodology used by Media Records, a private firm that measures newspaper advertising.

Also under way is an effort to standardize credit applications for newspaper advertisers [presstime, Dec. 1986, p. 57].

And expected this year are reports from other FOA task forces:

- The Task Force on Sales and Personnel Training has retained the management consulting firm of Towers, Perrin, Forster & Crosby to conduct a compensation study. This builds on University of Missouri research that found the average annual salaries for newspaper ad directors and retail ad managers to be substantially less than those of their radio and television counterparts. There will be additional reports from subcommittees on recruitment and training.
- The Task Force on Sales Structure is looking into the possibility of creating "a new sales team approach" to building newspaper advertising. "One advantage would be the appearance of a new, vigorous, talented sales force—another indication we are not willing to sit on our present linage base and present sales efforts," according to Andersen.
- The Task Force on Promotion will "prepare proposals as to how we can redirect the attention of advertising decision-makers toward newspapers," said Andersen. A campaign directed toward the general public may also be considered. □

AD/SAT is now a reality

AD/SAT, the service to deliver advertising facsimiles to newspapers via satellite, has concluded its "demonstration period" and has begun offering commercial service.

Company President N.S. (Buddy) Hayden said 12 newspapers and four advertising agencies participating in the demonstration have attested to the system's technical ability [presstime, Oct. 1986, p. 55].

The system also was approved by a special newspaper business liaison committee made up of Gene McDavid of the Houston Chronicle, Charles M. Kinsolving Jr. of the Newspaper Advertising Bureau, William D. Rinehart of ANPA and Robert Kirby of the advertising agency Bozell, Jacobs, Kenyon & Eckhardt.

The panel noted that ads received at 10 test newspaper plants were "satisfactory and will meet the newspaper advertiser's requirements."

There were some "minor problems," however, requiring technical modifications. And there were minor changes needed "in the electronics which are the result, primarily, of differences in the operating environment in the individual newspapers," the committee said.

Also, still to be installed at test sites is computer equipment for an AD/SAT messaging system that will operate much like electronic mail. Hayden said that part of the program should be running Jan. 19.

The facsimile system itself currently is "operating live every day" in a limited fashion in the 10 plants serving 12 newspapers. More equipment was ordered in December for the dozens of other newspapers that have contracted for AD/SAT service.

Hayden said at press time that, all told, contracts have been signed with about 75 newspapers representing 35 percent of daily U.S. circulation and 47 percent of Sunday circulation. Included were 23 of the 25 largest-circulation dailies and 41 of the top 50. Hayden said he expects AD/SAT to be operating in the top 100 U.S. markets by the end of the year. Eventually, AD/SAT hopes to serve 400-500 newspapers, he added.

While the system is intended primarily for national advertising, Hayden said it also has been used to transmit retail ads. An example is Lord & Taylor's advertising sent in December from New York City to The Washington Post.

AD/SAT offers a "tremendous time advantage," Hayden said. For example, an ad was delivered on an emergency basis from New York to the Chicago Tribune just five minutes before deadline.

Marketing for AD/SAT services is under way. Already, the company has contracted as regional sales agents Potomac Graphic Industries of New York and Ad Systems of Chicago.

The satellite-facsimile concept was initiated in the early 1980s by ANPA and NAB. The Robert Wold Co. in 1984 formed a new company to operate such a service, which it named AD/SAT. Wold last year sold the project to British press magnate Robert Maxwell. □

Momentum toward rate parity grows with Young & Rubicam test

Years of bickering between newspapers and national advertisers led to an effort by a New York ad agency to address the touchy subject of rate parity.

Young & Rubicam announced Dec. 10 that 23 dailies in 17 large cities had agreed to consider an 18-month test starting Jan. 1. They will curb their price differentials between national and retail advertising for package-goods advertisers who commit to a certain minimum size and frequency of newspaper ads.

Several days later, John G. Miller, the Y&R vice president who spearheaded the move, predicted that by the end of 1986, more than 100 papers would announce their intention to participate.

Over the past two decades, much of the blame for newspapers' declining share of national advertising—a paltry 6.3 percent in 1985, compared with 10.7 percent in 1960 —has been fixed on the high cost of national ads in newspapers. The most recent tabulation of the American Association of Advertising Agencies found newspapers' national rates to be an average of 64.6-percent higher than their retail rates.

While a few major dailies, such as the Wichita Eagle-Beacon, have eliminated this differential for consistent national advertisers meeting certain size and frequency criteria [presstime, Nov. 1986, p. 64], this is the first time a sizable number have indicated their willingness to do so.

The response from advertisers, agencies and newspapers has been enthusiastic:

• It is "the most significant development for advertisers like General Foods in the newspaper business in a long time," said David K. Braun, the corporation's director of media and program services.

• It represents "an opportunity to be more competitive, to be more aggressive in getting national business newspapers don't now have," said Leo Bogart, executive vice president and general manager of the Newspaper Advertising Bureau.

• "It proves that newspapers are moving forward and are willing to listen to advertisers and make some deals," said Jack P. Cohen, vice president, director of print and outdoor media buying for the agency DDB Needham Worldwide.

Package-goods advertising in U.S. dailies—primarily cents-off coupons for grocery products and health and beauty aids—is newspapers' fourth largest form of national advertising. But package-goods ads account for less than 1 percent of overall advertising expenditures in dailies.

Attracting more than just coupons from package-goods advertisers offers the possibility of significant growth in newspaper ad revenue, because this category makes up about a third of national advertising in all media, says NAB's Bogart.

Observers cautioned that it was too soon to assess the impact the experiment might have on increasing the amount of package-goods ads in newspapers or decreasing newspapers' rate differentials across the board.

"Remember, this is a test," said Miller. "We are trying to encourage these advertisers to think about newspapers, and many of them have not thought about newspapers for anything but coupons in a long time."

Braun of General Foods said newspapers must follow their words with action. "My guess is if you're not talking about virtually eliminating the differential, then you still have a significant psychological problem, if not a real financial problem," he said.

There is no uniformity among newspapers as to how they will respond to the Y&R initiative. "Each one is setting its own ground rules," said Cohen of DDB Needham. "It's a matter of one-on-one negotiation with each paper."

At the New York Daily News, package-goods ads following specified guidelines can be sold at rates that amount to up to "42 percent off the [rate] card and 6 percent higher than retail," said Anthony J. Calianese, senior vice president of advertising and marketing.

It was Calianese who started the ball rolling at Y&R last November when he approached the agency with a plan that "would extend retail rates to national package-goods advertisers" provided they "gave the Daily News volume and frequency." Y&R executives, he said, "liked the idea but needed more than one newspaper and one market," and began to approach newspapers individually.

Although it was Y&R that seized the inititiative, Calianese and other ad executives noted that adjustments to package-goods rates would not just apply to firms represented by this agency. "This is not just a Y&R rate," he said. "We are soliciting all package-goods advertisers and all agencies."

While the Daily News executive cautioned the plan is not a "quick fix," he said "pricing is the most important impediment to date as to why newspapers have not achieved their fair share [of national advertising]."

For some, implementing the plan will mean little change in rate structures. "We already have what is known as a 'national food rate,'" said Erich G. Linker Jr., vice president and advertising director of The New York Times. "We currently have a multi-faceted rate card with discounts and frequencies, keeping within our rate strategy of using category pricing." The Y&R initiative "is consistent with what we do, what we have been doing," he said.

Others point out that while the Y&R proposal has received a great deal of publicity, it is only one of a series of developments over the past year that have encouraged newspapers to appeal directly to package-goods advertisers.

"It's not just a response to the Y&R presentation," said Millard G. Owen, vice president of marketing and sales for The Boston Globe. A variety of sources have made newspapers aware that they are "no longer attractive to a package-goods advertiser who is interested in establishing a brand image," he said. "They [package-goods advertisers] need frequency."

Responding to this, the Globe this year is offering new rates for brand-name, package-goods advertisers in its food section, depending on various levels of size and frequency. —*Marcia Ruth*

Panel seeks slogan for classifieds

The phrase, "Let your fingers do the walking through the Yellow Pages," gets credit for luring many an advertiser to one of newspaper's rising competitors.

So the classified advertising subcommittee of the Future of Advertising Committee's Standardization Task Force is conducting a contest to find a competitive slogan and symbol for newspaper classifieds.

Deadline for entries is Feb. 15. They should be sent to the Newspaper Advertising Bureau, 1180 Avenue of the Americas, New York, N.Y. 10036.

How the Creative Newspaper 11 publication can help you sell advertising

BY CRAIG C. STANDEN

A key part of newspapers' strategy for regaining the initiative in national advertising and for increasing our ROP retail business has been the encouragement of better creative work in newspaper advertising through the Athena awards and the Creative Newspaper publication.

The Newspaper Advertising Bureau promotes the Athenas and Creative Newspaper through advertising and publicity in the advertising trade, and distributes thousands of copies of Creative Newspaper to large retailers, advertisers, agency account managers and creative departments. The bureau also uses a sales presentation based on Creative Newspaper in scores of sales calls on major agencies and at major meetings and conventions.

The purpose of these activities is to remind and/or convince the people who place the majority of national advertising that newspaper ads can be as dynamic and generate as much excitement as television commercials—and that newspaper advertising can be just as effective as television or magazines for building a brand's image with consumers.

This is an important, long-range job. But it's only part of the reason for the Athenas and for Creative Newspaper.

Far more important is what *you* do with Creative Newspaper in *your* market. Not only can U.S. and Canadian newspapers reach many more large-agency and major-advertiser executives than can the bureau's staff, but individual newspapers can also use their dominant position in their markets to improve the quality and effectiveness of the advertising of thousands of local retailers, large and small. And that's where the battle for ROP advertising is now being fought.

Your retail customers are being pursued aggressively by direct-mail companies and by local radio and TV competition. Creative Newspaper gives you an opportunity to work with these retailers to help improve their advertising to the point that they will prefer to stick with their successful newspaper advertising rather than take chances with other media they're less familiar with.

Here are some of the ways newspapers have told us they use Creative Newspaper and the accompanying sales presentation.

1. With **key advertisers and agencies**, newspapers are:

• Using the multi-screen version of the sales presentation as a centerpiece for a major meeting. Several newspapers invite their top local advertisers to a lunch or dinner meeting that is built around NAB Creative Director Hank Simons (or another bureau executive) and the multi-screen presentation. This is an especially effective way to get through to top agency people who are often the most difficult to reach. All the guests, of course, should receive individual copies of Creative Newspaper.

Craig C. Standen

• Using the single-screen version of the presentation for smaller meetings—both advertiser/agency groups and single-company staff presentations. For example, you might invite the creative and account staff of a local agency to your plant for a combination plant tour, lunch and presentation. To add extra spice to such a presentation, personalize it with slides of ads created locally and taken from your own pages.

2. With **individual advertisers and agencies,** newspapers are assuring that every advertiser who spends $5,000 or more has a copy of Creative Newspaper. It should be presented in person by the advertiser's newspaper representative as a way of saying, "Your business is important to this newspaper. Here's a resource you can use for ideas and inspiration when you're planning your ads." Creative Newspaper is also full of newspaper advertising success stories, which remind advertisers that the local paper is the best way to use advertising to increase sales.

3. With **their advertising sales staffs**, newspapers are:

• Featuring Creative Newspaper at staff meetings. Showing the presentation can be used to spark staff discussions of ways to use Creative Newspaper as a sales tool with individual accounts, ways to adapt outstanding ads for local advertisers and ways to focus attention on the importance of excellence in creating successful advertising for local retailers.

It makes sense for ad sales people to go through the pages of Creative Newspaper every two or three months; an ad they have forgotten may turn out to be the solution they need for a problem account. You might even want to give an award to the staff member who comes up with the best adaptation of a Creative Newspaper ad for a local advertiser.

• Using the presentation as a "creative slide bank." When you've finished showing the presentation to staff and local advertising people, individual slides can often be used by staff members for inclusion in presentations to specific accounts.

4. With **ad clubs, civic organizations and educational groups**, newspapers are using the presentation as an ideal program: It's timely, it's an interesting, entertaining half-hour with lots of humor, it presents newspapers and newspaper advertising in a positive way, and it demonstrates the value of newspaper advertising. In fact, your promotion department probably shouldn't wait to be asked but should seek this kind of audiences.

These are just some of the ways you can use Creative Newspaper 11 and the sales presentation to sell more and better newspaper advertising. If you'd like to arrange for a showing of the multi-screen version in your market, call or write Hank Simons at (212) 704-4570. If you'd like information about the single-screen version for NAB members, or about obtaining additional copies of Creative Newspaper 11, call Hal Licker, our vice president/production, at (212) 704-4571. □

Standen, president of the Newspaper Advertising Bureau in New York City, is a regular contributor to presstime.

Research on tap

Two firms are moving ahead with syndicated research. By mid-December, 52 U.S. dailies in 22 markets had signed on with Scarborough Research Associates, and 30 in 24 markets with Simmons Market Research Bureau [presstime, Sept. 1986, p. 51]. □

7th in a series of seven Knight-Ridder 1986 Pulitzer Prize-winning stories.

Now you see him.

© 1986 Knight-Ridder Inc.

Most people don't.

To many people, Walter is invisible. They've trained themselves not to see him.

They look the other way when Walter and other street people come into view.

The Philadelphia Inquirer wanted to bring these invisible Philadelphians into sharp focus for its readers.

Walter is a part of that invisible Philadelphia story.

His past is a stranger.

When it rains, he escapes in a box.

At night, he sleeps on steam vents on several streets in downtown Philadelphia. No one can ever remember seeing him washed and clean.

Many of these street people are a part of the bizarre phenomenon of the 1980s resulting from the deinstitutionalization of mental patients. In city after city, schizophrenics treat their torment daily by dulling their senses with all the alcohol they can get.

Stubble-chinned or bearded, bound in winter in ancient overcoats, they look like they've stepped out of the past. Ragged. Depression-era ghosts on modern streets.

Inquirer photographer Tom Gralish took to those streets to do a photo essay on downtown derelicts.

For the first week, he took no pictures. He worked on breaking down their highly developed sense of distrust for outsiders. Then, for five weeks, he shot 60 rolls of film, 2,160 pictures.

Selected photographs ran for more than 10 pages in the Inquirer. This is a fragment of that work.

Tom Gralish won the 1986 Pulitzer Prize for Feature Photography.

His pictures had graphically exposed a social policy which dumps the mentally ill on our cities' doorsteps and streets.

Considering the grim subject, many newspapers would never devote such an extraordinary amount of space to this kind of story.

But The Philadelphia Inquirer is a Knight-Ridder newspaper.

KR

KNIGHT-RIDDER

We never underestimate the American people.

Knight-Ridder, winner of an unprecedented seven Pulitzer Prizes in 1986, is a nationwide communications company with eight television stations, cable systems, business information services and 34 daily newspapers.

Survival may be at stake in NYC

Labor agreements with 10 unions covering about 8,800 employees of the New York Daily News, the New York Post and The New York Times expire March 30.

Labor specialists say the survival of the Daily News, which says it needs $30 million in labor cost concessions, is at stake. What happens during negotiations at that newspaper will determine the principal issue for the other two dailies.

But many experts emphasize that labor negotiations at New York City's newspapers no longer establish a pattern that is followed across the country. New York is unto itself, they say.

The situation in Manhattan today is similar to that of five years ago when Tribune Co. of Chicago, owner of the Daily News, put the then-1,483,333-circulation tabloid up for sale.

By the end of April 1982, however, the company had decided to keep the newspaper and to invest "a substantial amount" to restore it to financial health—contingent upon achieving cost reductions with the help of the unions. Four months later, the company and unions came to an agreement, and contracts were extended three years beyond their March 30, 1984, expiration date.

Circulation of the Daily News is now down to 1,270,926. The newspaper reportedly experienced an operating loss of $3 million for the first nine months of 1986, and it has lost some key advertisers [presstime, Nov. 1986, p. 38].

In return for the $30 million in concessions, Tribune Co. vows to invest $210 million in a new plant.

"We hope we can successfully work out an agreement to save the News and jobs for our people," said George E. McDonald, president of New York Mailers' Union No. 6 and head of the Allied Printing Trades Council, an umbrella group that represents the 10 unions. In December, Tribune auditors and an accounting firm retained by the unions were going over the Daily News' books, according to McDonald. The company soon "will be telling the 10 unions what their piece of the [$30 million] pie will be," McDonald said.

In a separate development, the mailers' union has agreed to recognize the right of the Daily News to subcontract Sunday edition inserting work in return for a $6-million payment to about 200 laid-off mailers, including 114 full-time employees who are eligible for $50,000 each.

At the Post, which reportedly has an average annual $10 million in losses, and at the financially secure Times, dates have not been set for the beginning of negotiations.

The Post, like the News, wants labor concessions. "We've got to have significant savings in our operational costs and increased flexibility in just about every area," said William A. O'Neill, executive vice president and general manager of the Post, which is owned by Rupert Murdoch's News America Publishing Inc.

A DIFFERENT CLIMATE. The labor picture in New York City has changed considerably from what it was in the 1960s. Twenty years ago, for instance, a newspaper's decision to farm out bargaining-unit work to a non-union shop would have resulted in a strike.

The unions are "not as militant" as they were, according to Joseph F. Barletta, who was executive vice president and general manager of the Daily News between 1976 and 1980.

"The biggest thing is a recognition by the unions that two of the three newspapers are losing money, which as recently as the 88-day strike in 1978 they didn't believe," said Barletta, now director of newspapers for Freedom Newspapers Inc. in Irvine, Calif.

Attention focuses on New York Daily News as Manhattan dailies prepare to negotiate.

Whatever happens in the upcoming negotiations in Manhattan, it will not be as important to the newspaper business as it was in the 1960s. "Twenty years ago," said Barletta, who is chairman of the ANPA Human Resources Committee, "what the unions could accomplish in New York City set goals for the unions throughout the country."

Another former New Yorker says there has been a big change in the nature of labor relations in the newspaper industry generally. "What New York City does is unimportant to the rest of the country," said James M. Baysinger, director of industrial relations at The Sacramento Union. "New York is almost an anomaly," said Baysinger, who was industrial relations manager at the New York Mirror when it closed in 1963.

Today, he said, the large newspaper groups "move on a much broader scale" and are the trend-setters. "I don't think New York is a benchmark anymore."

William W. Fletcher, president and general manager of the Rocky Mountain News in Denver, said the breakthroughs in the implementation of new technology "have been coming from all over the country. They did not come out of New York."

Lawrence A. Wallace, vice president/industrial relations for The Washington Post, said that when he was negotiating labor agreements in Detroit and San Jose in the 1960s, "We kept a close eye on the New York settlements" because the unions "would throw them at us."

Although labor relations specialists outside of the New York area play down the importance of the negotiations nationally, they take on a life-and-death appearance when viewed locally.

"What we are going to see this year are decisions that will chart the future of each of these three major newspapers into the 21st century," said Roy W. Anderson, ANPA vice president/human resources. "While they won't set a trend for the industry, these negotiations strike at the very heart of the New York City newspaper scene. The successful changes that have been negotiated in other cities must be negotiated there by creative bargaining on both sides." —*Clark Newsom*

ITU-CWA merger is about to take effect; union vows action on organizing front

The American Arbitration Association was expected to certify in late December the overwhelming vote by members of the International Typographical Union to merge with the Communications Workers of America. The merger becomes official 15 days after the certification.

When it does, the oldest union in the United States, the ITU, will become the Printing, Publishing and Media Workers sector of the giant CWA.

As newspapers have introduced labor-saving production technology, the ITU's active membership has decreased from more than 100,000 in the 1960s to 43,000 at the end of 1986. The CWA has 700,000 members.

The final, unoffical tally for the November referendum [presstime, Nov. 1986, p. 67] was 29,740 for merger and 7,265 against. The vote ended a nine-year search by ITU leaders for a merger partner.

The ITU's five top officers will relocate early this year from Colorado Springs to CWA headquarters in Washington, D.C.

The new CWA sector will be headed by ITU President Robert S. McMichen, who in a concurrent election of officers turned back the bid of Vice President Allan J. Heritage by a vote of 23,283 to 14,754. Secretary-Treasurer Thomas W. Kopeck was re-elected, along with vice presidents Billy J. Austin and William J. Boarman. A third vice president, Fred M. Leathem, also was elected. Two of the three vice president positions will be eliminated in 1990.

In addition to being president of the sector, McMichen also will become a vice president of the CWA.

About 1,700 votes were challenged in the election of officers, and they are determinative of whether Austin or Boarman is designated first vice president. The vice presidential candidate receiving the most votes is named to that slot. Austin received 21,491 votes and Boarman 21,695. The designation is important for successor reasons, in the event either McMichen or Kopeck should leave office during their three-year terms beginning Jan. 1, 1987.

ITU members also voted to continue a strike benefit fund independent of the CWA. Strike benefits will be $200 a week.

Some labor specialists believe the merger with the CWA is unlikely to affect current relationships between newspaper management and local unions. However, newspapers with unorganized departments may be targets for increased unionization efforts. McMichen and CWA President Morton Bahr said at a news conference that the combined union would be moving into areas that the ITU alone had not had the resources to organize.

"We see this merger as a way to strengthen everyone's position at the bargaining table and on the organizing front," Bahr said.

The CWA president said he hoped to work with The Newspaper Guild and the Graphic Communications International Union on joint organizing campaigns. There are no immediate plans to seek merger with either of those unions, he said.

"I don't think we'll see any more union mergers affecting the newspaper business in the next five years," said Charles D. Cole, ANPA manager/labor relations. "The Guild is interested in finding a merger partner but has had no favorable responses."

While ITU members were voting on the merger, the CWA concluded a merger with the United Telegraph Workers, which includes among its 5,800 members technicians at the Associated Press.

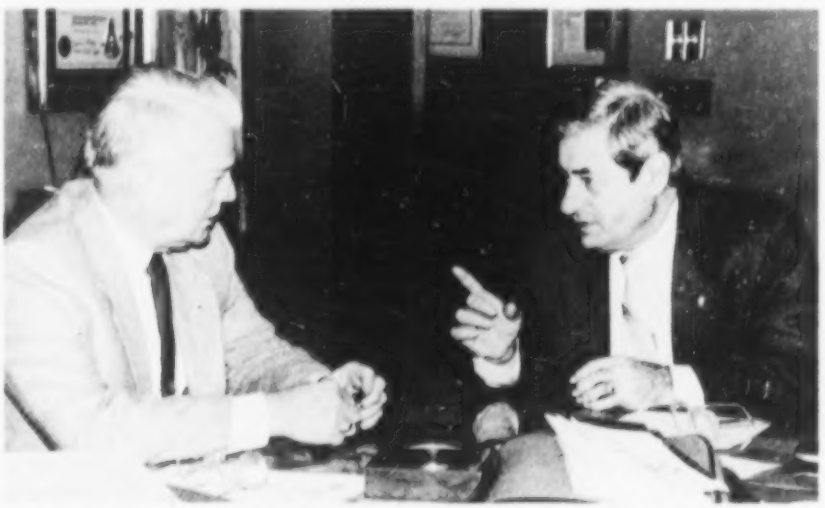
In another development, Teamsters President Jackie Presser canceled a "no-raiding" agreement between his union and the CWA. The Teamsters have been seeking to persuade newspaper mailer locals to disaffiliate from the ITU. Members of Phoenix Mailers' Union No. 52 recently voted 196-36 in favor of disaffiliation. Mailers in San Francisco and Minneapolis-St. Paul previously voted to disaffiliate [presstime, Nov. 1986, p. 67].

Although some labor specialists predict more mailers will disaffiliate, the president of one large local does not believe there will a large defection. "The majority of the mailers are satisfied with the merger and delighted to be with the CWA," said George E. McDonald, president of New York Mailers' Union No. 6.

—Clark Newsom

ITU member writes '30'

"Saying goodbye to the ITU comes hard," wrote ITU Secretary-Treasurer Thomas W. Kopeck in the final issue of the Typographical Journal. "There has never been a comparable union in the history of organized labor and in my opinion none will ever come close. In some circles we were referred to as an anachronism, a dinosaur, an organization whose time had come and gone. Perhaps this analysis is accurate and we were out of step with the times in many ways. . . ."



ITU's McMichen (left) confers with CWA's Bahr during December meeting in Washington, D.C.

Poll shows Guild members would support organizing drive

Most of The Newspaper Guild's members would be willing to pay an additional $1 a month in dues for increased organizing, according to a poll commissioned by the union.

David J. Eisen, the Guild's director of research and information, said the poll was undertaken to gather information for organizing efforts as well as to improve responsiveness to the union's 34,000 members.

More than 85 percent of those interviewed by telephone from their homes said they consider it important for the Guild to organize non-union workers in the news industry, with 57.8 percent rating it "very important."

The poll was conducted last spring by the Wilson Center for Public Research Inc. in Washington, D.C., which also analyzed the responses and prepared the report. The number of members surveyed, 1,100, was three times larger than the number many pollsters consider appropriate for a "population" the size of the Guild's membership, according to the research organization.

The report said a strong majority—ranging from 70 to 85 percent—has a high opinion of the union and the contracts under which members work. More than seven out of 10 said their jobs would be worse to much worse without the Guild.

Nearly 80 percent endorsed the Guild's being active legislatively, but the members polled were about evenly divided on whether it should support candidates for elective office.

"At a time when many unions are viewed as 'weak and ineffective' by workers they represent, Guild members consistently see their union as capable of addressing on-the-job concerns through success at the bargaining table and through the grievance procedure it has negotiated," the Wilson Center report said.

Guild President Charles A. Perlik Jr. said the union intends to put the poll's findings "to full use in shaping our programs and policies" for the short- and long-range future.

He said the poll gives the Guild its first detailed picture of the membership's composition, its demographics and occupational distribution.

One concern raised by the poll is the danger that as older members approach retirement, younger members may prove to be less enthusiastic about the union. Members who see the union as a most necessary part of their jobs are those closest to retirement age. More than one of every five members polled were 55 or older.

When asked what type of work they did, about 43 percent said either reporter, editor or photographer. The other 57 percent said they worked in various advertising, circulation and business office jobs. □

New survey of personnel practices to be made

The ANPA Human Resources Department will issue an updated version of its personnel information survey that was made in September 1981.

The initial survey results were the basis for a comprehensive analysis of newspaper personnel practices [presstime, Dec. 1981, p. 44].

"The data generated by the first survey have proved to be extremely valuable to our member newspapers, and we are hoping for an even better response this time," said Patricia P. Renfroe, ANPA manager/personnel relations.

As with the first survey, responses will be computerized, making it possible to provide members with specific information on personnel policies at newspapers of similar circulation size, union status or geographic region.

In conjunction with the personnel information survey, members also will receive a questionnaire on training practices at their newspapers.

Both survey forms will be mailed to ANPA-member newspapers this month. □

Recent contract settlement

Memphis Commercial Appeal, Guild: Three-year agreement covering editorial and commercial employees; retroactive to June 11, 1986.
(Details in January 1987 ANPA Labor & Personnel Relations Letter.)

Court rules contractor ineligible to receive jobless benefits

The Appellate Division of the New York Supreme Court has ruled that a motor-route driver for The Times Record of Troy was not an employee of the newspaper and therefore was ineligible to receive unemployment insurance benefits.

The driver, Marianne C. Martin, contracted with The Times Record to deliver bundles of newspapers to stores and newsstands along an established route.

The court noted that Martin was paid a negotiated, flat rate that could not be changed substantially without her consent. More significantly, the court said Martin could and did hire a substitute driver and a helper without the newspaper's approval.

The ruling came on an appeal by the commissioner of labor of an Unemployment Insurance Appeal Board finding that Martin was an independent contractor. The commissioner has petitioned the Court of Appeals, the highest court in the state, for a review of the Appellate Division's decision. □

$3.5-million settlement at Sacramento Bee gets final approval

An eight-year labor dispute at The Sacramento Bee officially ended in December with final approval of a $3.5-million strike settlement for printers who walked off their jobs in 1978.

The 63 printers, represented by Typographical Union No. 46, were permanently replaced after they refused to cross a picket line set up by mailers. They voted last June to accept the cash settlement [presstime, July 1986, p. 58], but several paperwork delays held up final approval. The printers were required to sign individual release forms absolving the company from future legal claims.

The settlement, which was approved by U.S. District Judge Raul A. Ramirez, will be spread over three years. Individual printers will receive payments ranging from $5,000 to about $50,000, before taxes, depending on their years of service and other factors. They were not reinstated.

The printers have requested that the parent international union reconsider its demand for reimbursement of about $1 million in strike benefits. □

Newspapers explore uses for optical disks

As the use of compact optical disk technology becomes more widespread, particularly in the area of data storage and retrieval, efforts are under way to identify additional uses for the laser-etched disks at newspapers.

A group of newspaper executives will gather in Washington, D.C., for two days in February to explore the possibilities. The meeting, sponsored by the ANPA Telecommunications Committee, will focus on CD-ROM technology. CD-ROMs—compact disks with "read only" memories—have been marketed for three years [presstime, Feb. 1984, p. 22]. Newspapers can use them to store library material or other data for which a permanent record is desirable.

However, newspapers have many other storage requirements that do not need permanent records. Those functions would be a natural for erasable optical disks, which could come on the market later this year.

Jane Wilson, ANPA's assistant director of telecommunications, said newspaper use of optical storage disks currently is rather limited, but she added that it soon will be widespread.

"The purpose of the February meeting is to determine how the technology might best be used for newspapers internally in such areas as libraries," Wilson said. "But we also want to look at how it will affect some newspaper customers, including large retailers and Realtors," Wilson said.

Other matters to be addressed include these questions:

- In what new ways ROM-CD can be used and by whom?
- What are the capacity, searchability and costs of such systems?
- How can newspapers use optical disks to improve their operations and offer new products?
- What are the implications for newspapers' on-line or hard-copy archival material?
- Is there a market for selling optical disks of newspapers' archives?

The Telecommunications Committee has preliminary plans to issue a report to the ANPA membership on newspaper uses of CD-ROMs.

Optical disk technology works this way: A laser is used to burn or press tiny "pits" of data into the disk. Lasers also "read" the pits, converting the data into electronic signals that translate into retrievable data on a computer screen.

"It's an evolutionary process, and the technology is still very new," but it is leaving the R&D stage.

The microscopic pits make it possible to store the equivalent of more than 250,000 typewritten pages on one 4.7-inch-diameter disk. The use of lasers also means materials can be retrieved very quickly.

Most often, the disks are inserted into a laser reader that is hooked up to a computer terminal—that of a mainframe system or a personal computer.

Philips and DuPont Optical Co.

Philips and DuPont Optical worker examines disk in sterile environment.

Michael J. Colello, executive vice president for engineering for Teletrak Advanced Technology Systems Inc. in New York City, said a two-sided optical disk can replace 1,100 floppy disks. In addition, material can be retrieved in seconds through the use of key words. His company produces software for a PC-based optical-disk database storage and retrieval system.

The technology is still in its infancy and is continuing to evolve, Colello noted.

Last year, several optical disk manufacturers banded together to begin establishing standards for data-based optical disks. This would enable any disk to be read on any player, a necessity if the industry is to flourish, said James H. Murphy, manager of information for Philips and DuPont Optical Co. The firm, which has headquarters in the Netherlands and U.S. offices in Wilmington, Del., makes audio disks for recordings, as well as CD-ROM and video disks.

Murphy said the publishing industry has been among the first to embrace CD-ROM. Grolier Inc., for example, has placed an entire 20-volume encyclopedia set—some 30,000 articles—on one disk. Astonishingly enough, only about 20 percent of the disk's storage capacity was needed.

"It's an evolutionary process, and the technology is still very new, though it's rapidly leaving the research and development stage," Murphy said. "Optical disks for data storage are getting a great deal of attention because the use is becoming more widespread."

His company is among many that are working to perfect an erasable disk. Philips and DuPont Optical hope to have one ready for the market by the end of this year, he reported.

An erasable disk would require a different set of lasers both for ascribing and reading the information. But it would have many more potential applications.

To cite just two in a newspaper operation, an erasable disk could be used for storage, retrieval and eventual dumping of the tremendous number of bits of information associated with full-page pagination and digitized photographs.

—Rosalind C. Truitt

After 1,800 projects, Technical Advisory Services still address specific newspaper problems

Back in 1964 when ANPA expanded its Technical Advisory Services to include in-plant studies, newspapers wanted individualized advice on the still-new technology of offset printing. They also wanted information on whether computer-driven typesetters were feasible.

These days, TAS studies address different issues—most often plant expansions and quality-control evaluations. But the idea of individualized attention to a newspaper's specific problems remains the same, according to Peter P. Romano, ANPA director/technical services.

"No two newspaper operations, even if they're the same size, are the same. You have different management philosophies, different modes of operation. So the only way you can do an honest job is to do it one on one," Romano said.

"We can be objective," he added. "The people who run newspapers know what they're doing, but they are so busy putting out a newspaper they can't see the forest for the trees some of the time. We help them do that."

About 1,800 TAS studies have been conducted for ANPA-member newspapers. Thirty were done in 1986, down slightly from 34 in 1985.

Most of the newspapers ordering TAS studies are small- to medium-size in circulation, although Romano said large metropolitan dailies also do so.

ANPA has offered technical assistance to newspapers since 1927 when what was then known as the Mechanical Department was established. However, in the past 22 years, the program has expanded and become more specialized.

Today, ANPA engineers and technicians, including people who once worked in newspaper production or in equipment manufacturing, offer in-depth analyses of a variety of subjects. They include: printing quality control, mailroom analysis, personnel utilization, plant and departmental layout, press conversions, pressroom analysis, communications, telecommunications, computer system selections, environmental services and cost effectiveness.

In some cases, newspapers send information to The Newspaper Center in Reston, Va., for analysis, but the vast majority of TAS studies involve in-plant visits, said Ed Eybers, technical services engineer. The charge for such visits and the time to prepare the written report is $250 per staff day plus transportation, lodging and meal expenses.

Most TAS studies cost $2,000 or less. And the cost often can be recouped through savings derived from implementing TAS recommendations, Eybers pointed out.

Prior to an in-plant visit, the newspaper is sent a questionnaire. If the evaluation is to be a comprehensive look at a newspaper's operations, the entire 18-page document is completed. For studies of a specific area of operation, fewer questions are answered.

Questions range from the number of employees in various departments to the make, model and year of the presses used.

The person (or persons) conducting the in-plant visit looks carefully at operations and talks to as many people at the newspaper as possible, Eybers said. Talks normally begin at the level of publisher, but supervisors, department heads and other employees are often consulted as well.

Once back at The Newspaper Center, the engineer gathers additional information from a variety of sources, such as the ANPA Technical Library, past TAS studies and other members of the Association's staff. Finally, a written, confidential report evaluating the situation and containing recommendations is submitted to the newspaper.

Newspapers interested in a TAS study should contact Romano at The Newspaper Center. □

SUPPORT PRODUCTS

PRESENTS
THE MODEL AS-710
INK LEVELLER

THE SUPPORT PRODUCTS MODEL AS-710 INK LEVELLER PERMITS OPERATORS TO MAINTAIN A PREDETERMINED LEVEL IN THE INK FOUNTAIN. THE AS-710 CONSISTS OF A STAINLESS STEEL BALL VALVE, A QUICK-DISCONNECT SUPPLY LINE, A DISTRIBUTION MANIFOLD WITH INDIVIDUAL VALVES, A SENSOR ASSEMBLY AND A ELECTRICAL SWITCH. DESIGNED FOR SIMPLICITY AND RELIABILITY, THE SENSOR WILL MAINTAIN INK LEVELS TO WITHIN 1/8" OF SETTING.

Correction

The chart that accompanied the November Special Report on flexography incorrectly listed the start-up time for the Monterey (Calif.) Peninsula Herald's new 7-unit Goss flexographic press. It is scheduled to be operational in 1988. Presstime regrets the error. □

TECHNOLOGY CALENDAR

- **Computer Graphics '87** conference will be Jan. 14-16 at the Westgate Hotel in San Diego.
- **Graphics of the Americas '87,** a graphic arts trade show, will be Jan. 23-25 at the Miami Beach Convention Center.
- A **Conference on Desktop Communications,** sponsored by the Seybold Group, will be Jan. 28-31 at the Hyatt Regency San Francisco.
- **Seybold Seminars '87** will be March 9-13 at the Beverly Hilton Hotel in Beverly Hills, Calif.
- The annual meeting of the **Collier-Jackson Users Group** will be March 13-17 at the Lincoln Hotel in Tampa.
- **Composition '87 and Type-X '87,** the National Composition Association convention and trade show, will be April 9-11 at the Marriott Marquis in New York.
- **ANPA/TEC '87**, the Association's annual Technical Exposition & Conference, will be June 6-10 in Las Vegas.

Bundle verifier to be tested

A bundle verifier developed by ANPA technical researchers will be tested at The Free Lance-Star in Fredericksburg, Va., early this year.

The verifier, which is designed to give an accurate count of the number of newspapers in a bundle [presstime, Oct. 1986, p. 61], is another example of the increasing attention being focused on the mailroom by the ANPA Board of Directors and the Association's Technical Committee, said George Cashau, ANPA director/technical research.

The Virginia daily, which is independently owned, has circulation of 34,717.

Cashau said other ANPA mailroom research centers on improving storage and retrieval systems for inserts, increasing the use of robotics, and developing computer software to tie together various mailroom components. □

TECHNOLOGY NOTES

• Parent company Eastman Kodak has **combined Atex Inc. and Eikonix Corp.** to create a new unit, Electronic Pre-Press Systems.

Atex manufactures computer terminals and word-processing systems for newspapers and magazines. Eikonix makes color-imaging equipment for newspapers. Both companies are based in Bedford, Mass., and will continue to operate as independent subsidiaries.

• The International Newspaper Conversion Group has changed its name to the **International Newspaper Group** to reflect the 11-year-old organization's shift in emphasis from newspaper press conversions to a wider interest in various press technologies and other technical matters.

• Information International Inc.'s **products now may be linked** to the Monotype Lasercomp. Newspapers will be able to use Triple-I's pagination or ad-makeup systems with that raster typesetter.

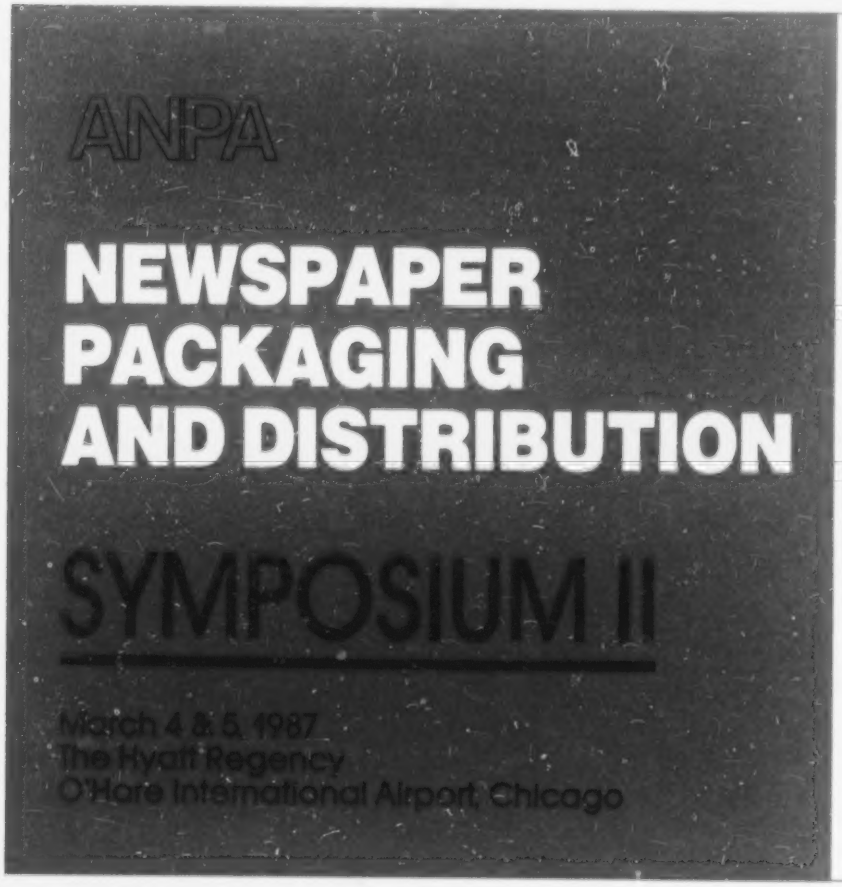
• NAPP Systems (USA) Inc. is conducting its sixth annual **"Best in the World" competition.** It is open to newspapers that use NAPP printing plates.

Contestants must submit two identical tear sheets of black-and-white and/or process color printed between Jan. 1 and Feb. 28. Judging will consider such factors as highlight dot retention, registration and ink density. Entries will be grouped according to geographic location, circulation size, and black-and-white or process color page.

Category winners and a "Best of the Best" will be announced June 9 during ANPA/TEC '87 in Las Vegas.

• BASF Corp. has **formed a new Printing Systems Operating Division.**

It consolidates BASF units that make K&E and Inmont printing inks, photopolymer printing plates, and color-imaging systems for newspapers. The West German firm has U.S. offices in Bedford, Mass.



This will be the second symposium sponsored by the ANPA Technical Committee focusing on current and future challenges of handling the newspaper from "Press Folder to Reader."

Newspaper publishers, production and circulation executives, operating personnel and equipment suppliers will benefit from the presentation by newspaper managers on the leading edge of today's technology.

The $375 registration fee includes admission to all sessions, continental breakfast on both meeting days, luncheon on Wednesday, March 4, and a reception on Tuesday evening, March 3.

Please call Fred Warner (703) 648-1186 for more information and a registration form.

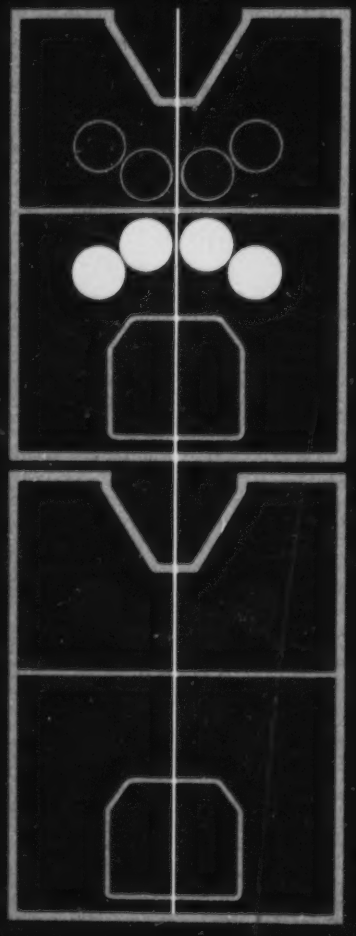
PAGING AND COLOR. IT'S

Now you can have both with the new Goss® Colorliner™ press. Paging and color flexibility — unmatched by any other double-width offset press — combined with optimum R.O.P. print quality. Without having to make a choice. Even in the future, when the Colorliner's modular design accommodates your changing production requirements.

In its unique four-high vertical arrangement with its short couple-to-couple web lead, the Colorliner can print process color on every page of a section, including the front page. Without the setoff associated with unit-to-unit compensators and common impression cylinders. Without reversing couples. And with reduced need for angle bar and bay window leads. This makes the four-high arrangement — particularly with optional third-form rollers in the printing couples — well-suited to produce Sunday preruns and four-color advertising inserts.

The Colorliner can be installed with 4/4, 4/2, 4/1, 3/1, 2/1 or whatever cylinder arrangement you need today. And its flexibility extends into tomorrow to meet new pagination and color requirements.



Four vertical units. Each with two printing couples. To combine optimum offset quality with the capability to print process color on every page of a section.

Goss **COLORLINER**

NOT EITHER/OR. ANYMORE.

The 75,000 cph Colorliner has a number of other outstanding features to maximize print quality and productivity. Slow-speed Goss Injector® or open fountain inkers. Water-down-first, direct-to-plate dampening systems. Narrow-gap lockup. Presetting and sequential startup. A new running-belt RTP for 45" rolls. Options include a 50" running-belt RTP, automatic webbing in vertical arrangements and heavy-duty 3:2 160-page Sovereign™ and 80-page 2:3:3 jaw folders.

The Colorliner is available with new, user-friendly press control and information systems. The menu-driven Advanced Press Control System provides all the advantages of automation: touch-screen input; feedback on ink zone, registration, compensator and web tension controls; preset individual ink and water curves; and automatic sequential startup.

The Production Information Control System counts papers and shuts presses down at preselected counts, generates customer-formatted reports and can collect historical data for up to a year.

Paging and color flexibility. It's not either/or anymore with the unique Goss Colorliner press.

For more information, contact Goss Newspaper Products, Graphic Systems Division, Rockwell International, 3100 South Central Avenue, Chicago, Illinois 60650. Or phone 312-656-8600.

Economy will shape paper use

BY JON G. UDELL

Although U.S. daily newspapers are well-positioned for the future [presstime, Nov. 1986, p. 71], history shows that the economy will be the primary determinant of newspapers' future growth. And the economic horizon of the United States is cloudy.

Among the many potential obstacles to economic expansion are the rapidly expanding federal deficit, huge portfolios of non-performing loans held by U.S. financial institutions, a dangerously high reliance on foreign capital in both the public and private sectors, and, in numerous major industries, a competitive struggle with foreign rivals that have lower costs and prices.

Fortunately, there also are rays of sunshine on the horizon. The rate of inflation has been greatly reduced, technology is advancing at an unprecedented pace, productivity is rising in numerous U.S. industries, the demographic configuration of the U.S. population is favorable to economic expansion, and there is at least a "promise" of reduced federal deficit spending and an improved balance of trade.

Given the many divergent positive and negative forces that will determine our destiny, predicting the economic future is indeed difficult. Most chief executives of Fortune 500 companies probably do not possess special talents for making any such prediction, but they are intimately involved in the course of economic events. Furthermore, their companies have both the need and the resources to carefully monitor and predict the many forces that will shape our economy's future. Therefore, I surveyed those CEOs, and 105 offered their predictions.

The differences in their views confirm that the future is indeed uncertain. Approximately one-half of the responding executives anticipated a period of severe economic stress, such as a financial crisis, between now and 1995; the other half do not foresee major problems for the U.S. economy in the years ahead.

Udell is Irwin Maier professor of business at the University of Wisconsin. This is the second of his two-part series on newspapers, newsprint consumption and the economy.

Tribune Co

U.S. newsprint consumption could rise to 14.5 or 15 million metric tons by 1995.

Despite the differences in their views, the CEOs generally agree that there will be a rising intensity of international competition, a significant transformation in almost every major U.S. industry because of advancing technology and growing productivity, and a continued erosion of U.S. industry's share of world markets.

Most of the executives predict a reasonably healthy rate of real U.S. economic growth between now and 1995. There is a fairly strong consensus that the average real rate of expansion will be 3 percent—almost the same as the prevailing rate during 1975-85.

If a 3-percent growth rate were to be realized, U.S. newspapers would fare well in the years ahead. For example, U.S. newsprint consumption, which stood at 11.65 million metric tons in 1985, would rise to more than 15 million tons by 1995. The vast majority of this newsprint would continue to be consumed directly and indirectly (for example, in preprinted advertising inserts) by newspapers.

However, if there is a period of severe economic stress during the years ahead, such as a financial crisis or severe recession, the anticipated 3-percent economic growth rate would be difficult to attain. Given this scenario, it would be more reasonable to anticipate a 2.5-percent average annual expansion of the real gross national product. Using this more conservative economic vision of the future, I project that U.S. newsprint consumption will rise to 12.9 million tons in 1990 and 14.5 million tons in 1995.

These estimates use a 30-pound basis-weight newsprint and are projections of the demand trend. If either 1990 or 1995 is near the peak of the U.S. business cycle, actual consumption should be above projected trend value.

On the other hand, if either year is at or near the recessionary phase of the cycle, consumption is likely to be below the projected 12.9- or 14.5-million tons. Both projections also assume an adequate supply of newsprint, and that is never a certainty. Even a temporary shortage of newsprint, if of major proportion, reduces the long-term growth of U.S. newsprint consumption.

In summary, the future outlook for U.S. newspapers is favorable even though the U.S. economy may experience some difficult days in the years ahead. If difficulty does not occur, the 14.5-million-ton trend projection for 1995 will be exceeded. In fact, if newspapers and newsprint consumption were to repeat the growth rates of 1975-85, U.S. newsprint consumption would reach 16.3 million tons in 1995. However, one can strongly question whether newsprint supply would allow such a rapid expansion.

Copies of my complete study, "A Look to the Future: the U.S. Economy, Newspapers and Newsprint Consumption in 1995," are available from ANPA's Newsprint and Transportation Department at The Newspaper Center in Reston, Va. □

Abitibi stock sold by Olympia & York

Olympia & York Developments Ltd. is selling its remaining 4.8-million shares of Abitibi-Price Inc.

Olympia & York owned 93 percent of Abitibi-Price in 1981 but sold most of its holdings to Gulf Canada Ltd. last year [presstime, Sept. 1985, p. 47]. □

Consumption rates rise once again; inventories drop

Newsprint consumption by all U.S. users was up 1.2 percent in October 1986 compared with the same month a year earlier. For the first 10 months of '86, users consumed 3.1-percent more newsprint than they did a year earlier.

Consumption by U.S. daily newspapers also increased by 1.2 percent in October, and for 10 months it was up 2.1 percent.

Newsprint inventories of newspapers in ANPA's statistical sample were estimated at 40 days' supply at the end of October, down from 43 days at the same time in 1985. North American mill stocks were about 28-percent below the October 1985 level.

Worldwide shipments from Canadian mills increased in October by 3.5 percent from October 1985. Shipments within Canada were up 6.2 percent, while those to the United States and Europe were up 0.6 percent and 18.6 percent, respectively.

Domestic shipments from U.S. mills increased 3 percent in October while U.S. shipments overseas were up 16 percent.

Canadian mills operated at 97 percent of capacity in October—the highest rate since February 1985—and at 93.4 percent for the 10-month period. U.S. mills ran at 91 percent in October and 94.2 percent for the year.

Production in Canada was 4.9-percent higher in October 1986 than a year previously, and it was up 4.6 percent in the United States. Ten-month totals showed increases of 2.4 percent and 2.9 percent, respectively.

Mills with majority of capacity face contract talks in Canada

Labor contracts will expire at most eastern Canadian newsprint mills this year.

These mills account for more than 8 million metric tons of newsprint—about 80 percent of total Canadian capacity. The majority of the contracts expire April 30.

In the United States, contracts will expire this year at five mills that account for about 25 percent of U.S. capacity.

ANPA's Newsprint and Transportation Department is preparing a detailed list of mills and contract expiration dates. It will be published in a subsequent issue of presstime.

In recent labor developments affecting the newsprint industry:

• A three-year contract was ratified between the United Paperworkers International Union and Kimberly-Clark Corp. at the company's Coosa Pines, Ala., mill. Employees will receive a $1,000 lump-sum increase in the first year and 3-percent increases in the second and third years.

• Negotiations continue between the UPIU and three mills where contracts expired last year: Augusta (Ga.) Newsprint Co., FSC Paper Corp. in Alsip, Ill., and Champion International Corp. in Sheldon, Texas [presstime, Nov. 1986, p. 72].

• An interim agreement was reached between the International Woodworkers of America and the Forest Industrial Relations organization in British Columbia. This action probably will mean an end to the woodworkers' strike that cut off most of the wood supply to MacMillan Bloedel's Port Alberni pulp and newsprint/groundwood complex, causing the mill to curtail production. □

Bidders seek Quebec's Donohue shares

Two companies have submitted bids to buy the 56-percent share of Donohue Inc. owned by the Quebec government through its holding company, Dofor Inc.

The bidders are Normick Perron Inc. and Dogesto Inc., a new company formed by Donohue's management and led by the company's president and chief operating officer, Edward Walsh.

Besides its stake in Donohue, Dofor is selling its 28-percent ownership in Domtar Inc. [presstime, Nov. 1986, p. 72]. □

Newspaper deliveries could be affected by bus-industry woes

Amalgamated Transit Union workers rejected a proposed two-year contract with Greyhound Lines Inc. calling for $27 million in wage and benefit concessions. A tentative agreement on the plan had been reached in November.

Greyhound's chairman warned that the parent company would sell the bus operation if talks did not result in union concessions [presstime, Nov. 1986, p. 72]. Some newspapers deliver bundles to outlying communities by commercial bus line.

In other bus-service news, Trailways Lines has received permission to discontinue scheduled service in Pennsylvania April 1. California and Ohio public utility commissions denied similar Trailways bids to drop service.

Trailways also has announced plans to eliminate all service in Nebraska and Utah. Similar service-curtailment petitions are pending in other jurisdictions. Trailways already has abandoned much of its interstate service in and through various Western states.

These and other developments come at a time when the Interstate Commerce Commission reports that about 3,763 communities have lost intercity bus service since the bus industry was deregulated in 1982, and about 890 communities have gained service. □

Milwaukee Road sale upheld by court

The 7th U.S. Circuit Court of Appeals in Chicago upheld decisions of the Interstate Commerce Commission and a federal judge under which assets of the bankrupt Milwaukee Road were sold to the Soo Line Railroad.

The court rejected separate pleas by rail labor, CSX Transportation Inc. (formerly Seaboard System Railroad) and investors in the Milwaukee's successor real estate company [presstime, April 1985, p. 43]. □

Longshoremen settle

International Longshoremen Association members approved three-year contracts with the ports of Philadelphia and Wilmington, Del. ILA members had rejected an earlier contract proposal [presstime, Dec. 1986, p. 68]. □

Job fairs, fellowships lead off year's minority hiring efforts

Increasing the number and status of minorities in newspaper jobs will continue to be the focus of major programs in 1987.

Three job fairs for employment in all newspaper departments will be sponsored by the Task Force on Minorities in the Newspaper Business [presstime, Nov. 1986, p. 76]. Responsibility for each of the fairs will be shared by another organization or newspaper.

The schedule is:

- Jan. 15-17 in Louisville, with the American Society of Newspaper Editors
- Feb. 6-7 in Los Angeles, with the California Chicano News Media Association.
- March 19-21 in Washington, D.C., with The Washington Post

The task force, made up of representatives from 31 newspaper-related organizations, cosponsored fairs in Boston and Minneapolis last year.

Meanwhile, ANPA Foundation will be continuing its minority fellowship program geared to increasing skills of minorities already working for newspapers.

The program, which will be in its seventh year, will enable 25 people to attend newspaper-business seminars. Newspaper executives and journalism school administrators may nominate minority candidates they believe have management potential. Or minority employees may initiate applications with the approval of their supervisors.

For seminars to be conducted during the first half of 1987, the deadline for applications is Jan. 20. Selections will be made by Jan. 26. Contact Nancy Osborn of ANPA Foundation at The Newspaper Center in Reston, Va. □

Foundation to move

Gannett Foundation said it will move its headquarters from Rochester to Washington, D.C., within the next two years.

Gannett Co., from which the foundation is legally independent, two years ago moved from Rochester to the close-in Washington suburb of Arlington, Va.

Foundation President Eugene C. Dorsey said the organization will maintain a Rochester office after the relocation. □

Five more p.m. dailies convert to a.m.

Five more newspapers have switched from evening to morning publication or announced plans to do so.

They are:

- The Santa Cruz (Calif.) Sentinel
- The Courier of Conroe, Texas
- The Gary (Ind.) Post-Tribune
- The Bismarck (N.D.) Tribune (to take effect in April)
- The New Haven (Conn.) Register (March 1).

Also since presstime's last roundup of publication schedule changes [Aug. 1986, p. 60], the Evening Independent of St. Petersburg ceased publication and became a section—named City Times and Independent—of the St. Petersburg Times, an a.m. paper.

Another Florida p.m., The News-Chief of Winter Haven, added a morning edition.

In New Haven, when the Register switches to mornings, its sister publication, the morning Journal-Courier, will be abolished. The Register will not entirely desert the p.m. field, however; it will publish an evening street-sales edition. □

Press associations: changes in command

The **Southern Newspaper Publishers Association**, at its annual convention Oct. 5-8 in Boca Raton, Fla., elected the following new officers:

- *President*—Cecil B. Highland Jr., Clarksburg (W.Va.) Publishing Co.
- *President-elect*—Creed C. Black, The Lexington (Ky.) Herald-Leader
- *Treasurer*—Larry D. Franklin, Harte-Hanks Communications Inc., San Antonio.

The **National Society of Newspaper Columnists**, meeting May 30-June 1 in Norfolk, elected these new officers:

- *President*—Richard Des Ruisseaux, The Louisville Times
- *Vice President*—Patricia Kite, P-K Communications, Newark, Calif.
- *Secretary*—Michael Harden, The Columbus (Ohio) Dispatch
- *Treasurer*—Bob Hill, The Courier-Journal and The Louisville Times □

ABC no longer counts number of newspapers, total circulation

The Audit Bureau of Circulations has discontinued its annual statistical roundup of daily and Sunday newspapers in the United States and Canada.

According to Charles O. Bennett, ABC vice president/communications, the annual accounting of the number of newspapers and their total circulation was begun 35 years ago as a service to the industry.

"In more recent times, others have developed annual reviews based on different sources, timing and methods, and resulting in different conclusions," Bennett said. "Hopefully, our decision will help to eliminate this confusion" [presstime, May 1982, p. 56].

Editor & Publisher Year Book compiles statistics on dailies and their circulations, which are cited each year in ANPA's "Facts About Newspapers" booklet. Separately, ANPA annually reports on daily newspaper start-ups, suspensions and mergers [presstime, Feb. 1986, p. 61].

Bennett added that ABC will continue to provide annual recapitulations of the Sept. 30 circulation data for U.S. and Canadian daily and Sunday newspapers that are members of the audit bureau. "These data in the 1985 study represented 70 percent of the total number of U.S. daily newspapers and slightly over 94 percent of the total circulation, and 82 percent of the number of U.S. Sunday newspapers and slightly under 98 percent of the total (Sunday) circulation," he said. □

Recent acquisitions

Thomson Newspapers Inc. of Des Plaines, Ill., acquired The Cumberland (Md.) News, daily circulation 14,842, and the Cumberland Evening Times, daily circulation 15,110. Thomson also acquired The Daily Gazette, Sterling, Ill., circulation 14,083.

Newhouse Newspapers of New York City acquired The Times, Trenton, N.J., daily circulation 63,870.

Ingersoll Publications Co. of Princeton, N.J., acquired The Sheboygan (Wis.) Press, circulation 29,440.

Morgan Dickerman III and Margaret Dickerman acquired sole ownership of The Wilson (N.C.) Daily Times, circulation 17,238.

The Alliance (Neb.) Times-Herald acquired The Goodland (Kan.) Daily News, circulation 3,183. □

Wilson, Sulzberger, Cowles, Schermer to be nominated

George W. Wilson, publisher of the Concord (N.H.) Monitor, will be nominated in May to serve as the Association's next chairman and president.

Also to be nominated at the 101st Annual ANPA Convention in New York City are:

- For vice chairman, Arthur Ochs Sulzberger, chairman of The New York Times Co. and publisher of The New York Times
- For secretary, William H. Cowles 3rd, president and publisher of The Spokesman-Review and the Spokane Chronicle
- For treasurer, Lloyd G. Schermer, chairman and chief executive officer of Lee Enterprises Inc.

The slate of officer nominees was approved by the Board of Directors during its Dec. 4-5 meeting in New York City. It will be offered at the Convention by the Nominating Committee headed by Richard J.V. Johnson, president of the Houston Chronicle.

Under ANPA's procedures, officers serve one-year terms and follow an annual succession to the chairmanship. Current Chairman and President Alvah H. Chapman Jr., chairman and chief executive officer of Knight-Ridder Inc., will remain on the Board for one year and will chair the next Nominating Committee.

George W. Wilson

Arthur Ochs Sulzberger

William H. Cowles 3rd

Lloyd G. Schermer

The Board also approved the intention of the Nominating Committee to place before the membership in May as new ANPA Directors Antonio Luis Ferré, president and publisher of El Nuevo Dia of San Juan, Puerto Rico; and Richard J. Warren, vice president/editor and publisher of the Bangor (Maine) Daily News. Ferre is a member of the Association's Circulation and Readership Committee, and Warren is a member of the Government Affairs Committee and a former member of the Technical Committee.

During the New York City meeting, the Board also adopted a 1987 Association expense budget of $13.3 million to provide continuing work and emphasis on postal matters, training, legal affairs, government relations, technology, telecommunications, human resources and other programs.

Revenue for the year, with *no* change in the dues formula, is expected to be $14.1 million, with the balance over expenses going to contingency and equipment reserves. The expense figure represents an 8.5-percent increase over the 1986 budget; the revenues represent a 10.7-percent increase.

Postal matters, including both second- and third-class issues, will continue to receive priority status in 1987 with some $329,000 earmarked for such work. Presstime will continue monthly at about its current number of editorial pages.

The ANPA staff will increase to 160 with the addition of a chemist, a paralegal and two meetings-management specialists. □

'The Blessings of Liberty' will be Convention theme

ANPA will observe its centennial in the place where all of its Conventions were held until 1975 and where the Association had headquarters until 1972—New York City. The theme of ANPA's 101st Annual Convention May 3-6 will be "The Blessings of Liberty: The Next Hundred Years."

The theme—using words from the preamble to the U.S. Constitution—was the idea of ANPA Chairman and President Alvah H. Chapman Jr.

"It was really Alvah Chapman's idea that it would be appropriate to make this a special Convention, because of both the Constitution's 200th anniversary and ANPA moving into its second hundred years," said David Laventhol, chairman of the Convention Arrangements Committee and president of The Times Mirror Co.

ANPA was founded in 1887 at a meeting of publishers held in Rochester, N.Y.

Opening ceremonies will take place on a Sunday evening, rather than a Monday morning as has been customary, at a vantage point for viewing the century-old Statue of Liberty.

The 5 p.m. ceremonies May 3 will be held at Castle Clinton, a national monument located in Battery Park on the tip of Manhattan. President Reagan has been invited to speak, Laventhol said.

The Convention Arrangements Committee is planning to present other speakers on the subject of "where society is now and where we are going," he added.

Also in keeping with the theme, the committee is developing a multimedia slide presentation that traces, in parallel, the evolution of ANPA, the newspaper business and the U.S. Constitution, for presentation at the Keynote Breakfast Monday morning.

Another highlight of the Convention program will be a seminar on "The Constitution: Balance of Powers 1987," conducted by Columbia University Seminars on Media and Society. It is scheduled for Wednesday morning.

Historically, ANPA conventions in New York City have been held at The Waldorf-Astoria. Although the Waldorf will be the site of most of this Convention's activities, two segments of the pro-

gram have been moved elsewhere for space reasons.

• The Monday Associated Press annual meeting will be at St. Bartholomew's Church, next door to the Waldorf.

• The Tuesday morning General Session and Newspaper Advertising Bureau annual meeting will be at Radio City Music Hall, a 10-minute walk from the hotel. Bus transportation will be available.

This year, two concurrent sessions are scheduled for Monday and Tuesday afternoons, instead of the traditional "topical clinics." Tentative subjects for the sessions are drug testing, the future of retailing, minorities, and "Fashions, Fancies and Finances."

Thomas C. Fichter, ANPA senior vice president, said the Convention "should break all records." The current attendance record, 2,888 registrants, was set the last time the Convention was held in New York City—in 1983. Fichter said "expert centers" again will be available to members during registration.

Convention registration information will be mailed to newspaper executives and others this month. □

Castle Clinton (center) will be site of opening ceremony May 3.

ANPA wellness guide mailed to membership

A guide for implementing a wellness/health program was mailed to ANPA-member newspapers in December.

The booklet, prepared by the Environmental Task Force of the ANPA Technical Committee, includes a bibliography and a wellness-program cost analysis based on circulation size and number of employees [pressstime, Sept. 1986, p. 60].

Additional copies of the 12-page booklet, "Wellness: A Guide to a Healthy Newspaper Family," are available to ANPA members for $10 each, and to non-members for $15. Contact Ellen F. Walaski, industrial hygienist, at The Newspaper Center in Reston, Va.

Guides examine technique of research

Information gathering is the subject of two new books: *Uncovering the News: A Journalist's Search for Information* by Lauren Kessler and Duncan McDonald, and *Search Strategies in Mass Communications* by Jean Ward and Kathleen A. Hansen.

Both books address ways researchers can master the mounting and increasingly complex mass of information. Kessler and McDonald, associate professors at the School of Journalism, University of Oregon, take a how-to approach. Ward and Hansen, associate professor and assistant professor, respectively, at the School of Journalism and Mass Communication, University of Minnesota, developed a model upon which they base their information-gathering techniques.

By explaining such informal sources as citizen networks and such formal sources as trade associations, authors of both books suggest ways to find and gather information quickly and efficiently.

Uncovering the News, a 244-page, soft-cover book, is available for $16.25 from Wadsworth Publishing Co., 7625 Empire Drive, Florence, Ky. 41042. *Search Strategies in Mass Communication*, at 276 pages, costs $15.95 (soft-cover) or $34.95 (hard-cover) from Longman Inc., Longman Building, 95 Church St., White Plains, N.Y. 10601.

Third World news has hometown impact

Many U.S. newspapers fail to give Third World events adequate coverage because, among other reasons, it is local news that sells papers, says John Maxwell Hamilton, visiting professor at the Medill School of Journalism, Northwestern University.

But as the interdependence between America and developing countries increases, readers should care about and better understand what is happening in these nations and how it affects them, says Hamilton, a one-time foreign correspondent. He suggests that newspapers tie Third World news to "Main Street" in a way that touches readers personally.

Hamilton's 188-page, soft-cover book, *Main Street America and the Third World*, was part of a Sigma Delta Chi Foundation project. It is available for $9.95 from Seven Locks Press, P.O. Box 27, Cabin John, Md. 20818. □

'Good morning' edict leads to bad day for Florida judge

A Florida judge who had a reporter hauled off to his chambers and reprimanded for not returning his "good morning" greeting in the hall of the county courthouse has been recommended for a reprimand himself.

Circuit Court Judge E.L. Eastmore Sept. 4 had a bailiff escort Palatka Daily News court reporter Butch Prevatt to his chambers, where he chastised him. Prevatt, who says he was preoccupied with thoughts of a research project when the judge addressed him, subsequently accused Eastmore of illegal detention.

State Attorney Stephen L. Boyles investigated the incident but said prosecution of Eastmore, who has been on the bench for 13 years, was "unwarranted."

However, the Florida Judicial Qualifications Commission Dec. 12 recommended to the state's Supreme Court that Eastmore be reprimanded for violating the Code of Judicial Conduct. It said the use of a bailiff to escort the reporter to chambers was an "overbearing and dictatorial act" on Eastmore's part and a "highly improper" use of his judicial power.

Newspaper numbers

5—number of VHF TV stations cross-owned with local newspapers in the top 10 markets.

7—percentage of U.S. daily newspaper publishers and general managers who are women.

372—average number of dollars paid weekly to beginning reporters working under contracts with The Newspaper Guild as of Oct. 1, 1986.

29—number of elements contained on the newly approved Standard Advertising Invoice.

Hot tip: Etoain Shrdlu is alive and well at the Smithsonian

Old newspaper hands who hanker to hear the clatter of a Linotype machine can do so at the Smithsonian Institution in Washington, D.C.

The National Museum of American History houses the only existing example of Ottmar Mergenthaler's original production-line Linotype, the "Blower" model. In working order, and run on request by Museum Specialist R. Stanley Nelson (above, showing a piece of type to a group of schoolchildren), it is on display in the museum's Hall of Printing and Graphic Arts.

Because of the difficulties of sustaining a hot-metal operation in a museum setting, however, the demonstration does not include the actual casting of a line of type.

Late last year, to mark the 1986 centennials of the Linotype and the museum's Graphic Arts Division, the Linotype Group—a division of Allied-Signal Inc.—presented the deed to three historic typesetting machines to the museum.

All three were precursors of the Linotype. The machines had been on loan to the Smithsonian since 1917.

Newspapers can warm readers on a chilly night

Start saving your old newspapers. You're going to need a lot of them if you buy Albert J. Zulkowitz's new invention that makes birch-like fireplace logs out of newsprint. Each log requires the equivalent of about two Sunday editions of The New York Times, he says.

Asked how long it takes to make a log, the 63-year-old Zulkowitz says, "It depends on how old you are. I could make a minimum of 40 logs an hour."

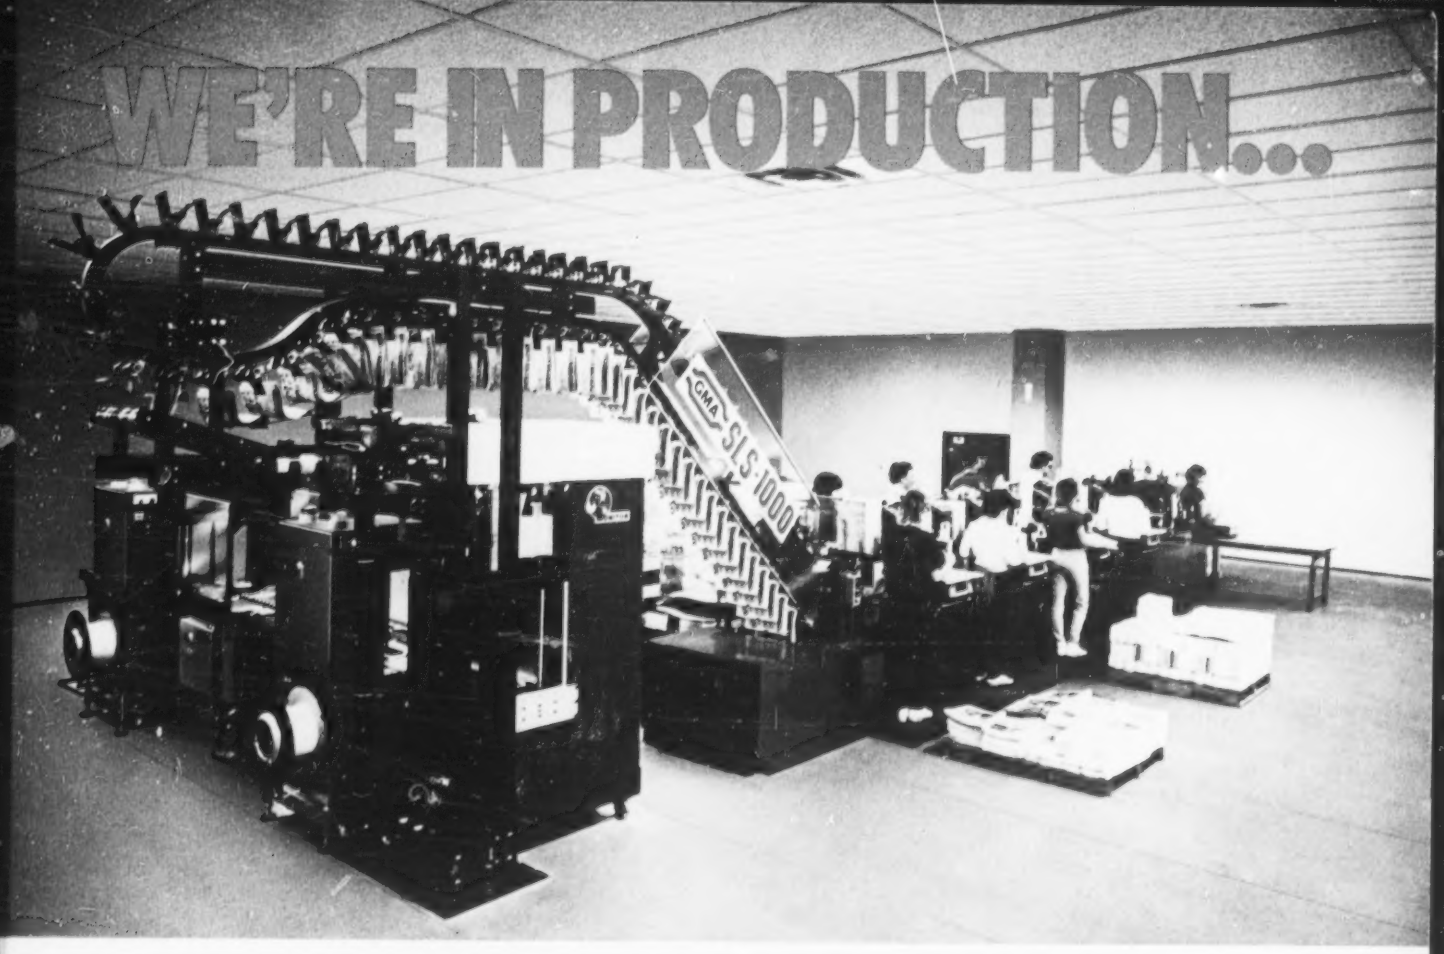
Zulkowitz has been issued a patent for his Eco-Fuel System. Most gadgets for making newspaper logs require that the paper be soaked and dried before burning. Zulkowitz says his is the only dry process that allows the logs to be burned as soon as they are made.

The rolled newspapers are put into an Eco-Logger that produces a log about 4 inches in diameter that burns 40 minutes or more. The logs are bound with a fine paper-covered wire and wrapped in a sheet of fresh newsprint with a birch-bark design. "You can't tell it from a birch log," he says.

The logs produce little residue, so at the end of the fireplace season the user cleans out wire and only a small amount of ashes. The secret of his invention, he says, is to allow enough air to penetrate the log. "We could get rid of tons of newspapers that go into landfills," he says. "You've got to start saving papers all year around."

The retired educator, who lives in Woodmere, Long Island, N.Y., plans to begin marketing his invention nationwide the end of February. Zulkowitz says the cost probably will be about $20.

WE'RE IN PRODUCTION...



Graphic Management's new high-speed SLS-1000 is in production and dramatically improving inserting speeds. In fact, this eight into one system was recently expanded to a **fourteen** into one to satisfy the inserting requirements of the New York Daily News while running three shifts a day at speeds up to 25,000 cph. That's productivity...!

To further meet your needs, Graphic Management Associates, Inc., has teamed up with Hall Systems, Inc. to jointly market total mailroom systems. Now you can have it all - monitor stackers, inserters, engineering and installation services - a complete turnkey package managed by one vendor.

The high-speed SLS-1000, offering the newest technology for the mailroom, is designed to meet the production requirements of the largest metropolitan newspapers, smaller dailies and weeklies.

So, as your insert market grows, the need to expand will be inexpensive and easy. Because of modular expandability from two to twenty insert hoppers - you can implement your future system NOW...!

GMA's SLS-1000

It makes heroes in the mailroom.

- Speeds up to 25,000 cph
- Modular expandability - from two to twenty insert hoppers
- Gripper delivery system
- Reject Control System
- Quarter fold capability
- Multiple jacket hoppers and drop points
- Electric Clutch feature
- Efficient use of floor space
- Ease of operation, maintenance and installation

For a complete, professional approach to satisfying your mailroom needs, call Graphic Management Associates, Inc. or Hall Systems, Inc. We'll provide **straight** answers to your mailroom problems!

Quality and commitment: The best in writing.

"I'm sort of the back roads person for the AP," says Special Correspondent Jules Loh. "I have been to every state, not as a tourist but as a reporter, talking to the people. And I'm forever discovering something about this country that I didn't know before."

The Associated Press is a news organization that doesn't have a star system, but Jules Loh stands out. His stories, focused on the everyday lives of Americans, often show the extraordinary side of ordinary people. His well-crafted pieces have been spotlighted in almost every newspaper in the country and have made his name one of AP's most familiar bylines.

Loh is a product of AP. He came up through the bureau system, starting 28 years ago in Louisville, filing the wire. He's spent his career taking on all kinds of news and features assignments, routine and special, to serve the needs of the thousands of member newspapers and broadcasters who own AP.

Like him, the 2,850 people who staff AP's 219 offices around the world are dedicated to giving these members the highest quality service in the news industry — a goal that is a continuing commitment by everyone in AP.

"Quality is not something I specifically think about every time I go to work in the morning," says Loh. "But when you're working with people who have a commitment to excellence and to quality, the quality comes out."

AP Associated Press
Quality. Commitment.

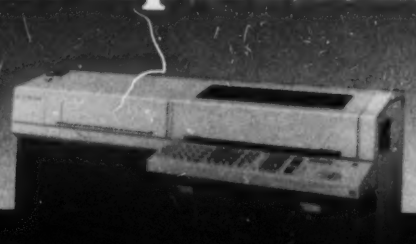
Any color scanner makes separations.

This one makes deadlines.



Good news! Now there's a scanner that can handle the daily grind of producing the daily paper.

Our extremely reliable SG-608 is truly a workhorse of a different color. That's because it features a unique red-laser dot generator for greater on-the-job dependability and up to twice the service life with less downtime and fewer maintenance headaches.

The SG-608 lets you routinely handle the quick turnarounds and high-volume production that are a way of life in the newspaper business. And, unlike most scanners, you don't have to be a genius with computers to set up and operate one.

The economically priced SG-608 is probably all the scanner you'll ever need. But it's also the logical place to start if you're considering a complete page make-up system later on.

When we designed the SG-608, we had one thing in mind—reliability. That's because we understand: If you don't get your paper out today, there may not be a tomorrow.

INDEX | VOLUME 9, NUMBER 2 | FEBRUARY 1987

Special Report *The million-member army of newspaper carriers is changing—it's no longer a kid's game. Each day, more adults are delivering more papers as the traditional "little merchant" system erodes. The trend toward morning publication—which means predawn deliveries—is a major factor. Many newspapers are also opting for pay-by-mail or pay-by-credit-card. Regardless of these changes and the doomsayers' predictions about print media, however, home delivery is predicted to continue to be a newspaper hallmark far into the future.* **20**

Building boom *To solve space problems, newspapers are expanding, adding satellite facilities or constructing all-new production plants.* **8**

Color-print film *Color-negative film is making gains on color slides, in part because it easily produces either color or black-and-white pictures.* **12**

Gambling ad sweepstakes *Newspapers are challenging laws restricting lottery ads. The stakes are high, but the odds of success are unfavorable.* **14**

New-style newsroom management *The new generation of editors tends to be more compassionate and to take greater advantage of training programs.* **28**

Newsrack retrospective *The coin-operated newspaper vending machine turns 30 this month. So sound was the original design that it is still being used.* **32**

Essay: Worldwide censorship *The World Press Freedom Committee's Leonard H. Marks explores the growth of censorship around the globe.* **34**

Profile: Russell T. Lewis *He could have had a job on the news or legal staffs. Instead, this New York Times exec chose the challenge of circulation.* **36**

"Challenging the Censors" *Meeting in London, an international conference of journalists adopts an action plan to combat censorship.* **42**

Labor and the 100th Congress *Watch for more labor and employee-benefit activity with Democrats in control of the Senate.* **48**

Flexo scorecard *Five newspaper companies recently purchased flexo presses. But after testing flexography, the Fort Lauderdale papers decided to buy offset.* **56**

ANPA/TEC '87 *The program for this year's ANPA Technical Exposition & Conference is shaping up. The Las Vegas show promises to be the biggest yet.* **58**

CHAIRMAN'S CORNER

Newspapers have important place in today's information society

In his 1982 book, *Megatrends*, John Naisbitt brought to the public's attention the concept that the United States has transformed itself from an industrial society to an information society. Today it's appropriate that we newspaper people take a look at our place in that society.

Over the years, we have seen many of our communications companies move from being family-owned, family-managed and largely independent one from the other, to large organizations owned by the public and by institutional shareholders.

In the mid-1960s, the 45 independent companies that now comprise Knight-Ridder were owned by approximately 100 shareholders. Today Knight-Ridder is owned by more than 15,000 shareholders. This is 150-for-1 ownership explosion of just one company in 20 years.

Alvah H. Chapman Jr.

We are not alone. Today there are 14 major publicly held U.S. companies in the newspaper business with tens of thousands of shareholders.

These realities—and the need to remain competitive—have stepped up the pursuit of professionalism in the management of newspapers.

In the early 1960s, most of the newspaper companies in America were privately owned and managed by third- and fourth-generation family members. Professional qualification was sometimes—but not always—part of the job criteria. Now we have better professional training for circulators, marketers and editors, and for the financial managers of our industry. The key jobs today are not going to the children of the owner, but to the best qualified manager, editor or publisher who can be found.

These management improvements have helped increase U.S. daily circulation to some 63 million, and Sunday circulation is at an all-time high of nearly 59 million. Newspapers are read in 75 percent of all U.S. households. Nearly two out of every three American adults read a newspaper on the average day; and more than eight out of every 10 adults read at least one newspaper during the average week.

And let's not forget Canada, where daily circulation exceeds 5.6 million, an all-time high.

Advertisers know these statistics, and they know newspaper advertising works. U.S. dailies are still the largest advertising medium, exceeding the nearest competitor, television, by almost $4.5 billion in 1985. Dailies are also number one in Canada.

Newspaper publishing is a very large business. Only two U.S. manufacturing industries have more plants; only five employ more people.

We have established an impressive record. We have diversified and increased ownership, improved management, held our lead in advertising, maintained circulation, and we have a carrier force of nearly a million that visits more homes each week than does the U.S. Postal Service.

Overall, across the continent, North America's newspapers continue to set records and to serve. We remain a vital force in the highly competitive information society.

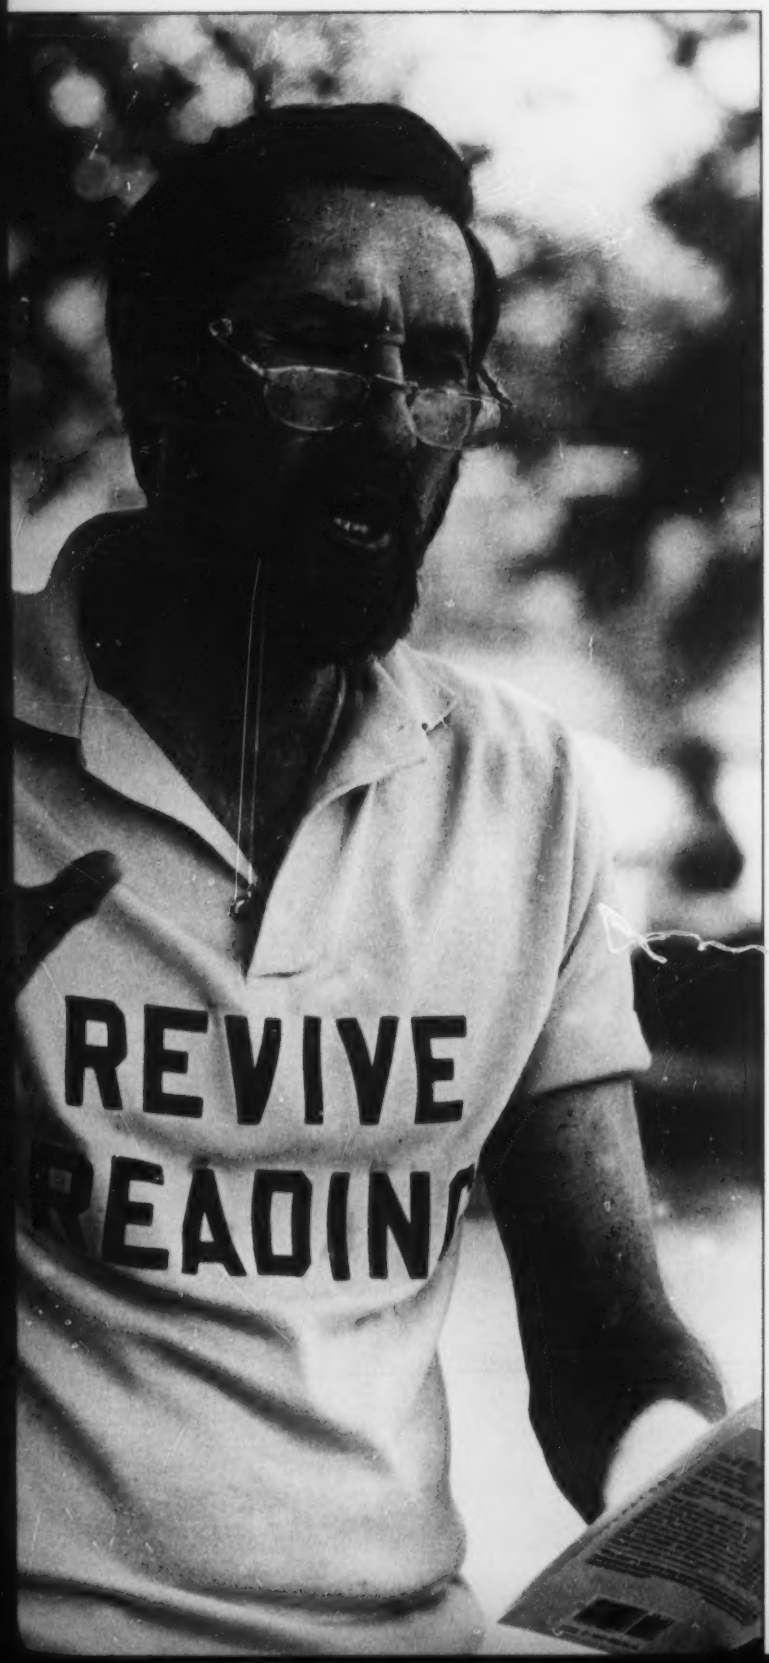
SPREADING THE WORD: A TESTAMENT FROM EL PASO



What can one newspaper do about the problems of illiteracy in its own city, much less the rapidly growing problem in the nation?

The El Paso Herald-Post has launched a crusade.

Working with other community groups, the Herald-Post has declared war on illiteracy. Its campaign includes everything from rallies to entice children and adults with the joys of reading, to programs to help juvenile offenders attain literacy skills. The forces become more powerful with each new community and business ally.

And the crusade is now igniting interest beyond El Paso. The Herald-Post is developing a blueprint for other newspapers to join in the battle. "The time has come," editor Jay Ambrose declared, "to preach the word, the printed word, to celebrate reading and its many rewards; to defend the greatest civilizing force in the history of mankind against the ravages of inadequate education and social neglect."

LITERACY: WE OPEN DOORS TO A WIDER WORLD

Have You Looked At Your Yellow Pages Directory . . . Lately?

Your Best Source for New Revenue is in the Yellow Pages!

Yellow Pages advertising is the nation's fastest growing major advertising medium. In 1985, $6.8 billion were consumed by Yellow Pages advertising with estimates for 1987 ranging from nine to eleven billion dollars. The majority of those dollars will be coming from your local advertisers. With the current trends toward pre-prints from R.O.P., the local advertiser will be vital to your long-term profitability and success. Yellow Pages are competing head-to-head for your local advertising dollars.

What can be done about the Yellow Pages growth?

How many dollars are in your Yellow Pages directory?

How much is a half-page ad?

When does your Yellow Pages close?

When should you approach the Yellow Pages problem?

Over the last four years of competitively selling against the Yellow Pages, Steve Wasser and Mark Rood of American Consulting Services have developed a marketing program for the newspaper industry which teaches your account executives how to convert overspent Yellow Page dollars into newsprint contracts through a "consultant sell" approach. Released in March this year, their training has proven to be measurable and extremely cost-effective for every size newspaper. If you are a results-oriented, bottom-line manager, call the results people today. Our number is located at the bottom of this page.

BUILDING BOOM

BY ROSALIND C. TRUITT
presstime technical writer

Many newspapers are constructing new plants to keep up with rapid growth or to facilitate new processes in production

With presses running at capacity and mailrooms overrun by inserts, many newspaper companies across North America are expanding buildings, erecting remote or "satellite" plants, or constructing completely new facilities to meet the demand.

In some instances, newspapers are making a long-overdue move to replace outmoded facilities. In others, executives say rapid population and economic growth—and the attendant rise in circulation and advertising demands—have necessitated a construction program.

"Some newspapers are really pressed for space because they've grown so quickly, but in other cases, newspapers delayed making the switch from letterpress and making other changes. Now [that] they're replacing that equipment, they find it necessary to expand or to build a new facility," says Harold S. Hoch, vice president and industrial manager for Chas. T. Main Inc. of Boston, an architectural and design firm.

Whatever the reason for the expansions and new buildings, design firms as well as ANPA's Technical Services Department report a flurry of construction activity in all areas of the country and at publications of all sizes.

For example, Leonard E. Elliott, staff consultant for newspaper facilities, says when he joined The Austin Co., a Cleveland architectural and engineering firm, six years ago, it had a handful of newspaper projects in the works. Currently the company is overseeing more than 30 newspaper projects.

To solve space problems, newspapers are expanding pressrooms, renovating editorial, advertising and other offices, and adding parking lots. However, relief for cramped, overtaxed mailrooms seems to be a universal headache for which a cure is still being sought.

"There's a great deal of expansion going on, and the influx of inserts has focused a lot of attention on the mailroom," says James P. Walsh, an ANPA technical services engineer who reviews building plans for newspapers that request it. "Everybody's complaining they don't have enough space, and they're trying to plan so that they do."

Newspaper executives and architects say that in addition to the mailroom activity there are several noteworthy trends in newspaper design:

- Joining in the construction binge [presstime, June 1983, p. 4] have been an unusually large number of small- to medium-size newspapers. Having outgrown their quarters, they are building larger, more efficient plants.
- The so-called "fast track" mode of construction, in which the design and construction process is speeded up to allow earlier completion of a project, seems to be losing favor. Many newspapers are returning to the old, more methodical approach of slower planning and calling for contractors' bids.
- Many newspapers, after years of urging by designers, are finally projecting far into the future when planning structures. Larger, more flexible building sites are being acquired, and buildings are being constructed with the idea that future expansion is not only possible but likely.

Still, some newspaper executives feel expansion itself should be avoided if at all possible. At the June 1986 ANPA trade show in Atlanta, Harold J. Brown, vice president/operations for the Atlanta Journal and Constitution, counseled workshop attendees not to build a plant unless it was absolutely necessary. He cited the expense and the time executives spend away from regular duties as reasons to avoid construction if at all possible [presstime, June 1986, p. 45].

In many instances, though, new construction is unavoidable. The New York Times Co., for example, in recent years has purchased a number of newspaper properties in need of immediate overhaul

Paddock Publications' new plant features a computerized press console.

The new 57,000-square-foot facility gives Paddock breathing room.

or replacement of various facilities, says Martin Donner, facilities director.

The Times Co. has built either completely new plants or satellite printing facilities for The Gainesville (Fla.) Sun, the Ocala (Fla.) Star-Banner, the Houma (La.) Daily Courier, The Sarasota (Fla.) Herald-Tribune, the Santa Rosa (Calif.) Press-Democrat and several other newspapers in recent years.

"In most of those places, the expansions and improvements couldn't be put off any longer. Presses were old and not performing up to contemporary standards. People were working in horrible . . . conditions," Donner says.

In each case, he observes, the newspaper wants functional buildings first and foremost, but it is also concerned that the buildings be compatible with local architecture. "We want them to look nice, too," Donner says. "We'll spend a few extra bucks for landscaping if it improves the appearance of the building. We want to be good corporate citizens."

MAILROOM WOES. A cramped mailroom is one of the reasons The State (morning, circulation 116,342) and The Columbia (S.C.) Record (evening, 29,398) decided to build a new plant. According to F. Page Morris, vice president of The State-Record Co., the pressroom is inadequate, and, in fact, the entire building is too small.

Then there is the problem with the University of South Carolina Gamecocks, who play their football games—often on Saturday nights to crowds of more than 70,000—in a stadium located practically next door to the newspaper.

Like any newspaper, The State wants complete coverage and on-time delivery for its widely distributed, 150,000- circulation Sunday edition. But delivery trucks seeking to drop off bundles at their destinations must fight heavy stadium traffic for some time after the games end.

The current site and the new one are about a half mile apart, but the new location will provide better access to highways.

Construction of the new plant began last December, and Morris expects the $17-million building will be completed and everything moved into it by the summer of 1988.

According to Morris, after deciding new facilities of some sort would have to be constructed, the newspaper company in 1984 considered a variety of options, including purchasing new presses and making them fit into the present structure, building a satellite plant and leaving the existing offices intact, or abandoning the old building and constructing a completely new one. After considerable deliberation, he said, it was determined a completely new facility was the answer.

Each newspaper's requirements are different, of course. And in a fast-growing suburb of Chicago, Paddock Publications decided a satellite production facility was the answer to its mailroom and pressroom problems. The company, which publishes The Daily Herald (morning, 73,315) of Arlington Heights and a total-market-coverage product, built a $4.5-million production-distribution center that opened last fall.

"In the early 1980s, we became aware our capacity was rapidly being reached. The number of newspapers we had to print on the equipment we had available meant we had to stretch deadlines to accommodate the press run," says Daniel E. Baumann, senior vice president, general manager and editor. "In addition, we had newsprint stored 15 miles from the plant, and inserts were being stored in every nook and cranny we had. We had to do something."

The "something" was the new, 57,000-square-foot Stuart R. Paddock Printing Center. It replaced printing facilities that had been located in downtown Arlington Heights since 1939.

Construction started in April 1985. Last October, the plant began printing weekly sections, and the entire newspaper has been produced there since November.

SMALLER PAPERS. Other mid-size and smaller newspapers also have been forced by rapid growth into plant expansion.

One is the Newhall (Calif.) Signal, a 36,000-circulation thrice-weekly owned by Morris Publishing Co. of Savannah, Ga. A $4.7-million plant that opened last September is the first building the Signal has ever owned. It unites in one place employees who had been scattered in several different sites.

Located in Valencia, just north of the San Fernando Valley, the building houses editorial, advertising and other offices as well as the newspaper's first press. Previously, a commercial printer printed the newspaper.

After talking about it "for years," the newspaper finally decided "to build our own building. The area . . . is just growing tremendously, and the growth made it necessary to expand," says Publisher Anthony Newhall.

In another fast-growing section of California, the Chico Enterprise-Record (evening, 26,361), owned by the Donrey Media Group, is in the process of relocating. Its new 42,000-square-foot plant will include a mailroom four times the size of the old one; a pressroom with a new, seven-unit M.A.N.-Roland offset press; new offices for other departments; and an employee lunchroom. Occupancy will be in April.

"We've done reasonably well publishing a newspaper considering this (existing) building was a feed store at one time and wasn't designed for that purpose," says General Manager David A. Osborne. "But it's nice to have our own building designed just for a newspaper."

To obtain the space it needed, the Enterprise-Record had to leave the central

part of town, as a number of other newspapers have done [presstime, Aug. 1985, p. 29]. "Our one regret is in leaving downtown Chico. It's a very vibrant downtown area and we liked being located there," Osborne says. "We just ran out of land, though, and our new plant about two miles away gives us easy access to downtown."

SLOWING IT DOWN. When growth is fast, newspapers can be faced with the need to replace old facilities more quickly than anticipated.

Even so, many newspaper executives note that it is important to proceed carefully in a building project because mistakes can be costly.

Frequently, people from one newspaper will talk with their counterparts elsewhere about which design firms to retain, and they frequently tour new newspaper facilities in other areas before signing construction contracts.

Paddock Publications' Baumann says he found such visits highly informative. "Every plant we'd visit, we'd get more ideas. Newspapers are very helpful with one another, and I believe it's important for our industry to be that way—taking the time out to show people around and answer questions. Now that our plant is finished, it's our turn to help out."

John Pellegren, founder and president of The Pellegren Corp., is one of the architects who recognizes the trend toward more careful deliberations and the tendency to rely less on the fast-track approach to expansion.

"People are going back to the old-fashioned way of doing things, taking the time to get good competitive bids," Pellegren says. "They're taking it slow because they know it has to last. They're also seeking their architectural firms more closely. They're asking for references, going out to look at what the architects have done in other locations."

The fast track is often taken when it's important to get a facility operating quickly so that additional revenues can be generated right away, architects say. Using that procedure, clearing and grading—and even pouring foundations—are done before the design is completed, and a contractor (or contractors) is decided upon without competitive bidding.

A significant drawback is that a building constructed by the fast-track method usually costs more.

"Newspapers always wait until the last minute to do anything, and we're as guilty of that as anyone else. We'd like to have the building completed sooner," says Morris of The State-Record Co. However, the Columbia newspapers—opting for the more methodical, bid-solicitation procedure—"decided to bite the bullet and give up the few additional months 'fast track' would have saved us."

"We believe each project has to stand on its own, but in Columbia, fast track wasn't the answer. Our presses are old, being used beyond their capacity, and the mailroom is cramped," Morris says. But the newspapers concluded they could live with those problems "a bit longer" and thus "take our time and do the design carefully."

Donner of The New York Times Co. has overseen both fast-track (most recently at the company's daily in Santa Rosa, Calif.) and non-fast-track projects. He says that in addition to the problem of not having a final cost until late in the project, the fast-track method can lead to "too many mistakes."

Not all newspapers have abandoned speeded-up construction schedules, however, and architects say the fast-track option may be desirable particularly if a newspaper finds itself in an emergency situation.

LONG-TERM PLANNING. Of course, long-term planning can prevent that kind of headlong dash into construction, and architects say many newspapers are finally heeding advice to plan for future contingencies. Not doing so can mean a building is inadequate not long after it's occupied.

In California, the Newhall Signal planned for possible future expansion by designing the front portion of its new building so it could support an additional story. The pressroom can also handle an additional press line when needed.

Baumann of The Daily Herald says planners made certain there was plenty of room for expansion on the newspaper's new 4.5-acre site in suburban Chicago, if and when the need arises.

The Morning News and Evening Journal of Wilmington, Del., also are taking the long view as they plan a new building. Michael J. Christopher, assistant production director, says, "Our mailroom is in desperate need of space because we have very little on-site storage, we're in an old building that needs a lot of renovation, our presses are at their capacity. However, we know we can't expand here. We're surrounded by small shops and restaurants, and there's no place to go."

Christopher adds: "We do know that the site we select will need room for almost 100-percent expansion. You're boxing yourself in too much for the future if you don't allow for that." □

There Was

In mid-January, The Capital in Annapolis, Md., opened its new, 80,000-square-foot newspaper publishing plant on the edge of town, a spacious, high-tech facility that emerged from two and a half years of careful planning and a year and a half of construction.

The three-story, $10-million structure replaces the newspaper's former quarters—a cramped building one mile closer to the crowded downtown area of the historic Maryland capital. The newspaper, which dates its beginnings to 1727, had been housed since 1948 in a building that at various times had been a bowling alley and a gas station.

With the new building came an additional $4-million worth of new newspaper equipment, including mailroom inserting machines, a color scanner and a leased five-unit Goss Headliner press with 80-page and four-color capacity.

For Philip Merrill, president and publisher of The Capital (evening, circulation 39,848), the handwriting had been on the wall for several years.

"It was clear we had to build. We should have built a new plant five years ago," Merrill says. "There were too many problems here. We had trouble getting the newspaper printed, and because of afternoon traffic and our location we had trouble getting the paper out and delivered."

Many of the problems stemmed from the success of the newspaper itself. Since the mid 1960s, circulation and the average number of pages per edition have tripled.

Production was hampered by nearly 20-year-old presses that could print a maximum of 48 pages and limited color. In addition, there were severe space limitations everywhere, particularly in the newsroom, pressroom, newsprint storage area and parking lot, where delivery trucks and employees' cars competed for space.

And the delivery trucks' problems were only beginning once they got out of the parking lot. Then they had to negotiate through heavily congested streets to make bundle drops.

So, in early 1983, Richard P. Murchake, the newspaper's production director, began fact-finding trips to other newspapers with new plants, such as the Asbury Park (N.J.) Press.

No Choice in Annapolis: 'It Was Clear We Had to Build'

The next step, in late-1984, was the creation of three committees, each with three members, to guide financing, site selection, and design and construction. Publisher Merrill chaired the finance committee, which included the newspaper's controller and general counsel. Murchake headed the other two committees and was appointed by the publisher to supervise the entire project. Serving with Murchake on the site selection and design and construction committees were the circulation manager and the controller.

From then on, the committees met almost weekly. They reported to Merrill, but Murchake says the publisher followed their recommendations for the most part.

In January 1985, the finance committee determined that the plant would be financed through $10 million in industrial revenue bonds and that in the beginning the new press would be leased with the likelihood of purchase in a few years.

By February 1985, Merrill, Murchake and the other newspaper executives had a good idea of what they wanted in the way of a building. After interviewing a number of architectural firms, they selected Denver Design Associates to prepare the blueprints.

Then it was time to select a site. About half a dozen were considered, Murchake says. All were within a mile or two of the newspaper's former location and all were approximately the same size.

The physical layout of Annapolis has made deliveries tricky for the newspaper. The city is located on the Chesapeake Bay, and two rivers, the Severn and the South, run through the city into the bay. There are two bridges across each river, and they are often clogged with vehicles.

The newspaper executives delayed the decision on the site until federal, state and local highway officials decided where permanent access roads to two major highways would be located.

In mid-1985, after that access had been determined, the final site was selected.

Murchake says the 10-acre plot offers the most convenient access to the highways and the bridges and will best enable the newspaper to meet its goal of completing home deliveries by 5 p.m.

In August 1985, with financing arranged, location selected and building plans ready, general contractor Dalsemer, Catzen and Associates Inc. of Baltimore began site preparation.

Murchake says construction proceeded smoothly, but there were "a lot of little details to keep track of." By keeping track of those details, from the installation of plumbing fixtures to the laying of computer wires, he avoided unpleasant "surprises" during construction, he says.

Construction of the production facilities was completed last September, and the presses and mailroom equipment were up and running by mid-autumn. The editorial, advertising, business-office and other staffs completed their move in mid-January when the rest of the building was finished.

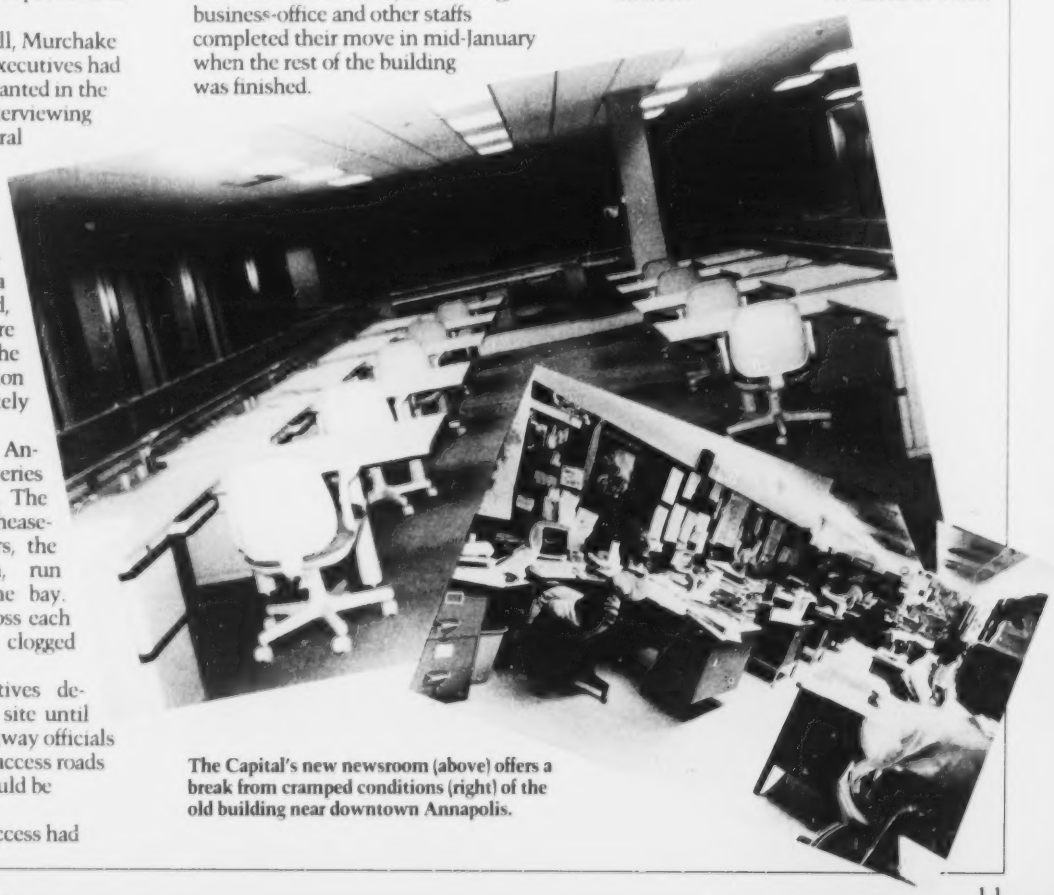
On Jan. 19, The Capital published for the first time with all departments operating in the new building.

It had taken four years from conception to completion, but Merrill, Murchake and their colleagues are pleased with the spacious new building with its high-speed presses, tripled mailroom space, 20,000-square-feet of newsprint storage space, large newsroom and other facilities.

In addition to publishing The Capital, Merrill's company—Capital-Gazette Communications—publishes three Maryland weeklies and one semi-weekly at the Annapolis plant. Much of the color separation and other pre-press work for The Washingtonian and Baltimore magazines, also owned by Capital-Gazette Communications, will be done in the new plant.

The Capital also plans to print more color and is considering a Sunday edition, which was not previously feasible.

—Rosalind C. Truitt



The Capital's new newsroom (above) offers a break from cramped conditions (right) of the old building near downtown Annapolis.

POSITIVELY NEGATIVE

Some newspaper photographers shoot only print film for the option of running either color or black-and-white pictures

BY JAMES M. GODBOLD

On May 12, 1961, Life magazine featured on its cover a sparkling color photograph of astronaut Alan B. Shepard. He was being hauled aboard a helicopter after splashing down from the first U.S. manned space flight.

The photograph had been shot with Ektachrome, a slide film. However, the film was developed as a negative rather than a positive slide by eliminating one phase of the slide development process. From the original negative, transparencies and black-and-white and color prints were made. Most newspapers serviced by the Associated Press and United Press International used black-and-white photos made from the color negatives.

Thus the color negative came to be widely known as "universal pan," meaning that any use was possible. Not only could it yield color pictures, it also could be used to make black-and-white prints.

During the 1950s and '60s, Ektachrome often was developed to a negative image because there were no negative color films available that would deliver usable quality.

Most publications using color had no pre-press scanners for transparencies, or if they did, the units were at best experimental. Consequently, the only way color could be reproduced on a printing press was by taking a color print and making a series of metal photoengravings for the process colors magenta (red), cyan (blue) and yellow.

Use of scanners for making color separations did not catch on at newspapers until the early 1970s. The advent of such machines, coupled with the subsequent sharp rise in newspaper color, led to reproduction directly from transparencies.

While many newspapers still shoot only slides, a growing number appear to be using color-negative film, according to an informal survey for presstime.

Negatives give newspapers the option of running a picture in color or black-and-white. Black-and-white prints made from a color negative usually are vastly superior and less time-consuming than prints made from color slides.

One proponent of the shift to negatives is Harold G. Buell, assistant general manager for newsphotos of AP, which in January converted to negatives exclusively. "We want every photograph which we transmit to be available in color to any customer that asks for it," Buell says.

Accordingly, most AP photos still will be transmitted in black-and-white form. But AP members now can get any AP picture also in color.

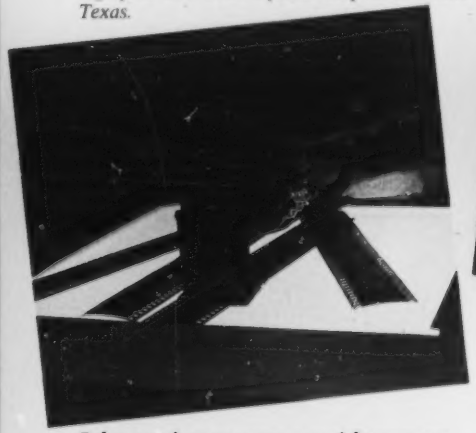
Among other converts to color negatives are Tony Spina, special assistant to the managing editor of the Detroit Free Press, and George L. Honeycutt, director of photography of the Houston Chronicle. They say negatives, in effect, shift color quality control from the back shop—the scanning process—to the photographer's darkroom.

In color-negative work, as in black-and-white photography, there is considerable latitude for manipulation in the enlarging process. Prints can be dodged, burned, color-corrected and otherwise improved. In contrast, adjustments to positive-film pictures must be done in the process of making color separations. For some newspapers lacking the most up-to-date scanning equipment, improvements are made more easily when enlarging a negative in the lab.

POSITIVE SIDE. Despite the plaudits of Buell, Spina, Honeycutt and others, the majority of newspapers still are very positive on the merits of transparencies, especially regarding quality.

Ron Mann, photo editor of The Orange County Register in Santa Ana, Calif., insists that because of their diverse client needs, "the wire services are the only people with a legitimate reason for using negative color." The Register has

Godbold is former director of photography for the Minneapolis Star and Tribune and for National Geographic magazine and a former publisher of community newspapers near Chicago and Houston. He currently is a free-lance photographer and owns a photo shop in Tomball, Texas.



Color negatives are a common sight on many newspapers' light tables (above); prints can be enlarged to size and gang-separated (right).

conducted quality tests and believes transparencies still yield better color.

The Register shoots mainly the Japanese-produced Fujichrome film with speed ratings of ASA 50 and 100—considered relatively slow in this era of 1,000 and 1,600 ASA. Many other newspapers also have reported using Fuji film—as opposed to that of newspapers' old standby, Kodak—for transparency work [presstime, March 1986, p. 10]. When shooting negatives, however, photo managers say Kodak's Kodacolor is the choice over Fujicolor.

George E. Sweers, assistant managing editor and director of news illustrations of the St. Petersburg Times, also favors slides, although he agrees negatives have some pluses including time savings, especially when processing multiple photographs on a tight deadline. In such instances, color prints can be made to size in the darkroom and "gang separated."

Some newspapers use different films and different processes, depending on the shooting situation. For example, Geary G. Broadnax, assistant photo editor of The Houston Post, says his photographers use all slide film for general photography but under some lighting conditions (such as Houston's Astrodome) use negatives. Negative color is easier to correct to a proper color balance, he says.

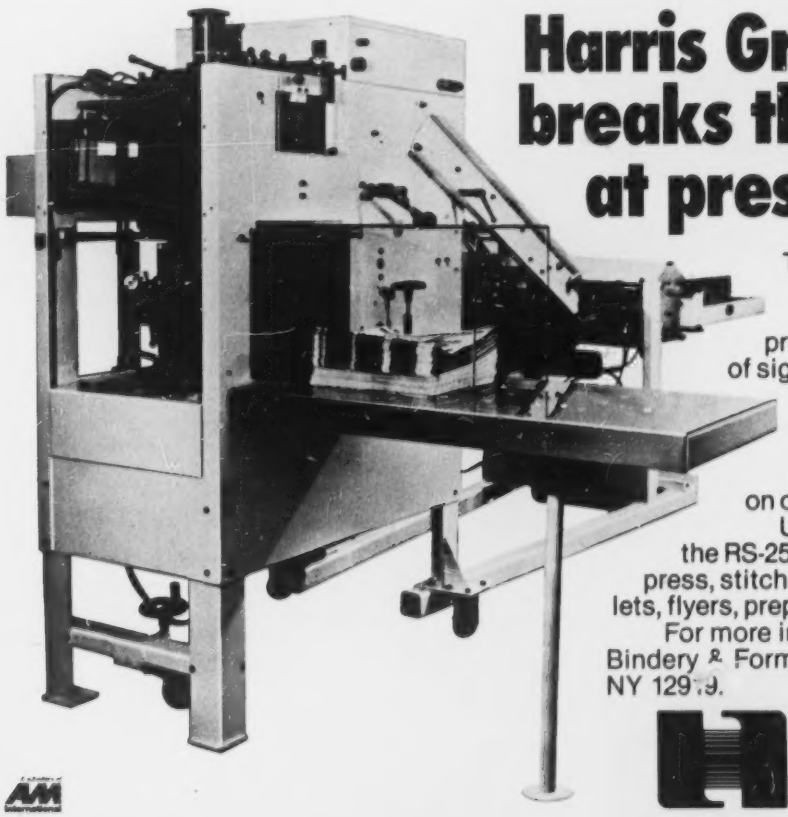
If there is any question whether a newspaper will end up running a shot in color or black-and-white, use color negative film. It eliminates getting "burned."

Other papers say they prefer to deal only with slides because color-negative film requires having a darkroom technician who can make color prints. They say they would rather hire another photographer than another technician.

Carl Davaz, photo editor of the Eugene (Ore.) Register-Guard, says he has the best of both worlds. "Although we are 99-percent chrome (slides, when shooting color), we can scan direct from a color negative with results equal to" a transparency, he says. The Register-Guard shoots transparency film exclusively but occasionally receives color negatives from outside sources.

Regardless of the technique, one point is apparent in the overall negative-versus-positive color picture: Electronics and printing equipment have a big impact on final quality.

Moreover, there seems to be a consensus among newspaper photo experts—one that accentuates the negative. If there is any question whether a newspaper will end up running a shot in color or black-and-white, use color negative film. It eliminates getting "burned" if a change in editorial plans demands color art and only black-and-white shots are available. □



Harris Graphics RS-25 breaks the bottleneck at press delivery.

The RS-25 works directly inline with most standard press deliveries to produce counted, compressed, and compensated stacks of signatures, 4 to 96 pages, at rates up to 70,000 cycles per hour.

It significantly reduces manning requirements and improves stack quality so follow-on operations are more efficient.

Used inline with slitter/trimmers, the RS-25 produces stacks of glued-on-press, stitched-on-press, or unbound booklets, flyers, preprints, and other material.

For more information, write Harris Graphics, Bindery & Forms Press Division, Champlain, NY 12919.

GAMBLING ADS

Prohibitions on newspapers' running advertising for bingo and other 'lottery' events put them behind the 8-ball

BY MARGARET GENOVESE
presstime staff writer

The Albert Lea (Minn.) Tribune does not run ads for state-licensed bingo games conducted by local charities. Nor does it contain advertisements for the state-conducted Iowa Lottery, although the community is a scant eight miles from the Iowa border.

The 9,018-circulation daily refuses such ads *not* because its Publisher Donald F. Jones has any qualms about promoting gambling. On the contrary, Jones would like to accept the ads.

It refuses them because 20 percent of the paper's circulation is mail-delivered, and it would be illegal to put newspapers containing these advertisements in the mail.

Publishers in other locations around the country have run up against similar legal roadblocks. The barriers are built primarily of federal laws restricting the advertising of a "lottery"—a term covering everything from church bingo to state lotteries to casino gambling. (However, it does not include parimutuel horse race wagering, because horse race handicapping is considered a "skill" and not a game of chance, according to an official of the Harness Tracks of America.)

Depending on the state and the types of lotteries legal there, the restrictions can cost newspapers a "substantial amount of revenue," according to René P. Milam, ANPA counsel.

Other newspaper observers say they also cause community relations problems for newspapers when they have to turn down ads from local charitable groups. They affect smaller newspapers more than larger ones. And, because some newspapers run the lottery ads despite the law, they even set newspaper against newspaper.

But, "primarily, it's a First Amendment issue," says Milam. It is the same issue that makes newspapers fight bans on cigarette and liquor advertising—that what is legal to sell or do should be legal to advertise.

"It seems to me that the newspaper reader is entitled to information about these legitimate local activities and to make up his own mind whether he wants to participate," says attorney P. Cameron DeVore of Seattle, an expert on commercial free speech. "So the classic First Amendment argument about not taking a paternalistic view, and providing more information so that free speech will permit free decision-making, applies."

Minnesota Publisher Jones cannot run ads from this American Legion bingo game.

In Minnesota, Publisher Jones insists on his newspaper's strict adherence to the law, although he considers the law "unfair" and observes that another newspaper in the area carries bingo ads, seemingly in violation of the law. "I do not run around the country breaking the law" even though the law appears to be "ridiculous," he says.

The restrictions can cost newspapers a "substantial amount of revenue."

Through the Minnesota Newspaper Association, Jones and other publishers in that state have gone to federal court seeking a declaration that the sections of the federal laws prohibiting mailing of lottery ads are unconstitutional. A similar challenge is being made by Aimes Publications Inc. of Buffalo, N.Y., whose magazine, Lottery & Gaming Review, was denied a second-class mail permit because it carries lottery advertisements.

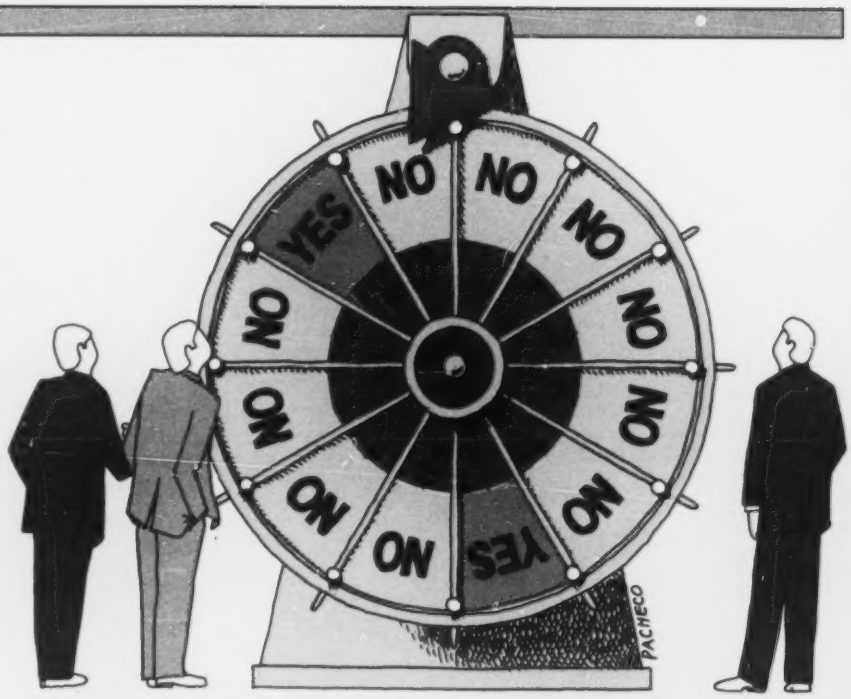
The attorney for MNA believes that the chance of the newspapers' prevailing in court, once better than even money, now is a long shot.

The reason is a 5-4 decision rendered by the U.S. Supreme Court last July in *Posadas de Puerto Rico Associates v. Tourism Co. of Puerto Rico.* That decision upheld the constitutionality of Puerto Rican law prohibiting casino gambling advertising aimed at residents of the island [presstime, Aug. 1986, p. 34].

The Puerto Rico Legislature "surely could have prohibited casino gambling by the residents of Puerto Rico altogether," wrote Justice William H. Rehnquist, now chief justice of the United States, in the majority opinion. "In our view, the greater power to completely ban casino gambling necessarily includes the lesser power to ban advertising of casino gambling. . . ."

Before *Posadas*, the odds were "probably 60-40" in favor of the Minnesota newspapers' winning their case, says MNA attorney Mark R. Anfinson of Minneapolis. "It wasn't a laid-down hand," says Anfinson. "But we had some strong legal arguments."

Although he is not as pessimistic as he was immediately after the court issued its *Posadas* ruling, Anfinson now puts the odds at only about 25-75 in the newspapers' favor.



Some experts say newspapers have a long-shot chance of getting federal laws in question overturned.

An attempt also will be made in this session of Congress to repeal the federal statutes restricting lottery advertising, although newspapers have not come up a winner in similar previous efforts. U.S. Rep. Barney Frank (D-Mass.) says he is "hopeful" he will be able to garner sufficient support for his legislation to allow advertising for state-authorized and regulated lotteries, but "some people are nervous about the opposition of anti-gambling groups—that has been the problem in the past."

RESTRICTIONS. The primary restrictions on gambling advertising are found in the federal criminal code. Under federal law, except for state-run lotteries, it is a crime, punishable by a fine of up to $1,000 and one or two years in jail, to:

- Import into the United States or carry in interstate commerce "any advertisement of" any "lottery, gift enterprise, or similar scheme"
- Put into the mail "any newspaper, circular, pamphlet, or publication of any kind containing any advertisement of any lottery, gift enterprise, or scheme of any kind offering prizes dependent in whole or in part upon lot or chance"
- Broadcast "any information of or information concerning any lottery, gift enterprise, or similar scheme."

In addition, there are some limits on the advertising of state-run lotteries, although the law was liberalized in that area for newspapers in 1975 and for broadcasters a year later. It is still permissible to advertise only in the state holding the lottery and in adjacent states with their own lotteries. The latter provision is the reason newspapers in Minnesota, a state without a lottery, cannot mail newspapers advertising the one in Iowa.

In addition to the criminal code restrictions, a section of the postal statutes also declares lottery advertisements "unmailable."

The laws are "not properly understood," says Robert J. Brinkmann, general counsel of the National Newspaper Association, an organization made up primarily of smaller dailies and weekly newspapers. "Most people think you can't put a lottery ad in a newspaper that's mailed but it's all right if carrier-delivered. That's not necessarily true," he says, pointing to the section barring interstate commerce in lottery advertising. "I would think an awful lot of (newspaper) distribution systems might be in interstate commerce," he says.

Brinkmann believes the laws are violated "all the time," principally out of ignorance. For example, advertising executives at some papers in New Jersey and Nevada, both states with legalized casino gambling, were unaware of the laws when questioned by presstime.

Because the main arm of enforcement of these laws is the local postmaster, newspapers with a large number of mailed copies and located in communities with charitable bingo games are the ones most likely to be informed about these laws, newspaper association lawyers say.

Although the same laws also prohibit placing a list of prizes awarded by lotteries in the mail or interstate commerce, which would seem to restrict news reporting on lotteries, Minnesota Newspaper Association attorney Anfinson says a 1969 federal court decision in New York made it clear that news stories are protected by the First Amendment and cannot be banned.

In addition to the federal laws, there is a patchwork quilt of state restrictions on gambling advertising.

For instance, in Puerto Rico, New Jersey and Nevada, where casino gambling is legal, there are a variety of restrictions:

- In addition to barring advertising aimed at residents of the island, Puerto Rico also requires casinos to submit to gambling regulators for "prior editing and approval" any advertising directed toward tourists.
- New Jersey prohibits casinos from advertising information about odds, the number of table games or the size of the casino.
- In Nevada, regulations adopted by the Nevada Gaming Commission authorize it to act against a casino for "failure to conduct advertising and public relations activities in accordance with decency, dignity, good taste, honesty and inoffensiveness."

States that permit charitable gambling also may have restrictions. "You have as many different types of regulations as there are jurisdictions," says John E. Jacobson, executive director of the National Association of Fundraising Ticket Manufacturers, which represents manufacturers of such things as bingo cards and other gambling paraphernalia.

Jacobson formerly was in charge of regulating charitable gaming in North Dakota. That state restricts the amount of gambling proceeds that may be used for advertising. The expenditures must come out of the 40-55 percent of the proceeds set aside for "expenses." They may not come out of the percentage of the proceeds earmarked for charity.

In Michigan, on the other hand, there is no restriction on the use of gambling pro-

Brinkmann believes the laws are violated "all the time," principally out of ignorance.

ceeds for advertising. But the state imposes a long list of size and content restrictions, including limiting newspaper advertising about bingo games to one column wide by one inch high, type no larger than 10 point, copy consisting of no more than seven lines, and only one ad per publication.

OVER THE YEARS. The federal laws barring the interstate transportation, importation and mailing of lottery advertising were originally enacted to try to stem the spread of several legal, but unregulated, lotteries. The leading one was the Louisiana Lottery.

According to I. Nelson Rose, professor of law at Whittier Colllege and an expert in gambling law, the Louisiana Lottery was one of the largest gambling operations ever. "There is a question as to whether it was corrupt or not; it certainly was out of control," he says.

The Louisiana Lottery was part of a second wave of legal gambling to hit the United States, according to Rose. It occurred after the Civil War. The first wave swept the nation during the Revolutionary War period.

The third wave, in which the nation is now engulfed, started with a "mini-wave" during the Depression, adds Rose. It was in this period that Nevada, for example, legalized casino gambling. The wave gained force in 1964 when the first state-operated lottery began in New Hampshire.

According to the National Association of State Lotteries, 22 states and the District of Columbia now conduct lotteries. Another five states approved lotteries in the November elections, but have yet to put them into operation.

A total of 47 jurisdictions have legalized bingo, according to Gaming & Wagering Business magazine.

This growth in gaming activity and acceptance has caused the newspaper business to question the current pattern of restrictions. In 1984 congressional testimony in support of legislation to ease lottery advertising restrictions, ANPA and NNA asked: "Is it not time for Congress to decide that what may have been appropriate for 1890 and the following decades is no longer appropriate in the 1980s?"

The organizations also contended that the laws discriminate against smaller newspapers. Larger newspapers are primarily carrier-delivered and can afford to do a separate press run for copies mailed or carried out of state; smaller newspapers, which tend to rely more heavily on the U.S. Postal Service for delivery, cannot, they said.

The Akron Beacon Journal, for example, groups its bingo ads on one page and replates the page with a house ad for the approximately 600 copies it places in the mail. William B. Aylward, assistant circulation manager, complains that this is expensive and causes delays in getting the regular edition on the street. Aylward, chairman of the Postal Committee of the International Circulation Managers Association, says the federal laws are "preposterous" and should be changed.

CHANGES, CHALLENGES. The challenge to lottery advertising restrictions has had some limited success. In 1984, for example, Kentucky's attorney general issued an opinion that the state's prohibition against publication of "any matter, announcement or statement in anywise concerning any lottery, drawing or scheme of chance" was unconstitutional. The assistant attorney general said the statute has a "chilling effect on a publisher's First Amendment right to free speech."

The Minnesota Newspaper Association and Aimes Publications are hoping for similar results in their court challenges.

In addition to their First Amendment claims, they also raise a discrimination issue, charging that the Postal Service has not enforced the law uniformly. MNA Manager Linda I. Falkman calls the USPS denial of that allegation "nonsense."

"We've got documented cases where a newspaper runs a bingo ad (and) they get a letter that says, 'You stop it, or you could go to jail,'" she says. "In other towns they can run bingo ads all the time and their postmaster doesn't say a thing."

Some Minnesota newspaper publishers have gotten "so mad" at this situation that they have turned in neighboring newspapers to the postal authorities, she says. "It's turning publisher against publisher."

The resolution of the case "will come down to whether or not the court believes the statutes are, in fact, unconstitutional under the First Amendment as we have claimed and whether they have been applied in a discriminatory and arbitrary fashion," says Falkman. □

Special Report

MORE ADULTS JOIN THE RANKS OF CARRIERS

BY GENE GOETZ
presstime staff writer

Although 'little merchants' still deliver more than half of all newspapers sold, increasing numbers are delivered by adults. Societal and newspaper changes are behind the switch.

M. C. Valada

A 1986 ICMA survey found nearly three-quarters of newspapers used little merchants.

It seems in retrospect like a simpler, more innocent time back when the grocer, the iceman, the milkman and the paper boy all delivered their goods to the home. Of these, only the paper carrier still faithfully delivers.

But the newspaper carrier force is changing.

At one time, nearly all newspapers were delivered by youths—either by home delivery or hawked on the street. Today, single-copy sales from racks or newsstands account for about 20 percent of all sales. Adults make up about 15 percent of the carrier force, but the average number of copies delivered by each adult is considerably greater than the average for each youth carrier. Altogether, kids today distribute little more than half of all daily newspapers, circulation experts say.

And the trend is growing: The much-revered "little merchant" system is eroding.

Although children remain the majority of deliverers, some newspaper executives see the day coming when the typical deliverer is not the 12-year-old kid dropping the paper on the doorstep but the middle-aged person flinging it from a car or stuffing it into a delivery tube.

The adult may be an independent contractor, an employee of the newspaper or a hybrid known as a delivery agent, but there are more of them delivering newspapers every day.

An ANPA task force concluded after five months of study last year that the little-merchant system is indeed faltering, but it said newspapers should not be prepared to administer the last rites any time soon. According to the task force, youth carriers will remain, along with adults, part of the "optimum" distribution system in the business.

The changing composition of the delivery force has come about because of societal changes in lifestyles, demographics and population, and because of changes in the newspaper business itself.

The percentage of households subscribing to the newspaper has decreased, in part because of the changing nature of households that now consist of more transient, single persons—a group of generally lower newspaper readership. This decline in household penetration has the effect of spreading out delivery routes over a larger geographical area. Meantime, suburbanization has created housing areas that are less concentrated and less accessible by foot or bicycle.

In addition, rising affluence has rendered the job of delivering the paper less of a plum in the eyes of many young people. And in some locations there seem to be fewer youngsters than there are jobs available—newspaper or otherwise.

And with the shift to morning publication by many U.S. and Canadian dailies has come a growing problem of convincing kids it is worthwhile to get up before dawn to deliver the paper—and of convincing parents it is safe for their children to do so.

Says circulation consultant Cyrus H. Favor: "The affluence of society is such that kids don't want to work. He turns his nose up at $25 a week delivering papers. He can make more as a caddy or mowing grass. So we've got problems. The prices charged for newspapers are not adequate to pay the youth a good wage. I begin to wonder how many decades we are going to be able to afford home delivery."

At the beginning of this decade, 93.7 percent of daily newspapers in the United States and Canada used the little-merchant system, according to a survey by the University of Missouri School of Journalism. A 1986 survey by the International Circulation Managers Association found that 72.8 percent of 681 responding newspapers used little merchants—a decrease of 22.3 percent. Both studies were coordinated by Joseph B. Forsee, who was associate professor of journalism at Missouri and is now general manager of ICMA.

The 1980 Missouri study also found that 68.2 percent of the newspapers were using adult carriers—signifying that a majority of newspapers deploy a combination of adults and kids in their delivery forces. In its study last year, ICMA found that the number of newspapers using adults exceeded 72 percent.

According to the Missouri study, there were 1,013,819 daily newspaper carriers in the United States and Canada in 1980, of which about 91 percent were youths. Forsee estimates that the number has dropped to 85 percent today. That would mean about 60,000 fewer kids are delivering U.S. and Canadian dailies now than were doing so at the beginning of the decade. The trend toward adults seems most pronounced in, but is not limited to, metropolitan areas.

Some circulation managers in smaller communities say they haven't noticed the change and still rely entirely on youth

"Crime being what it is, you can't get the young people. Parents aren't going to let their kids get up at 5 o'clock and let them go out on a newspaper route."

carriers. But among circulation executives in larger communities, the trend is clear, even if it's unwelcomed.

"There is a big upswing to adults," says David W. Perona, vice president/circulation director of The Buffalo News (all-day, circulation 317,651), who still believes "the little-merchant system is worth preserving."

"It's a shame," says Henry Stevens, circulation director of the Tallahassee Democrat (morning, 54,126), who nevertheless agrees that more and more carrier jobs are being filled by adults. "I hate to see the little merchants plan go," he says. "It's excellent training (for kids to have a paper route), to meet the public, to manage their own business, to take care of money, to learn how to pay a bill."

But adult carriers also have their patrons. Patrick L. Marlton, circulation director of The Oregonian (all-day, 317,162) in Portland, says: "When we went to adult carriers, we eliminated all our service problems. Now we get one complaint for 2,000 customers. That's because you have adults, and when you have them, you cut down on turnover. With adults, we have no service problems, no circulation problems."

ICMA's Forsee thinks the trend has been a gradual one and will continue on that basis. "I don't see the pell-mell rush (to adult carriers) that some see," he says.

Regardless of the speed, the swing away from youth carriers represents a notable transformation for what has been a fixture on the national landscape—the newspaper carrier, an American icon, a prominent figure in our folklore.

Youngsters have been delivering newspapers in North America for more than 250 years. In his 1971 book *Circulation Management Training*, the late Robert A. Macklin credited Benjamin Franklin with being America's first newspaper carrier. Macklin, who was Forsee's predecessor as ICMA general manager, wrote that in 1718, at the age of 12, Franklin home-delivered papers for his brother, a Boston printer.

Initially, the youths who delivered papers or sold them on the street worked directly for the newspaper.

The little-merchant system was developed later. Under this system, which had its origins in London around 1833, the carriers buy copies of the newspaper at wholesale and resell them to subscribers at the retail price.

Over the years, the little-merchant system has drawn occasional criticism from those who decry what they perceive as the last stronghold of child labor.

In the United States, the crusade against child labor reached a denouement in 1938 with enactment of the Fair Labor Standards Act. The law forbade employing young people under 16, but it specifically exempted newspaper carriers as well as some other categories such as child actors and children working on family farms.

ADULTS YES, YOUTHS NO. Circulation directors across the country are by no means agreed on which system offers more advantages and fewer disadvantages. Among the advantages cited for adult carriers—and disadvantages for using kids—are these:

- **Turnover.** Circulation directors continually complain about the proclivity of today's youth to stay on the job a short while and then quit. Three to six months is the average time for a youth carrier to last, they report.

The Missouri study in 1980 found that carrier turnover ranged from 50 to 100 percent annually. It's worse than that in currently prosperous New England. The Providence Journal (morning, 84,220) and The Evening Bulletin (115,127) reported 145-percent turnover in 1985. More than 100-percent turnover was reported both at the Waterbury (Conn.) Republican (morning, 39,856) and the Waterbury American (evening, 28,419) and at the Lawrence (Mass.) Eagle-Tribune (evening, 58,174).

By contrast, newspapers that have shifted to adult carriers claim far lower turnover rates. Marlton says when The Oregonian made its shift to adult carriers in March 1983 the turnover rate dropped drastically. "Some of the (adult) agencies have not had a turnover in the past two years," he says. "That's unheard of in the newspaper industry."

The Globe and Mail (morning, 313,647) of Toronto was having to replace an average of 150 to 200 youths each week out of 2,700 total carriers—a weekly turnover rate of 5.5 to 7.4 percent of the carrier force. After replacing the 2,700 youths with 550 adults, replacements dropped to 10 or 12 carriers per week—a rate of 1.8 to 2.2 percent.

Why do the young carriers quit? "Crime being what it is," says James Long, circulation director for The Knoxville (Tenn.) Journal (morning 43,768) and the News-Sentinel (evening 102,340), "you can't get the young people. Parents aren't going to let their kids get up at 5 o'clock and let them go out on a newspaper route, and I don't blame them."

It's not only the crime; many of the youngsters apparently feel it's a crime to have to get out of bed so early. In a survey

conducted last summer by Glenn Gamst, research analyst at the San Jose Mercury News (all-day, 264,492), youth carriers cited "getting up in the morning" as one of the top reasons for quitting a route.

Other reasons given were:

1.) Too little pay, too much work.

2.) The newspaper was too heavy and the routes were too spread out.

3.) Problems with district managers.

4.) Parents told them to quit.

The carriers also said they quit because they had to collect payments from subscribers, get a substitute when necessary, field customer complaints, work seven days a week and solicit new customers.

• **Labor supply.** The end of the "baby boom" in the mid-1960s has created a shortage of young people to fill jobs available to them. This is evident throughout the country but appears to be particularly acute in New England, where a booming economy has created abundant jobs. In the June issue of its Update magazine, ICMA ran this headline across the front page: "New England Desperate for Carriers."

"It's hard to motivate the kids for the amount of money they make," says Morley Piper, executive director of the New England Newspaper Association. "They can cut a lawn or two and make the same amount of money they make on a paper route. Or they can work in a fast-food place."

Nature, though, may be helping to alleviate the problem. Piper notes that many of the offspring born in the peak years of the 1946-64 baby-boom—the mid-50s—have had children that in three or four years will be old enough to be newspaper carriers.

• **Reliability.** Circulation people are by no means unanimous on the point, but many say that adults are more reliable than youths.

Most newspapers that employ adults require a written provision for a substitute; if the regular adult is ill, the substitute takes over automatically.

The St. Louis Post-Dispatch (morning, 370,000) has been delivered almost entirely by adults for many years. "The route is the adult's responsibility," says Circulation Director Roger Ruhe. "We will not run that route for them." On the other hand, if a youth gets up and doesn't feel well, Ruhe says, the mother will tell him to stay home, and often the district manager has to deliver the papers.

Youths tend to provide personal service.

R. Victor Dix, vice president and publisher of The Daily Record in Wooster, Ohio (evening, 25,606), recalled an instance when a girl carrier went to an Ohio State football game and did not deliver the Saturday paper until Sunday.

• **Economics.** Some circulation managers say adult carriers end up being cheaper because the newspaper needs fewer district managers to supervise them and fewer people in the circulation office to handle complaints and other support duties.

In Toronto, for example, The Globe and Mail reduced its district managers from 80 to 21 when it switched to adults. After the switch, complaints were reduced from 4,000 a week to 900, says Nicholas Russo, circulation director.

• **Workload.** As the survey by the San Jose Mercury News made clear, the growing size of the newspaper has fed the trend toward adult carriers. Adults, who usually deliver in cars, station wagons or pickup trucks, can more easily handle the heavier papers of today than youths on foot or bicycle.

Big-city Sunday papers can weigh 10 pounds or more, and those published in smaller metropolitan areas can also be heavy. For example, on the Sunday after last Thanksgiving, The Columbus Dispatch (morning, 248,121) contained 824 pages and weighed 7 pounds.

Says Marlton of the adult-delivered The Oregonian: "Papers are so big today that kids can't handle 25 papers. Twenty-five (Sunday) papers weigh over 100 pounds. How the hell is a kid going to handle 100 papers? You can't even get that many into a Volkswagen any more."

• **Crime.** Since 1982, at least seven youth carriers have been abducted, raped or murdered while delivering papers. And the San

"Youth carriers create much more rapid circulation growth." They have a personal touch and get to know customers and potential customers.

Jose survey found that 32 percent of Mercury News youth carriers had been personally scared "by someone or something" while delivering papers.

Heightened concern for safety led ICMA in 1985 to publish a 141-page book on safety awareness. It contains numerous examples of newspapers' individual safety programs and offers suggestions for precautions by young carriers.

Fifty years ago people who lived in center-city areas were not afraid to walk the streets after dark. Today, there are areas of some big cities where newspaper circulation departments have simply abandoned efforts at home delivery, according to ICMA's Forsee.

In some places, newspapers have turned to adults to deliver in what Ruhe of the St. Louis Post-Dispatch calls "tough" neighborhoods. Both Ruhe and Perona of The Buffalo News say they strive to find a resident of the neighborhood to do the job.

"When I came here, they were bringing people in from the suburbs to deliver the paper" in areas where street gangs roam, Perona says. "They couldn't cut it."

YOUTHS YES, ADULTS NO. Despite the slippage in the use of kids to deliver the newspaper, the little-merchant system still has its ardent supporters.

By far the greatest factor mentioned by newspapers that retain little merchants is an affection for the system, based in part on sentiment and in part on the business experience youngsters gain as carriers.

The training youth carriers get provides lifelong benefits, says Buffalo's Perona, who supervises 4,327 of them plus about 120 adults.

"A lot of people have benefited from their (youthful) newspaper experience in adult life," he says. "With kids, money is not the prime motivator. It might be the reason they start, but it's not the reason they stay. Kids can learn a lot from their newspaper route, even when they have bad experiences."

William T. Malone, president and publisher of the Arkansas Gazette (morning, 126,346) of Little Rock, says, "I'm opposed to the trend toward adult carriers. A part of the selling routine for parents is the business training Johnny or Suzy will get for later life. To replace the kids is not being fair to the youth of America today."

Among other points cited by little-merchant proponents are these:

Service. Youths, by consensus, will do one thing adults usually will not do. They will place the newspaper inside the storm door or on the porch, out of the weather. How much this is worth in terms of circulation numbers probably cannot be measured, circulation experts say.

In New England, that high degree of delivery service is traditional, and customers demand it, says Piper of NENA. Although some papers in the region have adult carriers, and despite the relative shortage of youths there, the heavy majority use youths exclusively, Piper says.

The Oregonian's complaint rate dropped after converting to adult deliverers.

Customer contact. Doorstep delivery also means that youth carriers come into contact with their customers more often than the adult who flings the paper onto the lawn or driveway, or puts it into a tube next to the mailbox.

In many places, youth carriers still make door-to-door collections, too. Circulation executives say that when the carrier meets the customer, good will is invariably the result.

Selling. Some circulation managers claim that young people are better salespeople than adults.

"Youth carriers create much more rapid circulation growth. We've seen it time and time again," says Timothy J. Alldridge, director of consumer marketing at the San Jose Mercury News. Kids, he says, have a personal touch and get to know customers and potential customers. Most adults who moonlight as newspaper carriers do not have time to solicit new customers, and many newspapers with adult carriers must employ extra crews—often young people—to bring in new subscriptions.

Cooperation. Most circulation executives say youth carriers are more pliable than adults. Even though the vast majority are independent contractors, youth carriers will cover the area assigned to them, charge the amount "suggested" by the newspaper,

collect for the paper and solicit new customers. By contrast, many circulation directors say, adults will not canvass for new customers or collect, and newspapers have little control over prices charged for home delivery by adult independent contractors. Finally, litigation is fairly common between adult carriers and newspapers over a variety of issues, including termination, assignment of routes, status (employee or independent contractor), prices and control of subscription lists or territories.

The champions of the little-merchant system emphasize that before curbing or abandoning the use of youth carriers, newspapers should try to make the little-merchant system work. In a report last November to ANPA Chairman and President Alvah H. Chapman Jr., the Marketing and Distribution Task Force of the Association's Circulation and Readership Committee acknowledged that "the youth-carrier system is in jeopardy at many medium and large newspapers. For those newspapers, it may not continue in the future as the most important delivery means. Consequently, more adult carriers will be used."

However, "before a newspaper concludes that the youth carrier system is no longer effective, it should have done the utmost possible to ensure that all the necessary steps have been taken to make the system work," the task force added. It said, for example, that newspapers must meet four criteria if they are to compete successfully for carriers in the youth job market: "The job requirements have to be made realistic; carrier training and recognition programs have to be effective; compensation has to be competitive; and carrier supervision must be competent."

Adverse weather conditions pose formidable challenges especially for youth carriers on foot.

VARIATIONS ON A THEME. The distribution task force, headed by Seattle Post-Intelligencer Publisher Virgil Fassio, also reported that "the optimum distribution system" for a newspaper often involves a mix of delivery means—youths and adults operating as independent contractors, agents or employees—and the flexibility to adjust "the volume of newspapers among the various delivery systems when circumstances require a change."

Of the three major categories of carriers, *independent contractors* enjoy the most autonomy. The independent contractor is, by definition, an independent business person. He or she buys papers from the newspaper company at wholesale prices and sells them at retail. The contractor usually sets the price to subscribers for home delivery; the newspaper has no control over it.

The National Labor Relations Board and the Internal Revenue Service stipulate that the employer cannot control the means by which an independent contractor accomplishes his or her tasks.

Under the *agency* system, newspapers normally contract with one or more agents who make their own arrangements with other individuals to deliver the papers. The newspaper usually controls the price charged for the newspaper and handles collections, often by billing the customer for payment by mail.

Employees are paid directly by the company, either by the hour or by salary, and they get fringe benefits. The employee system allows the newspaper greatest control. It can tell the employee when, where and how to deliver the paper, how much to charge, and when to collect.

In its 1986 survey showing that 72.8 percent of 681 newspapers were using youth independent contractors, ICMA also found that 72.1 percent had adult independent contractors as deliverers. (The numbers are greater than 100 percent because of the combination of delivery methods commonly employed.)

About one-fourth of the newspapers reported having an adult agency system, compared with about 10 percent for youth agents.

Adult employees were being used for delivery at 8.6 percent of the newspapers. Only a handful (less than 2 percent) had youth-carrier employees.

COMPENSATION. Gross earnings of carriers generally vary from about 22.5 percent to one-third of the subscription price. As an example, The Columbus Dispatch pays both youth and adult carriers 31 percent of the $2-a-week subscription price. But adults earn more because they deliver 250 to 300 papers a day, compared with an average of 60 for kids, says Circulation Director John R. Brigham.

A youth carrier at the Dispatch with such a route thus would earn $37.20, a respectable sum for a teenager with a part-time job. An adult delivering 300 papers a day earns $186 a week. "That's

"The optimum distribution system" often involves a mix of delivery means—youths and adults operating as independent contractors, agents or employees.

An adult carrier who delivers 1,000 papers a day at the St. Louis Post-Dispatch would have a potential annual gross income of about $37,700.

not bad," Brigham notes, "for a part-time job." "The best adult carrier," he contends, "is a young married adult just starting a family. He can use the money." (The carrier force, of course, contains girls and women as well as boys and men, but no industrywide statistics by sex are available.)

By contrast, delivering the St. Louis Post-Dispatch is big business. An adult independent contractor wanting to sell his or her route can get from $50,000 to $90,000 for it, says Circulation Director Ruhe, who explains that buying a paper route in St. Louis means buying a money-making franchise. An adult carrier who delivers 1,000 papers a day would have a potential annual gross income of about $37,700, he says. And though most of the routes have 600 to 700 customers daily and 900 Sunday, Ruhe reports that several distributors do handle as many as 1,000 every day.

The list price of the Post-Dispatch is 25 cents daily and 75 cents Sunday; carriers earn a 35-percent commission.

The Norwalk (Ohio) Reflector (evening, 9,591) charges extra to customers who want their papers placed in tubes and pays adult carriers more for "tubing" a paper. The weekly price is $1.25 if the paper is thrown on the lawn and $1.39 a week if placed in a tube. Adult carriers on a motor route get 39 cents (31.2 percent of the purchase price) for each customer who gets a thrown paper and 51 cents (36.7 percent) for those whose paper is tubed.

Youth carriers in town get 32 cents (25.6 percent) per customer per week.

The Reflector is among the papers that also pay motor-route deliverers a mileage allowance. According to Carol McLaughlin, office manager, the Reflector's allowance is based on a formula that began years ago: Every time the price of gasoline at the pump goes up 7 cents per gallon, the newspaper allows an additional half-cent per mile driven. Of late, the rate has been 14 cents a mile.

PAYMENT METHODS, OTHER CHANGES. The circulation-revenue picture also is changing in terms of how customers pay their bills.

Figures collected by ICMA last spring indicate that about half the newspapers in the United States collect by the month, and two-thirds collect in arrears rather than in advance. Weekly collections by youth carriers remain the method used by 66 percent of newspapers in the Northeast; papers in other areas use a combination of methods, with many allowing the subscriber to select his or her preferred payment system.

For a growing number of customers, the preferred system is paying by mail or by credit card. Pay-by-mail billing intervals tend to range from one month to six months.

Circulation consultant William Merritt of Sun City, Ariz., a circulation executive for more than two decades at the Los Angeles Examiner (before it became the Herald Examiner) and at the now-defunct Washington Star, warns that it can be "a mistake" for a paper to bill every three, four or six months. "We have encouraged people not to bill more than two months at a time," he says because otherwise the amounts due become so high that some customers discontinue the paper.

Merritt and consultant Favor, a former ICMA general manager, also note that having the customer pay by mail instead of paying the carrier directly eliminates a prime opportunity for the customer to voice a complaint.

Accordingly, the Columbus (Ga.) Ledger and Enquirer found that 60 percent of pay-by-mail customers did not complain when something went wrong—they just stopped paying their bills and quit the paper. This exacerbated the ever-present problem of "churn" in which people start and stop the paper—a costly process of record keeping and logistics for newspaper circulation departments.

To restore personal contact, and to alleviate churn, the

Many Prominent People Started As Carriers

C. David Rambo

ICMA's Forsee adjusts portrait in Carrier Hall of Fame.

Some of the most accomplished people in business, government, show business and other endeavors got off to very early starts in their careers—at about ages 11, 12 and 13.

They were newspaper carriers, learning about money, honesty, service, responsibility.

Many of the more famous folks who have benefited from the experience are depicted at the 27-year-old Newspaper Carrier Hall of Fame maintained at the International Circulation Managers Association's headquarters in The Newspaper Center, Reston, Va.

Featured in the Hall of Fame are 97 prominent people who in their youth delivered newspapers and who praised the experience: Dwight Eisenhower, Herbert Hoover, Carl Sandburg, Carl Rowan, John Wayne, Jackie Robinson, Jack Dempsey, Julius Erving, Bob Hope, Bing Crosby, Danny Thomas and many others.

Columbus papers have asked their youth carriers to knock on the doors of overdue customers and remind them courteously that their bills are delinquent. The paper also runs customer-service ads telling subscribers how to register complaints.

Compared with pay-by-mail, a lesser number of newspapers have adopted the method of allowing customers to pay by credit card. One of the latest credit-card converts, the Akron Beacon Journal (evening, 155,023), began its system Dec. 1 and already has 35 percent of its subscribers paying with "plastic." The customer submits a Visa or MasterCard number to the circulation department, and the newspaper sends the bill automatically to the bank or other credit-card issuer.

Like much of the complex newspaper delivery equation, however, there are positive and negative factors to these types of payment plans for the dwindling number of youth carriers. On the positive side, the plans eliminate door-to-door collections, a procedure many youngsters find onerous. On the other hand, they virtually eliminate the tips youth carriers generally receive when collecting.

A multitude of other changes also are affecting newspaper distribution, including the increased computerization of the circulation department, the publication of total-market-coverage vehicles for non-subscribers, the use of plastic bags for some newspaper deliveries, and the development of novel programs designed to recruit and retain carriers.

On the latter score, R. Vincent Reynolds, circulation director of the Roanoke Times & World-News (all-day, 122,928), uses youth carriers to deliver the evening edition and adults for morning distrib tion. The youths don't have to get up early, and the adults are free to work at full-time day jobs, Reynolds points out.

James Midtbo, vice president/circulation director of the Minneapolis Star and Tribune (morning, 378,981), has split his paper routes two ways. He has one set of carriers for Monday-through-Friday editions and another set for weekend deliveries. This approach is aimed at alleviating carriers' complaints about the drudgery of having to deliver papers every day of the week.

Midtbo says the switch came when the Star, an afternoon paper, was combined with the morning Tribune into an all-day and then mornings-only publication. The former Star carriers were given the weekend deliveries.

The dichotomous system works well, he says, because 70 percent of the weekend carriers are young people—they have to get out of bed early only twice a week—and 70 percent of the Monday-through-Friday carriers are adults, who he says tend to be more reliable on weekday deliveries.

Such innovative approaches to carrier problems are being monitored by circulation executives throughout North America.

VISIONS OF THE FUTURE. A few people have questioned whether the newspaper of the future will need to be delivered at all by an individual. R.E. (Ted) Turner, the cable television magnate, once belittled the newspaper industry's distribution methods at an ANPA Convention. "Your news gathering is very efficient. It's the manner of your dissemination that is so inefficient," said Turner, who predicted that "the newspapers as we know them today will be gone within the next 10 years, or certainly playing a very reduced role." He said that in May 1981—nearly six years ago.

A prediction that is proving to be more accurate was made a year earlier by ANPA Vice President/Technical William D. Rinehart. "It is doubtful . . . that any of the technology currently being introduced could ever begin to replace printed newspapers, so long as we continue to deliver newspapers to the home economically," Rinehart wrote. He cited numerous unsuccessful attempts made to replace the traditional newspaper, from home facsimile of the 1940s to videotex then in its infancy [presstime, June 1980, p. 21].

Readers will continue to spurn electronic alternatives to the printed product that is dropped off at residences and at single-copy outlets by kids and adults.

And looking into the 21st century, readers will continue to spurn electronic alternatives to the printed product that is dropped off at residences and at single-copy outlets by the veritable army of kids and adults, says John R. Harrison, president of The New York Times Regional Newspaper Group and chairman of the ANPA Circulation and Readership Committee.

In fact, Howard L. Hay, circulation director for the Chicago Tribune, foresees a surge in newspaper circulation as millions of baby boomers age. With the "graying of America," he says, there will be a shift from the "single-copy, Yuppie cycle" to increased subscribership. Hay, a member of the Readership and Retention Task Force of the Newspaper Advertising Bureau's Future of Advertising Project, says "the projections for the number of people who will be 65 or older after the year 2000 boggle your mind."

Lee J. Guittar, who rose through the circulation ranks to the upper echelon of newspaper management, anticipates a boom, too, but he believes it will come in single-copy sales. Guittar, vice president of the Newspaper Division of The Hearst Corp., reasons that as the service economy and the "on-the-move culture" continue to evolve, people will be increasingly inclined to buy their newspapers one at a time. Newspapers must "get a whole lot smarter on how to sell single copies," says Guittar, noting that his is "an unpopular stand. . . . A lot of people disdain single-copy sales. They look upon them as paid samples until they can find some way" to sell the buyer a subscription.

But in whichever area the "boom" comes, no one who has studied the situation is predicting that the home deliverer of newspapers will go the way of the iceman or the milkman. The point at issue is whether it will be predominantly kids or adults that do the delivering and, long-term, whether one is better than the other for the newspaper business.

What is not in question is that the little-merchant system is losing some steam and that more and more adults are finding newspaper delivery a lucrative enterprise.

For those who believe the traditional youth delivery of newspapers should be preserved, individual newspapers and industry groups have identified numerous ways to try and preserve it—better training, better pay, better conditions and innovations such as job sharing.

No one questions the stakes.

As Albert E. Gollin, NAB's vice president/associate director of research, told an industry meeting last fall, circulation "is the system that sustains life—for people, cities and newspapers. If it breaks down in any of us, it's a crisis. If the movement of people or goods through city streets is stopped, you've got gridlock. And if newspapers can't reach out to their readers and deliver the paper reliably, when and where they want it, we're in trouble." □

Managing in The Newsroom

Styles of supervision are changing with the new generation of newspaper editors and reporters

BY MARK INGHAM

As an industry ages, it experiences any number of changes. Generational differences are noticeable in the various management levels of an organization, and this may be particularly evident in newspaper editorial departments of today compared with those of yesteryear.

Although the image of the editor bellowing at the cowering, but eager, young reporter may have been accurate at one time, it is no longer. Many of those once-young reporters today are editors, and they are determined to discharge their duties with more understanding than their early bosses did. The reporters-turned-editors may have learned a great deal about journalism and the newspaper industry from some crusty old curmudgeon, but they are inclined toward a more compassionate management style.

Concurrently, a new generation of reporters has moved into the newsroom—individuals who are not as easily intimidated as their predecessors. "These are bright, poised, hard workers who are very practical about managing their own careers and getting ahead," says Susan Miller, director of editorial development at Scripps Howard. "They don't cower."

Jack Davis, metropolitan editor at the Chicago Tribune, is a member of the new generation of editors. "As my years of experience increase, and it becomes more possible for me to impose my will on the newsroom and its employees, I find myself becoming more and more participative," he says. "I try to foster communication between my editors and get them to make as many decisions as possible."

Davis acknowledges that not all newsrooms have undergone major changes in personnel management practices, but he detects a growing awareness that management tools are available to help editors supervise their staffs. "There is training available, and while there is a cost, beyond the tuition, in terms of an increased workload for the other staff members, it is worth the investment," he avers [presstime, Feb. 1984, p. 10].

Another change in the newsroom of today is employees' awareness of the negative effects of a stressful environment. "We are getting more and more requests for assistance in stress management from the editorial department," says Charles E. Whiting, training and development manager at The Orlando Sentinel.

"The great thing about training and development is the courses they have to supplement stress management," adds William R. Scott, the Sentinel's Broward County editor. "One thing that has helped has been the team building we have done with our various work groups. It seems that managers get 'stressed out' as much by ineffective interaction with their employees as they do by the actual tensions of their job."

Paul Reeve, corporate director of training at the Providence Journal Co. concurs with Scott's analysis. Says Reeve: "When I get requests for assistance with stress management, I always do a further needs assessment. Generally, it turns out that the stress was generated by poor working relationships. If we can help the working relationship, we can do away with the source of the stress instead of just learning how to manage it."

Because of a successful track record, editorial managers are not at all reluctant to sign up for courses offered through his training department, Reeve adds.

Editors can see for themselves how a smoothly operating newsroom can reduce job tension. Scripps Howard's Miller, former chairwoman of the American Society of Newspaper Editors' Human Resources Committee, says that any time a company introduces better management practices, it demonstrably breaks down internal barriers and reduces employee pressures.

Having a less autocratic style can also improve the quality of the newspaper. "I made an effort to establish an intellectual understanding with my reporters and editors that we could work *together*," says the Chicago Tribune's Davis. "I feel that we get a much richer variety of stories for the newspaper" this way.

Ingham is ANPA personnel relations associate.

John Dzeckan, Chicago Tribune

Chicago Tribune's Davis (left), meeting with Associate Metropolitan Editor Dennis Ginosi, favors a "participative" management approach.

"As an industry, we are way behind in the way we deal with people. . . . Team building has helped us learn about ourselves and others in a way that helps us to appreciate differences in other people."

DIFFERENCES APPARENT. Whether it is an increased awareness of stress or some other factor that is driving the change, newspaper personnel professionals have begun to notice a difference in the way a number of editorial departments are managed.

"About two years ago, good management was an idea whose time had come in the newsroom," says Miller, citing the enthusiastic reception for ASNE's *Newsroom Management Handbook* that was written by editors and released in 1985.

Barbara Sanchez, editorial personnel manager for Newsday reports that requests for management training, both internal and external, have increased significantly in the past two years for members of the Long Island, N.Y., daily's editorial staff. "We are seeing an erosion of the concept that editors need not be managers of people," says Sanchez.

Scott says The Orlando Sentinel's newsroom turned to the human resources area about three years ago as a result of an employee attitude survey that gave editorial managers low marks. And as newsroom supervisors became more skillful at people management, they began to realize other things were keeping them from doing the best possible job. "That's when we began working on team building and stress management," he says. "Team building has given us a framework for an honest discussion of differences, which has helped to reduce the stress level."

Another newspaper that has successfully used the team-building concept in the newsroom is The Charlotte Observer. "As an industry, we are way behind in the way we deal with people," says Jeannie Falkner, features editor. "Team building has helped us learn about ourselves and others in a way that helps us to appreciate differences in other people. The trust and understanding that develop in an effective team-building program go a long way towards getting things done in a day."

Many more newspapers are using less innovative, but still effective, human-resources management programs.

One program that particularly responds to the new generation of employees is the performance appraisal [presstime, Aug. 1986, p. 18]. Both Scripps Howard's Miller and Newsday's Sanchez report that a primary part of their jobs is to assist in the administration of a newsroom performance-appraisal system.

Experts say that one hindrance to the rapid adoption of this and many other human-resource management techniques is the concept that the newsroom is like no other place—and, in some cases, like no other newsroom.

"Editors are not always comfortable with a program simply because it was successful in another department, or another newsroom. It must be specifically designed for their newsroom," says Patricia P. Renfroe, ANPA's manager/personnel relations. And even though many editors may be completely comfortable admitting they are not experts at people management, the answer for them does not lie in regular supervisory management training. They want special courses in *newsroom* personnel management, Renfroe says.

Happily for the editors seeking assistance—and for the personnel they are supervising—some newspaper trainers have worked with editors in designing specialized courses.

In addition, ANPA offers, in conjunction with ASNE and the Associated Press Managing Editors Association, several Leadership in the Newsroom Workshops each year, as well as less specialized Management Development Workshops.

The various activities in the field reflect a growing awareness that there may be a better way of getting the job done. The ultimate result is a different kind of newsroom work environment. □

It's the 30th Birthday Of Coin-operated Newsracks

BY MICHAEL I. GRACZYK

The multi-colored boxes are lined up smartly like toy soldiers at attention—shiny, bright and emblazoned with bold lettering, ready to withstand the ravages of Mother Nature and daily pounding by consumers.

They mark the last stop in an assembly line that uses technology rivaling machinery found in the most modern auto plant. But instead of racy monograms like 300-ZX or RX-7, these squat containers carry nameplates like Times, News, Journal, Chronicle or Post.

The site is Kaspar Wire Works Inc. of Shiner, Texas, about 80 miles east of San Antonio, where the ubiquitous, coin-operated newspaper box was born Feb. 6, 1957.

"We're the biggest manufacturer in the United States and I guess the world," says David Kaspar, vice president of sales and great-grandson of the company's founder.

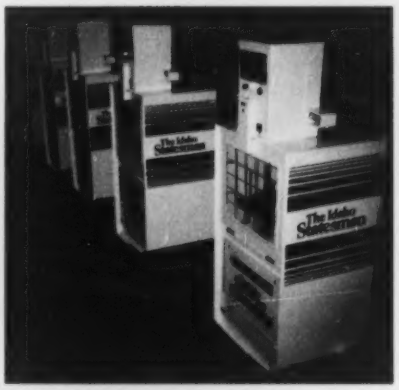
"We're the General Motors of the newspaper rack business," adds Cliff Long, general sales manager.

The company estimates more than 4 billion newspapers a year are purchased out of Kaspar-manufactured Sho-Racks. About a year ago, The Wall Street Journal took delivery of Kaspar's 1 millionth newspaper box.

The first one hit the streets 30 years ago this month, carrying the logo of the San Antonio Light. A Light circulation manager had complained that too many people were stealing papers from non-locking "honor racks," so Kaspar employees developed a coin mechanism and case-type rack with a pull-down door. The basic design is still in use.

Kaspar Wire Works can trace its beginnings to the turn of the century. August Kaspar, son of a Swiss Lutheran missionary, hand-wove with a pair of pliers a corn-shuck basket from smooth wire discarded by farmers who were switching to barbed-wire fences. Neighbors liked it, "and pretty soon he decided, 'I've got something here,' " David Kaspar says.

August Kaspar's next invention was a wire muzzle for horses. He went full-time with his business in 1898, and over the years the company—which now employs 525 people in a town of 2,100—has made shopping carts, display racks, deep-fry baskets and the wire trays that hold cups in soft-drink dispensers.



Machines bound for Boise roll off the assembly line at Kaspar Wire Works.

The newspaper racks are manufactured from scratch out of American-made steel specifically selected by Kaspar Wire Works.

Presses punch out components for coin mechanisms and for the boxes, and steel-cutting machines are programmed by computer to ensure straight edges. Robots spot-weld the pieces together. The steel is zinc-electroplated to help combat rust. Acrylic enamel paint is applied in automated booths. "We want these boxes to look good for a long time," the fourth-generation Kaspar says.

The workhorse of the Kaspar line is known as the TK-80 Sho-Rack, a 4-foot-high, 19-inch-wide, 16-inch-deep box that holds up to a 29-inch stack of newspapers. It weighs about 95 pounds and, depending on options like paper holders, extra-large windows and discounts to large-volume purchasers, costs about $200. Other models cost up to $600.

"We've got 30 different models of racks, but once a newspaper gets a style everyone is used to, the newspaper doesn't want to change," Kaspar says. "Nothing seems to replace the old standby."

More than 70 percent of Kaspar's sales are TK-80 models.

USA Today, generally credited for the trend toward greater use of color and graphics in newspapers, also broke the mold in newspaper racks, pioneering its TV-like box atop a pedestal. Kaspar has manufactured more than 100,000 of them, and the newspaper is the company's largest customer.

"USA Today patented the design," Kaspar says. "We build it for them and to their specifications. We cannot build that design for anyone else."

If there is a trend in the industry, it is toward modular racks, where several newspapers share a common large box with individual compartments and colorful designs.

"What we have also seen is a big explosion in customers going to fancier logos on the side of the racks," Kaspar says.

The New York Daily News, for example, now has a bright red, white and blue box. The Chicago Sun-Times uses a yellow box with red and white letters. The Houston Chronicle redid thousands of boxes at Kaspar with a new design [presstime, Aug. 1986, p. 64].

The No. 1 problem with all the boxes is vandalism, as thieves try to get inside the coin-box mechanism, Kaspar said.

"We've got a big, heavy, 12-gauge housing because that's where the money is," he says. "But we'll hear stories where vandals have used a cutting torch. Sometimes they'll take the whole rack away and take it home where they can work on it."

The lifetime of a box, however, is quite long, with some in use since the 1960s.

A dozen salesmen scattered around the country service Kaspar customers and, at Kaspar expense, newspapers send technicians to Shiner, where they are put up in a Kaspar-owned guest house and where Kaspar workers train them to repair the boxes.

"We not only want to sell them a rack, we want them to be proud of it on the street," says Long, the general sales manager. □

Before America covered its tracks.

The first subway in America. It was built in Boston to alleviate growing traffic problems. And within just a few years subways all over America would take urban transportation to a whole new level of excellence.

But years before Boston subways took people underground, The Boston Globe was taking them to new heights with coverage of the fast-moving world around them.

From the first transatlantic flight to the first man in space. From horses to horsepower. From time spent sailing on Boston's Charles River to time saved on The Concorde. Whether it could be found on land or sea, above ground or below, you could be sure it would surface in the Globe.

Which is why long before Boston's streetcars became subway cars, people were making tracks for the Globe.

The Boston Globe

Censorship On the Rise Around the World

BY LEONARD H. MARKS

In the review of major events of 1986, press freedom can be listed among the major casualties, along with the Chernobyl disaster and the explosion of the Challenger space shuttle.

In Nicaragua, the venerable La Prensa was shut down by the Sandinista censors. In South Africa, the State of Emergency Law seeks to restrict media coverage to handouts from the Bureau of Information. In Malaysia, The Asian Wall Street Journal was shut down for three months and two of its journalists were expelled. Similarly, Singapore has resorted to expelling "unfriendly journalists" and delaying or stopping delivery of foreign news publications.

Leonard H. Marks

In Uganda, President Yoweri Museveni publicly stated his support for the free press and then declared to reporters that "I must warn you, the papers, I do not want to see again the denigration of the armed forces. Anyone who denigrated the armed forces will be punished."

In totalitarian societies, notably the Soviet Union and Eastern European countries, all media—print and broadcast—are under direct control of government. There is, therefore, no adversary relationship between the press and the government. All "news" is what the government wants the public to know. The journalist, so-called, is a civil servant whose function is to "sell the government line."

Even in democratic societies, there are growing efforts to influence news reporting by controls, direct or subtle. In democratic Costa Rica, although government officials are freely elected, there are indirect restraints on press freedom. All reporters must be licensed by the government and must receive their training in a prescribed university. Although this practice was declared a violation of the treaty on human rights by the Inter-American Court of Human Rights, there has been no action to repeal the law or to abandon its enforcement. Throughout Latin America, there is a growing tendency to restrict press reporting.

Press freedom in the United States, guaranteed by the First Amendment to the Constitution, has also been challenged at times by restrictive state laws and overzealous government officials chafing under critical stories about their official conduct. To counter these moves, the courts have been vigilant in voiding such efforts and in upholding the independence of the media. However, the need for constant vigilance is clear here and in other democratic societies of the West.

The London-based Index on Censorship, which has just completed a 1986 review of censorship practices throughout the world, concluded:

> "Where privately owned media do exist, governments resort to a variety of methods to keep them in line. Opposition magazines are closed down, journalists are arrested and imprisoned, often detained without charge or trial for long periods of time, anti-terrorist or similar legislation is used elastically to silence dissent, various economic sanctions are applied: fines, bribes in the form of subsidies, the withdrawal of lucrative official advertisings, the withholding of licenses, newsprint, etc."

The deterioration of press freedom has inevitable and serious consequences. If The Times of London, the BBC, The New York Times or comparable media cannot inform their readers or viewers fully on political, social and economic events occurring throughout the world, opinions and judgments about those countries cannot be tested in the court of public opinion. Business leaders accustomed to objective and complete reports concerning their investments abroad will be compelled to rely on private sources, which may not be timely or as accurate as information available from The Wall Street Journal, The Economist or the Financial Times.

Moreover, the long arm of the censor has recently been extended to forms of communications other than the media. Multinational corporations have discovered that restrictions are being placed on the transmission of data bits to computers in other countries.

The restraints on a free press have in the past and will in the future affect trade and investments in the countries imposing these controls. Tourists will not flock to distant shores where journalists are excluded. Do you believe that Managua or Pretoria will thrive because of suppression of the news media? If proof is needed, examine the trade balance or the travel statistics with some of the countries which limit access to news.

If a regime does not care about such development—international trade, commerce or tourism—it may shrug off these arguments. But it should not ignore the hostility that ignorance breeds.

In addition to the economic arguments against press controls, consideration should be given to Article 19 of the Universal Declaration of Human Rights, which provides:

> "Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers."

The Helsinki Accords, to which the U.S.S.R. and the Soviet bloc nations agreed in 1975, contain similar provisions.

Despite the clear language, some communist countries regularly censor books, magazines and newspapers. Shortwave radio programs from the BBC, Deutsche Welle, Voice of America, Radio Free Europe and Radio Liberty are jammed to prevent news and views from the West reaching local audiences. In these countries, Western reporters are subject not only to censorship but also to personal harassment and sometimes are arrested on trumped-up charges.

To air these problems, news media leaders from 35 countries met in London Jan. 16-18 to develop new and practical ways of "fighting the censor." (See story, p. 42.) The success of this effort may have a profound effect on personal freedom and human rights, on trade, tourism and, indeed, on the peace of the world. □

Marks, of the Washington, D.C. law firm Cohn & Marks, is treasurer of the World Press Freedom Committee. This presstime *article was prepared prior to Marks' appearance at the January news media conference on censorship in London.*

She's the best in the business at cops and robbers.

© 1986 Knight-Ridder, Inc.

Edna has relentless curiosity.

She dresses each morning to the cryptic crackling of police radios.

On her way to work, she often stops by police stations and scans the printouts to see if there were any intriguing overnight arrests.

Once at her desk, she'll phone an assortment of detectives. There isn't a cop in town who has to ask, "Edna who?"

Every city in the country has crime.

Only one has Edna.

Edna Buchanan covers crime and the cops for The Miami Herald. Edna's byline is on more than 200 stories a year.

All this in a newspapering age where the police beat is often considered a mere jumping off place for more "desirable beats."

Edna can't imagine a better assignment.

"Writing police stories is never dull," she says. "They're people stories, what makes people tick. What brings out the best in people or drives them berserk. You can't learn as much about people on another newspaper beat."

Edna fiercely follows up leads.

Edna hiked all over Coral Gables, Fla. looking for a hooded rapist.

He is still at large. But through her stories, the police know a lot more about him.

She tries to find out why life ends too soon for so many. Why a feisty boxing champ found depression a fight he couldn't win and killed himself. And there was her painful account of how a father felt compelled to kill his comatose 3-year-old daughter in her hospital crib.

For these and other stories, Edna Buchanan won the 1986 Pulitzer Prize for General News Reporting.

Edna has been developing her own police stories at the Herald for 15 years.

Many newspapers shift reporters from beat to beat so often they can never have this kind of crime coverage.

But The Miami Herald is a Knight-Ridder newspaper.

KR

KNIGHT-RIDDER

We never underestimate the American people.

Knight-Ridder, winner of an unprecedented seven Pulitzer Prizes in 1986, is a worldwide communications company with eight television stations, cable systems, business information services, and now, 34 daily newspapers.

Russell T. Lewis

He Snubbed Miss Liberty — And a Career Was Born

BY GENE GOLTZ
presstime staff writer

Russell T. Lewis faced a difficult choice. He was a student at Northeastern University, a work-study college in Boston and his counselor said two summer jobs were available: tour guide at the Statue of Liberty or copy boy at The New York Times.

Lewis went to the Times newsroom instead of New York harbor. And after transferring to the State University of New York at Stony Brook, where he received a bachelor's degree in 1969, and during three years at Brooklyn Law School, where he graduated in 1973, he continued to work at the paper on and off.

Russell T. Lewis

Now he's a Times executive—senior vice president, circulation. He presides over a delivery system that is national in scope and involves just over 1 million copies each weekday and more than 1.5 million on Sundays.

Lewis, 39, masks an inner intensity behind a wide, warm grin. "One of his best qualities," says Katharine Darrow, the Times' corporate counsel and Lewis' immediate boss, "is he gets along with everyone. Everyone loves him." Says circulation legal counsel George Freeman, "He's a funny guy and a pleasure to work with."

Lewis' rapport with people serves him well in dealing with customer complaints—he personally takes phone calls from subscribers and answers their letters—and with circulation dealers.

His other standout quality, according to those who work with him, is the intensity he brings to any task before him, on the job or off. He runs 20 to 25 miles a week, lifts weights, skis, swims, and plays racquet ball and ice hockey. Despite what colleagues describe as a legendary appetite, Lewis is a trim 6-foot-1 and 185 pounds.

At a regional sales conference, after running five miles in the morning and putting in a day that lasts far past the dinner hour, Lewis may have his staff playing racquet ball with him at midnight, says Freeman. "Only the hardiest of his staff can keep up with him."

Darrow remembers when Lewis, while in college, was a summer clerk in the legal department. "We'd sit around and watch how long it would take him to do a job that was impossible to do. He'd find things impossible to find. He was just a demon," she says.

During another stint, working as a news assistant, Lewis wrote a story about a postal strike. The National Guard had to deliver the mail, and as a guardsman himself, he had an inside vantage point. The story won a publisher's award.

After finishing law school, he left the Times to join the prestigious law firm of Cahill, Gordon and Reindel, where he gained more insight into the newspaper business by helping out with First Amendment cases and antitrust litigation involving newspapers.

After four years with the firm, the Times legal department "asked me if I felt like coming back," Lewis recalls, "and I did."

In 1983 Lewis, accepted an offer to become circulation director. Why did he pass up the possibility of exciting careers in the news or legal departments for a position some people might consider dull? He says circulation interested him because it presented a different kind of challenge.

"As a lawyer, particularly a litigator, you come into situations where the facts are already given. You scratch yourself and say, 'Gee whiz, how did these folks get into this mess?' . . . But as a businessman, you are the one who gets to choose what the facts will be. You are more a master of your own destiny. The company and the project keep pushing you forward. I thought there was some degree of challenge to that."

Lewis says the complexities in deciding how to get the right number of papers to 40,000 retail circulation outlets around the country is far from dull. And dealing with legal problems, litigation, distributors and regulations means plenty of diversity, he says.

Much of his job, Lewis says, is ascertaining that the Times gets "upscale" customers. The paper uses city maps with demographic markings to denote what kind of people live in each section. "Rather than go into Pittsburgh as a whole, you consult these maps and . . . find where the upscale folks live. And then you say, let's make deliveries there."

In its distribution scheme, the Times uses adult carriers entirely and has "ever since anyone can remember." Lewis says it is not practical to have children deliver the paper because of its early-morning delivery schedule, because of its size—a recent Sunday edition weighed in at a record 11 pounds, and because the home-delivery routes in cities like Pittsburgh and Boston are too spread out to be done on foot. Circulation of the Times today is about 70 percent in the New York metropolitan area, 15 percent in the Northeast and 15 percent in the rest of the country, Lewis says.

The Times' success stems not from the number of papers it sells but from the quality of its news and the quality of its readers, who attract advertisers "willing to pay a respectable sum of money to reach those readers," Lewis says.

Emphasizing how pleased he is to work at a newspaper with the long tradition of The New York Times, he comments: "When all is said and done, people in the newsroom are writing history, and to be a part of disseminating that, I'm proud to tell my kids what I do."

He and his wife, Ellen, have a 7-year-old daughter, Erin, and an 11-year-old son, David. They live in Armonk, Westchester County, 40 miles from Times Square. □

How FMC systems keep business in motion

FMC systems integration. The power to offer you a complete line of roll handling equipment, software, and technical service. Designed to work in harmony. Keeping complex systems in motion, reliably and efficiently, day after day.

That's why the nation's leading dailies have turned to FMC for over twenty-five years for their roll handling needs. Because FMC knows the newspaper business can never stop.

If you're looking for a total roll handling system—start with a good role model. Contact FMC Corporation, Material Handling Systems Division, 3400 Walnut Street, Colmar, PA 18915. (215) FMC-2487, Telex 846491. In Canada: FMC of Canada Ltd. Material Handling Systems Division 650-2 Hood Rd., Markham, Ontario L3R4S7, Canada (416) 474-7500, Telex 06-986282.

COURTS

Appeals court upholds newspaper's right to disobey 'transparently invalid' court order

Attorneys for The Providence Journal and media organizations hailed as "extraordinary" a recent federal appellate decision that cleared the Journal and its executive editor of a criminal contempt-of-court conviction.

Meanwhile, the special prosecutor assigned to the case has been granted an extension until Feb. 13 to decide whether to seek review of the decision by the full 1st U.S. Circuit Court of Appeals. Prosecutor William A. Curran would not say whether he is inclined to seek the en banc hearing, but he has been conferring with the U.S. solicitor general's office about the matter.

A three-judge panel of the court threw out the contempt conviction on Dec. 31, ruling that the lower court's temporary order forbidding the Journal's publication of information about a reputed organized crime figure was "transparently invalid" because it constituted "a presumptively unconstitutional prior restraint on pure speech by the press."

Because the stringent legal test to allow such a restraint was not met, the Journal's disobedience of the order does not merit a contempt citation, the court held. It added: "A party subject to an order that constitutes a transparently invalid prior restraint on pure speech may challenge the order by violating it."

It was the first federal decision to hold that an unconstitutional prior restraint may be violated by a newspaper without subjecting the newspaper to contempt, said Floyd Abrams, a noted New York lawyer who represented the Journal.

Abrams also said it was the first federal case to uphold the "transparently invalid" standard for disobeying a court order restraining pure speech.

Such a standard has been rejected by the U.S. Supreme Court in cases of speech that is conduct-related, such as in a demonstration or march without a permit.

The Journal case involved a temporary restraining order against publication of information about Raymond L.S. Patriarca, which had been obtained from the FBI through the Freedom of Information Act.

U.S. District Judge Francis J. Boyle soon rescinded his order, but the Journal published the information while the order was still in effect, incurring the contempt conviction, a $100,000 fine and a suspended 18-month jail sentence for Executive Editor Charles Hauser, who also was ordered to perform 200 hours of public service [presstime, Sept. 1986, p. 40].

Hauser said he was relieved by the appellate decision but added, "I was aware from the very beginning if you take a drastic step like this, you've got to be ready to accept the consequences."

Abrams said, "As a matter of long-term legal impact, the decision is a powerful one and a significant one.

"It's an extraordinarily rare act by the judiciary, by which the judiciary placed the First Amendment above the ordinary obligation to adhere to court orders even when they are wrong. In doing so, the court emphasized the central status in American law on the ban of prior restraint. . . . If the ruling had been to the contrary, I believe it would have led to more prior restraints, more conflict between the press and the courts, and less information for the American people. And so here, too, the effect of the decision is very real and longstanding."

In its decision, the court had these words of caution: "Rarely will a party be subject to a transparently invalid court order. . . . Even when a party believes it is subject to a transparently invalid order, seeking review in an appellate court is a far safer means of testing the order. For if the party chooses to violate the order and the order turns out not to be transparently invalid, the party must suffer the consequences of a contempt citation."

—Mary Anderson

Censorship of school paper will get Supreme Court airing

The U.S. Supreme Court agreed Jan. 20 to review the First Amendment rights of student journalists covering controversial topics in a high school newspaper.

A school district in St. Louis County, Mo., seeks to overturn a court ruling that a principal violated the First Amendment rights of a student newspaper staff by deleting two pages of an edition because he objected to the content of two articles concerning pregnancy and divorce.

In that 2-1 ruling, a panel of the 8th U.S. Circuit Court of Appeals held that the May 1983 deletion was unlawful censorship because the newspaper was a "public forum" rather than merely part of the curriculum subject to the school district's control.

The dissenting 8th Circuit judge agreed with a lower court decision that the paper was not a public forum and that school officials may constitutionally decline to publish student articles for fear of lawsuits by outside parties.

The Hazelwood School District's attorney said he will emphasize the same grounds as the dissent when the Supreme Court hears arguments next term. The 8th Circuit opinion places schools in an "untenable position" if they wish to continue supporting student newspapers, Robert P. Baine Jr. said.

In other Supreme Court news, the court has been asked to accept an appeal filed by Lakewood, Ohio, concerning a newsrack ordinance. The city is seeking to reverse a decision by the 6th U.S. Circuit that overturned regulations governing permits, design and insurance for newsracks. The same decision upheld a ban on newsracks in residentially zoned areas [presstime, Sept. 1986, p. 40].

The court has denied review of several other media-related cases:

- *Booth Newspapers Inc. v. DeWitt*, in which Booth sought review of a Michigan trial judge's decision to seal pretrial documents without establishing whether "good cause" existed to do so, such as a "substantial government interest."
- *Fisher v. San Diego Union and Larsen*, in which the court let stand a California law denying general damages to libel plaintiffs who had not demanded retraction of allegedly libelous material within 20 days of its publication or broadcast
- *Multimedia v. Hawkins*, in which Multimedia Inc. sought review of a $26,500 invasion-of-privacy award against the Greenville [S.C.] News and Piedmont for identifying the teenage father of an illegitimate child. □

Newspaper appeals contempt charge against reporter

The Concord (N.H.) Monitor has filed a motion asking a Maine judge to reconsider his contempt-of-court charge against reporter Bob Hohler, who refused to testify in a murder trial about his interview with the defendant.

Maine prosecutors won the murder conviction on Jan. 10 without Hohler's testimony, but they still plan to press the contempt complaint in a trial before a different judge.

"We are asking the judge to take another look at his order requiring Mr. Hohler to testify. If he agrees, we are asking that he vacate the contempt finding," said attorney William Chapman, representing the Monitor.

Chapman and Monitor Publisher George W. Wilson said they believe Superior Court Judge Arthur Brennan might have ruled differently if he had not been under the pressure of ruling in the middle of the murder trial.

Among the grounds for reconsideration, Chapman said, is the contention that Maine prosecutors precluded any chance for the "cool reflection that courts ought to give issues of this sort" by not raising the issue of Hohler's testimony long before the trial. Through correspondence with the paper, the trial prosecutor had known almost a year and a half before trial that the paper would fight any subpoena of Hohler, he said.

Brennan ruled during the trial that Hohler's testimony met legal standards for compelling a reporter to take the stand. But the paper contends those standards were not met. □

Emmet Meara, Bangor Daily News

Hohler responds to questions outside the courtroom.

Newspaper can't be sued over misplaced ad, judge says

The Chicago Tribune has won a judgment in federal court setting new case law that a newspaper cannot be held negligent for losing an advertisement.

The summary judgment by U.S. District Judge William C. Lee in Fort Wayne, Ind., stated that Indiana Construction of Fort Wayne had no claim to $250,000 in damages from the Tribune, which misplaced the ad. The company had sent the ad to the newspaper but had mistakenly addressed it to a lock box reserved for payment of ads.

The ad in question was a legal notice required from the bidders on a sewage treatment plant in Plano, Ill. Indiana Construction was the low bidder but lost the job because the legal notice had not been published.

"Although there is an enormous amount of case law regarding a newspaper's right to refuse advertising, including legal notices—plus the related First Amendment cases regarding a newspaper's right to control what appears in its pages—there were no prior cases addressing a newspaper's failure to publish an ad which it had not knowingly rejected," said Lynn R. Jordan, assistant counsel for the Tribune.

Lee ruled that the Tribune was not negligent because "a private newspaper does not have a duty 'not to lose' an advertisement."

He also rejected the construction firm's breach-of-contract claim, saying the Tribune had never accepted its offer to publish the advertisement for payment.

Even if those claims had been valid, the judge said, the company could not receive any damages for lost profits in light of the "limitations of liabilities" notice in the Tribune, which states: "The newspaper will not be liable for a failure to publish an ad . . . except to the extent of the cost of the ad for the first day's insertion."

The judge also noted that the construction firm could have prevented its own loss through actions such as verifying the first insertion, which it failed to do.

"Indiana Construction has suffered a hardship," Lee wrote. "But imposing a duty on the Tribune to relieve that hardship is not justifiable and would have enormous ramifications. Not every hardship is actionable." □

COURT BRIEFS

• The weekly Bradford (Pa.) Journal and The Bradford Era, a daily, have **settled an antitrust lawsuit** in which the Journal charged the Era with predatory pricing and other unfair competitive practices [presstime, July 1984, p. 49]. Terms were not disclosed.

• U.S. District Judge Charles R. Richey in Washington, D.C., dismissed charges brought by the federal government that John P. McGoff, chairman of Global Communications, failed to register as an **agent of South Africa**. Richey said the statute of limitations had expired for bringing a case under the Foreign Agents Registration Act. The government has filed a notice of appeal [presstime, Oct. 1983, p. 13].

• The California Supreme Court upheld a lower court's **dismissal of a $3-million lawsuit** by author William Peter Blatty who sued The New York Times because it omitted one of his novels from its best-seller list.

• The U.S. Court of Appeals for the District of Columbia refused to reconsider a three-judge panel's ruling that the **"fairness doctrine"** is not a "binding statutory obligation." As a result, a decision by the Federal Communications Commission not to apply the doctrine to teletext stands [presstime, Oct. 1986, p. 47].

The plaintiffs—the Telecommunications Research and Action Center and Media Access Project—said they will appeal to the U.S. Supreme Court.

• Synanon, a controversial drug rehabilitation program, has **dropped two libel suits** against David V. Mitchell, publisher of the Point Reyes (Calif.) Light, and his ex-wife and former co-publisher, Cathy C. Mitchell. The weekly won a 1979 Pulitzer Prize for its reporting on Synanon.

Synanon's insurance company also agreed to pay $100,000 to the Mitchells. In return, they dropped their countersuit against Synanon for abuse of process.

• The NBC television network said it will ask a judge to set aside a U.S. District Court jury's **$19.3-million libel award** to entertainer Wayne Newton.

Newton sued NBC over broadcast reports linking the singer to organized crime.

REGULATIONS

PCB transformers draw fine

Newspaper Agency Corp. of Salt Lake City has been fined for violating federal regulations on polychlorinated biphenyls, or PCBs.

The fine resulted from an inspection last February by the Environmental Protection Agency of two electrical transformers containing PCBs. The transformers are housed on the roof of the pressroom where the agency prints The Salt Lake Tribune and the Deseret News.

The company was cited for failing to have properly disposed of a small amount of PCB-laden oil that had leaked from the transformers, for not having a PCB sign on the chain-link fence enclosing the transformers and for failing to register the transformers with the local fire department.

The latter two violations were of regulations that had taken effect two months before the inspection [presstime, March 1986, p. 43].

EPA originally proposed a fine of $27,000, which was appealed by the company. According to Michael J. Brennan, the company's operations manager, the parties have tentatively agreed to a settlement requiring the company to pay $8,400.

One count, alleging that the company had failed to conduct quarterly inspections, was dropped. EPA also reduced fines for the other counts because the company demonstrated "good faith," Brennan said. Among other things, the company showed during the settlement discussions that it had contracted with a firm to remove the PCB-oil from the transformers. □

Tax-law revisions may change status of some newspaper independent contractors

A provision in the new federal tax law may affect the tax status of some people who work for newspapers.

The provision created an exemption from the "safe harbor" provided in earlier law that directed the Internal Revenue Service to stop trying to classify independent contractors as employees for tax purposes.

According to Martin Casey, ANPA manager/government and international affairs, the new provision will not affect independent contract carriers or delivery agents. But it will affect such people as engineers, designers, drafters, computer programmers, systems analysts or other similarly skilled workers.

Newspapers who engage these kinds of workers and who treat them as independent contractors "can expect IRS to move against these situations and attempt to force treatment as employees" for purposes such as withholding, Social Security, pensions and benefits, Casey said. □

REGULATORY NOTES

• ANPA has begun offering a new service to member newspapers—an **"environmental audit"** designed to assure that newspaper operations comply with government regulations.

Upon request, industrial hygienists on the Association's staff will visit a newspaper and scrutinize its health, safety and environmental programs "from top to bottom," said Richard W. Neergaard, manager/environmental services. Following the visit, they will prepare a report with recommendations for improvements if necessary.

According to Neergaard, "many newspapers have expressed concern about their readiness for inspections by government regulators."

The cost for the study will be $250 a day plus expenses. Neergaard said a typical audit should take one or two days.

• The Occupational Safety and Health Administration has announced a preliminary determination that **exposure to four glycol ethers** at the agency's currently permissible limits "may present significant risks to the health of exposed workers." The agency said it is examining options for revising its standards for the chemicals.

The substances are used widely in many industries including newspapers, where they may be found in such things as solvents and blanket conditioners, according to Richard W. Neergaard, ANPA manager/environmental services.

Participation sought in reporting system

ANPA will send 1986 ANPA Accident Reporting System forms to member newspapers this month.

Most of the information to complete the forms may be obtained from the federal Occupational Safety and Health Administration's Form 200, which employers must post in the workplace each year by Feb. 1.

In its third year, the Accident Reporting System allows participating newspapers to identify potential problems, compare their injury and illness records with newspapers of similar size and with the printing and publishing industry as a whole, discuss specific injury and illness rates with insurance carriers, and measure the effectiveness of wellness programs. □

LEGISLATION

Moynihan bill would prevent exclusion based on ideology

Sen. Daniel Patrick Moynihan (D-N.Y.) has introduced a bill that would prevent the federal government from denying anyone entry into the United States on ideological grounds.

Moynihan had called for a review of the nation's immigration laws following the incident last October in which Colombian journalist Patricia Lara was denied entry [presstime, Dec. 1986, p. 56].

His new bill, S 28, also requires that before the government may deny a visa on national security grounds, the attorney general must apply for an order from a special court.

In a development related to the exclusion of foreign journalists from the United States, eight press associations have requested a meeting with Attorney General Edwin Meese III. The groups said they want to "further state our concerns and gain a better understanding of the processes used to exclude aliens."

Signing the letter were representatives of ANPA, the Inter American Press Association, the American Society of Newspaper Editors, the Associated Press Managing Editors Association, the Committee to Protect Journalists, the Magazine Publishers Association, The Newspaper Guild and the Reporters Committee for Freedom of the Press. □

Survey yields surprise: 3rd-class is newspapers' top mail category

Newspapers in ANPA spent more on third-class mail in 1985 than on any other mail class, according to an Association study. They spent an estimated $280 million on third-class, compared with about $260 million for second-class and about $140 million for first-class.

Survey results were extrapolated from the responses of 733 member newspapers who returned a questionnaire that had been mailed to all of the Association's nearly 1,400 members.

Some newspapers told ANPA that they were not able to break their postal expenditures into classes and that, consequently, data were not available. Because of this and other problems, ANPA is exploring a more uniform way of reporting newspaper postage costs to make future surveys more complete.

Association leaders said they suspected newspapers' third-class expenditures are large, but they expressed surprise at the magnitude of the third-class bill indicated by the survey. Newspapers use third-class for total-market-coverage programs and for promotional materials.

"The results of the report will help ANPA represent the interests of newspapers in future postal rate proceedings," said ANPA Director Sandra C. Hardy, vice president of Calkins Newspapers, Levittown, Pa., and chairman of the ANPA Postal Committee. "But despite our status as large third-class mail users—or perhaps because of that status—we intend to continue to encourage the Postal Service to restructure its rates.

"The advertising market is distorted by artificially low third-class rates. We believe it is in the best interest of newspapers and the Postal Service to analyze the market carefully and make necessary corrections," Hardy said.

Because most newspaper companies have cut way back on their use of the mails to distribute their regular issues, some newspaper executives also expressed surprise over the high second-class bill. The study covered a period in which some metropolitan daily newspapers were using second-class for their total-market-coverage programs. That practice virtually ended last June, and as a result, expenditures in all likelihood have decreased. □

POSTAL NOTES

• The Postal Rate Commission may act soon on newspapers' request that the **minimum size for third-class** mail that is presorted by carrier route be enlarged slightly to accommodate newspapers.

The U.S. Postal Service in late summer asked the commission for a recommendation on the new size [presstime, Aug. 1986, p. 3]. Some third-class mailers balked at the idea. The commission then asked the parties to settle their differences.

Postal officials Jan. 14 submitted a settlement plan that third-class mailers did not approve but that included changes ANPA requested: increases of one-half inch in length and one-quarter inch in width, for final maximum size of 14 inches long, 11 3/4 inches wide and 3/4 of an inch thick.

• ANPA said it will intervene in the rate commission's mail classification proceeding filed by four newspapers over **second-class, total-market-coverage** programs.

The commission said it will hear the "live controversy" over postal rules disallowing the second-class TMC practice.

The case was filed by The Sacramento Bee, the Des Moines Register, The Tennessean of Nashville and the Nashville Banner [presstime, Jan. 1987, p. 50].

• The commission agreed to hear an amended ANPA complaint on **detached mailing labels**, one in which the Association has asked for clarification of the definition of a "piece" of mail [presstime, Jan. 1987, p. 48].

Separately, the commission rejected a Postal Service motion that it reconsider hearing the case. The commission said "clarity and understanding would be aided" by taking a look at the issue.

• John N. Griesemer was **elected chairman of the USPS Board of Governors.** Griesemer, 56, is a Springfield, Mo., businessman who has served on the board since 1984.

He succeeded John R. McKean, who served three years as chairman. McKean's term as a governor will expire in December 1991.

Elected vice chairman was John L. Ryan, an Indianapolis businessman.

Canada Post may reduce newspaper subsidies

Newspapers in Canada fared relatively well in a round of postal increases scheduled to be implemented July 1. But they might not be so lucky in coming years because the Canadian government is considering cutting way back on postal subsidies that benefit newspapers.

The government is discussing with Canadian newspaper publishers and other users of subsidized mail how the current $225-million subsidy can be pared to $162 million by 1991 as Canada Post tries to curb its deficits.

Canadian newspaper officials said hardest-hit in any subsidy reduction would be rural, weekly newspapers that depend on the mails for most of their distribution.

James A. Dills, executive director of the Canadian Community Newspapers Association, said many of those newspapers—published in areas with little prospects for growth—could not absorb radical cost increases. "They cannot simply jump from the rate class they're in to something much higher" overnight, he said.

The new rates, announced in January, will include continued free distribution under certain circumstances for weekly newspapers delivered within a 65-kilometer radius of where they are published.

Canada Post will impose a 13-percent increase for the minimum second-class rates affecting most other newspapers.

Canadian newspaper officials say the number of copies affected by that increase is very small. □

No rate increases for at least two years

Officials of the U.S. Postal Service said there will be no rate case filed this year, which means, among other things, that newspapers can look forward to at least two more years without mail-rate increases. It takes about a year for rates to increase after a rate case begins.

Postmaster General Preston R. Tisch had said Dec. 15 in a television interview that the Postal Service would file a rate-increase request in 1987 with new rates to be effective in 1988. However, Tisch later said he "misspoke."

Asked about plans for a rate case to be filed in 1988, a postal spokesman said in late January there were "none as of this time." □

'Declaration of London' calls for joint action against worldwide censorship

Declaring that "where censorship exists it must be contested, and where censorship would be instituted it must be countered," an international conference of journalists has proposed a plan of "joint action" to do just that.

Meeting in London Jan. 16-18, the journalists resolved to continue to protest and publicize abuses against press freedom.

In their six-page "Declaration of London," they also called for:

- Creating a "fund against censorship" to support legal challenges to censorship measures
- Establishing a "censorship hot line"
- Producing public service advertisements spotlighting examples of censorship
- Organizing an "early warning system" to provide advance information on restrictive press measures being proposed
- Dispatching "journalistic missions" to regions where censorship is especially severe.

The meeting was the latest in a series of "Voices of Freedom" conferences organized by the World Press Freedom Committee and Tufts University's Edward R. Murrow Center of Public Diplomacy. The first, in 1981, was attended by 60 journalists and resulted in the adoption of the "Declaration of Talloires," a plan to improve the free flow of information around the world [presstime, July 1981, p. 26].

This year's meeting, "Challenging the Censors: A World News Media Action Conference," attracted 150 journalists from 35 countries.

Setting the stage for the conference was a working paper titled "Censorship: What is it? Where is it?" The document was prepared by the staff of "Index on Censorship," a London magazine.

Addressing the conference, Index Editor George Theiner observed that censorship takes many different forms and "is present, to a less or greater degree, in every country, from the worst totalitarian police state to the most enlightened and tolerant democracy."

Theiner said it "ranges from the total control exercised by dictatorial regimes, to the more subtle pressures exerted in the democratic countries, to the court cases brought in Britain . . . under the Official Secrets Act and the reluctance of successive British governments to consider bringing in freedom of information legislation; from economic intimidation in the form of the withholding of publishing licenses, newsprint allocations or government advertising, to the imprisonment, kidnapping and assassination of troublesome journalists."

Monitoring censorship is the easy part, Theiner added. "The difficult part is to know what to do about it. . . ."

The formal "Declaration of London" adopted by the conference enumerated nine "basic principles that should apply in maintaining a universal, free and uncensored flow of information":

1. "Censorship, direct or indirect, is unacceptable; thus laws and practices restricting the right of the news media freely to gather and distribute information must be abolished," and governments must not interfere with the news content or restrict access to news sources.

2. "Independent news media must be allowed to emerge and operate freely in all countries."

3. "There must be no discrimination by governments in their treatment, economic or otherwise, of the news media within a country."

4. "Government media must enjoy editorial independence and be open to a diversity of viewpoints."

5. "There should be unrestricted access by the . . . media within a country to outside news and information services, and the public should enjoy similar freedom to receive foreign publications and foreign broadcasts without interference."

6. "National frontiers must be open to foreign journalists."

7. "Legal, technical and tariff practices by communications authorities which inhibit the distribution of news and restrict the flow of information are condemned."

8. "Restrictions on the free entry to the field of journalism or over its practice, through licensing or other certification procedures, must be eliminated"

9. "Journalists, like all citizens, must be secure in their persons and be given full protection of law. Journalists working in war zones are recognized as civilians enjoying all rights and immunities accorded to other citizens."

At a press conference following the conference, WPFC Chairman Harold W. Andersen, chairman and chief executive officer of the Omaha World-Herald Co., said the proposed action plan has "the potential for significant impact."

"The challenge now is to capitalize on the interest which was shown and translate some of the words into action," he said. □

Discussing language of the declaration are (from left) Horacio Aguirre of Diario Las Americas, Miami; Alejandro Miro Quesada of El Comercio, Lima, Peru; and Wilbur G. Landrey of the St. Petersburg Times.

20 journalists killed in 1986

Twenty journalists in 13 countries were killed worldwide in 1986, far fewer than in 1985 when 31 died in 11 countries. However, other types of violence against members of the media increased last year, according to an annual survey by Freedom House, an organization that monitors freedom around the world.

The mortality rate in the Philippines, where 16 journalists were killed in 1985, plummeted in 1986 when only two were killed after being ambushed by guerrillas.

Leonard R. Sussman, executive director of the New York City-based organization, cited the Philippines as one of two countries in which there were "major gains" in press freedom. "The Philippines removed the heavy burden of Marcos's oligarchical journalism," he said. "The press is bolder and more diverse than ever."

The other country in which there was substantial improvement was Haiti, which, like the Philippines, turned out of power an entrenched head of government [presstime, Aug. 1986, p. 20].

Mexico was "the most murderous nation" in 1986, with four journalists killed. A fifth journalist was killed there, but that was over a private matter, according to Sussman, who also noted that after his study went to print reporting 19 journalists killed one in Guatemala was murdered.

In addition, 40 journalists were expelled from countries in 1986, compared with nine in 1985; 178 were arrested, compared with 109 the previous year; and 214 were "harassed," representing a substantial increase over the 76 in 1985. Thirteen journalists were kidnapped or disappeared, the same number as in 1985 [presstime, Feb. 1986, p. 39]. □

UNESCO 'disinformation' report criticized

A report being written under contract on "the disinformation campaign against UNESCO" has drawn strong criticism.

The contract was awarded by UNESCO to the Institute for Media Analysis in New York City, a year-old organization whose advisory board is headed by former Irish Foreign Minister Sean MacBride, who chaired a UNESCO commission that in 1980 issued the controversial "MacBride Report" on international communications [presstime, June 1980, p. 14].

The disinformation contract calls for "a section on the use of the press by organizations such as the Heritage Foundation, the Copley News Service and others with the apparent intent of attacking the U.N. system." The agreement is for $24,999—one dollar less than the dollar level at which contracts must be approved by an internal UNESCO contracts committee.

Herbert G. Klein, editor-in-chief of Copley Newspapers and vice president of The Copley Press Inc., said that "mentioning the Copley News Service is typical of UNESCO propaganda efforts. The Copley News Service has no relationship to disinformation." CNS, said Klein, "is in the job of syndicating features and news which is informative in an accurate way. I consider it libelous by a body which is impossible to sue."

Dana Bullen, executive director of the World Press Freedom Committee, said the "directed, secretive way in which this is being handled indicates that a cheap shot against the press is in the making that will add no luster to UNESCO's image." □

WORLD PRESS NOTES

• Timothy Balding, assistant director of **FIEJ**, the International Federation of Newspaper Publishers, was expected to be appointed director of the organization by its board of directors Jan. 28.

A former journalist, Balding would succeed Maribel Bahia, who left FIEJ in August. Balding has been on the staff of Paris-based FIEJ since 1985, serving as executive assistant and editor of the FIEJ Bulletin before becoming assistant director. He was a British news correspondent in the 1970s.

• Nicaragua's opposition daily newspaper, **La Prensa**, closed since June 26 by the Sandinista government, announced Jan. 9 it would try to resume publication. This followed the institution of a new Nicaraguan constitution guaranteeing freedom of expression.

A day later, however, President Daniel Ortega reimposed a state of emergency that suspended press freedom. The newspaper remained closed.

U S West letter highlights BOC competition

One of the seven Bell operating companies, U S West Inc., said it may pull out of the BOCs' joint research project. Some telecommunications experts say the development underscores increasing competition in the phone industry since AT&T's divestiture.

The joint project, called Bellcore, was formed in 1984 as a result of the breakup. Among Bellcore's functions are maintaining common standards for the nation's phone systems and performing research for the local phone companies. U S West said Bellcore's sharing of research data and other work may not be conducive to the competitive relationship developing between the BOCs.

U S West said Bellcore should "develop and expand" exclusive, proprietary research and development activities for individual companies.

To leave Bellcore, a partner must give three years' notice that it may not want to participate. U S West did so in a recent letter.

"In three years, we want to be able to sell our share," said a U S West spokesman.

U S West serves 14 states in the Plains and Mountain States area. □

Christian Science Monitor plans an electronic edition

The Christian Science Monitor is preparing to launch an electronic version.

The nationally distributed newspaper, which is based in Boston, was gearing up in January for a six-month market test.

The service will broadcast articles and other information over an unused portion of an FM-radio frequency. The material would be received by a data decoding device and automatically be printed out in hard copy. It will be a non-interactive system, much like a wire service.

The Monitor said it will use graphics with news stories, but they must be reproducible on the receiving end's dot-matrix printer.

The Monitor is the first national newspaper to launch an electronic edition transmitted on the unused FM frequencies, or FM sideband. □

Daily strives to make copy easier to read

Last spring, a market research study conducted for the Lexington (Ky.) Herald-Leader made a disturbing discovery. The newspaper was being read by a significantly smaller proportion of people with high school educations than with college educations.

Shortly after that, thanks to a computer program that analyzes the readability of prose, the newspaper may have found one reason why—it was writing over most readers' heads. According to the computer analysis, one-third of the stories were written at or above college level.

Today, the Knight-Ridder Inc. daily (morning, circulation 111,162) is experimenting with using that same computer program to improve its readability.

The computer program takes stories from Knight-Ridder's electronic library system, VU/TEXT, and computes three readability scores: the Flesch Reading Ease score, which measures sentence complexity and is based on the average number of words per sentence and the number of syllables per 100 words; the Farr-Jenkins-Paterson score, which is similar to Flesch; and the Gunning Fog Index, which gives an assessment of the readability of material by grade level.

Readability formulas are nothing new. The late Rudolf Flesch, for example, devised his method in the mid-1940s.

What is new is the computer application, which permits quick and easy analysis of large numbers of stories.

Immediately after results of the analysis were in, Herald-Leader Executive Managing Editor Joel Rawson put out the word: "If we want to appeal to more readers and if we want them to easily understand the news they paid 35 cents or $1 to get, we need to watch our writing."

Merritt (right) and reporter Kit Wagar discuss editing of Wagar's stories.

In January, the paper launched a pilot project aimed at helping individual reporters improve the readability of their stories. Harry W. Merritt, projects editor/writing coach, works with six reporters, running their unedited stories through the program and then discussing the findings with them.

The computer program will be valuable if it merely emphasizes the point that "writing needs to be simple and clear," said Merritt. "I think newspapers really have to draw in people. We are not like television where you turn on the set and lie back and watch. It is more of an effort for people to read."

According to Rawson, plans call for the entire content of the newspaper to be run through the program every six months to see if there is any "measurable change" in readability.

Rawson also believes it may be possible to use the program during the writing process. Just as the "H & J" function on an electronic front-end system can give a reporter or editor an indication of how long a story is, the readability program can provide a measure of sentence and word complexity.

Everyone involved in the experiment emphasizes that this computer program is not an answer by itself to clarity problems.

"We are not going to edit the newspaper by computer," said Chairman and Publisher Creed C. Black. "It's simply another tool we can use in trying to make our paper more attractive and readable."

The program may be purchased from the Clearinghouse for Computer-Based Education in Journalism and Mass Communication, a non-profit organization at the University of Miami.

Known as "KR-READ" within Knight-Ridder, it is being marketed as "Readability Online." It is available for $10 by writing to Clearinghouse Director William R. Oates, P.O. Box 248127, Coral Gables, Fla. 33124.

Oates and Timothy E. Stehle, research consultant for Knight-Ridder, said other programs that measure readability are also available. "Four Readability Formulas" is available for $35 from the Clearinghouse. Two other commercially available programs are "RightWriter," from DecisionWare Inc. of Sarasota, Fla., and "Readability Calculations," from Micro Power & Light Inc. of Dallas, Texas.

Sunday magazine editors form new group

A group of Sunday magazine editors, whose meetings long have been underwritten by Standard Gravure Corp., has reorganized as the self-supporting Sunday Magazine Editors Association, or SunMag.

The Louisville printing company pulled back its financial support after the Bingham family sold it along with other properties including The Courier-Journal. Atlanta businessman Michael D. Shea bought Standard Gravure for $20 million [presstime, July 1986, p. 84].

The Sunday magazine editors subsequently declined offers of support from other printers. A commercial link "really creates some problems," said SunMag President Melissa Houtte, editor of The Dallas Morning News magazine Dallas Life. "We just felt it would be more journalistically pure."

Members, now numbering about 50, will pay annual dues of $50. Registration fees of $200 should support SunMag's annual meeting, to be held this year in Washington, D.C., May 17-19. □

Press more believed than Reagan, poll shows

The public is fed up with news of the Iran scandal, but it believes the press more than it believes President Reagan or Congress, according to the Gallup Poll.

Television, the press and public figures all have lost ground with the public since a similar poll was conducted in 1985. The latest poll, taken Dec. 27 through Jan. 4, found that the believability of newspapers was 63 percent compared with 83 percent in 1985.

Network television news scored 66 percent, down from 83 percent in 1985.

President Reagan was given a believability rating of 52 percent, as against 67 percent in 1985. Democrats in Congress scored 44 percent and Republicans in Congress, 41 percent.

Fifty-four percent of the public said there had been too much news coverage of the sale of arms to Iran and the funneling of some of the money to Nicaraguan rebels.

The poll, sponsored by The Times Mirror Co. of Los Angeles, has a margin of error of plus or minus 3 percent. □

Citizen Bee program draws newspapers' heightened interest

Based on the success of Citizen Bee competitions for high school students last year, newspaper involvement has increased dramatically for the second annual competition, organized by the Close-Up Foundation to fight civic illiteracy.

Organized much like the spelling bees that newspapers traditionally have sponsored, the Citizen Bee tests students' knowledge of American history, economics, geography, politics and current issues while also challenging their analytical thinking skills.

The Houston Chronicle was the only newspaper to act as sole sponsor for one of the Bees held in five pilot states last year. A handful of other papers provided financial backing or other support.

But the surge of participation this year, by more than two dozen newspapers, has taken the Close-Up Foundation pleasantly by surprise. "Now we are seeking to have newspapers become our primary sponsors," said Citizen Bee Director Eric Goldman.

The foundation's president, Stephen A. Janger, said that "newspapers, for the most part, enjoy being part of the struggle against civic illiteracy."

"They have a major stake in it, and I think they are very, very distressed about young people not reading the newspapers," Janger said.

"I see this as being probably the most exciting national competition for social studies in the next five years," said Caroll Jordan, NIE manager for the Houston Chronicle. "If newspapers jump on the bandwagon when (the Bee) is in town, they stand to benefit in terms of community service and in terms of circulation."

Questions for the Bee, including general questions on current issues, now are drawn almost entirely from the source book, *Close Up USA*, published by Close-Up. But Jordan envisions the addition of more timely questions on current events—culled from local, state and national newspaper coverage—for their respective rounds in future competitions.

The Close-Up Foundation, located in Arlington, Va., expects that more than 15,000 students in 17 states will vie for scholarships in the local Bees beginning in March.

The competition culminates in the final round June 23 in Washington, D.C., with top winners receiving scholarships ranging from $1,000 to $3,000. □

Studies focus on credibility, endorsements and innovation

BY GUIDO H. STEMPEL III

Cecilie Gaziano and Kristin McGrath of Minnesota Opinion Research, which conducted the credibility study for the American Society of Newspaper Editors [presstime, May 1985, p. 56], have provided additional analyses of those data.

They report that credibility is not something you can measure adequately with just one question. Through factor analysis, they found 12 items that seemed to go together to form a credibility scale. The items were whether newspapers are fair, unbiased, tell the whole story, are accurate, respect people's privacy, watch out for people's interests, are concerned about the community's well-being, separate fact from opinion, can be trusted, are concerned about the public interest, are factual and have well-trained reporters.

A lot of credibility research has focused on getting respondents to say which is more credible—newspapers or television. Gaziano and McGrath point out that in the ASNE study, people who thought newspapers were credible also thought television was credible, and vice-versa.

They also found that respondents rated newspapers slightly higher than television on local news and rated television slightly higher on coverage of natural disasters.

This article appears in the Autumn 1986 Journalism Quarterly.

The extent to which newspapers endorse Republican presidential candidates is well-known, but what about campaign issues? A study by Byron St. Dizier, assistant professor of communication studies at the University of Alabama—Birmingham, indicates there is much less support for the Republican position on issues.

St. Dizier mailed a questionnaire to editorial-page editors at 114 randomly selected newspapers of more than 50,000 circulation. Seventy-five percent responded.

President Reagan was endorsed in 1984 by a majority of the responding newspapers—57 percent to 33 percent, with 10 percent not endorsing. St. Dizier asked what stand the newspapers had taken regarding nine issues on which the Democratic and Republican platforms took opposite stands.

On only one of those nine issues, abolishing the Department of Energy, did more papers support the Republican position than supported the Democratic position.

Among the newspapers that endorsed Reagan, a majority opposed the Republican position on equal rights, taxes, limiting covert activity, school prayer, abortion and tuition tax credits. On aid to the contras, a plurality opposed the Republican position, with about a fifth not taking a position.

On the other hand, the newspapers that endorsed Walter Mondale supported the Democratic position on all nine issues. St. Dizier suggests this may explain the tendency for endorsement editorials not to deal with issues. His study also appears in last fall's Journalism Quarterly.

Experienced editors and publishers are more likely to be innovative than inexperienced ones. That's one of the findings of a study at the School of Journalism at the University of North Carolina.

A mail questionnaire was sent to editors and publishers of 331 daily newspapers. Newspapers were selected randomly, but the selection procedure was weighted for circulation. For example, a newspaper with 100,000 circulation had 10 times as much chance of being included as a newspaper of 10,000 circulation. Response rate was 74 percent.

Innovativeness was defined in terms of readiness to introduce new products, readiness to adopt new production technology and involvement with electronic information systems.

Other findings were that editors and publishers of larger newspapers were more innovative than their counterparts at smaller newspapers, and that more innovative editors and publishers perceived newsroom morale as higher. Market competition was found to be unrelated to the degree of innovativeness.

The study appears in the Fall 1986 Newspaper Research Journal. The article was written by Sharon H. Polansky, a doctoral student at UNC, and Douglas W. W. Hughes, who received his master's degree from UNC and is now a doctoral student at the University of Southern California. The data were gathered by Philip Meyer, William Rand Kenan Jr. professor at North Carolina. □

Stempel is distinguished professor of journalism at the E. W. Scripps School of Journalism at Ohio University, Athens, and editor of Journalism Quarterly. He is a regular contributor to presstime.

Discount plan draws reaction

RJR Nabisco is asking newspapers to accept an unusual, earn-as-you-go discount contract under the newspaper business' NEWSPLAN volume discount program. The early response from some newspapers indicates a mixed reaction.

Instead of making a commitment to buy at least six pages in 1987 and thereby qualify for a participating newspapers' minimum NEWSPLAN discount rate, the Winston-Salem, N.C., conglomerate proposes a contract in which it makes no commitment to buy a specific minimum volume of advertising space. Instead, it proposes to purchase space at a newspaper's "open" rate (generally the most expensive) and receive a credit or rebate from the newspaper if it turns out that it purchases enough space during the contract period to qualify for a discount.

In a Dec. 29 notice sent to about 700 newspapers, RJR Media Services said "the nature of today's business environment" does not provide it the "luxury" of projecting a level of advertising activity 12 months in advance, as required currently to earn a discount under NEWSPLAN.

The company also maintained that its plan is "the standard practice of every non-newspaper print media vehicle in the media industry that offers any type frequency or volume discount."

In some markets, the company will have no problem meeting the minimum volume required to qualify for a discount, said RJR spokeswoman Maura Payne. "In the others, we would just like the flexibility to read our business needs . . . as the year progresses."

Although Payne reported response to the proposal "has generally been positive," some newspapers have not accepted it.

The Dallas Morning News has notified RJR that its normal practice is to allow an advertiser only about 60 days to back-date a contract.

The Kansas City (Mo.) Star and Times will inform RJR that it will not accept the contract at the present time, but will remain "receptive" to any industry-wide decision to change NEWSPLAN policy, according to Jack E. Hines, general advertising manager. "I'm not saying I wouldn't do it; I'm just saying I don't want to do it by myself," he said.

NEWSPLAN was adopted by the newspaper business to provide national advertisers with an incentive to purchase more newspaper space. In return, newspapers get an indication of the amount of business they can expect during the year, which assists them in planning purchases of such things as newsprint and ink. According to the Newspaper Advertising Bureau, just under 1,100 daily newspapers participate in the program. □

Annual NoRMA winners named

Winners of the 16th annual NoRMA Awards competition for outstanding newspaper advertising were announced in mid-January.

Winners of the contest sponsored jointly by the Newspaper Advertising Bureau and the National Retail Merchants Association include Macy's of New York in the over $250 million in sales category; ZCMI of Salt Lake City, $100-250 million; Raleighs of Washington, D.C., $50-$100 million; NBO Stores Inc. of Secaucus, N.J., $25-50 million; H.A. & E. Smith Ltd. of Hamilton, Bermuda, $5-25 million; and Bockstruck's of St. Paul, less than $5 million.

Donaldsons of Minneapolis won in the institutional category; Nordstrom of Seattle and Neiman-Marcus of Dallas tied for the new "best use of color" category; and John Wanamaker of Philadelphia won the public-service category. □

Regional auto ad campaigns can benefit newspapers

BY CRAIG C. STANDEN

Cut-rate financing—2.9 percent, 2.4 percent and even 0 percent—made the headlines in automotive advertising last fall. But according to Val Corradi, the Newspaper Advertising Bureau's vice president for automotive advertising, the long-range phenomenon newspaper advertising people should be thinking about is the regionalization of auto advertising.

Several manufacturers are introducing regional marketing and advertising programs that could trigger major changes in the way cars are advertised and merchandised. Behind these programs is the rapid growth since the mid-1970s of dealer associations and their ad budgets.

Ford and Chrysler were the pioneers in organizing their dealers into marketing entities, establishing unified groups that generated additional funds to increase impact in the marketplace beyond national spending and local dealership dollars. They were followed by General Motors and then by many of the import makes.

Today, none of the major auto makers carries the full burden of investing huge sums on a national basis to bring shoppers into their dealers' showrooms. Although image-building, factory advertising still runs on network TV and in national magazines and newspapers, local-dealer and dealer-association advertising is being relied on to do more of the image-building work as well as the in-close selling. The dealer-association funds usually are augmented by sizable matching contributions from the factories.

Since 1980, factory advertising in newspapers has risen 81 percent. But dealer-association advertising has gone up 140 percent, and local-dealer spending 313 percent.

The 10-year trend is even more striking. From 1975 to 1985, factory dollars spent in newspapers by Chevrolet and Ford went up 68 percent and 33 percent respectively. But dealer-group spending grew by 742 percent and 771 percent, and local-dealer spending by 460 percent and 493 percent, respectively.

Today, dealer associations spend well over $1 billion per year in all media—the bulk of it in spot TV. But newspapers' share is growing. Many newspapers have capitalized on this potential by introducing special, automobile-dealer-association advertising rates.

The shift in emphasis toward local selling has most recently been reflected in the automakers' "national" advertising efforts.

Chevrolet has been the leader in regionalized "national" campaigns. A couple of years ago, Chevrolet hired a relatively small Los Angeles ad agency, Vic Oleson and Partners, to create a $10 million "Cal-

Standen, president of the Newspaper Advertising Bureau in New York City, is a regular contributor to presstime.

ifornia only" campaign, which resulted in a positive turnaround in sales and dealer attitudes. Similar programs met with success in the Northwest and other test areas.

Last year in Texas, where pickup trucks have been enjoying a vogue as personal cars, Chevrolet spent $4 million for a local promotion for Chevy trucks. Now Chevy has made regionalization official—embarking on a nationwide effort with a budget of more than $50 million carved out of advertising funds that used to be considered national.

Robert Burger, general manager of Chevrolet, recently told Automotive News that his advertising philosophy has changed to a more regional focus, and he called the shift long overdue.

"Those markets shifted before we recognized they had," he said. "Now we have to go after them aggressively. We've found it just doesn't do any good to spend a lot of money trying to move a car that's doing well nationally in a market where it's not doing well at all. The demographics and the people are just not there."

Now in place are six Chevrolet area marketing managers under the direction of a field marketing manager reporting directly to Burger. They have authority to supervise and coordinate advertising and promotion campaigns in their areas according to market demand, product preferences and other local considerations. And Campbell-Ewald, Chevy's lead agency, has restructured its operations along similar lines.

Other GM divisions are also moving toward more regionalization of their advertising. Buick's agency, McCann-Erickson, recently set up a separate Regional Marketing Organization, with offices in six major cities and with sole responsibility for implementing Buick market-by-market activities.

Ford and Chrysler have also joined the trend to regionalization. John Vanderezee, Ford Division's ad manager, told Madison Avenue magazine recently, "We're doing more regional advertising than in the past, and this has had an effect on our need for network television. We know where our sales and marketing problems are, and what better way to attack them than on a local or regional basis."

Art Kesteloot, Dodge's national ad manager, told Madison Avenue, "We have special campaigns and special media buys in the South and Southwest. We have a New England campaign. We have a California/West Coast campaign. It's (a matter of) recognizing sales trends and consumer wants and needs."

The trend toward regional advertising by automakers gives daily newspapers an unparalled opportunity to increase automotive revenues. After all, we offer automotive advertisers the ideal vehicle for locally oriented new-car marketing. Newspapers, both large and small, provide exceptional coverage, speed, flexibility, upscale demographics and real cost efficiency.

And newspapers today have become expert at forming ad hoc networks—joining forces to give advertisers complete coverage of market areas and offering a full range of market data, readership and audience data, and other data.

All in all, targeted marketing on a regional basis is becoming increasingly important to automakers and represents an outstanding opportunity for newspapers to capture more automotive dollars. □

Newspaper Management Systems
A Proven, Effective, Productive Solution.

"We use Collier-Jackson's Newspaper Management Systems because they specialize in the newspaper industry. One software philosophy for all systems makes it easier on everyone — from the DP technical coordinators to the operators at the terminal screen."

Labor and the new Congress

BY CLAUDIA M. JAMES

With the change in leadership in the U.S. Senate from Republicans to Democrats, there is likely to be more activity in the labor and employee-benefit areas than has been seen in the last six years.

The centers for such activity in the recently convened 100th Congress are expected to be the Senate Committee on Labor and Human Resources, which is now chaired by Edward M. Kennedy (Mass.) who has a longstanding interest in these issues, particularly health benefits, and the labor subcommittee, which is chaired by Howard M. Metzenbaum (Ohio).

Significant attention is expected to be devoted to "mandated" benefit issues. Kennedy, in previous Congresses, has advocated mandated health benefits, catastrophic health coverage and insurance pools for the uninsurable.

Efforts to expand on the COBRA (Consolidated Omnibus Budget Reconciliation Act) health-coverage provisions passed in the 99th Congress also are expected. Under COBRA, employers with 20 or more employees are required to offer extended health coverage to former employees, divorced spouses, widows and dependents. Organized labor is very much behind these efforts.

Among labor's other priorities is job security—the major goal for most unions today at the bargaining table. The labor movement is looking to Washington in its quest for job security and for continuation of benefits. In the last Congress, this translated into a strong push for plant-closing legislation. In this Congress, the plant-closing/job-retraining issue is likely to be aired in the context of the "trade" debate—international trade being the hottest issue in the 100th Congress, apart from the Iran/contra affair.

Legislation considered in the last Congress would have required a 90-day advance notice to workers in the event of a plant closing or permanent layoff involving 50 or more employees. The legislation was narrowly defeated on the House floor, a real defeat for labor. One of the reasons for the bill's demise was Labor Secretary William E. Brock's promise to create a task force to review plant closings and work force reductions and make some recommendations. That task force's report in mid-January recommended assistance for displaced workers, with the focus on job retraining.

While the report does not specifically propose any new tax on employers, it suggests that alternative funding methods should be considered if general revenues are not available to fund these programs.

It is expected that bills will be introduced that would prohibit testing of employees for drugs, and hearings are likely on this issue.

A second labor priority item—"parental and medical leave"—is also expected to be back and very seriously considered in the 100th Congress. The parental leave legislation approved by two House committees in the last Congress would require employers of 15 or more people to give 18 weeks of unpaid leave for the birth, adoption, or serious illness of a child or parent and 26 weeks' leave for personal illness with no loss of job or health care benefits.

Under the proposed legislation, employees with three months or more service would qualify for the leave, and employers could seek a second medical opinion in the case of medical leave. The legislation had 120 cosponsors but failed to be considered by the full House of Representatives.

However, there will be even more interest in moving the bill through the House in this Congress because it is likely to receive a more favorable reception by the new Senate.

Many feel that coverage of an employer of 15 employees will be very difficult for such a small business. However, there is a good chance that some version of this legislation will pass the 100th Congress, perhaps with threshold coverage set at a higher number.

Another bill that has been reintroduced in both houses of Congress is "employee notification" legislation that would require the government to notify workers at increased risk of occupational disease because of hazardous substances in the workplace. A risk-assessment board would be established within the Department of Health and Human Services to assess which workers are at risk and then to notify them. Opponents fault this legislation as an unnecessary overlay to the "hazard communication" standard and for its failure to give notice and an opportunity to comment to employers before notifying their workers. They also see it as valuable ammunition for plaintiffs in workers compensation and tort cases.

The Senate Labor Committee also is expected to give close scrutiny to administration of the Occupational Safety and Health Act, particularly enforcement of employer record-keeping requirements.

And both the Senate and House labor committees are expected to hold oversight hearings on enforcement of the wage and hour laws, particularly in the area of child labor restrictions. Another first order of business will be serious efforts to raise the minimum wage, an effort strongly supported by organized labor.

It is very likely also that legislation will be passed restricting the use of polygraphs as a screening device and investigative tool by private employers. The House passed such a bill in the 99th Congress.

Introduction is expected of legislation that would prohibit drug testing of employees, and hearings are likely on this issue.

In the last Congress, Sen. Charles E. Grassley (R-Iowa) mounted an effort to amend the Hobbs Act to cover acts of union violence. This type of proposal will face increased difficulty this time around, given the changeover in the Senate.

Another area of expected change involves confirmation of presidential appointments.

The Senate Labor Committee, under Kennedy, undoubtedly will take a more critical view of Reagan appointments to fill any National Labor Relations Board vacancies or other labor posts subject to Senate confirmation. □

James is an ANPA assistant general counsel.

Spectrum of human resources covered in 2-day conference

People are assets and investing in them returns the biggest dividends to a company, a management expert told the opening session of the 8th annual ANPA Labor and Personnel Relations Conference.

That theme—the relationship between personnel and the bottom line—was continued throughout the fast-paced conference in Boca Raton, Fla., Jan. 12-13 as various sessions focused on the variety of ways that productivity can be enhanced by better personnel management.

Jack Hutton, The Boca Raton News

George S. Odiorne

People also are an expense item, said the kickoff speaker, George S. Odiorne, who has been described as one of the fathers of the management-by-objectives system. Odiorne urged the nearly 130 participants to use the "portfolio" method to measure the growth potential of their human resources share of the market.

In assessing the portfolio, it may be prudent to "divest" the few who have no potential, Odiorne said. There is a limited amount of money to spend on developing people, he said, and most of it should be spent on "building your potential stars"—the people that usually comprise about 10 percent of a company's employees. One strategy in developing employees is a formal "mentoring" program. "See that they get the opportunity to work under mentors," said Odiorne, a professor of management at Eckerd College in St. Petersburg.

In addition to "mentoring," such topics as "downsizing" (reducing the workforce) and "outplacing" (job-hunting assistance for laid-off workers) were discussed by a panel of experts.

Expense control also was an important issue at the conference. Most publishers want to put out the best newspapers they can, and there is "always the temptation to add people," said P. Anthony Ridder, president of Knight-Ridder Inc.'s Newspaper Division. "Cost control and productivity gains are vital," he said.

Too often, Ridder said, publishers have gone along with union demands in labor negotiations. "Outdated, restrictive work practices should not be tolerated," he said. "We must publish under any circumstances, including strikes, and unions need to know that."

The rising cost of health care was addressed by Dallas Salisbury, president of the Employee Benefit Research Institute in Washington, D.C., who said health-care expenditures "will increase regardless of what we do." Demographics, including an aging workforce, "dictate it," he added. The cost of health insurance for retirees is a "huge liability" that in many cases is not being properly funded by employers, Salisburg said, and there is a possibility that new laws will make it a legal liability.

Another human resources area that needs attention, according to Ridder, is the recruitment of non-newsroom employees.

Octavia Harriston, employment manager at the Chicago Tribune, suggested one way to improve that situation is to cultivate relationships with promising young people while they are still in college. By doing this, she said, many students who would never have considered a newspaper career unless they were journalism or communications majors could be convinced that such a career is "an interesting career alternative."

"I am not a great believer in job fairs," she said. "I see them as shooting with buckshot as opposed to taking more careful aim and identifying students with the greatest potential."

The 1988 conference will be in Phoenix Jan. 10-13. *—Clark Newsom*

Sex bias suit settled for $750,000

An 11-year-old lawsuit charging The New Haven (Conn.) Register and Journal-Courier with sex discrimination in newsroom pay and promotions has been settled for $750,000.

The settlement, which was approved by U.S. District Judge Warren W. Eginton following a trial, included $475,000 to the plaintiffs' lawyer, a company spokesman said.

The 23 female plaintiffs will receive payments ranging from $479 to $12,446 each. More than 100 members of the class-action part of the suit will receive about $166 each [presstime, Oct. 1982, p. 53]. □

Publishers say recruiting is top personnel concern

The primary human resources concern of publishers at newspapers under 80,000 circulation in the United States is recruiting and retaining good employees across the board.

That's the result that emerged from a telephone survey of publishers by the ANPA Human Resources Department. The survey was made at the request of the Personnel Relations Subcommittee of the Association's Human Resources Committee.

Recruitment was followed by employee welfare and then training as priority issues. The next issues of concern were wage and salary programs and minority hiring.

ANPA Manager/Personnel Relations Patricia P. Renfroe said calls were placed to 50 publishers representing at least one newspaper within each state in the continental United States. Their circulations ranged from 21,000 to 80,000. Thirty-six publishers responded to the survey.

In addition to the five principal issues, the publishers expressed concern about:

- Substance abuse/drug testing
- Productivity
- Safety
- Interpretation of wage-hour laws
- Smoking in the workplace
- Performance appraisals
- Retirement planning
- Tax laws.

The publishers also were asked if they anticipated any union organizational drives at their newspapers in 1987. Only four responded affirmatively. However, several of the newspapers were already totally organized.

"Circulation size of the newspapers surveyed seemed to have little or no correlation with the issues mentioned," Renfroe said. "Many human resources management issues are the same regardless of size." □

Recent contract settlement

Indianapolis Star and News, Teamsters: Five-year agreement covering drivers, warehousemen, dockmen and mechanics; retroactive to Oct. 1, 1986.
(Details in February 1987 ANPA Labor & Personnel Relations Letter.)

Strike activity at newspapers drops to record-low level

In 1986, for the first year since ANPA began keeping an annual strike summary nearly a half-century ago, no strike was started against a U.S. newspaper.

There were job actions during the year at two Canadian dailies, however. Both involved Typographical Union No. 145 in Quebec.

The union called a three-day strike in July over terms of an initial labor agreement covering advertising support workers at The Gazette of Montreal. The newspaper did not lose any publication days.

In the other action, publication of Le Nouvelliste in Trois-Rivieres was suspended between May 30 and June 21 in a dispute over new contract terms for production employees. The workers claimed they were locked out, but the company contended that the union had engaged in a strike beginning with a work slowdown May 29.

A spokesman for the printing sector of the Communications Workers of America (formerly the International Typographical Union) suggested that the low level of strike activity in 1986 might be attributed to the fact that fewer contracts expired during the year.

But David J. Eisen, director of research and information for The Newspaper Guild, said the reason was that "new technology has made it increasingly difficult to shut down a newspaper." Eisen said 1948 had been the last year in which the Guild was not involved in a newspaper strike.

As 1987 began, the only continuing newspaper strike in North America was at the Chicago Tribune, where pressmen represented by the Graphic Communications International Union and printers and mailers represented by the old ITU walked out in July 1985. The Tribune has continued to publish.

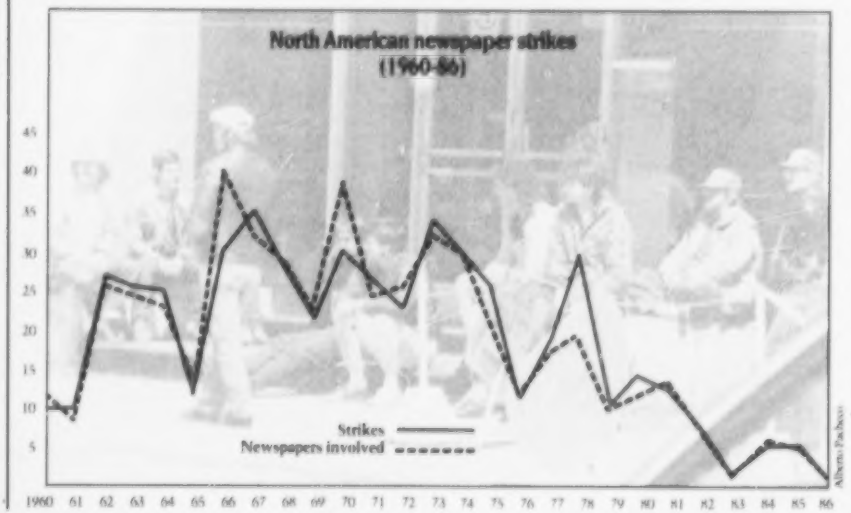
Two other labor disputes that predate 1986 ended with settlement agreements during the year. They were at The Sacramento Bee, where ITU printers walked off their jobs in 1978, and at The News of Paterson, N.J., where printers struck in 1981. Both newspapers published throughout the strikes.

In 1987, "We may see a few strikes at smaller newspapers arising from organizing efforts by the CWA," said Charles D. Cole, ANPA manager/labor relations. □

Guild certified at Ontario daily

The Ontario Labor Relations Board has certified the Southern Ontario Newspaper Guild as bargaining representative of advertising department employees at The Expositor in Brantford.

Certification came after a majority of the 29 inside and outside advertising employees signed cards authorizing the Guild to represent them. The union already represented editorial and circulation employees at the daily. □



CWA printing sector phasing out operations in Colorado Springs

The merger of the International Typographical Union and the Communications Workers of America became official Jan. 1. The former ITU, founded in 1852, is now the Printing, Publishing and Media Workers sector of the CWA.

The merger was effective 15 days after the American Arbitration Association certified the results of an ITU referendum in which the members voted by a 4 to 1 margin in favor of the merger proposal [pressstime, Jan. 1987, p. 57].

With the merger's implementation, sector President Robert S. McMichen and Secretary-Treasurer Thomas W. Kopeck began planning to relocate to Washington, D.C., where CWA has headquarters.

Under the terms of the merger agreement, the sector's three vice presidents are not required to reside in the Washington area.

About 50 of the 60 people employed by the ITU at its Colorado Springs headquarters were temporarily hired by the CWA to phase out operations there. Eight employees took early retirement.

The ITU Negotiated Pension Plan will remain in force, and the Union Printers Home in Colorado Springs will continue as a separate entity. Former ITU international representatives and organizers will continue to service the printing sector's membership.

Retirees can remain as sector members by continuing to pay the $1 per month they now pay toward a mortuary fund. Starting in 1991, retirees may continue as voting members of the international union by paying 1.15 percent of their pensions, excluding Social Security.

It was also announced that a two-day conference of the printing sector will be held just prior to the CWA's July 27-31 convention in Miami Beach.

Meanwhile, members of former ITU mailers' locals in Cincinnati, Louisville, Minneapolis-St. Paul, Phoenix, Seattle and Topeka, Kan., have followed the lead of San Francisco mailers in voting to disaffiliate from the ITU—a move that is widely viewed as a first step toward possible affiliation with the Teamsters union.

But CWA President Morton Bahr said his union would not "stand idly by and let the Teamsters decimate the ranks" of the former ITU. "We have not gotten this far to see the ITU torn asunder by a rejected rival," he said. In 1985, ITU members voted by a 2 to 1 margin against merging with the Teamsters. □

Newspapers study employee reports of hand, arm injury

Published reports that users of video display terminals have experienced pain in their hands, wrists or arms have called attention to "repetitive strain injury," or RSI.

Not only VDT users but others who make repetitive movements while doing their jobs may be subject to such injuries, said Richard W. Neergaard, ANPA manager/environmental services.

One type of repetitive strain injury, he said, is known as carpal tunnel syndrome, which results from damage to, or pressure on, the medial nerve. The medial nerve is located in the arm and travels through a portion of the wrist known as the carpal tunnel. "Improper wrist angle when performing a repetitive task is frequently the primary reason for (its) onset," he said. Other types of RSI injuries include those that involve similar "tunnel" areas found in the elbows, knees and ankles.

The Los Angeles Times is among the newspapers where some VDT users complained of RSI. But Neergaard said reports of such cases are rare.

Other large newspapers, such as The Record of Hackensack, N.J., have not received complaints about RSI.

The Denver Post and some other papers have reported cases of carpal tunnel syndrome in the mailroom and pressroom.

"Our members complain more of visual problems from VDT use than musculo-skeletal problems," said David J. Eisen, director of research and information for The Newspaper Guild. The Guild Reporter has reprinted a lengthy article on RSI that was published in the January-February issue of Columbia Journalism Review. □

Corrections

In a list of arbitration awards in the December issue (p. 71), it was incorrectly reported that an arbitrator upheld the discharge of a switchboard operator at The Patriot and The Evening News in Harrisburg, Pa. The arbitrator overturned the discharge and ordered the grievant's reinstatement with back pay.

Also, the contract settlement between the San Diego Union and Tribune and the ITU became effective Sept. 1, 1986, when signed. It was not retroactive as reported in the November issue (p. 68).

Presstime regrets the errors. □

Arbitrator upholds Guild in 'byline strike' dispute

A four-day "byline strike" at The Plain Dealer of Cleveland by members of Local 1 of The Newspaper Guild did not violate a labor agreement, an arbitrator has ruled.

The dispute arose when a sportswriter received a one-week disciplinary suspension for what the newspaper contended was poor job performance. To protest the action, a high proportion of reporters decided to withhold their bylines from stories.

The Plain Dealer filed a grievance, arguing that although individual reporters may withhold their bylines under a section of the labor agreement, group action was not permitted.

The labor agreement states that an employee's byline "may be used" unless the employee "specifically requests otherwise."

In dismissing the company's grievance, Arbitrator Harry Graham, a Cleveland State University professor, found that the contract language did not contain any restrictions on the right of employees to withhold their bylines. "The agreement has been renegotiated since the union last conducted a byline strike in 1979," he said. "The employer had an opportunity to seek and secure a modification in the language governing withholding of bylines. It did not take advantage of that opportunity."

The ruling in Cleveland was the opposite of one issued in a case involving the Rockford (Ill.) Register Star and another Guild local [presstime, June 1985, p. 86]. However, Arbitrator Graham said the two situations were different.

First, he noted, the contract language in Rockford provided that "the affixing of a byline is the prerogative of the publisher." Secondly, the dispute there occurred in the context of negotiations for a new agreement.

"Those factual differences are of such magnitude as to render (the Rockford case) of little value as a guide to the outcome of this dispute," he said. □

Additional arbitration awards

Baltimore Sun, Guild: Louis Aronin found that the company violated the labor agreement by permanently transferring a reporter from Baltimore to Annapolis without the reporter's consent.

Columbus (Ohio) Dispatch, Teamsters: Fred E. Kindig ruled that the company has the right to require a medical statement when an employee refuses a mandatory overtime assignment, claiming illness, if the company has good reason to question that sickness is involved.

New York Daily News, Mailers: Richard Adelman found that the company is required to include foremen and assistant foremen in a layoff unless it can demonstrate that because of special circumstances one or more of them should be retained.

(Full texts are available from the ANPA Human Resources Department at The Newspaper Center, Reston, Va.)

NLRB elections

Fresno (Calif.) Bee, ITU: Composing room employees voted 25-23 against continued representation by Typographical Union No. 144.

(NLRB Case No. 32-RD-727)

San Mateo (Calif.) Fuchs Publications, Guild: Production employees at the company's four weekly newspapers voted 5-3 against representation by the Northern California Guild, Local 52, and editorial and commercial employees voted 15-8 against the union.

(NLRB Case No. 20-RC-16076)

Vineland (N.J.) Times Journal, UAW: In separate elections, advertising employees voted 10-0 against further representation by District 65, United Auto Workers, and production employees also voted against it, by 44-34.

(NLRB Case Nos. 4-RD-1302, 4-RD-1315)

Kenaf tests 'encouraging'; financing sought for mill

Results of a January test at a Beloit, Wis., paper mill to turn kenaf into newsprint were "very encouraging" to backers of the project, so the group is now pursuing financing for construction of the first kenaf newsprint mill.

That was the assessment of one of the principals in the undertaking, Jerry K. Stanners, chief executive officer of The Bakersfield Californian. The Californian owns 42.5 percent of Kenaf International, which conducted the Beloit tests.

Stanners said the paper produced in Beloit was in limited quantity. The next hurdle—a larger commercial test in the fall—will be to make 200 to 300 metric tons of newsprint, which then will be tested in a newspaper production environment.

The pilot paper tests at Beloit Corp. followed pulping trials last fall at the C.E. Sprout Bauer Mill in Springfield, Ohio. The pulp produced from the fast-growing fibrous plant intitially was said to measure up to conventional wood pulp in brightness and opacity [presstime, Nov. 1986, p. 70].

However, a more detailed examination by officials of the U.S. Department of Agriculture and of the Ohio mill indicated that the pulp not only measures up but in some ways may surpass traditional newsprint. According to William Bohn, research director of the test facility at the Ohio mill, kenaf newsprint has a "superior brightness and high opacity which should lead to a unique newsprint sheet, perhaps even one that other sheets will be compared against."

Stanners said the principals in the kenaf venture are encouraged by what they have seen so far but are reserving final judgment until the pulp and paper have been produced in larger quantities and have received extensive newspaper field testing.

Even so, the testing so far has convinced KI officials that a kenaf mill in southern Texas, west of Brownsville, and the growing of 25,000 to 30,000 acres of kenaf in that area is feasible. If the financing can be arranged—and Stanners is confident it can—KI would like to break ground for the mill in January 1988 and have it operating by December 1989.

The most immediate goal is to grow enough kenaf to allow the papermaking tests to be conducted later this year. It takes about 120 days to grow kenaf from seed to harvesting, so a planting at the end of March should yield mature plants at the end of July.

Stanners said the USDA has provided a great deal of technical research and expertise in recent years. ANPA also has supported kenaf research because, unlike trees, the plants could provide a quickly renewable supply of newsprint.

Like The Bakersfield Californian, Agrifuture Inc. owns 42.5 percent of KI. KI General Manager Charles S. Taylor owns the remainder. □

Can You Measure The Quality Of Your Newsprint?

Quality printing demands quality newsprint . . . especially for quality color reproduction.

Today's increasing demands for color, by advertisers and consumers, require greater control of newsprint brightness, opacity and color. And now you have it.

Technidyne's MICRO TB-1C allows everyone to clearly communicate these values with real numbers that everyone understands. The simple-to-operate MICRO TB-1C provides accurate, reliable, standard measurements . . . a common language. Every time.

Newspapers can order quality newsprint with confidence, and check those orders when they arrive. Mills know what to produce. Exactly. Everyone will be talking the same language. At last!

Contact us today for more information or a demonstration.

New mill boosts capacity outlook

Newsprint capacity in the United States could increase through 1989 more than previous estimates because of recently approved plans for a new mill in Grenada, Miss.

The American Paper Institute, in its annual study of U.S. paper, paperboard and wood pulp capacity, said newsprint capacity probably will increase about 2 percent, or about 109,000 short tons (98,883 metric). It attributed growth to improvements scheduled for existing facilities.

But Mississippi Chemical Corp., a farmers' cooperative, announced after the API study was published that it will build a newsprint mill with capacity of 204,000 metric tons a year [presstime, Nov. 1986, p. 72].

Start-up of the new mill is planned for September 1989. The $300-million plant will be operated by a new company called Newsprint South Inc.

In its study, API also said total U.S. newsprint capacity in 1986 was 5.32 million metric tons (5.86 million short tons, as API reports its figures), reflecting an increase of only 77,111 metric tons, or 1.5 percent, since 1983. No new machines were brought into production during this period. Capacity gains from improvements to existing plants have been offset largely by the shutdown or conversion of about 272,155 metric tons of capacity to other grades.

In other survey findings:

- There were 45 newsprint machines in the United States in 1985, representing 3.6 percent of all machines that produced paper in the country.
- Newspapers represented about 17 percent of the 16.14 million metric tons of recycled paper in 1986. That is expected to rise slightly—to 17.79 percent—in 1989. However, the overall volume of recycled paper is expected to increase from 23.6 percent of all U.S. paper produced last year to 24.4 percent in 1989. □

UPIU contract ratified; talks continue at two mills

A three-year contract has been ratified between the United Paperworkers International Union and FSC Paper Corp. at the company's newsprint mill in Alsip, Ill.

Workers will receive a $1,000 lump-sum increase in the first year, no increase in the second and a 3-percent raise in the third.

Negotiations continue between the UPIU and two mills where contracts expired last year: Augusta (Ga.) Newsprint Co. and Champion International Corp. in Sheldon, Texas.

In Canada, talks started between the Canadian Paperworkers Union and Rothesay Paper Ltd. in St. John, New Brunswick.

The contract for one of the union locals expired Dec. 31. The contract for the other local will expire June 30 [presstime, Jan. 1987, p. 68]. □

Bulky, unstable newspapers can cause even the best stackers to miscount by as much as 10%. Now, Icore offers the Mark III Newspaper Counter as an effective and economical solution to this problem.

Using a count by weight system, the Mark III accurately determines the number of papers in each bundle leaving the stacker. Because the Mark III is a true in-motion weighing device, you can maintain a maximum line throughput of 60 bundles per minute. The Mark III effectively monitors line performance with its easy-to-operate microprocessor electronics.

Cost-conscious newspapers like the *Louisville Times*, *Omaha World Herald*, *Richmond News*, and *Tallahassee News* rely on the Mark III to eliminate shorted stacks and reduce distribution costs.

To learn how the Mark III could figure into your operation, call Icore today. (612) 633-5150.

"For an accurate count, our numbers stack up."

Consumption continues its upward trend

Newsprint consumption by all U.S. users increased 3.8 percent in November 1986 compared with the same month a year earlier, while U.S. daily newspapers' consumption rose by 2.6 percent. There was one more Sunday in November 1986.

Consumption of all U.S. dailies for the first 11 months of 1986 grew 2.4 percent to 8.148 million tons from 7.955 million tons for the same period of 1985.

At the end of November 1986, newsprint inventories of newspapers in ANPA's statistical sample were estimated at 39 days' supply, compared with 44 days a year earlier. Stocks of North American mills were down about 15.3 percent from the previous year's level.

The operating rate for Canadian mills last November was 97 percent, while U.S. mills had an operating rate of 96.1 percent.

Shipments from Canadian mills were up 3.3 percent from November 1985 levels, while Canadian shipments to the United States rose just 0.5 percent for the same comparative period. Shipments within Canada increased 7.2 percent and those to overseas markets increased 14.6 percent.

Domestic shipments from U.S. mills increased 2.3 percent, and U.S. shipments overseas were 22.1-percent higher than in November 1985.

Production increased 2.9 percent for all North American mills. U.S. production for the month increased 3.4 percent from November 1985, and Canadian production went up 2.6 percent for the same period.

Mutual libel seminars save your paper money.

The best way to avoid the expense of libel and privacy suits is to avoid having such suits filed in the first place, but keeping pace with the rapid changes in libel and privacy law makes this difficult. That's why the personnel of so many newspapers attend the seminars on the prevention of libel and privacy suits offered by the Mutual Insurance Company of Hamilton, Bermuda.

"How To Prevent Libel and Privacy Suits" informs newspaper professionals about the current status of libel and privacy law in order to prevent costly suits. The one-day seminar offers legal expertise and explanations of recent court decisions involving libel, public and private people, actual malice, negligence, embarassing truths, lies, distortions, and mean methods, in multimedia presentations and question and answer sessions.

Offered to publications insured by Mutual, this seminar enables journalists to do their job with a minimum of risk. For more information, contact Barbara Dill, (305) 856-2965.

Flexo takes one step back, several forward

Ralph S. Roth

Thomas P. O'Donnell

For those keeping score, chalk up five wins and one loss for flexography in recent weeks.

In the win column, five newspaper organizations have purchased flexo units, some completely replacing existing presses and others placing the units in prime positions for printing front pages and section fronts in conjunction with letterpress units.

The loss, while singular, was a significant one. The Fort Lauderdale News (evening, circulation 66,943) and the Sun Sentinel (morning, 137,176), which have printed more than a million newspapers flexographically each week since 1984, decided to replace aging letterpress presses with Goss Colorliner offset, not flexo.

Some newspaper executives said the Fort Lauderdale decision could prompt other newspapers to reconsider a possible move to flexography. However, they said they believe flexo will continue to make gains at newspapers. And it is still consensus that future press decisions will be based on the needs of individual operations and that the two printing processes—offset and flexo—are likely to coexist for some time [presstime, December 1986, p. 36].

The newspapers newly committed to flexo are:

- The Wichita Eagle-Beacon (morning, 122,622), which is purchasing seven mono (one-color) units, two four-color units and two halfdecks from M.A.N-Roland USA Inc.
- Fort Wayne (Ind.) Newspapers Inc., which is purchasing four mono units, two four-color units and two halfdecks from M.A.N.-Roland. The company publishes The Journal-Gazette (morning, 60,334) and The News-Sentinel (evening, 57,603) under a joint operating agreement.
- The Charlotte Observer (morning, 214,700), which will replace one press with nine M.A.N.-Roland mono units and five color cylinders, and which will add two mono units and a color cylinder from the same manufacturer to each of three existing press lines. The color cylinder adds an additional plate cylinder for four-color printing.
- Lancaster (Pa.) Newspapers Inc., which is purchasing two seven-unit flexo presses from M.A.N.-Roland, each with a four-color unit and four halfdecks. The company publishes the Intelligencer Journal (morning, 43,950) and the Lancaster New Era (evening, 57,150).
- The Blade (evening, 160,606) of Toledo, which purchased two complete flexo presses, each with seven mono units and four halfdecks, from the Graphic Systems Division of Rockwell International (Goss). The newspaper has an option to purchase a third flexo press.

Fort Wayne's press units are expected to be delivered in December; the Lancaster, Charlotte and Wichita newspapers expect deliveries in January 1988; and the Toledo newspaper is scheduled for delivery of the first of its two presses in December 1988.

The newspapers in Charlotte and Wichita and The News-Sentinel in Fort Wayne are part of the Knight-Ridder Inc. group, while The Journal-Gazette of Fort Wayne is independent. Toledo is a member of the Block Newspapers group, and the Lancaster newspapers are independently owned.

Ralph S. Roth, vice president/production for Knight-Ridder, said even though each newspaper in the group has its own contract with M.A.N.-Roland, Knight-Ridder was able to negotiate a group purchase price for all the units.

By purchasing flexo units and positioning them with existing letterpress presses to print front pages and section fronts, Roth said the newspapers will receive a boost in print quality without having to replace entire letterpress presses. Knight-Ridder believes this kind of "sprinkle" approach is the most cost-effective way to raise the quality of printing for its newspapers, he added.

"We know what flexo can do. In Miami (the Herald) and Long Beach (the Press-Telegram), we're printing with flexo every day, and it's doing a beautiful job," Roth said. He said that each Knight-Ridder newspaper must decide for itself what process is best for its situation, adding that some may choose offset in the future. The company plans no additional press purchases for at least a year, though, Roth said.

Roth, who has been one of flexography's chief proponents, conceded that the Fort Lauderdale decision almost certainly will "slow down the growth of the flexo process somewhat. It may cause some newspapers to re-examine flexo decisions. In at least one case, a company that was pretty strong for flexo is doing that. But it (flexo) will continue to develop and people will continue to buy it."

The president and publisher of the Fort Lauderdale dailies, Thomas P. O'Donnell, said that in the flexo test there color reproduction was no problem, but his production staff was never satisfied with black halftone reproduction, primarily because of plugging problems.

"We tried like heck, and nobody is to blame really. But we had to make a decision—and we just believed the risk of flexo was too great at this time," O'Donnell said.

The Fort Lauderdale papers plan to continue using the flexo units until the new presses are up and running, scheduled for the fall of 1989. O'Donnell said he is "hopeful things will work out" with the flexo process. —*Rosalind C. Truitt*

Deadline is Feb. 13 for returning survey on expenditures

Deadline for returning questionnaires in ANPA's annual capital expenditures survey is Feb. 13.

The survey of member newspapers covers 1986 plant expansions, modernization and new-equipment purchases, as well as projections for 1987.

Only summary totals are published [presstime, June 1986, p. 86]. For more information, contact the ANPA Technical Services Department at The Newspaper Center, Reston, Va. □

Newsplate

presensitized offset plates are prepunched for you!

This gives you speed and convenience in getting to press faster, with absolutely no chance of punching inaccuracies!

Likewise, Newsplate's factory-applied coating frees you of the need to mix chemicals on the spot. This eliminates any possible coating inconsistencies, and, not incidentally, does away with messy roller coaters and punch/coaters.

Thus Newsplate cuts out two time-consuming steps in makeready from package to exposure, and eliminates two problems as well. It offers you the security of hassle-free plate processing, backed up with a two year shelf life—for dependable operation today, tomorrow, next year and the year after!

That's not all. Newsplate's presensitized coating is applied to Hoechst's tough electrochemical grain: a powerful combination that offers sharp dot reproduction for clean, clear images and pressruns you can count on of 250M+ impressions.

Now you've got a lot of powerful reasons to put Newsplate in your pressroom. Call us for more information.

Program taking shape for ANPA/TEC '87

It has a new name (but as yet no theme), and it is expected to be the biggest ever.

"It" is ANPA/TEC '87, the ANPA's Technical Exposition & Conference—previously known as the Operations Management Conference & Exposition.

And although the theme for the Conference portion of the June 6-10 trade show in Las Vegas has not been determined, the chairman of the ANPA/TEC Arrangements Committee said Jan. 14 that the emphasis will be on efficiency, quality and what equipment is best suited to help a newspaper improve its operation.

As for the Exposition, more than 300,000 square feet of exhibit space in the Las Vegas Convention Center has been reserved by vendors. Last year in Atlanta, the exhibits filled what was then an unprecedented 270,000 square feet of space.

The growth of the show is perhaps best demonstrated by the fact that it did not break through the 200,000-square-foot barrier until 1981.

The Exposition will be open on each of the event's five days.

According to Arrangements Committee Chairman Larry D. Strutton, the preliminary program calls for discussions on electronic graphics systems, waste-ink management, presses, drug testing, voice-recognition devices, artificial intelligence capabilities and desktop publishing.

"I believe we have a program that serves us well," Strutton said after the meeting of his committee at The Newspaper Center in Reston, Va. Strutton, executive vice president/operations for the Los Angeles Times, observed that "the problem in putting these programs together over a period of several months is that what may be hot when you first start considering a subject might have cooled off by the following June."

"There's another balance to consider as well," he added. "Some areas are so new there's not enough information available to make a workshop or general session. In other cases, when the technology has been around for awhile—even if there's still interest—you have to decide whether someone attending a workshop would really come away with anything new."

General sessions will be conducted in the convention center's Rotunda and workshops will be in the East Hall meeting rooms.

Peter P. Romano, ANPA director/technical services and Conference director, said more than 10,000 registrants are expected. Attendance was 11,631 in 1986 and 10,524 the last time the show was held in Las Vegas—in 1983.

ANPA has reserved about 6,000 rooms in 11 Las Vegas hotels, including the Las Vegas Hilton that will be the headquarters hotel. Other Conference hotels will be the Alexis Park, Bally's, Caesar's Palace, Desert Inn, Flamingo Hilton, Holiday Inn Center Strip, Maxim, Riviera, Sahara and Sands. Free shuttle bus service will be available between the hotels and the convention center, excluding the Las Vegas Hilton, which is next door to the center.

Special hotel rates will be available for Conference-goers. Housing forms and other information will be mailed to ANPA member newspapers and other potential attendees in early March.

In 1986, preregistration was offered for the first time, and badges and other convention materials were generated by computer. The innovations were successful and will be used again this year.

The registration fee will be $40, Romano said, up $5 from last year.

For the third year, presstime will sponsor a "fun run" for registrants and their families. It will be on Sunday, June 7.

The tentative program for the three days of sessions is as follows:

Monday, June 8

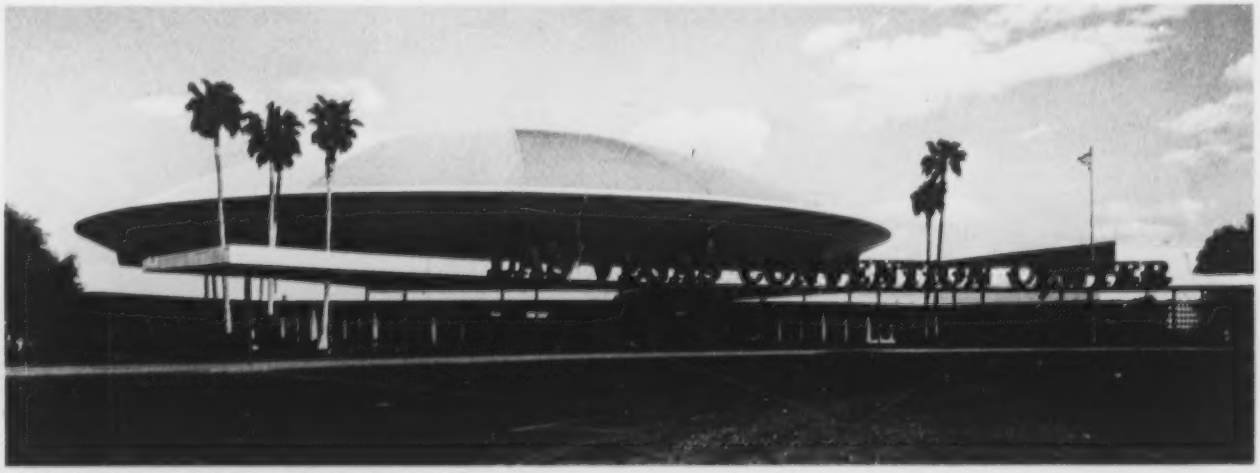
Strutton will chair the opening general session. Brian L. Greenspun, president of the Las Vegas Sun, and Earl L. Johnson, general manager of the Las Vegas Review-Journal, will offer welcoming addresses. George W. Wilson, who will be nominated at ANPA's May Convention in New York City to serve as the Association's chairman and president, also will address the session. Wilson is president of the Concord (N.H.) Monitor.

Topics scheduled for discussion at the general session include "Editorial—Competing for the News," "Advertising—Competing for Advertising" and "Putting It All Together."

Three concurrent workshops will follow on "Newsroom Pagination," "PC Options" including desktop publishing, and "Printing Inks."

Tuesday, June 9

Homer E. Taylor Jr., vice chairman of the ANPA/TEC Arrangements Committee and vice president/manufacturing and supply of Scripps Howard, will chair the



The sessions and equipment exhibition will be housed in the massive Las Vegas Convention Center.

general session. Topics will include "Presses—Decision Dilemma," "Ink—Cradle to Grave Issue," "Quality—A View from the Top" and "Materials Handling." Subsequent concurrent workshops will explore "Mandatory Drug Testing," "Press Options," "R&D—Reclamation and Disposal" and "Guide to Quality Newspaper Reproduction."

Wednesday, June 10

Norman P. Dusseault, vice president and assistant general manager of the Times Publishing Co. in St. Petersburg, will chair the general session. It will feature a report on the AD/SAT system for transmitting advertising materials by satellite, and a look at electronic photography and graphics systems, which is expected to include demonstrations of this new technology by a variety of manufacturers. The workshops will examine "Ad Composition/Ad Tracking," "Graphic Enhancement Systems" and "Voice Recognition and Artificial Intelligence." □

ANPA-INK ready for production following several successful field tests

After successful press runs at the Houston Chronicle and other newspapers, ANPA-INK®, the soybean oil-based ink developed by the Association for newspapers' offset and letterpress printing, is ready for commercial production.

So far, three licensed ink companies—General Printing Ink, The Ink Co. and Graphic Fine Color Inc.—have discussed making tanker-car-sized lots of ANPA-INK for sale to newspapers, according to George Cashau, ANPA director/technical research.

ANPA charges a nominal licensing fee for use of its patented technology.

The ink is available in black and in color. Because of limited production capabilities, ANPA technicians have been able to manufacture only about 10 gallons at a time, but Cashau said ANPA-INK performed well a few months ago when it was used to print more than 200,000 copies during a daily press run on offset presses at the Houston Chronicle.

Earlier, the letterpress ANPA-INK had been successfuly tested at The Washington Post [**pressstime**, Oct. 1986, p. 61].

"The ink needs to be manufactured in tanker-car-sized lots, and it needs to be tested in a daily production environment, but we feel fairly confident that the ink works," Cashau said. "The only thing that will prove that to be true is widespread use of the ink. We'd like as many newspapers using it as possible."

ANPA has conducted research on a non-petroleum-based ink since 1980. More than 9,000 formulas were created before the successful one was reached. □

Quality programs, electronic photography on tap

A quality control checklist for individual newspapers is being developed by the ANPA Technical Committee and staff.

Dubbed "ANPA✓CHECK," the checklist would enable a newspaper to evaluate its own production methods and results against widely accepted standards.

If approved by the Association's Board of Directors, the program could be available to ANPA-member newspapers later this year.

Charles R. Blevins, vice president/production of Gannett Co. and chairman of the Technical Committee's Quality Reproduction Task Force, briefed the committee on the project at its Jan. 13-14 meeting at The Newspaper Center in Reston, Va.

In addition, ANPA staff members are working on a more formal quality evaluation program that would be conducted at The Newspaper Center. Copies of newspapers sent to the facility would be evaluated through a computer program that is being designed to quantify various printing factors [**pressstime**, Oct. 1986, p. 60].

In another report to the Technical Committee, Louis J. Franconeri, chairman of the Electronic Photography Task Force, said his group is working to familiarize manufacturers with newspaper operations so that they might develop electronic photography equipment that links easily with other newspaper production equipment.

For that reason, the task force has devised flow charts for vendors, indicating how text and graphics move through a newspaper's system.

The idea, said Franconeri, vice president/operations for The Baltimore Sun, is to have pictures flow through the system much the same way copy flows through computers. Electronic photography, he noted, is an important link in the integration of text and graphics in a full-fledged pagination system.

In electronic photography, no film is used. Instead images are captured on a magnetic disk or videotape and then digitized and displayed on a video monitor. Pictures can then be enhanced or otherwise manipulated on the screen.

William D. Rinehart, ANPA vice president/technical, who has worked with manufacturers to advance the idea of electronic photography for newspapers, told the Technical Committee: "An explosion is about to happen in electronic photography, and the great thing about it is that we're not looking at super-expensive equipment. This will enable even the smaller newspapers to afford the technology."

In other reports to the committee:

• The Computer Task Force noted that The New York Times is using a bar code on the front page of its newspaper to keep track of unsold newspapers that are returned from single-copy-sales outlets.

• The Direct and Offset Printing Developments Task Force discussed plans for ANPA's Press Options IV Symposium Oct. 20-21 in Chicago. It will examine the "hard choices" a newspaper faces when deciding which printing process best suits its operation, said Jerry S. DeHimer, director of operations for the Providence Journal Co.

• After gathering information from member newspapers and other sources, the Environmental Task Force is preparing a report on methods of managing waste. The task force also is preparing for the 1987 Health and Safety Symposium Oct. 29-30 in Orlando. □

TECHNOLOGY NOTES

• Rockwell International Corp. has proposed issuance of a new class of common stock, a move apparently designed to deter **unwanted takeovers.**

The corporation, whose manufacturing operations include newspaper printing presses through its Graphic Systems Division, wants to issue a new share of Class A stock for each existing share. Each new share would give a stockholder 10 votes. The proposal will be voted on at the corporation's annual meeting Feb. 11.

• Eastman Kodak Co. is sponsoring its annual "Run for the Money" **newspaper color reproduction contest.**

Contestants must reproduce the image of four Walt Disney characters dressed in colorful attire. All entries must have been published in a regular edition of the entrant's newspaper no later than April 6 and must be received by Kodak by April 20.

Winners will be announced during ANPA/TEC '87 in June in Las Vegas.

Contestants also will be asked to participate in Kodak's first "Newspaper Print Quality Survey," which will show newspapers how their reproductions compare to other entrants in terms of dot gain, ink densities and other factors.

• Mycro-Tek Inc. of Wichita and Norsk Data A.S. of Oslo, Norway, entered into a **joint marketing agreement** that will introduce Norsk Data Comtec Integrated Publishing Systems into the North American market. Mycro-Tek will provide exclusive sales and support for the system.

The move will enable Mycro-Tek, which manufactures newspaper front-end systems, to offer systems to larger publications.

The initial agreement is for three years.

TECHNOLOGY CALENDAR

• **Seybold Seminars '87** will be March 9-13 at the Beverly Hilton Hotel in Beverly Hills, Calif.

• The annual meeting of the **Collier-Jackson Users Group** will be March 13-17 at the Lincoln Hotel in Tampa.

• The annual **America•East** newspaper operations conference will be March 25-27 at the Hershey (Pa.) Lodge and Convention Center.

• The **Technical Association of the Graphic Arts annual conference** will be March 29-April 1 at the U.S. Grant Hotel in San Diego.

• **Composition '87 and Type-X '87,** the National Composition Association trade show, will be April 9-11 at the Marriott Marquis in New York City.

Improve the Quality of Your Printing with the Roconex Magnetic Packing Gauge

This unique instrument is the best tool available for checking the thickness of packing under the press blanket and plate after they're put on the press. Since the packing will frequently "crush" after a few thousand impressions, the change must be determined and corrected with this gauge to assure good quality printing.

- Prevents dot gain
- Eliminates strain on cylinders, gears and bearings due to over-packing
- Reduces plate image and blanket wear
- Steel construction for long wear and precise readings

Mailroom symposium — March 3-5 in Chicago

Mailroom problems will be the focus of ANPA's second "Newspaper Packaging and Distribution Symposium." With the theme "From Press Folder to Reader," it will be held March 3-5 at the Hyatt Regency O'Hare, Chicago.

Larry Marbert, director of construction and mechanical systems for Knight-Ridder Inc., will be the chairman of the symposium.

Registration fee is $375. A block of rooms has been reserved at the Hyatt Regency. Reservations may be made by calling the hotel at (312) 696-1234. Rooms are $95 for a single and $110 for a double per night. When making reservations, callers should indicate they will be attending the symposium.

Registration forms for the symposium have been mailed to member newspapers. Phone registration for the symposium will be accepted by the Technical Research Department at (703) 648-1202. □

James N. Longson

Alfred Eisenpreis

Sue A. Tempero

Octavia Harriston

Single copies of the following speeches are available from the ANPA Public Affairs Department at The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041:

Development in Remote Entry of Classified Advertising
James N. Longson, vice president/corporate development, Tribune Co., Chicago. Western Classified Advertising Association annual conference, Portland, Ore., Oct. 6

Politicians and the Press
New York Gov. Mario M. Cuomo. Remarks made in receiving the Audit Bureau of Circulations 1986 Dynamic Communicator of the Year award, ABC conference and annual meeting, New York City, Nov. 13

Battling Terrorism Within an Open Society
Jerry W. Friedheim, ANPA executive vice president. International conference on "Terrorism in a Technological World", Washington, D.C., Jan. 21

The Electronic Information Business and Newspapers: Setting the Record Straight
Kathleen Criner, ANPA director/telecomunications affairs. Telestrategies Seminar, Washington, D.C., Oct. 30

What Women Customers Want
Alfred Eisenpreis, senior vice president/retail marketing, Newspaper Advertising Bureau. National Retail Merchants Association annual convention, New York City, Jan. 13

Censorship: What Is It? Where Is It?
George Theiner, editor, Index on Censorship, London. World News Media Action Conference, London, Jan. 16-18

From the ANPA Labor and Personnel Relations Conference, Boca Raton, Fla., Jan. 11-13:

Outplacement: Easing the Trauma of Termination
Sue A. Tempero, director/employee relations, The Des Moines Register

Toward a Balanced Workforce: An Equal Employment Opportunity success story
Octavia Harriston, employment manager, Chicago Tribune

The Impact of Illiteracy on the Newspaper Business

Downsizing: Structuring Employee Terminations to Avoid Legal Claims
Sandra E. Rapoport, attorney and managing consultant, William M. Mercer-Meidinger Inc., New York City

From the Association of National Advertisers New Product Marketing Workshop, New York City, Sept. 10:

Unlocking the Corporate Mind for Creativity
John M. Keil, executive vice president and director/creative development, DFS/Dorland Worldwide

Creative Strategies for New Products
Hall "Cap" Adams Jr., chairman and chief executive officer, Leo Burnett U.S.A.

Buy-sell activity will continue despite year-end bustle

As predicted, there was a flurry of media sales in the final weeks of 1986 as buyers and sellers rushed to take advantage of favorable tax treatment before the new federal income tax law took effect Jan. 1.

But media broker Christopher Shaw, chairman of Henry Ansbacher Inc., said that not all prospective clients joined in the rush to sell.

Notably, where one or more members of a newspaper-owning family was elderly, there was no sense of urgency to sell, Shaw reported. "They said, 'Look, we don't want to get involved in this rush-rush. Come back and we'll have lunch and sit down and talk about it further.'"

Shaw said 10 owners said exactly that in December. For this reason, he believes there may be a resumption of newspaper sales in a few months. "I don't think you will find a lot of transactions in January, February or March," Shaw said, "but I think you'll find a lot of discussion and closing" of sales later on.

Shaw said his company completed four newspaper sales in the final two months of 1986. "In all those cases, completion of the sale by the year end was of crucial consideration," he said. "They wanted to get the deal done before the end of the year." If the sales had been postponed until this year, he said, the sellers' capital gains taxes would have been 40 percent higher [presstime, Dec. 1986, p. 78].

Newspaper analyst John S. Reidy of Drexel Burnham Lambert expressed similar views.

"We feel most papers that were going to sell any properties took a hard look at 1986 and knew they would have a higher tax in 1987," said Reidy.

Reidy said he does not think the frantic selling pace in the waning weeks of 1986 foretold a slowing in transactions throughout 1987. But he said the current "sluggish" economic pace will preclude vigorous activity during the first several months.

Analyst J. Kendrick Noble of PaineWebber Inc. also expects newspaper sales and acquisitions to resume a rapid pace. Newspapers have a greater cash flow than most other businesses, largely because of their somewhat monopolistic position compared with other businesses—an attractive feature for buyers, he said.

Way ahead of anyone else on the acquisition front in late '86 was **Hollinger Inc.**, a Toronto holding company headed by businessman Conrad Black. It completed the purchase of 23 small dailies in the United States and 10 in Canada, as well as a variety of non-dailies, commercial printing firms and other properties.

U.S. dailies acquired were: in Pennsylvania, the Bradford Era, Corry Journal, Kane Republican, Ridgway Record, St. Marys Daily Press, Sayre Evening Times, Punxsutawney Spirit; in New York, Hornell Evening Tribune, Wellsville Reporter, Salamanca Republican.

Also, in Illinois, the Carmi Times, Eldorado Daily Journal, West Frankfort Daily American, DuQuoin Evening Call, Benton Evening News, Canton Daily Ledger, Marion Daily Republican, Monmouth Review Atlas; in Indiana, Columbia City Post & Mail, Hartford City News-Times; in Ohio, St. Marys Evening Leader, Wapakoneta Daily News; and Boonville (Mo.) News & Advertiser.

Canadian dailies acquired were: in British Columbia, the Fort St. John Alaska Highway News, Port Alberni Valley Times, Cranbrook Daily Townsman, Kimberley Daily Bulletin, Nelson Daily News, Dawson Creek Peace River Block News, Prince Rupert Daily News, Trail Times; Lloydminster (Saskatchewan) Daily Times; and Summerside (Prince Edward Island) Journal Pioneer.

In other late-'86 acquisitions:

Herald Association Inc. of Rutland, Vt., acquired the Rutland (Vt.) Herald and the Barre/Montpelier Times-Argus.

Brown Publishing Co. of Cincinnati acquired five Ohio dailies: Wilmington News-Journal, Washington Court House Record-Herald, Circleville Daily Herald, Logan Daily News and Van Wert Times-Bulletin, and one weekly.

Donrey Media Group acquired the Pine Bluff (Ark.) Commercial, Arkadelphia (Ark.) Siftings Herald and Claremore (Okla.) Daily Progress.

John P. McMeel and Kathleen W. Andrews of Kansas City, Mo., acquired the Vista (Calif.) Press and two weeklies.

Emmerich Enterprises Inc. of Greenwood, Miss., acquired the Clarksdale (Miss.) Press Register.

Stauffer Communications of Topeka, Kan., acquired The Oak Ridger, Oak Ridge, Tenn.

Sutherland Media Inc. of San Antonio acquired The Corsicana (Texas) Daily Sun.

MediaNews Group of Woodbury, N.J., acquired the Bristol (Conn.) Press, the Graham (Texas) Leader, a 50-percent share of the Hobbs (N.M.) Daily News-Sun, and three Connecticut weeklies.

Park Communications Inc. acquired the Milton (Pa.) Standard, three weeklies and a Seattle radio station.

The Hearst Corp. acquired the Laredo (Texas) News, then closed it. Hearst continues to publish the Laredo Times.

Hearst also acquired News America Syndicate [presstime, Nov. 1986, p. 18] and Esquire Magazine Group Inc.

There were many other acquisitions by newspaper companies, including:

- **Dow Jones & Co.** boosted its share in Telerate Inc., a financial-information company, to 44.8 percent.
- **The Times Mirror Co.**, owner of 40 percent of Rhode Island Cable Television, purchased the remaining 60 percent.
- **Scripps Howard Broadcasting Co.** sold its interest in cable television systems in Fairfield County and Bridgeport, Conn.
- **The Washington Post Co.** announced it will sell its 18-percent interest in Detroit Cellular Telephone Co. to a subsidiary of Pacific Telesis Group.

—Gene Goltz

Groups air differences in counting methods

Representatives of seven newspaper-related organizations met in January to discuss why reports produced by some of those organizations on the number of U.S. daily newspapers and their circulations arrive at different results [presstime, Jan. 1987, p. 69].

Convened by the Newspaper Advertising Bureau, the Jan. 14 meeting at NAB headquarters in New York City was attended by representatives of American Newspaper Markets Inc., ANPA, Audit Bureau of Circulations, Editor & Publisher magazine, International Circulation Managers Association, and Standard Rate & Data Service Inc. □

Montreal market grows hotter; Louisville goes 'all-day'

BUSINESS ROUND-UP

Montreal's busy newspaper market is gearing up for a fifth daily and possibly a sixth. Analysts are warning that one or more of the papers may sink in the looming struggle for advertising dollars.

Le Matin is scheduled to arrive Feb. 2 as the fourth French-language paper in the world's second-largest French-speaking city.

And a Quebec publisher, Pierre Peladeau, said the chances are good that he will launch a sixth Montreal paper before the end of the year—an English-language daily to compete with The Gazette.

In other newspaper-business activity:

• The Louisville Times (evening, circulation 124,386) will cease publication Feb. 16. The Courier-Journal (morning, 166,182) will become an all-day newspaper. No layoffs are planned, according to Gannett Co., which acquired the two papers last year [**pressime**, June 1986, p. 98].

• Florida Today, the USA Today look-alike published in Melbourne, reverted to a more conventional paper.

In a year-long experiment, Florida Today gave strong emphasis to state and local news in its front section and was offered at a special combination rate with USA Today [**pressime**, Oct. 1985, p. 60]. Both papers are owned by Gannett.

USA Today's circulation rose to about 18,000 copies in Brevard County, but Florida Today declined from 69,485 on Sept. 30, 1985, to 62,277 a year later. Gannett executives said it was apparent that Florida Today readers wanted full coverage, including national and international news on the front page and a full stock market report.

• The Times Mirror Co. will bring out a sports business magazine in May. To be called Sports Inc., it will be directed toward people involved in the business aspects of sports as well as to suppliers and journalists. Circulation is projected at 50,000. □

Shift to offset delayed by S. Africa flap

Florida Publishing Co., which prints The Florida Times-Union and the Jacksonville Journal, will delay its move to offset printing rather than allow the press it had bought from a South African company to become "an ongoing symbol of community divisiveness," newspaper executives have decided.

Jacksonville's black community assailed the announcement last March that the newspaper company had purchased an 18-unit Goss Metro press from SAAN Ltd. of Johannesburg.

The press was built in England by Rockwell International, and SAAN bought it for its own publishing interests. But when SAAN encountered financial setbacks, it sold the press, said Florida Publishing's vice president and general manager, James L. Whyte.

While seeking an alternative, the Jacksonville papers will continue to be printed on a 19-year-old, 22-unit Hoe press that has been converted to DI-LITHO™. □

UPI names four new managing editors

United Press International President Milton R. Benjamin in January named veteran journalists to the four managing editor positions at the wire service.

Barry Sussman, who founded The Washington Post-ABC News Poll and was the editor in charge of the Post's Pulitzer Prize-winning Watergate coverage, became UPI managing editor/national; Ben Cason, assistant managing editor of the Post, became UPI managing editor/news; Kim Willenson, Newsweek congressional correspondent and a former UPI editor, became managing editor/international; and veteran UPI editor Bill Ferguson was named managing editor/broadcasting.

Benjamin was not successful in wooing back former UPI Managing Editor Ronald E. Cohen, who was fired shortly before Benjamin became president [**pressime**, Dec. 1986, p. 6]. Cohen has been named general news executive of Gannett News Service. □

U.S. had net loss of 7 dailies last year as Canada gained 2 dailies

There was a net loss of seven daily newspapers in the United States last year, compared with a net loss of nine in 1985.*

While nine new paid dailies were started, 16 others stopped daily publication. Nine of the 16 suspended outright, four were lost through mergers and three converted to weekly publication, according to information available to ANPA.

New dailies started in 1986 were:

- Dothan (Ala.) Wiregrass Today (Nov. 2)
- Lakeport (Calif.) Lake County Record-Bee (Nov. 8)
- Tracy (Calif.) Press (April 1)
- Inverness (Calif.) Citrus County Chronicle (Sept. 14)
- St. Louis Globe-Democrat (Jan. 27)
- St. Louis News (March 31)
- New York City Tribune (Jan. 1)
- Aberdeen (N.C.) Citizen News-Record (Sept. 1)
- Sevierville (Tenn.) Mountain Press (April 1)

Suspending outright were:

- Colorado Springs Sun (Feb. 28)
- Baltimore News-American (May 27)
- St. Louis Globe-Democrat (Oct. 29)
- St. Louis News (April 8)
- Uhrichsville (Ohio) Chronicle (October)
- Painesville (Ohio) Lake County Telegraph (May)
- Monongahela (Pa.) Herald (March)
- Waynesburg (Pa.) Democrat Messenger (March)
- Laredo (Texas) News (December, following acquisition of its assets by The Hearst Corp's. Laredo Times Co.)

Merging were:

- Daytona Beach (Fla.) News (with Daytona Beach Journal, August)
- St. Petersburg Evening Independent (with St. Petersburg Times, Nov. 7)
- Dayton (Ohio) Daily News (with Dayton Journal Herald, Sept. 15)
- San Angelo Times (with San Angelo Standard, March)

Converting to weekly were:

- Jacksonville (Ark.) News (Oct. 1)
- Cairo (Ill.) Citizen (Aug. 6)
- Quakertown (Pa.) Free Press (September)

In Canada, two new dailies were launched in '86, while no dailies there stopped publishing.

The two were:

- Burlington (Ontario) Spectator (Sept. 8)
- Moncton (New Brunswick) Le Matin (Aug. 11).

*A net loss of 10 was reported in the February 1986 issue [p. 61]. ANPA later learned that the New Smyrna Beach (Fla.) News & Observer began publishing daily on Nov. 28, 1985.

Worcester County Newspapers and Ogden Newspapers have sold

The Bristol (Conn.) Press

(Daily Circulation 20,000) and two contiguous weekly newspapers

To Garden State Newspapers, Inc.

Union Leader employees reach settlement

Employees of The Union Leader and New Hampshire Sunday News in Manchester reached a settlement in January with the William Loeb Union Leader Trust and Publisher Nackey Loeb that will transfer 25 percent of the newspapers' stock to employees while keeping ownership under her control.

Loeb and the trust settled with pressman Richard Bergeron, representing the employees during a trial in U.S. District Court in Concord, N.H.

Bergeron alleged that William Loeb had promised ownership of the newspapers would go directly to the employees immediately after his death. But Loeb also had set up the trust to hold the stock for another 40 years, apparently contravening his promise, Bergeron said.

Nackey Loeb, his widow, argued that holding the stock in trust would prevent an undesirable takeover.

Under terms of the settlement, the trust, established in 1979, remains intact, and surviving employees who had worked at the newspaper at least a year before William Loeb's death in 1981 will receive the first distribution of stock by fall.

To sell the stock, an employee first must offer it to the company, attorneys said.

ANPA

1887 - 1987

100th Anniversary Convention

The Waldorf-Astoria, New York
May 3-6, 1987

Castle Clinton, Battery Park

This year's ANPA Convention is of special significance. It marks two important anniversaries—the 100th anniversary of ANPA and the 200th anniversary of the U.S. Constitution.

You won't want to miss this commemorative event, highlighted by a program devoted to a sweeping look at what the future holds for our country and for the newspaper industry. The theme is "The Blessings of Liberty: The Next Hundred Years."

The Convention's opening ceremonies will be on Sunday, May 3, at 4:30 p.m. at Castle Clinton, Battery Park, on the tip of Manhattan—a vantage point for viewing the Statue of Liberty. President Reagan has been invited to speak. Make your travel plans so that you won't miss this opening event.

And there'll be many other program highlights that will take place at The Waldorf-Astoria, Radio City Music Hall and St. Bartholomew's Church.

Bus transportation will be provided for all sessions scheduled at locations other than The Waldorf-Astoria, except for nearby St. Bartholomew's Church.

A tour is scheduled on Monday, May 4, which includes Breakfast at Sardi's followed by a visit to Lincoln Center.

Convention registration forms are in the mail. Please return them to ANPA by March 30. Additional forms are available from ANPA's Priscilla Shingleton (703) 648-1031 or Leesa Thompson (703) 648-1097.

Watch for other program details in the March and April issues of presstime!!

Commemorating a Century of Service to Newspaper People . . .

ANPA fees to be studied

A special study group of newspaper executives will review ANPA's various fees and service charges during the next several months and will look also at the Association's dues formula.

ANPA Chairman and President Alvah H. Chapman, Jr., chairman and chief executive officer, Knight-Ridder Inc., established the study group that will be headed by ANPA Director Frank A. Bennack Jr., president and chief executive officer, The Hearst Corp. Members will include ANPA Director John J. Curley, president and chief executive officer, Gannett Co.; former ANPA Chairman and President William C. Marcil, president and publisher, The Forum, Fargo, N.D.; former ANPA Secretary Dolph C. Simons Jr., editor and publisher, The Lawrence (Kan.) Daily Journal-World; and Frank A. Daniels Jr., president and publisher, News and Observer Publishing Co., Raleigh, N.C., who headed the last such study in 1979.

"It is important that ANPA leaders periodically review the revenue-producing mechanisms of the Association," Chapman said. "At the moment, ANPA's revenues are strong and are sufficient to fund the programs and activities put forward by our member newspapers through our participatory planning process each year. But we don't want to be caught short, nor do we want to be overcharging; so this group will give me and the Board of Directors a look at where we are now and will recommend any changes in either fees or the dues formula which it thinks desirable."

It is anticipated that the study group will make its initial report to the Executive Committee and Board by fall. □

Members gain from travel discounts

The ANPA Membership Department estimates that ANPA-member newspapers realized more than $600,000 in travel savings in 1986 through discount programs offered by the Association.

Nearly 1,000 employees of member newspapers used United Airlines' discount fare program, according to Michael Genick, ANPA manager/membership services. The program has been in effect only since September [presstime, Nov. 1986, p. 79].

In addition, "well over" 2,000 people used discount programs offered by Delta Air Lines, Genick said. Most of them took advantage of special rates offered in connection with the ANPA trade show last June in Atlanta.

Because of the high level of participation in their discount programs, both air carriers have increased the level of savings available, Genick added. For 1987, both will provide 40-percent (instead of 30-percent) discounts off regular coach fares for travel to and from newspaper-business meetings. A 5-percent discount off special fares will be continued.

ANPA-member newspaper employees also benefited from the Hertz car rental discount program, with Hertz reporting about $1.5 million in sales at discounted prices, Genick said. □

Nominations made for Trustees

The ANPA Nominating Committee has announced its intention to nominate Charles T. Brumback and Sandra C. Hardy to the two top officer positions of the ANPA Foundation Board of Trustees.

The nominations were submitted to the Trustees for their approval during the meeting of the ANPA Board of Directors in Los Angeles Jan. 27-28. The election of Foundation officers will take place in May at the Board meeting following the ANPA Convention in New York City.

Charles T. Brumback

Sandra C. Hardy

Brumback, president and chief executive officer of the Chicago Tribune Co., is to be nominated to serve a one-year term as chairman and president of the Trustees. He currently is vice chairman.

Hardy, vice president of Calkins Newspapers of Levittown, Pa., is to be nominated for a one-year term as vice chairman of the Trustees. She currently is chairman of the ANPA Postal Committee. □

ETAOIN misspelled

I was sorry to see the misspelling of the name of my dear and revered friend ETAOIN SHRDLU (Jan., p. 72).

It was he who provided my first job in newspapering (after that of paper carrier). His passing has left fewer people who appreciate his role in production. Fewer still know of his compatriot CMFWYP VBGKQJ, whose name virtually defies both spelling and pronunciation.

As your article states, the Smithsonian recognizes "the difficulties of sustaining a hot-metal operation in a museum setting." It was no less difficult in live production.

Josiah P. Rowe III
General manager
The Free Lance-Star
Fredericksburg, Va.

One of the best

I read about 60 graphic arts and graphic arts-related magazines a month. It is part of my job. Let me tell you that "presstime" is one of the best, if not the best, of all the publications I see.

over-set

Robot to reader: '*Bonjour! Comment allez-vous*'?

You would have thought that the offspring of the USA Today robot would be all-American.

But this one speaks French.

Executives from UniMedia Inc., which publishes more than 30 dailies and weeklies in French Canada, fell for Gannett Co.'s robot at a reception during the 1986 ANPA Convention in San Francisco.

So UniMedia President Jacques G. Francoeur asked Gannett Chairman Allen H. Neuharth for his blessing and technical assistance in building UniMedia's own 5-foot promotional robot.

Gannett also stands to benefit from innovations in the new robot that—like the original—moves, twinkles its eyes and follows conversations with onlookers, albeit *en francais*. This one also hands out newspapers and soon will feature a video screen in the back of the newspaper box so that, when empty, it can show films as a promotional tool. The screen will be an especially useful tool when the robot tours Canadian schools as part of the "Journal en Classe," the French equivalent of Newspaper in Education.

At least the USA Today progeny can claim American citizenship. It was built in Atlanta.

Only 34,246 years to go!

How much is a trillion dollars, anyway?

When the federal government releases its budget every year, reporters try to come up with ways to help readers relate to the billions of dollars being talked about.

Common are such things as the "end-to-end" example: a million $1 bills placed end-to-end would extend about 96.7 miles; a billion would reach 96,700 miles; etc.

This year, when President Reagan submitted the first trillion-dollar budget in history, The Washington Post's Boyce Rensberger used a newspaper example to put that number into perspective. He wrote:

"Suppose somebody paid you $1 for reading each word of news and features in a typical edition of The Washington Post. Since one day's Post is officially estimated to contain 80,000 non-advertising words, you'd have $80,000 after reading one day's paper. In the unlikely event that you read every word of every paper for a year, you'd have a cool $29.2 million. But to read a trillion words and earn $1 trillion, you'd have to read The Post every day for 34,247 years."

By the way, the Post also noted in more traditional fashion that a trillion $1 bills placed end-to-end would stretch 96.7 million miles, "enough to go from the Earth to the sun with about 3.7 million miles of dollar bills left over, or a little more than $38 billion in change."

Newspaper numbers

3,171—number of youth carriers hired by San Jose Mercury News for 1,662 paper routes during 1983-85.

585—average number of dollars paid weekly as a top minimum for experienced reporters working under contracts with The Newspaper Guild as of Dec. 1, 1986.

5 million—total circulation of the 120 daily newspapers in Africa, excluding those in Arab states

Snow Country publisher does more than just sign his name to Christmas cards

Some people send lengthy letters to friends and relatives during the Christmas season. The Johnsons of White Bear Lake, Minn., have taken that year-end tradition one step further. They publish a Christmas newspaper.

"We're newspaper people, and so we thought our Christmas letter should be in a newspaper format," says Eugene D. Johnson, publisher of The White Bear Press, a 16,500-circulation weekly. This year's "Johnson Edition" of the Press was 12 tabloid pages full of stories and photos of the family's 1986 activities.

Reaction to the annual publication has been "remarkable," says Johnson, who keeps the edition's ever-growing mailing list on a computer.

This year, the family sent the paper to 850 relatives, friends and newspaper-business associates.

UPDATE JANUARY 24, 1987:

Now look at the growing number of revolutionary newspapers, representing 39% of total daily and 52% of total Sunday U.S. circulation, that have joined the AD/SAT Network.

SPECIAL REPORT

The Changing Face Of the Newspaper Workforce

The people who grew up on TV... have helped us grow into No.1!

"Grabbing most of today's publicity is Gannett's USA TODAY, serving up the short, sweet, colorful news America is used to getting on tv."
–Marketing & Media Decisions, January, 1986

"Some of its concepts and all of its graphics have had extraordinary impact on daily newspapers. It has really become the country's only wide-focus national newspaper."
–Forbes, January 12, 1987

PUBLISHED BY GANNETT

From the start, who we had in mind as our readers was just as important as what we had in mind for our newspaper. We wanted to give the young, smart, upscale tv generation the [illegible] newspaper—one with great design, sharp color and nuggets (not mountains) of pertinent information. And it worked. Our readers love us and our advertisers find that we're not just a pretty newspaper. We deliver quality readers in quantity—4,792,000 of them every [illegible]

No.1 [illegible]

Publishers on Parade

Why did Bob Page add Parade-Plus to Parade in the Chicago Sun-Times?

ROBERT E. PAGE
President and Publisher, Chicago Sun-Times

"Basically, Parade is a valuable asset in the Chicago Sun-Times for its strong editorial package. Its nationally recognized writers and innovative articles generate a high degree of reader satisfaction.

"At the same time, we find Parade-Plus to be a useful advertising sales device that allows for extra flexibility and adds to our bottom line. With Parade-Plus we've had our own advertising sections. Sometimes these sections are exclusive to one retailer and other times, devoted to themes such as audio/visual or health and fitness merchandise.

"In fact, in January of '87, Parade-Plus allowed us to do a special 12-page section that was well received by readers and a success for our advertisers."

Featured in 297 newspapers every Sunday.

For information on why Parade is important in major markets and how Parade-Plus can work for newspapers with over 250,000 circulation, contact Carlo Vittorini at (212) 573-7111, and talk publisher to publisher.

THE THREE MOST IMPORTANT CONSIDERATIONS WHEN BUYING A NEWSPAPER STUFFER ARE

PRODUCTION! PRODUCTION!! PRODUCTION!!!

Here at McCain we appreciate the fact that when you invest in a piece of equipment you have every right to expect the best possible return on that investment. And we've spent over 75 years improving and innovating our equipment to assure you of just that! So you can forget all about McCain's international reputation for versatility, quality, and dependability. You can even forget about our exclusive 'short travel' concept and our quick, easy, and positive make-ready. After all, these are just a means to an end. All you have to remember is that dollar for dollar *McCain Builds the Most Productive Saddle Binders and Newspaper Stuffers in the World.* So, if you're in the market for a stuffer and want the fastest possible payback with year after year of the highest return on your investment write or, better yet, call McCain. We'll show you how practical and profitable a new McCain can be.

INDEX VOLUME 9, NUMBER 3 MARCH 1987

Special Report *The face of the newspaper workforce has changed and is continuing to evolve. Compared to a generation ago, today's newspaper employees present a more racially and sexually balanced picture, with larger numbers of blacks and women. Tomorrow's workforce will be older and probably consist of more women, single parents and dual-career families. Younger workers will be harder to find and will present new demands. How will newspapers cope with this new workforce, and what should they be doing now to prepare for it?* 26

Taxing duty *It's April 15 all year-round for a growing corps of newspaper experts who help their companies comply with tax laws.* 6

Delving into databases *With the help of computers, newspaper researchers can quickly comb electronic files for information.* 10

High pressure area *Newspapers are devoting more space to weather reporting. The reason is simple: an amazing demand from readers.* 16

Desktop publishing *Apple Computer Inc. started the trend toward personal computer-based typesetting systems; now it's got bushels of imitators.* 22

Newspaper senior citizens *Who says the news business is a young person's game? Not these newspaper folks who like their work too much to quit.* 36

Essay: The Constitution's story *Retired U.S. Chief Justice Warren E. Burger says* Miracle At Philadelphia *is must reading.* 42

Profile: P. Anthony Ridder *As befits a marathon runner, the head of Knight-Ridder Inc.'s Newspaper Division has been on the fast track to the top.* 44

Newspapers score in survey *A new study shows Ohio residents prefer and use newspaper advertising more than ads on TV.* 52

Revenue raisers *As they begin revising state tax codes, legislatures are looking at newspaper sales-tax exemptions with an eye toward their elimination.* 56

Wire color enhanced *A process camera that has been popular with ad agencies is now being used to improve wire-service color photos.* 66

Acting on minority issues *After two years, the Task Force on Minorities in the Newspaper Business is beginning to see its ideas become realities.* 74

Tax Specialists, p. 6

CHAIRMAN'S CORNER

ANPA, Constitution anniversaries will merge at Convention

By now I expect each of you has received, completed and returned your registration forms for the 1987 ANPA Convention in New York City. We need those registration forms back no later than March 30.

This year's Convention promises to be exciting, entertaining and informative. It is focused on two important anniversaries–the 100th anniversary of ANPA and the 200th anniversary of the Constitution of the United States. Our theme this year is: "The Blessings of Liberty: The Next Hundred Years."

Your Convention Arrangements Committee, chaired by David Laventhol, president of The Times Mirror Co., has been hard at work for nearly a year creating and developing an event that is commemorative in nature yet at the same time relevant to the future of our newspaper business.

Alvah H. Chapman Jr.

Because of the special nature of this 100th Anniversary Convention, activities will begin a day earlier than usual. Opening ceremonies will be Sunday, May 3, at Castle Clinton in Battery Park on the southern tip of Manhattan. The site provides a spectacular view of the Statue of Liberty in the harbor and is an appropriate location for the start of this meeting. New York Gov. Mario Cuomo has been asked to welcome ANPA conventioneers to New York, and President Reagan has been invited to speak at these opening ceremonies.

Also on Sunday, ANPA will operate "expert centers" near the registration area in The Waldorf-Astoria's Hilton Room. Information will be available there on labor and personnel matters, technical operations, legal/postal/government affairs, advertising, marketing, and literacy. Expert staff and committee members will be available to answer your questions and to provide advice. These centers have been successful in the past in providing members one-on-one sessions on specific issues.

More general matters of interest to our business will be covered in the various Convention sessions. Some of the topics include: the drug problem, minorities in our industry, and the future of retailing and advertising. There also will be a special panel discussion on the next 100 years.

A Fred Friendly seminar will be conducted on "The Balance of Power." Former Sen. Gary Hart and Sen. Robert Dole will exchange ideas, and other speakers such as former Presidents Carter and Ford have been invited to speak at the various meal functions.

As you can see, David Laventhol and his committee have developed an especially interesting program for this special Convention. I hope you and your executives will participate. I know that there are many demands on our time, but I feel these annual meetings are important for us as individuals and as newspaper people. I am certain we will leave New York better informed than when we arrived and better prepared to face the challenges that lie ahead for the newspaper business.

I look forward to seeing you there.

Mutual protects you against paper cuts.

Telling the whole story sometimes means taking risks, but with libel suits becoming more common (as well as more expensive for winners and losers alike), it might be tempting to cut questionable stories in order to reduce those risks.

The Mutual Insurance Company of Hamilton, Bermuda, believes that newspapers need to be secure in their reporting. So, for more than twenty-five years, Mutual has provided newspapers throughout the United States, Canada, and the Caribbean with the financial protection they need to endure lengthy and expensive libel suits.

During those twenty-five years, Mutual has handled more than 4,500 suits in the libel field. It is this kind of experience that makes Mutual the insurance company of choice for newspapers that want to protect themselves against the unpleasant fact of libel suits.

Mutual offers ANPA-member publications libel insurance that provides punitive damage coverage across the United States. A policy from Mutual pays up to 10 million dollars per occurence, rather than an annual aggregate. With low deductibles to minimize your loss, a libel insurance policy from Mutual is your best protection against libel litigation, the unkindest cut of all.

Taxing Position

For some newspaper companies, satisfying the IRS and other tax authorities is a year-round job

BY MARY A. ANDERSON
pressTime staff writer

If you think your personal 1040 form is complicated, you should see what Christopher W. Baldwin does to satisfy the Internal Revenue Service and state tax collectors.

Baldwin, director of taxes for Gannett Co., has a staff of eight accountants and other specialists to file the company's numerous tax returns, including 300 state income tax returns. "Sometimes, the list seems endless," he says.

The company's federal income tax return is "the size of a major metropolitan phone book," he says.

This year, Gannett will pay $230 million in income taxes, according to Baldwin's projections--$200 million to the federal government and $30 million to the states and localities.

Because of its size, Gannett gets routine, annual audits that are conducted by the "Large Case Group," in IRS parlance.

Gannett is by no means alone. The Tribune Co. of Chicago and The New York Times Co. are among other large newspaper companies that provide permanent office space to accommodate the IRS agents, every year, all year.

LIVING WITH THE IRS. The arrangement is normal for any of the country's largest companies that meet certain criteria set by the IRS. The agency selects companies for the extra scrutiny through application of a point system that assesses variables such as gross assets, gross receipts, number of subsidiaries and diversification, as well as the estimated amount of IRS manpower needed for an audit, says IRS spokesman Roderick P. Young.

"The IRS has a presence indefinitely" in any large company, says Timothy J. McCormally, tax counsel for the Tax Executives Institute in Rosslyn, Va., an information-sharing organization of more than 4,000 corporate tax officers in the United States and Canada.

The IRS calls it the Coordinated Examination Program. Agents work on rotation, so they are not with any given company longer than about two years at a time, "to keep them fresh and avoid any implication of (companies) cozying up to the IRS," McCormally says.

"We have a similar situation to what Gannett has," says Theodore D. Novak, tax manager for the Tribune Co. "Every year, we are audited. The IRS comes in . . . and we give them a room. They call in specialists, depending on the circumstances."

What's it like to live with the IRS? "You find out they're human. And in the situation, you develop a working relationship with the individuals. You find there are sometimes ups and downs with it. I find we get along with them very professionally," Novak says.

Baldwin agrees. "You develop a rapport and a relationship with them that's professional and try to respond to their requests for information," he says.

But that effort can be "frustrating at times," says Thomas H. Nied, who directs a staff of 10 professionals in the taxation department of The New York Times Co.

"The IRS has been here permanently for the past five years," he says. "They're distracting. They're demanding a lot of time and effort to respond to their questions."

At any given time, there are from one to five IRS agents auditing Times Co. returns for different periods of time. It takes about a year for the IRS to audit one year's returns.

"For the 1982-1984 cycle, we have received close to 200 questions in writing from the service. Many of those questions are 3- to 10-part questions," Nied says.

Gannett provides an office for up to three IRS agents in its Rochester, N.Y., offices, and another office for an unending stream of state tax collectors--one state at a time--at the company's headquarters in Arlington, Va.

Smaller newspaper groups and independent papers still turn to certified public accountants and outside attorneys for help with their taxes.

But as more and more newspaper companies have grown through mergers and acquisitions, they have added staffs of up to 10 professionals to do their tax filings, which become more voluminous and seemingly more complex with each passing year. These staffs of in-house tax experts, long familiar to some other industries, are fairly new to newspapers.

The New York Times Co. began its in-

Gannett's Baldwin oversees the filing of federal and 300 state returns.

house tax service about 17 years ago. But the level of expertise has changed significantly since then.

"If you go back 17 years, The New York Times was just a newspaper. (The tax department) used to be a clerk. As the company has grown and made acquisitions, and expanded into different taxing jurisdictions, we have drawn more attention from the (Internal Revenue) Service. Today, we have attorneys, and 'Big 8' accountants"–people once employed by the eight leading accounting firms–"staff the tax department," Nied says.

NEW TAX LAW. In general, auditing issues of the 1980s have concerned investment tax credits and the adjustments to book income (pre-tax, net income from domestic operations) in calculating taxable income, says Gannett's Baldwin.

But changes in the federal tax law enacted last year have brought new challenges to newspaper tax departments.

Publishing, and newspapers in particular, are among the winners in the latest tax restructuring, according to a December 1986 analysis by the investment firm Shearson Lehman Brothers. The trade-off in the 1987 tax year will be lower overall tax rates for newspapers, traditionally one of the highest-taxed industries, in exchange for elimination of numerous tax preferences [**presstime**, Oct. 1986, p. 12].

Newspapers' taxable income will increase because of the loss of investment tax credits, the loss of some deductible expenses, new capitalization rules and the alternative minimum corporate tax. But the new tax rates, with projected reductions of about 5 to 10 percent over the next two years, should more than compensate, experts say.

Nonetheless, the changes make newspaper tax returns more complicated than ever. As if tax specialists for newspapers were not busy enough.

"There are busy times and there are busier times," says Gannett's Baldwin. "There are no times when there's a down period. There used to be peaks and valleys in the tax practice, but that's not true around here, with the acquisitions and the dispositions. There are no lulls. I think in the future, for 1987's return and beyond, we will probably have to expand the staff to meet the new record-keeping requirements."

Novak says the Tribune Co.'s 1985 federal return was about 1,000 pages. The firm paid about $108 million in state and federal income taxes for that year.

This year, "Due to the complexity of the tax law, the tax file is getting thicker," he says, adding, "I could always use more" than his current staff of six to process the multitude of corporate tax returns.

"For the 1982-1984 cycle, we have received close to 200 questions in writing from the (IRS)."

Thomas H. Nied
The New York Times Co.

Nied says he does not plan to expand his staff off 10 at The New York Times Co., which prepared state and federal income tax returns totaling about $99 million for 1985 and expects to pay about $123 million for 1986.

Nor does Knight-Ridder Inc. plan to expand its staff of four tax professionals. However, the new tax law will necessitate some expansion of computer capacity, says Paul Youngren, assistant vice president of taxation.

STATE TAXES. The IRS may be looking more closely at newspapers, but newspapers are *definitely* looking more closely at the state tax implications of the new federal tax law.

"Generally, our members are becoming more and more attuned and active in the state tax area," says McConnally of the Tax Executives Institute. "With lowering of the federal tax rate and states becoming more aggressive, the importance of state taxes has increased tremendously. So, for those with a large dispersion of properties, that could have significance."

State tax authorities have been auditing Gannett more frequently in recent years, a development Baldwin attributes to the high profile of USA Today. "Generally, states are more aggressive with us because we are more visible," he says.

Most states also are redesigning their tax codes to adjust to the revisions in federal tax law, and some states are seeking to use the federal changes to broaden their tax bases. Some current state legislative proposals call for elimination of the exemption of newspaper circulation sales from sales taxes, or extension of the sales tax to sale of advertising services. (See story, p. 56.)

State returns also make up the greatest bulk of newspaper tax filings, while accounting for a small fraction of the total tax burden. When a company has several properties or subsidiaries in one state, it must file a separate income tax return for each.

The Knight-Ridder staff files between 250 and 275 state income tax returns, in addition to other state tax returns and, of course, the federal return, according to Youngren.

Moreover, each yearly return is preceded by quarterly estimated tax reports. By the time state returns for property, sales and payroll taxes are added, most of the largest newspaper groups must file thousands of returns and other tax-related documents.

GETTING TOGETHER. To help keep pace with the ever-changing world of taxation, Nied of the Times Co. and Baldwin of Gannett formed a media tax group about six years ago. The informal group initially had about 12 members. Now, 60 to 80 tax specialists representing a variety of media companies join in the meetings, usually following semiannual meetings of the Tax Executives Institute.

"It has brought together the tax people from the major media companies, not just newspapers, to share similar experiences," says Nied. "The group . . . tries to make sure that members of the major industry organizations do not act in direct conflict with the media group as a whole. We try to make the effort as consistent as possible."

Among the tax departments of large media firms, Baldwin believes Gannett's may have the highest public profile, partly by virtue of the move of Gannett corporate headquarters to the Washington, D.C., area. "We're just more active in the whole broad spectrum of taxes," he said. Baldwin, for example, has testified on tax legislation be-

fore the House Ways and Means Committee and at IRS hearings on regulations.

"I would hope that we're leaders in every facet of the tax administration and tax departments of newspapers," he says.

"I don't like to think of us as just a compliance shop, just cranking out returns. We handle research, planning management on tax-related matters and answers to tax questions dealing with the company's benefit plans," in addition to analyses of the tax implications of acquisitions, he says. "I like to look at us as a full-service tax department . . . providing the whole gamut of tax planning, tax work, administration, et cetera."

Baldwin runs a centralized tax department, meaning that all income tax preparation for Gannett properties occurs in his office. "They supply us with financial information through a year-end financial package and year-end property package," he explains.

Gannett uses its own computers to consolidate and prepare the final returns, as does Knight-Ridder. But some other companies, such as the Tribune Co. and the Times Co., consolidate information from subsidiaries, then use an outside computer service, called Fast-Tax, based in Dallas.

"We have a computer in house, but we still use the Fast-Tax system to do the federal return," says Nied. "At present, I think the Fast-Tax system with some refinements could be the ultimate tool we would use in preparing the federal tax return."

"We're dealing with federal tax changes, and presumably up to 50 states. If we go totally in-house, we must hire a programmer who, every time there's a change in the law, must calculate the program to accommodate the changed law," the Times Co. tax specialist adds.

McCormally of the Tax Executives Institute agrees with some of the newspaper tax directors that vendors such as Fast-Tax are better equipped to accommodate tax changes faster than can individual corporations, despite the growing trend to do more tax preparation in-house.

For the Gannett operation, Baldwin disagrees. "Fast-Tax doesn't offer enough more than what we can do here, to consider them," he says. But he speculates that the company would consider an outside service if it developed a much more sophisticated capability.

However, even its sophisticated system hasn't always helped Gannett when dealing with some tax authorities. On several occasions since he became tax director in 1979, Baldwin has been called to smooth things over with a local sheriff, padlock in hand, or other authority intent on collecting taxes by seizing assets or closing a newspaper or broadcast station. The Gannett executive tells authorities in such instances "that we want to be good corporate citizens" and will pay any taxes due them.

Generally, he says, such misunderstandings arose because the local authorities believed they were only dealing with one small business, not realizing that taxes would be paid through Gannett corporate offices. The threats stopped after they learned they were dealing with a much larger company, he says.

"Those incidents are less prevalent now than they were back when I first started," says Baldwin. As Gannett refines its tax-filing procedures, he says, "It's a constant evolution and, hopefully, the change has been for the better." □

Newspaper Management Systems
A Proven, Effective, Productive Solution.

"We use Collier-Jackson's Newspaper Management Systems because they specialize in the newspaper industry. One software philosophy for all systems makes it easier on everyone — from the DP technical coordinators to the operators at the terminal screen."

Database Searches

Newspapers make big strides in supplementing reporters' legwork by plugging into computer-based, on-line services

BY C. DAVID RAMBO
pressTime staff writer

With deadline fast-approaching, editorial writer Doug Manship Jr. of the Advocate and State Times of Baton Rouge needed the first names of six Soviet dissidents. His background material in hand listed only last names. Using a computerized database, the newspapers' library came up with the information in about 20 minutes.

A reporter for the Daily Press and The Times-Herald of Newport News, Va., asked his newspapers' library to check candidates for the job of city manager. An electronic search again proved valuable. "In one case, we found that the guy had been fired from his job" in another city, says Theresa M. Hammond, director of library services.

And at The Washington Post, coverage of the Iran arms controversy has been supported routinely by skillful, on-line background checks–particularly when unfamiliar names have surfaced. "As soon as a character's name pops up, we do a search on him to see what he might be involved in," explains Kathy A. Foley, deputy director of information services.

Citing these and other examples, many newspaper researchers and editors say computer databases comprise one of the best research tools since the advent of encyclopedias. More newspapers are subscribing to commercial databases and using them in a greater variety of ways. All the while, the number of database offerings continues to grow.

"I wouldn't want to do without" the capability of on-line searches, says Don Buchanan, managing editor of the State Times in Baton Rouge. "It would slow us down, and our stories wouldn't be nearly as detailed."

"A lot of the databank searching is really bread-and-butter stuff" leading to better, in-depth stories that offer more perspective, says Jim Hunter, librarian of The Columbus Dispatch.

> *A lot of the work "is really bread-and-butter stuff" leading to better, in-depth stories.*

Such services can be expensive, however. In fact, the librarian of one large daily says the paper lately has spent upwards of $30,000 a month on them. "I would hate to be quoted on that, because I'm not sure management knows how much we're spending," the librarian says. Experts say costs may drop in the future as database companies make use of compact disk technology for storing data.

Basically, on-line databases are extensions of a newspaper's own library or, to use a dying term, the newspaper morgue.

There are dozens of such services. Researchers gain access to them by using a computer terminal linked by phone lines to the database. Virtually any kind of information can be retrieved and in various forms—from bibliographic notations to abstracts of articles and even full-text versions. Librarians usually have a printer attached to their terminals for making printed copies of information that appears on the screen.

SURGE IN USE. There are no comprehensive data on the number of newspapers subscribing to database services. However, a survey conducted last spring in conjunction with the Special Libraries Association's Newspaper Division—the largest organization of newspaper librarians—indicates use is growing substantially.

According to the survey, at least 80 newspapers use on-line services. A similar study in 1984 showed only 39 subscribers.

About one-third of the 80 spent between $1,000 to $10,000 a year on database services. The rest were about evenly divided into groups spending between $10,000-$20,000, $20,000-$30,000 and more than $30,000.

The Columbus Dispatch's Hunter, who coordinated the recent survey, says questionnaires were sent to 456 librarians at about 300 newspapers; 168 librarians representing 155 newspapers responded.

Not only has there been an increase in the number of newspapers using commercial services, there also has been an increase in the variety of uses.

For example, the SLA Newspaper Division studies show the business and news desks make the most requests for on-line searches. But experts report increased interest coming also from such areas as the features desk.

Scott Dennsey, Daily Press and The Times-Herald

Librarian Hammond and Newport News business reporter Matthew Sherrin gather information from computerized database.

Anne C. Leggett, library director of the Baton Rouge newspapers, says the Advocate's music critic requests advance information on shows he reviews on visits to New York. And profile writers make good use of biographical information on out-of-town celebrities. Facts gleaned from such a wide variety of sources might not be available by perusing local clips or other limited print resources, she adds.

Diane C. Mirvis, chief librarian of Syracuse Newspapers, says a study of database usage at her newspapers between August and December 1985 showed that the city desk and its staff of reporters accounted for the largest numer of on-line requests—33.6 pecent of the total. Others were the business desk (19.7 percent), the lifestyle desk (13.27 percent), sports desk (12.94 percent), the news bureaus (7.8 percent) and the editorial department (6.8 percent).

Another frequent user was found to be newspaper management. The front office routinely seeks such things as information on vendors and other companies for corporate reasons, and profiles of pebple for personnel and business reasons. Management also uses the *Official Airline Guide* database, which allows newspapers to check schedules and car-rental rates and even to book reservations.

"Use patterns" can be misleading, however. They can change as the mix of employees in the newsroom changes, Mirvis says.

"It really depends on the research style of the editor heading that department and the research style of individual reporters," she explains. Some reporters never consult the library, she says, regardless of whether they might benefit from a routine check of periodicals or a detailed on-line search.

FAVORITE DATABASES. Regardless of how many different kinds of database requests a newspaper may generate, there is an ever-expanding plate of on-line services from which to choose. There are literally hundreds of individual services available, and more are being introduced all the time.

In addition, many of the services are constantly expanding their menu of individual offerings. Experts say there is no single database that will meet all needs. That is true, they say, even though some services overlap through arrangements called "gateways," in which one program offers access to other databases.

Nevertheless, a handful of services are proving to be particularly popular among newspapers. According to the 1986 SLA Newspaper Division survey, the most widely used is Nexis, produced by Mead Data Central of Dayton, Ohio.

Nexis has a huge offering. Full texts and abstracts are available from at least 15 newspapers including The New York Times, The Washington Post, The Christian Science Monitor and American Banker; at least 33 consumer and specialty magazines such as Business Week, Forbes, Aviation Week & Space Technology, and Oil and Gas Journal; at least 10 wire services including the Associated Press, United Press International, the PR Newswire and Xinhua (New China) News Agency; at least 42 newsletters such as McGraw-Hill's Biotechnology Newswatch; the Federal Register and other government documents; and the Associated Press Political Service containing information on congressional and gubernatorial candidates. The list goes on and on.

Charges for the services are almost as diverse as the offerings. For example, in the case of Mead Data Central, there are four charges that make up the final user bill: a monthly fee, either $50 or $125 depending on the services subscribed to; a basic telecommunications charge, either $17 per hour using WATS lines or $12 using any one of the three dedicated data-carrier lines—Meadnet, Telenet or Tymnet; "connect time" to the service's mainframe computer, $20 per hour; and a $9-$23 "search fee."

There are hundreds of individual services available, and more are being introduced all the time.

In addition, a hard-copy printout or copying the computerized data on a magnetic floppy disk costs 2 cents per line of text.

The SLA study shows that other most widely used services are:

- Dialog Information Services Inc. of Palo Alto, Calif., providing more than 200 bibliographic databases on many subjects.
- Vu/Text Information Services Inc., a Knight-Ridder subsidiary in Philadelphia, offering access to files of at least 35 newspapers, the Associated Press, an encyclopedia, various business and finance databases, maritime-related information, Canadian news sources, international news and even recipes. Vu/Text also sets up and maintains newspapers' electronic libraries.
- Dow Jones News/Retrieval Service, giving access to files of Dow Jones publications including The Wall Street Journal and to extensive information on business, government and the courts.
- DataTimes, offering access to files of a number of newspapers for which DataTimes' parent company–Datatek Corp., a subsidiary of Oklahoma Publishing Co. of Oklahoma City–has set up automated library systems. DataTimes and Dow Jones News/Retrieval Service recently entered into an agreement by which the Dow Jones service will be available through DataTimes.
- Info Globe of Toronto, offering stories from The Globe and Mail of Toronto and used mainly by Canadian newspapers.
- An online database of the Canadian Press, the Canadian news cooperative.

A big factor to consider in selecting databases is cost. "It really must be cost-effective," says Mirvis of Syracuse. She tests systems extensively before subscribing to them and has dropped some after buying them because their worth did not pan out.

In some cases, databases can help newspapers cut costs. "Some things on Dialog are full text from (publications with) subscriptions costing $400-500 a year," notes Hammond of the Newport News newspapers. For publications consulted relatively infrequently, it is easier and cheaper to use Dialog

the most experienced executive recruiting firm in newspaper and broadcasting

than to keep buying the annual print-version subscription.

Leggett of the Baton Rouge dailies, which subscribe to Nexis and DataTimes, says newspapers have the option of researching databases to which they do not subscribe by contracting with an outside source, perhaps an educational facility. For example, the Lousiana State University library in Baton Rouge subscribes to some databases that the newspaper does not have. Calling on those services "supplements what we can do in-house," Leggett says.

SEARCH SKILLS REQUIRED. Each service comes with its own set of passwords and computer commands. Because of the complexity and sometimes stiff fees, the most effective way to use on-line databases is to limit the searches to expert researchers who have become computer-keyboard virtuosos.

The experts at most newspapers are the same librarians upon whom reporters relied in pre-database days for research assistance. Reporters and editors generally are told to keep their hands off the equipment.

"Our attitude is we can do it better and cheaper," says Foley of The Washington Post. An exception at the Post is that some desks employ their own qualified researchers who are allowed to perform searches.

Another exception common to many newspapers is to allow reporters and editors freedom to peruse their newspaper's own electronic files if the system is so equipped. In many cases, the journalist can use his or her own video display terminal to do so.

Mirvis says the Syracuse Newspapers are working on a system intended to simplify searches. The goal is to make all on-line work as easy as gaining access to the newspapers' own files. Completion of the project is "down the road," however. Mirvis adds she is not yet sure how liberal the newspapers are going to be in allowing editors and reporters to use it on their own.

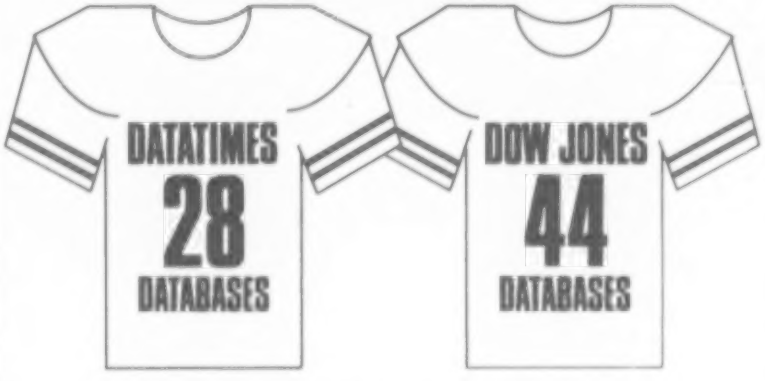
For now, she and her staff maintain tight vigilance on the systems. "I use that database as just another tool in my library," she says, and the library has final say on whether a reporter's information request merits an electronic search. Major disagreements between the library and editors or reporters are taken directly to the managing editor or even to the publisher, she says.

There may be some other disputes brewing over the use of such databases. The courts so far have held that records available on paper should be equally available when stored on computers. But some observers say there are "Big-Brother"-like privacy questions yet to be addressed. For example, through the databases it is possible to dig up sensitive or embarrassing facts about people that would be practically impossible to compile otherwise. With help of the computer, one might easily learn of previous marriages, about property owned in distant cities, about a criminal record or other particulars hidden in the closet.

Another privacy concern has to do with those who conduct searches. Some database companies say the CIA, FBI, National Security Agency and others have asked to see records showing who uses the databases and for what purposes. The companies have rejected such requests.

Barring any curbs imposed as a result of such concerns, current users say there is no doubt that newspapers will continue to expand their use of databases, and that journalists and researchers will come up with new and more innovative ways to make withdrawals from memory banks. □

Dow Jones News/Retrieval®
and DataTimes...



America's Best Information Line-up.

Dow Jones News/Retrieval® is coming online to DataTimes with the best information line-up in business: *The Wall Street Journal, Barron's, Forbes, Inc., Financial World*, PR Newswire, Dow Jones News®, and more.

You know DataTimes. We help America tackle its business information needs with online newspaper database access from the country's leading newspapers and newswires including *The Washington Post, The Dallas Morning News*, AP Newswire, the *San Francisco Chronicle* and many more.

You know Dow Jones. The leading business information source. Period.

Together, we're the greatest offense in the game of business. When you need data on any person, company or subject for business or other kinds of news, it's online with DataTimes. Easy research with easy access from any computer terminal, *anywhere!*

Now, you can gain impressive yardage against the competition without manually searching through a stadium full of old newspapers, magazines, files, and microfiche.

Call DataTimes today and get over 30 business and financial databases from Dow Jones News/Retrieval® *plus* 28 of the country's leading newspaper and newswire services.

DataTimes and Dow Jones News/Retrieval®. The winning information strategy. And your best offense in the game of business.

WHO PROVIDES CLEARANCE TO FLY THIS PLANE?

Until the Pittsburgh Press stepped in, commercial airline pilots could take control of a plane even when their health might put them and their passengers in jeopardy.

The story began to unfold when an airline pilot was brought to a Pittsburgh hospital emergency room clinically dead from a cocaine overdose and then checked out 33 hours later. Doctors and nurses were helpless to keep him from flying. They couldn't warn air safety authorities because of laws protecting patient confidentiality.

Pittsburgh Press reporters Andrew Schneider and Matthew Brelis decided to find out how often this kind of thing happened. They uncovered an outdated FAA medical review system, rendered ineffective because of superficial examinations and lack of drug testing in the bi-annual physicals for commercial pilots.

Using the Freedom of Information Act, they reviewed thousands of medical cases. They found that the FAA's top physician had granted hundreds of exemptions to pilots previously declared unfit to fly because of serious medical problems, including risks of heart attacks and diabetic comas.

Even pilots who had lost their driver's licenses for driving under the influence were still flying.

The response to their reporting was quick and direct. The FAA, the Department of Transportation, Congress, the Air Line Pilots' Association and the American Medical Association demanded reforms.

It isn't easy to navigate through an industry's own system for checking itself. But because of The Pittsburgh Press, a new portrait of pilot fitness emerged.

At Last, Synergism In the World of Publishing System Suppliers.

Now there is a single source for the systems requirements of the entire publishing industry. That source is Mycro-Tek.

Through a cooperative product development and marketing arrangement with Norsk Data, a pioneer in publishing systems and one of the world's leading systems manufacturers, Mycro-Tek has tapped the brain power of two continents to put total systems solutions at your fingertips. Now literally every facet of your system requirements can be met by a single source—from a one-terminal system to a network incorporating hundreds of terminals and peripherals; from a system used to publish a small weekly to a total publishing/management system for a million-plus-circulation daily; from your hardware and software requirements to your service and upgrade demands of today and tomorrow.... Mycro-Tek *is* the solution.

WEATHER PAGES

Everybody talks about the weather, and newspapers are doing something about it: making their coverage clearer, brighter and more complete

BY GENE GOLTZ
presstime staff writer

Many U.S. daily newspapers are completely remaking their weather pages in response to readers' nearly insatiable demand for weather news.

One weather editor compared the recent demand to a sports addict's hunger for more and more statistics. Readers devour the colored, three-dimensional weather maps, local and regional weather reports, weather stories, weather anecdotes, and historical weather notes. Still, they ask for more.

"It's amazing how keen an interest there really is," says Kelly Smith Tunney, assistant general manager/director of communications for the Associated Press.

"We get a million minute requests," says Mike Hurley, weather editor for the Los Angeles Times.

Letters about weather coverage arrive at the rate of about 50 a week, he says. Readers ask for more global temperature reports, national listings, marine forecasts, details on winds off Tahiti and snow depths in Duluth.

"When someone has a particular tie to a spot on the Globe, they want to see how the weather is there," says Hurley. "There's a great deal of reader demand for specific data."

Greater reader interest in things meteorological was demonstrated in a recent survey of 165 daily newspaper managing editors. More than half of the 109 respondents said they were devoting more space to weather news than three years earlier.

The survey was conducted by journalism Professor Douglas A. Anderson and graduate student Claudia J. Anderson of Arizona State University, and results were reported in the Summer 1986 issue of Journalism Quarterly.

Today, the survey found, about a third of all dailies above 20,000 circulation devote a half-page or more to the weather. And whereas there was little eye-catching color on newspaper weather pages five years ago, today two out of every 10 large papers have them, and one of every 10 small papers.

It's not clear whether reader interest has been awakened because of many newspapers' flashy new weather pages, or whether such pages have been created in response to reader interest. What is clear is that all over the United States, newspapers have been overhauling their weather pages—often in drastic and spectacular fashion.

USA Today, with its full-page, full-color weather report, is credited in many circles with encouraging other newspapers to discard gray and tired weather pages and to modernize them.

In the survey of managing editors, more than a fourth of the respondents agreed that the colorful Gannett Co. national daily had provided impetus for their newspapers to provide better weather news and maps, but about two-thirds said that was not the case. (Some respondents indicated they did not know.)

Some newspapers took the initiative to redesign their weather presentations before USA Today's debut in September 1982. For example, one year earlier, The Providence Journal began overhauling its weather package. Managing Editor/Graphics David B. Gray says the new version appeared "long before any perceived pressure from USA Today."

Yet many other newspapers took notice of USA Today's bold and colorful weather format. Joe Coleman, assistant managing editor in charge of photography and graphics at The Atlanta Journal and The Atlanta Constitution, says that when those papers were being redesigned, the managing editor at the time "had seen the USA Today prototype and found one thing worth stealing—an expanded weather map."

When the Chicago Tribune was being redesigned in 1983, the weather page was on then-Graphics Editor Howard Finberg's mind because, as he said at the time, "the (Chicago) Sun-Times was redesigning their (weather) presentation and USA Today was ready to roll into Chicago with its full-color page."

Newspapers apparently are still on the weather-page binge.

The Los Angeles Times, which had redesigned its weather report in 1981, recently came out with a redesign of that redesign. It added graphic illustrations of air pollution forecasts and marine forecasts to 60 miles out from the coast—the entire 500-odd-mile California coastline, not just Southern California as was previously the case.

A rival newspaper, The Orange County Register, revamped its weather page last fall. It now carries nearly a full page of weather news, with three maps—one national, one state and one county.

About a third of all dailies above 20,000 circulation devote a half page or more to the weather.

THE FORECASTING GAME. Regardless of their editorial emphasis on the subject, U.S. newspapers large and small get much of their weather information, directly or indirectly, from the government's National Weather Service. The NWS collects data from 260 U.S. locations, weather satellites, weather stations at military bases around the globe, and from other countries that share weather information on a cooperative basis.

Through 52 forecasting stations and with the help of 100,000 volunteer storm-spotters, the NWS makes weather information available free to newspapers or anyone else wanting it and having a means to receive it. The service boasts that the accuracy of its forecasts has improved immensely over the past 40 years.

Even so, a host of private companies that sell weather information to clients have sprung up. They claim to provide specialized and localized forecasts that are beyond the mandate of the NWS.

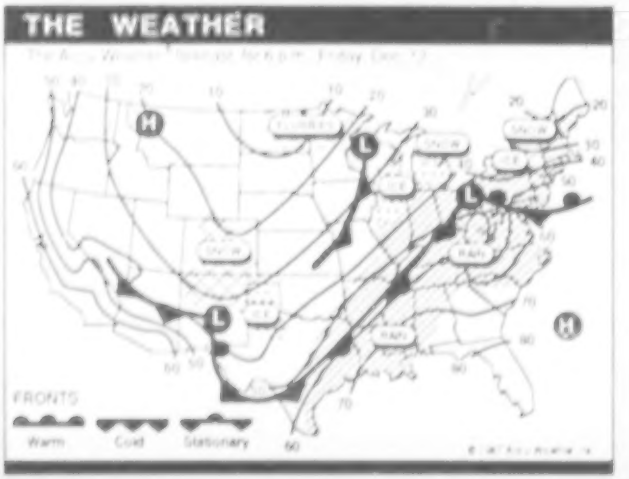
"The private weather companies out there take the bulk information and digest and tailor it for a client," says Donald E. Witten, director of the office of public affairs

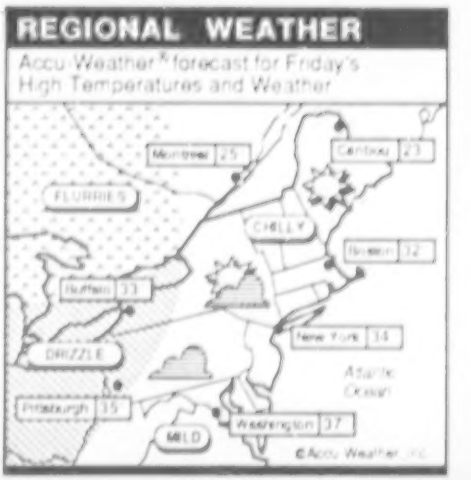
Accu-Weather and The Associated Press Announce

A NEW GENERATION OF NATIONAL AND REGIONAL WEATHER MAPS

on the AP LaserPhoto Network

Up-to-Date ● Accurate ● Visually Appealing ● Consistent ● Easy to Read





Other exciting map and text features are also available by direct arrangement with Accu-Weather. These complement and enhance the new Accu-Weather / AP Maps.

- Get local, state, and multi-state maps with the same look, style and quality of the national and regional Accu-Weather / AP Maps. They all fit together to make a total weather package.
- Text summaries that describe, supplement, and support the new Accu-Weather / AP national and regional maps.
- Over 40 weather features to choose from, including 5-Day Local Forecasts, Local Statistics, Tanning Index, Ski Weather, U.S. and World City Forecasts, Resort Forecasts, and many more.
- These maps and features are tailored to each client's needs.
- Text is transmitted computer-to-computer, complete with typesetting commands. Our high quality maps are created on Macintosh and accessed through Accu-Weather's LaserPhoto or MacWeather system.

Accu-Weather graphics and text can significantly enhance the look, quality, and accuracy of your weather page, while saving you money in production costs. For information, call ACCU-WEATHER today at 814-234-9601.

for the National Oceanic and Atmospheric Administration, the U.S. Commerce Department agency that oversees the NWS.

Of the dozens of private weather consultation services around the country, four are catering to newspapers. Originally, they furnished weather information to radio and television stations as well as to a variety of other entities as diverse as farmers, ski resorts and commercial fishermen. Now they are slowly picking up daily newspaper clients.

Their fees vary from newspaper to newspaper and are based on such factors as the amount and the degree of customization of the information supplied, and on the paper's circulation size. Bob Lindmeier, general manager of one of the four companies selling to newspapers, Weather Central Inc. of Madison, Wis., says fees can range from $3 a day to $60 a day and up. For $3 a day, a small newspaper, for example, would get a black-and-white weather map with general information showing nationwide weather. The fees go up with added services, such as color-coded or three-dimensional maps, regional weather, or such features as picnic, gardening or sun-tanning forecasts.

The private firm claiming to be the largest of the four serving newspapers is Accu-Weather Inc. of State College, Pa., the home of Penn State University. Accu-Weather President Joel N. Myers, who founded the firm in 1962, has a doctorate in meteorology from Penn State and is a trustee of the university.

Myers says Accu-Weather has more than 1,000 clients, of which "40 or 50" are newspapers, including the Philadelphia Daily News—Accu-Weather's first newspaper client back in 1973—the New York Daily News and The Washington Times.

Accu-Weather, like the other private weather services, will provide virtually all things for a newspaper weather page. It offers about 35 different weather packages, including a sun-tanning index, gardening forecasts and international forecasts, such as the weather in Paris or Shanghai. It will furnish meteorologists, artists and computer technicians to help a newspaper completely redesign its weather page. It will transmit graphics, including daily weather maps, graphs and sketches, via computer to the newspaper ready to print.

Accu-Weather was the original supplier of USA Today's material for its weather page, but after a contract dispute in 1983, the relationship was terminated.

Weather Services Corp. of Bedford, Mass., founded in 1946, has about 600 clients, including six newspapers. The company now supplies the material for USA Today's weather page with the familiar three-dimensional color map.

Weather Services sends black-and-white national weather maps over a telecopier to USA Today by 2 p.m. There is one map for each color--red, blue, yellow, black--with the area drawn with black pen on each of four maps showing where the particular color should go. The maps also come complete with black-and-white rain or snow cross-hatching and locations showing cities and temperatures. USA Today then adds in the colors.

The pre-progammed weather text is sent directly from Weather Services' computer into USA Today's computer. The text includes a chart showing four-day forecasts of each of the 50 states, a short summary of "Weather Across the USA" in seven regions, a chart of highs and lows in cities around the world, weather summaries in 28 major U.S. cities, a short weather story covering the nation and other features.

Because the text is transmitted computer to computer the deadline is around 5 p.m. and can run as late as 6 p.m. Michael Chihak, assistant national editor at USA Today, says the deadlines are not strict, but that the weather page usually is not updated once it is prepared. In case of drastic weather changes, such as fast-moving hurricanes, Chihak notes, the paper would treat those as a news story to be run separate from the weather page. Deadlines for the paper's international editions are 11 a.m. for maps and 2:30 p.m. for text.

Since last year, the back page of USA Today's front section has not been devoted entirely to weather. There is now an ad across the bottom of the page—sometimes keyed to weather matters—that runs 3 inches high.

Weather Central of Madison, founded in 1974, recently has begun to step up its solicitations for newspaper clients. Last year the company developed a modern weather page with the Wisconsin State Journal in that city and has been supplying weather text to the Milwaukee Journal. The firm is negotiating with six or more newspapers to provide complete weather service, company officers say. Weather Central has about 140 non-newspaper clients, including the CBS television network.

Another meteorological company just getting into the newspaper business is six-year-old WeatherData Inc. of Wichita, which has been feeding weather information to about 40 clients who include radio and television stations and private entities such as agricultural agencies.

After working on a weather page for three years with the Wichita Eagle-Beacon and doing some graphics work for the Eagle-Beacon's parent, Knight-Ridder Inc., WeatherData announced Oct. 22 the formation of a newspaper network. Like the other private services, it offers a complete range of graph-

Weather Central Inc. provides map run by the Wisconsin State Journal of Madison.

Of the dozens of private weather services, four are catering to newspapers.

ics including national and regional weather maps that can be sent directly to a newspaper's computer by telephone line. WeatherData also offers weather text written in the style and typeface of the client newspaper -- even custom-made weather symbols such as snowflakes and lightning.

WIRE SERVICES. The Associated Press and United Press International also have been modernizing their weather services to meet the increasing demand. AP has signed up 24 newspapers for its Weather Auto Relay Network, an automated weather service that was started last summer. WARN provides graphics and text for 6,000 different weather items provided by the National Weather Service.

A newspaper can pick from that menu and receive the text and graphics directly into its own computer system.

AP also has been working with Accu-Weather on developing and furnishing new, enhanced national and regional weather maps to AP newspapers. Chris Pederson, AP editor in charge of technology, says, "A lot of the impetus (for improved weather packages) has come from member newspapers. Newspapers are sprucing up their weather pages, and since AP is out there in more than 1,400 newspapers, they are going to rely on us for that mission."

According to Pederson, AP was contacted about a year ago by newspapers using Atex front-end systems because the slow-speed National Weather Service printers were not churning out the copy at computer speeds. "So they said, 'Can AP help?' We were lucky, and I think they were lucky," says Pederson. "At the time we were in the midst of a program to speed weather information to our bureaus from New York, so it was great timing."

The upshot, says Pederson, was that AP was able to unveil WARN at last year's ANPA trade show in Atlanta.

A newspaper can receive text and graphics directly into its own computer system.

The 24 newspapers that have signed up for that service include some large ones, such as The Philadelphia Inquirer and The Boston Globe and some smaller ones, such as the Lubbock (Texas) Avalanche-Journal and the Wilmington (N.C.) Morning Star.

The cost is $72.78 a week for each WARN client no matter how many of the 6,000 items it selects to receive. "What AP interprets from this," says Pederson, "is that we now have a service appealing to a wide range of newspaper tastes in the weather, and because these guys can decide exactly how much of that flood of material they want to receive, the smaller guys are not buried. It's not very expensive."

Pederson says AP has done printout samples of the WARN service for large numbers of additional newspapers and expects many more to subscribe.

UPI, meanwhile, is exploring the techniques of sending to newspapers text, maps and other graphics that will feed directly into their computers. UPI is also studying offering newspapers specialized area forecasts.

"We're looking into doing these things for newspapers if they are needed, depending on what the market studies show," says Bruce Kanner, UPI regional manager.

UPI has used Accu-Weather for its broadcasting clients but not for newspapers. It has relied on the National Weather Service to service its newspaper clients.

NOT A PRIORITY. The heightened interest in weather pages is not universal, however. Many smaller papers haven't the wherewithal to gussy up the weather.

A typical example is the Dothan (Ala.) Eagle (morning, circulation 22,445). Managing Editor Doug Bradford says his paper eschews color graphics but carries two full columns of weather news on Page 2, using AP data. The paper runs high and low temperatures of about 100 cities nationwide and carries a national AP weather story. But most of the weather news concentrates on state and local conditions. "We want to know what's going on in Montgomery (Ala.), not Butte, Montana," says Bradford.

In Canada, the Canadian Broadcasting Corp. handles the brunt of weather news. In Toronto, for example, none of the three daily papers even carries a map on the weather page, except for the Saturday edition of The Toronto Star.

"We killed our weather map, which caused no little distress," says Colin MacKenzie, assistant managing editor for The Globe and Mail. "We had a weather map, but it was half out of date, with halftones and no color capability. It just looked like hell. People complained. We still get one or two phone calls a month, but it hasn't seemed to hurt circulation any. . . . If you're seriously interested in the weather, radio does a terrific job."

MacKenzie says the USA Today approach "hasn't swept the country the way it did in the United States."

"I couldn't believe it, how your weather goes over," says MacKenzie. "Your papers carry an amazing amount of weather." □

'Shoe' **By Jeff MacNelly**

I DON'T KNOW IF IT'S WORTH IT TO PRINT THIS BIG WEATHER MAP IN THE PAPER...
YEAH, IT MUST BE EXPENSIVE TO DO FULL COLOR EVERY DAY...
IT SURE IS.
YOU WOULDN'T BELIEVE THE CRAYONS WE GO THROUGH...

THE HEARST CENTENNIAL.

100 YEARS OF MAKING COMMUNICATIONS HISTORY.

This year The Hearst Corporation is celebrating its 100th anniversary in American journalism.

As a salute to the many thousands of employees who helped us reach this milestone, we have gathered together just a few from the past and the present who, in some special way, represent the achievements of all their co-workers over the past century. Reporters, columnists, editors, publishers, writers, broadcasters and business executives: they have made Hearst one of the largest and, we think, one of the best communications companies in the world.

And to our readers, our viewers, our listeners and our advertising clients for their support over the years...thank you!

The Hearst Corporation

Desktop Publishing

BY ROSALIND C. TRUITT
presstime technical writer

Personal computers teamed with laser printers produce a less costly alternative to conventional typesetting

(Editor's note: This article is the first in a four-part series on new electronic pre-press technologies and how they are transforming the newspaper business.)

Two years ago when Apple Computer Inc. introduced its Macintosh "desktop-publishing" system, complete with software, hardware and peripherals, the Cupertino, Calif., firm simultaneously gave birth to and locked up a new market.

An Apple Macintosh personal computer with output to a laser printer virtually became synonymous with desktop publishing, and that dominance continues. However, the company's success has prompted a bushel of other software and hardware manufacturers to enter the field and aggressively market new products.

In the newspaper business, desktop publishing is making inroads at small dailies and weeklies. Executives of those newspapers say the systems reduce publishing expenses [presstime, Jan. 1987, p. 18].

"Speed and cost savings are the primary advantages for us," says Joseph A. Tinkelman, co-publisher and general manager of the Potomac Almanac, which is distributed to 30,000 households in Potomac, Md., a suburb of Washington, D.C.

Tinkelman says he and Co-publisher Leslie Leven considered purchasing a traditional front-end system that would have cost about $120,000. Instead, they settled on a desktop system with 14 Macintoshes, two hard disks, two LaserWriters and software for about half that amount. In addition, the newspaper no longer pays $50,000 a year to have its type set by an outside firm.

By using a $5,000 laser printer, some newspapers have replaced $30,000 typesetting machines. The printers also require less servicing, they contend, so maintenance costs are reduced. Savings also accrue from the use of the cheaper paper in the printer and the elimination of costly development chemicals.

One newspaper, a 2,000-circulation weekly, estimated it had been spending $350 a month for phototypesetting paper and another $50 to $100 for processing chemicals before purchasing its desktop system. The newspaper now budgets $50 per month for composing materials.

The technology involves use of relatively inexpensive and easy-to-operate personal computers with software designed for text composition, and in some cases for page makeup and manipulation of graphics, too. A laser printer provides the finished copy on plain paper. In many cases, users also purchase a hard disk for increased storage of data, large computer display screens and dot matrix printers.

Three different types of hardware currently are used for desktop publishing: Macintosh, International Business Machines Inc. PCs and compatibles—computers that run the essentially same software as IBM PCs.

Personal computers can be purchased for about $2,000 apiece, often less with discounts.

As for the software to drive the computers, more than a dozen manufacturers offer publishing packages, and more are arriving on the scene all the time. The packages have been designed to process words, to create line art and to drive typesetters. Software costs range from $500 to $1,000 per program, although some of the so-called professional desktop software may cost $2,000 to $10,000 or more. The more expensive software is faster and (unlike some less expensive packages) offers hyphenation and justification plus a larger dictionary, among other features.

In addition to the relatively modest cost, desktop publishers praise the systems for their ease of use. In many cases, the systems were used to put out a newspaper a day or two after being installed.

On the negative side, users have some complaints about the reduced size of keyboard keys compared with other computer terminals. Also, some say the systems are more sensitive than multi-user front-end systems, with copy occasionally pulsating on one terminal when someone is using another one in a network system.

Newspapers also have complained that it was necessary to have a consultant or other expert assemble and install a network of Macintosh computer terminals for a multi-user system. However, in January Apple introduced a central storage unit that will allow several Macintoshes to share data stored on a central hard disk. The company says this will make networking more efficient.

Typesetting companies and professional typographers dispute whether the laser printers used in desktop-publishing systems yield quality approaching that of conventional phototypesetters [presstime, July 1986, p. 57], but many customers indicate satisfaction with the laser's 300 dots-per-inch resolution. Phototypesetting resolution is 1,200 or more dpi.

There is disagreement on whether laser printers yield quality approaching that of phototypesetters.

ON THE MOVE. There is no doubt that desktop publishing is becoming increasingly popular among newspapers. However, those interviewed by presstime—and that includes computer consultants, computer manufacturers and newspaper computer experts—believe desktop publishing will have only limited use in medium-to-large metropolitan newspapers for the forseeable future. The systems just aren't designed to process quickly the quantity of data generated by larger publications, they say.

Right now, Robert A. Susskind, ANPA programmer/analyst, says desktop publishing is best suited to small newspapers that can use it not only in producing editorial and advertising materials but for internal recordkeeping as well.

In medium-sized newspapers, such a system could be helpful for interdepartmental work and in large newspapers for production within a department, like advertising or promotion.

"It's important to remember that it is primarily a 'pre pre-press' system for very

Systems

Ed Kashi

Electronic Publisher Inc. has sold about 85 Macintosh desktop systems to newspapers, including The Northern Light of Colorado Springs and its publisher, William H. Kezziah (foreground).

large newspapers right now," says Susskind. "Most of the newspapers using it are using it for line art but not halftones. Halftones are still screened and pasted up with the laser-printed text before (a page) goes to the printer."

The systems with less expensive software work best on pages that are nearly identical, such as long columns of type. For that reason, although pagination could be used for a report, it doesn't work as well for a newspaper in which nearly every page is different, according to editors involved in desktop publishing.

Most of the newspapers create display advertisements with a desktop system but prefer to paste up pages by hand because the editors say it gives them more flexibility and control.

'We don't have any illusions that this system would work for larger publications, but we feel it would be ideal for small newspapers—and there are a number of smaller newspapers out there," says Carolyn Grossman, manager of desktop publishing for Xerox. Her company just introduced its first desktop-publishing system. It is IBM-compatible.

All of the companies marketing to newspapers say work is under way to make products more adaptable to a paper's needs. Some of the newspaper executives interviewed say they receive upgrades on equipment two or three times a year.

For example, PageMaker, a software program that integrates text and graphics and is used by several newspapers, until recently would produce only tabloid-sized pages, which made it virtually impossible to create broadsheet pages.

After users, including newspapers, were asked to suggest improvements in the software, PageMaker was modified to produce broadsheet pages. Carolyn Bakamis, spokeswoman for Aldus Corp., the Seattle company that manufactures the software program, says the larger page format is one of 20 new features added to the software program.

In addition to producing larger pages, PageMaker now offers kerning (adjusting the space between characters and words), hyphenation, production of up to 128 pages at a time and the ability to work on facing pages simultaneously. It has also proved popular with newspapers because it offers a variety of tints, lines and borders for advertising displays as well as cropping for graphics.

NEW PLAYERS ATTRACTED. Originally, PageMaker was only available for Macintosh computers, but the company now makes software for use with IBM PCs and compatibles as well. That chronology reflects how desktop publishing has evolved.

Apple, which introduced its Macintosh in 1983, designed it for work with graphics. In 1985, Apple introduced the LaserWriter printer and teamed it with the Macintosh. Line art and text could be combined and transmitted to a laser printer—and desktop publishing was born.

Apple officials advertise the "Mac" as the system that offers the "power of a design studio, typesetter and print shop all right on your desktop."

The idea of teaming a PC with a laser printer didn't remain the company's private domain for long. IBM-type systems were introduced less than a year later.

The operating system for IBM PCs is called PC-DOS, or "personal computer disk operating system." Most computers that are IBM compatible use the MS-DOS operating system. MS-DOS stands for "Microsoft Disk Operating System" because it was developed by Microsoft Corp. Software that runs on MS-DOS computers usually will run on PC-DOS computers, although Susskind says there are exceptions.

IBM's desktop system runs on Interleaf Inc. software. Interleaf has designed Workstation Publishing Software for less complicated jobs and more sophisticated software, RT Publishing Software, for professional use.

The professional software—which costs $8,200, compared with $1,995 for Workstation—has more extensive formatting capabilities and integrates text and graphics more quickly.

Interleaf has just introduced two new laser printers with 300 dpi for use with IBM's desktop system.

The new Xerox Desktop Series, Ventura Publisher Edition, is IBM-compatible as well. The system can provide output to a laser printer as well as to a color ink-jet printer.

Another company, Compugraphic Inc., with personal computers for editorial use and laser printers for proofing, will aim for the professional desktop publishing market.

Desktop systems are sold in a variety of ways. One reason Macintosh became so popular so fast is that purchasers could buy a nearly complete system—hardware, some software and peripherals—from one retailer. Word processing software was often purchased from other companies.

Other companies, including Xerox, offer complete systems as well. The various components of its Ventura system are sold together and separately but are discounted if purchased as a package.

The ways to buy include:

• Getting a "turnkey" package from a manufacturer, in which equipment is sold and installed, training arranged and maintenance provided by that one company. Turnkey arrangements can be good for those

who want to be handed a complete package.

• Going to a retailer, in which hardware and compatible software are bought from one or more vendors. Some newspapers say this gives them more control over specific components of the system.

• Using "value-added resellers," entrepreneurs who contract with a hardware manufacturer to sell the hardware and who then add customized software for a specific market. An example is Electronic Publisher Inc. of Excelsior Springs, Mo. Company President Patrick J. Morgan packages Apple systems that are designed for newspapers and other publishing entities.

As an Apple value-added reseller, his company customizes systems for newspapers, some of which include software designed by his firm. The package must be approved by Apple before it is offered for sale. Morgan says he has sold about 85 desktop systems to newspapers across the country in the past 18 months.

In addition, Morgan's company provides installation and other support as well as maintenance. If repairs are necessary, the user sends the malfunctioning Macintosh to Electronic Publisher, which in turn sends out a replacement PC within 48 hours of the original notification of a problem.

An Apple spokeswoman says newspapers are a major market for the Macintosh, and there are more than a dozen value-added resellers who work primarily in the newspaper market.

HOW THEY WORK. One thing that sets desktop-publishing systems apart from conventional composition and typesetting methods is the way commands are given to the typesetter. On front-end systems, commands or formats are used to tell the typesetter how to set spacing and which typefaces to use, among other things. With the "hyphenation and justification" command, the way lines will be broken when typeset is displayed on the computer screen, but specific typefaces cannot be seen.

Many desktop-publishing systems go a step further and use "What You See is What You Get," or WYSIWYG, page-composition software.

WYSIWYG means the text appears on the screen in the typeface and in the size specified. This allows the user to see how a page will look prior to typesetting. Newspaper editors who are using WYSIWYG-type software say it simplifies their jobs. If something doesn't look right, changes can be made easily.

Such software is manufactured by, among others, Interleaf Inc. and Bestinfo Inc., although the latter prefers to be called a professional publishing system and not desktop. The programs run on both Macintosh and IBM-type hardware.

For creating graphics, there are software programs for what is called "painting," in which illuminated dots known as pixels are manipulated on the computer screen to form images. Manipulation is usually accomplished with a "mouse"—a gadget on the desktop that directs a pointer on the computer screen. Software programs allow a user to create designs and other art, and there are programs to generate charts and graphs.

After the text and graphics are created, they can be integrated on the computer screen and sent to the laser printer.

Apple's LaserWriter and Hewlett Packard's LaserJet, which can be used with MS-DOS and PC-DOS computers, appear to be the laser printers used most often by newspapers, although there are more than a dozen others on the market.

A laser printer is driven by a computer which is given commands as to which type face will be used. The computer calculates spacing, how each letter will look and other factors. Once that is done, the laser is activated. Its beam is directed by mirrors to a rotating photoconductive drum. The drum becomes electrostatically charged and attracts toner particles that arrange and adhere to the drum in a pattern determined by the computer. The drum then imprints the image on regular paper.

WHERE THEY WORK. In Colon, Mich., which has a population of about 2,000, Melvin Plath and his wife, "Skip," bought an Apple Macintosh system about 16 months ago to publish their weekly newspaper, The Express.

After 30 years of publishing, the couple decided to trade in a 1920's vintage Linotype machine for two Macintoshes and a laser printer.

"We did everything here. Set the type, ran the press," she says, adding that she and her husband were considering retirement about two years ago. Years of producing the entire newspaper themselves was exacting a toll.

These days, though, she says they're putting out the 1,000-circulation weekly with a minimum of effort. "We almost feel like we're retired because we can take a little time off. It's just great."

Her husband notes: "After we'd print the paper, it would take more than half a day just to break down the type. Not having that to do alone saves a lot of time."

Tinkelman, the co-publisher in Potomac, Md., says the Macintosh system is the first computer system for his newspaper. The newspaper went from an average 80 pages twice a month to about 64 pages a week in May 1986.

"Of course, everything is faster with computers than without them. . . . I don't believe we could have gone weekly without (the system)," Tinkelman says.

Alan and Kathy Johnson, a husband and wife who publish the Liberty County Times, a 2,000-circulation weekly in Chester, Mont., switched to a desktop system when a fire destroyed much of their typesetting equipment shortly after they took over the newspaper in 1985. Johnson says he used his Apple Macintosh equipment to produce the newspaper the same week he bought the system. "It did the job and did it early on," he says.

Although pleased with the resolution from his laser printer, Johnson adds: "My background was really in writing and editing before we got the paper here. I didn't know a lot about the production end, so maybe I don't look at it as critically as someone who's closer to typesetting."

He has three Macintosh Plus PCs, each with one megabytye of user memory, a 20-megabyte hard disk drive and a LaserWriter.

"I believe desktop publishing will revolutionize the newspaper business much in the same way offset did," says Johnson. □

SUPPORT PRODUCTS INC.

REMOTE PASTING & SOFTENING SYSTEM
SAVES MAKEREADY TIME AND MONEY

The Support Products Inc. remote pasting and softening system is easily installed on any folder. It allows production of booklets from 8 to 96 pages. Remote control keeps pressman away from moving web — eliminating possibility of tools being dropped in folder. High pressure employed permits finer orifices on the glue heads, so the glue job is neater with less material used. Call today for additional information and pricing.

Now you see him.

© 1986 Knight-Ridder, Inc.

Most people don't.

To many people, Walter is invisible. They've trained themselves not to see him.

They look the other way when Walter and other street people come into view.

The Philadelphia Inquirer wanted to bring these invisible Philadelphians into sharp focus for its readers.

Walter is a part of that invisible Philadelphia story.

His past is a stranger.

When it rains, he escapes in a box.

At night, he sleeps on steam vents on several streets in downtown Philadelphia. No one can ever remember seeing him washed and clean.

Many of these street people are a part of the bizarre phenomenon of the 1980s resulting from the deinstitutionalization of mental patients. In city after city, schizophrenics treat their torment daily by dulling their senses with all the alcohol they can get.

Stubble-chinned or bearded, bound in winter in ancient overcoats, they look like they've stepped out of the past. Ragged. Depression-era ghosts on modern streets.

Inquirer photographer Tom Gralish took to those streets to do a photo essay on downtown derelicts.

For the first week, he took no pictures. He worked on breaking down their highly developed sense of distrust for outsiders. Then, for five weeks, he shot 60 rolls of film, 2,160 pictures.

Selected photographs ran for more than 10 pages in the Inquirer. This is a fragment of that work.

Tom Gralish won the 1986 Pulitzer Prize for Feature Photography.

His pictures had graphically exposed a social policy which dumps the mentally ill on our cities' doorsteps and streets.

Considering the grim subject, many newspapers would never devote such an extraordinary amount of space to this kind of story.

But The Philadelphia Inquirer is a Knight-Ridder newspaper.

KR

KNIGHT-RIDDER

We never underestimate the American people.

Knight-Ridder, winner of an unprecedented seven Pulitzer Prizes in 1986, is a nationwide communications company with eight television stations, cable systems, business information services and 34 daily newspapers.

THE CHANGING FACE OF THE NEWSPAPER WORKFORCE

It's older and more heterogeneous in makeup and attitude. And it's getting more so. This is causing newspapers to adjust their personnel policies significantly.

BY CLARK NEWSOM
presstime labor writer

America at work today is a far cry from a generation ago. In 1964, Harry H. Browning, president and general manager of The Tennessean of Nashville, was personnel manager of The Cincinnati Enquirer. He recalls the difference. You didn't see workers past the early stages of pregnancy. No one wore beards. Women did not wear slacks to work. Smokers were prevalent. Alcohol was the only drug used, and there was not much concern about that. A female manager was a curiosity. Few blacks were in white-collar jobs. AIDS, of course, was unheard of.

When Octavia Harriston went to work in the classified telephone salesroom of the Chicago Tribune in 1965, there were two other black women on the staff. There were no blacks and few women in outside sales positions. "The environment I entered at the Chicago Tribune in 1965 was no different than that in other businesses or institutions across the country," she says. She started the job "not really expecting a lot and certainly not expecting a 'career.'" Now she is the Tribune's employment manager.

No one can deny that the workforce has changed dramatically in a generation, partly because of the social upheaval of the 1960s. With the exception of such recent developments as drugs in the workplace, the changes that have occurred in the 460,000-employee U.S. newspaper workforce generally have been positive, say human resources specialists.

For one thing, the physical makeup of that workforce is becoming more balanced. According to the Equal Employment Opportunity Commission, the percentage of black employees at U.S. newspapers with more than 100 employees rose from 3.3 in 1966 to 9.5 in 1984, the latest year for which figures are available. During the same period, the percentage of white employees at newspapers dropped from 94.9 to 85.3. Also during the same period, the percentage of women at those papers rose from 19.8 to 35, while the percentage of men dropped from 80.2 to 65. (See charts, pp. 28, 29.)

Between now and the year 2000—a scant 13 years away—these trends will accelerate, personnel specialists say. They and other fundamental changes in the newspaper workforce will be dictated by demographics, by laws against discrimination in the workplace, by attitudinal differences of newer employees and by enlightened management.

The newspapers that can adapt their human resources policies and attitudes to these new realities, experts agree, are the ones that will flourish.

"Most of our personnel policies and practices were established years ago when we had a predominantly white, male workforce," says Alvin Miller, vice president/personnel for The Record in Hackensack, N.J., who is president of the Newspaper Personnel Relations Association. "The management that's going to be able to adjust and change will be the successful recruiter and retainer of good people in the future."

Extensive interviewing by presstime of human-resources experts in the newspaper business found that these will be the key changes in the workforce during the remainder of the century:

• **An aging workforce and a shortage of younger workers.** These twin phenomena will have a profound effect on newspapers, such as heightened competition with other businesses for entry-level personnel, higher pay for a more experienced staff, and greater costs for health insurance and pensions.

• **More women and more single parents in the workforce, more dual-career families.** These groups will increase the demand for child-care centers, flexible work schedules and flexible benefit plans.

• **The availability of more minority workers.** This will force newspapers to refine their recruiting and training efforts for blacks, Hispanics, Asians and others.

• **Different attitudes and demands among younger workers.** These workers will want more of a voice in shaping company policies and, because they will be in demand, they will have more mobility in changing employers when disappointed about promotions or some other aspect of their employment situations.

The aging trend is the one capturing the most attention at this time. "Demographically," says William B. Johnston, a senior research fellow at the Hudson Institute in Indianapolis, "America in the year 2000 will be slowing down and showing signs of middle age."

The U.S. Labor Department's Bureau of Labor Statistics projects that the labor force rate of growth, which was near 3 percent a year in the 1970s, will slow to only 1 percent annually in the 1990s. "The dearth of young people will be particularly noticeable," Johnston says. Concurrently, the average age of the workforce will increase from 35 today to 39 by the turn of the century, the oldest in the country's history.

Although there are no figures for the average age in the newspaper industry, it may be higher than the norm. For example, the average age of The Record's 1,050 full-time employees is 40, the Los Angeles Times reports an average age of nearly 42 for its 6,000 full-time employees, and the St. Petersburg Times reports that the average age of its 1,500 full-timers was 39 as of Jan. 1, 1985.

Another striking fact about the labor force of the future is that it will be more heterogeneous and female. The Labor Department says that by the year 2000, 80 percent of all new entrants into the workforce will be women, minorities and immigrants. These changes are bound to affect the newspaper business.

"While it's true that we manufacture a perishable product that happens to be unique every day," says Stephen D. Rice, personnel manager of the Asbury Park Press of Neptune Beach, N.J., "we still deal with the same type of productivity issues and human resources issues as all other manufacturing companies do."

"All of these changes are going to make for a more exciting workforce," says George D. Veon, until recently vice president and director of employee relations for the Chicago Tribune, "and probably a more productive workforce if we do a good job in identifying the value systems of this more diversified group. We will need to provide a work atmosphere that motivates people. This will probably mean new and different ways in dealing with our employees. It's going to require more creativity on our part." And it may not be easy. For changes in the newspaper workforce have not always come about smoothly, as demonstrated by the number of age, race and sex discrimination charges filed against publishing companies. "Newspaper managers attending seminars are increasingly finding discussions concerning discrimination and legal issues on the agenda," says Carol H. Green, vice president/human resources and legal affairs for The Denver Post.

"In larger cities," Green says, "there are a

A team of newspaper experts in the human-resources field is considering what the primary employee-relations issues will be in the year 2000.

number of discrimination charges being filed at the EEOC and with state civil rights commissions. Most are resolved at the agency level, but in a few instances they have resulted in federal court lawsuits. The newspaper industry probably generates about the same number of lawsuits as any other major industry. It's a natural result of lawyers becoming more aggressive for plaintiffs in the employment law field. It's also the result of the workforce being more diverse than it was."

To cope with the changing workforce, publishers are looking to their human-resources specialists to spot trends and to advise them on how to respond to those trends. To help achieve that end, a team of newspaper experts in the field is considering what the primary employee-relations issues will be in 2000. The nucleus of the group is the Personnel Relations Subcommittee of ANPA's Human Resources Committee.

"Indications are that newspapers will remain a fairly labor-intensive industry," says Patricia P. Renfroe, ANPA manager/personnel relations. "Because of this, it is important to get an idea of the issues that may be important to, and that will have an impact on, our future labor force."

AGING AND RETIREMENT. Since 1964, newspapers have gone through a technological revolution and learned to live with the changes it brought, especially in terms of radically reordering the staffing needs of the production departments. With the "graying of America," newspaper specialists in human resources are pondering demographic changes that will significantly alter the overall newspaper workforce. "It's a fact of life, and we'll have to adapt to it one way or the other," says Roger P. Parkinson, publisher and president of the Minneapolis Star and Tribune. "Hopefully, we'll anticipate and not just react."

In terms of preparing for the "graying" trend, anticipation should not be a problem because the demographics are clear: Tomorrow's workers will be older than today's.

Circulation personnel concerned with the daily distribution of newspapers through the "little merchant" system are already keenly aware that the pool of young workers is shrinking [**presstime**, Feb. 1987, p. 20]. The so-called "baby bust" generation was the result of a dramatic drop in population growth across the United States during the 15 years between 1965 and 1980. Today, baby-bust youngsters who are beginning to enter the regular workforce find themselves in growing demand for some kinds of entry-level jobs.

The Labor Department predicts the number of young workers will continue to decline both relatively and absolutely. Workers ages 16-24 accounted for 20 percent of the workforce in 1985 but will decline to 16 percent by the year 2000. Johnston of the Hudson Institute says fewer younger workers could lead employers to bid up wages, triggering new inflation.

"We anticipate more older people in the workforce as time goes on," says Charles N. Mock, executive vice president/personnel of the Providence Journal Co. "This will mean higher wage and benefits costs, because we won't have as many lower paid, younger employees coming into the workforce."

Frank A. McDonald Jr., director of personnel for the Richmond (Va.) Times-Dispatch and News Leader, says some newspapers may face a shortage of workers to fill jobs calling for new skills as computerization continues to spread through the industry.

As the workforce ages, early retirements will increase. That may seem a paradox, but it's not. It merely reflects the fact that experienced workers who will be making careers in newspapering will have an early-retirement option that previously was rare in the business. Improved employer-sponsored pensions coupled with Social Security have made the difference. The Labor Department says the proportion of workers 55 and older will decline from 13 to 11 percent by 2000.

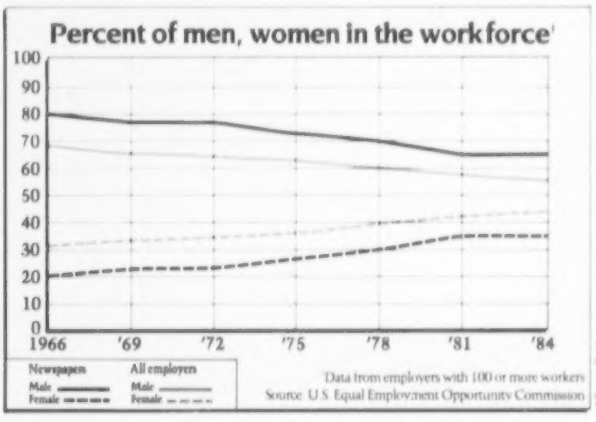
The trend toward early retirement is a strong one, according to the Social Security Administration, with more people taking reduced benefits at age 62.

But the early-retirement trend is not affecting all newspapers, and Sun Belt/Frost Belt regional differences may play a part in where it applies and where it doesn't. "Seventy-five percent of our people take early retirement now," says Gerald W. Wright, director of personnel and industrial relations for The Tampa Tribune.

"People don't want to work till 65 anymore," says Bobby G. Reid, corporate personnel director for Morris Communications Corp. in Augusta, Ga. "Most are getting out at 62 while still in good health."

At the Richmond dailies, "Most of our people are leaving before age 65," says McDonald.

Yet in locations such as Providence, Hackensack and



Philadelphia, that is not the case.

"We don't have many people taking early retirement" from the Providence Journal Co., says Mock. In Hackensack, Miller estimates that 40 to 50 percent of The Record's experienced workers retire before 65, but he says that represents "no change."

June B. Barry, vice president/human resources for The Philadelphia Inquirer and Daily News, reports that most of the employees at those newspapers work until the normal retirement age. "What's going to happen," she says, "is that people are going to 'age better' and work longer."

Looking ahead, Miller suggests that "in coming years, people may be working still longer because of the cost of living"—that is, early retirement will not be feasible because of spiraling prices.

Another possible drag on the early-retirement trend is the 1983 change in Social Security law that raises to 67 the age at which a person can retire with no reduction in Social Security benefits. The change will be phased in gradually and does not affect workers born in 1937 or earlier.

As yet unknown is the effect of a 1986 amendment to the Age Discrimination in Employment Act, prohibiting most employers from imposing a mandatory retirement age. The amendment, which took effect Jan. 1, could cause "a coming problem," says Reid of Morris Communications. Some employers may have occasions when it will be necessary to discharge an older worker for incompetency. If that happens, he says, "instead of retirement being a happy occasion, it will turn into a bitter situation."

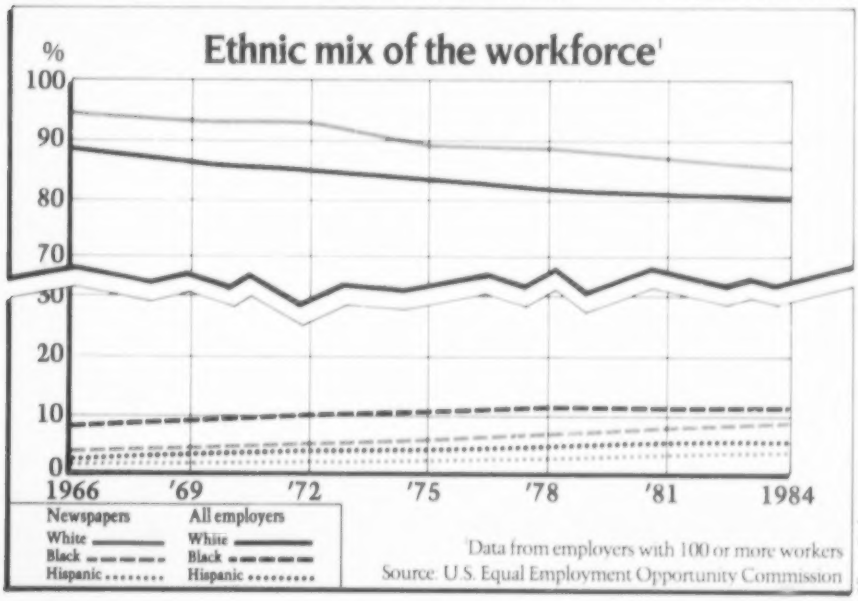
Dallas L. Salisbury, president of the Employee Benefit Research Institute in Washington, D.C., says the change in the act was more of a civil rights measure to require equal treatment of older workers than a change that will significantly affect retirement behavior. Currently, according to the Census Bureau, only about 15 percent of men over 65 continue to work.

Another part of the retirement picture receiving attention by newspapers as well as industry generally is the provision of health insurance to retirees [presstime, June 1986, p. 28]. Few papers currently offer this benefit, although many experts expect pressure to do so will grow. They warn that this step should be considered carefully, citing a Louis Harris poll that found more than two-thirds of the surveyed U.S. firms with retiree health-insurance plans had not made any financial projections on their cost, and most were not setting aside cash reserves to cover future retiree health costs. Congress is being asked to consider legislation permitting companies to use the assets of overfunded pension plans to help cover these rapidly escalating costs.

Kent Lytle, Times Tribune

Workers load bundles of newspapers at the loading dock of The Peninsula Times Tribune, Palo Alto, Calif.

However the retirement situation shakes out, no one doubts that an older workforce is on tap for newspapers as it is for other industries. Another survey, this one conducted for the American Association of Retired Persons, shows that workers age 50 and over are highly valued by their employers for their experience, knowledge and work habits. The survey of 400 diversified companies also found that 90 percent of the employers believe older workers are cost-effective.



WOMEN AND DUAL-CAREER HOUSEHOLDS. The most visible change in the newspaper workforce since 1964 has been the growing number of women in all departments. According to the Bureau of Labor Statistics, the percentage of women at newspapers soared from 22 in 1965 to 41 in 1985. These are larger numbers than the 19.8 percent (1966) and 35 percent (1984) reported by the EEOC for newspapers with at least 100 workers, and they reflect the fact that women are more prevalent at smaller papers.

"More and more females are in non-traditional positions," reports McDonald. "The male bastion is falling apart, but I think it has made the workplace a better place to work. The female worker can handle it all."

"This has probably had the greatest effect on how we do business," adds

McDonald. "We worry about maternity, something we didn't used to have to do."

BLS reports that one of the fastest-growing sectors of the labor force continues to be mothers of infants and toddlers. The agency says that just over half of all women with children under age 3 were in the labor force in March 1986, compared with 34 percent in 1975. The proportion of mothers in the labor force rises steadily as the age of their children increases.

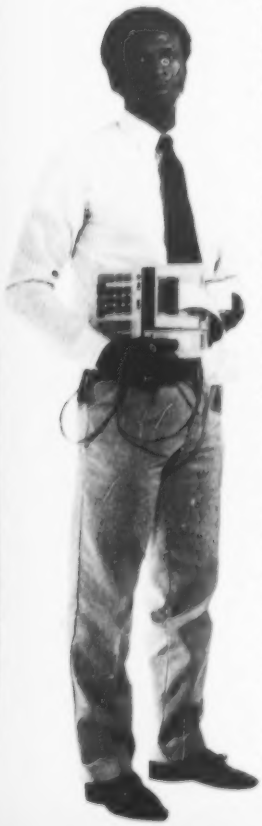
There is a widespread public impression that almost all mothers are employed full-time nowadays, but that impression is wrong, according to a study by the American Enterprise Institute, a policy research group in Washington, D.C. The study of Census Bureau and Labor Department statistics found that many working mothers are employed part-time, and that many who are employed full-time do not work year-round.

For those women working full-time, a recent study of women in the media showed that in the newspaper business, they have not fared as well as men in salaries and promotions, but a trend toward closing the gaps appears to be under way [**presstime**, Oct. 1986, p. 30]. "They will continue to demand opportunities to hold jobs historically held by men," Mock says.

Despite automation, many mailrooms remain labor-intensive.

At the same time, McDonald observes that in Richmond, and elsewhere, "We're seeing more males in the clerical pool and in telephone sales jobs."

As more women work, businesses are attempting to adapt to demands for improved maternal leaves, flexible work schedules and more child care. (See story, facing page.) Even those working part-time are demanding fringe benefits. "We have to [provide them] to stay competitive in the marketplace," McDonald says.



The changes brought by the steadily increasing female presence in the workforce are startling. Today, there are more career couples, single parents and "blended" families (stepchildren, half-siblings, step-parents, multiple sets of grandparents) than ever before. "The Norman Rockwell traditional household with a full-time working father, stay-at-home mother and one or more school-age children is a thing of the past," says Stephen B. Dolny, a consultant in General Electric Co.'s corporate employee relations operation and a speaker at ANPA's 8th annual Labor and Personnel Relations Conference in January. "Dagwood and Blondie now represent less than 14 percent of American homes. And this will decrease to 6 percent by 1995."

"Management is having to rethink benefits and the hours people work," says McDonald. "We're seeing more and more men taking off to care for a sick child. It used to be the mother who would take off."

Dual-career families "have greater independence because they know they have the other wage-earner to depend on," says Mock. "They have more mobility in changing employers. I think the number of dual-career families will increase."

"People are no longer locked into jobs they don't like to the extent that they were," says Thomas C. Bryan, personnel manager of The Seattle Times. "We will see a significant movement to provide child care, flexible work schedules and flexible benefits for dual-career families."

Relocation of employees has also become more difficult because of two-career families. "We try to be more sensitive to the problems of having a working spouse," says Kelly Smith Tunney, assistant general manager and director of corporate communications of the Associated Press. "There is a lot of human attention to it now that there didn't used to be." For two-worker households, even coordinating vacations can become a major problem.

Because many employees' spouses lose jobs when a move takes place, some companies find they must also help them get work. Mock, for example, says that when a person being hired by the Providence newspapers requests assistance in finding a spouse a job, "We've tried to help them by looking at their resumes and circulating them" to prospective employers in the city.

The problem of finding a job for the spouse of a transferred employee "is a very big issue," says Madelyn P. Jennings, senior vice president/personnel for Gannett Co. She says personnel

The Norman Rockwell household with a full-time working father, stay-at-home mother and one or more children is a thing of the past.

departments at Gannett properties are encouraged to develop a "welcome package" giving information about other employers in the area, and to give help in preparing resumes.

Besides the issues surrounding working spouses, newspapers also are having to come to grips with questions arising from another demographic sign of the times: unmarried couples living together. The Census Bureau reports that the number of such couples has jumped sharply, topping 2 million in 1986 for the first time.

"If the trend continues upward," says Guy T. Garrett Jr., vice president/personnel for The New York Times Co., "it could create some issues for us, particularly in terms of employee benefit matters such as joint-survivor status, dependent medical coverage and some types of life insurance."

On a more definite note, experts say the continued growth in the percentage of women in the workforce is inevitable. Labor Department economists forecast that from about 44 percent today, their share will climb to 47 by the end of the century. And newspapers, currently trailing the national figure by 3 percentage points, also will see a rise in their ratio of female workers, according to human-resources specialists in the business.

Workers' Child-care Needs Are Being Addressed by Newspapers

BY PATRICIA P. RENFROE

One of the growing issues in the newspaper business as well as in industry generally, is the availability of child care that is accessible, affordable and, most of all, high quality. The issue is complex, volatile, expensive and not limited to female employees.

Complex because child care involves a variety of needs—expanded parental work leave, infant day care, sick care for children and proper child development.

Volatile because the issue stems from sociological upheaval—in the rapid growth in the number of dual-career families and single-parent households.

Expensive because the cost of institutional care can run from $35 to $150 per week, with businesses' on-site locations usually the most expensive.

And in today's society, women no longer bear total responsibility for child care.

In a recent Fortune Magazine nationwide survey of 400 men and women with children under 12, 55.1 percent of men said care was shared equally, and 51.9 percent of women agreed. This indicates that men as well as women take time away from their jobs to care for children when a baby sitter fails to appear or when sickness precludes normal arrangements for care.

Newspapers are beginning to respond to the issue. Some are already involved in a child-care program. Others are examining employee child-care needs and how they might be met [**presstime**, May 1983, p. 50].

Pressure for child care has been brought by individual employees and by organized labor. The Newspaper Guild states in its model contract that the employer shall pay the full cost of day/night care for the employee's dependent children with the employee choosing the type of care and facility to be used. The Communications Workers of America, which recently absorbed the International Typographical Union, has raised the issue in its 1986 Bargaining Council resolution entitled "Justice."

Human-resources specialists at newspapers agree that the issue cuts across all newspaper departments and is not going to disappear. It will become a growing target, some say, for government intervention if private industry fails to act.

One newspaper pioneer in the child-care field is the News-Piedmont Co. of Greenville, S.C. In 1983, it helped to organize an independently operated "child development" center. Newspaper employees say the center is much more than a baby-sitting facility because the care includes developmental activities structured to prepare children for kindergarten.

About half of the 45-50 children at the center are those of newspaper employees. Initially, the newspaper provided seed money and administrative staff time. Today, fees paid by parents and special fund-raising activities support the center.

The Record of Hackensack, N.J., has been affiliated with a hospital-operated facility for several years. Alvin Miller, vice president/personnel, says that it, too, is developmental in nature, not custodial. The newspaper does not provide employee subsidies; instead, it financially supports a variety of hospital programs, with the child-care center being one example.

At The Boston Globe, a study of employee child care needs has been conducted. Efforts are being made to develop a consortium of businesses in the neighborhood that would support a child care center. Director of Human Resources Frank Grunstrom says the Globe's white-collar employees have expressed the greatest interest in having such care available for their children.

A number of human-resources executives emphasize that a company can show concern for child-care problems and extend assistance without making large expenditures.

An example of such assistance is a referral service. Employees of The Dallas Morning News, for example, can seek free referral service through Child Care Dallas. Under the newspaper-supported program, interested employees are interviewed to determine child care needs. They then receive a list of appropriate providers, including licensed day-care centers, suppliers of in-home care and registered family centers.

The Statesman-Journal in Salem, Ore., offers a referral service and more. Personnel Director Steven Hungerford says there has been a wide ranging response to concerns that surfaced in an employee survey on the issue. The survey indicated a need to examine existing company policies as well as to consider new ideas. As a result, policies have been altered to allow employees to use sick leave to care for children who are ill or involved in an accident.

The Statesman-Journal also instituted a plan allowing employees to apply for job sharing or "flextime" to meet care needs [**presstime**, May 1986, p. 12]. Such an arrangement must be approved by the immediate supervisor, department head and personnel director, although denials may be appealed to the publisher. There is a trial period before any change becomes final.

Hungerford says the employee-relations benefits far outweigh the $5,000 cost of the various initiatives in Salem. "Employees without children have written to say they were impressed and proud of the newspaper program, while parents are obviously pleased," he says.

Renfroe is ANPA manager/personnel relations.

The introduction of new editorial computer systems can be a difficult adjustment for some workers.

MORE MINORITIES. Also predicted to be a greater presence in the workforce of the future are minority groups. For example, BLS projects that by the early 1990s nearly one in every four new entrants to the labor force will be black.

"Today's issue with minorities remains getting them in the door," says Terri Dickerson-Jones, ANPA Foundation minority projects coordinator. "Tomorrow's issues will be promotion and retention." Dickerson-Jones also serves as staff director of the Industry-Wide Task Force on Minorities in the Newspaper Business, which has representatives from 39 newspaper-related organizations. (See story, p. 74.)

The U.S. newspaper industry has yet to conduct a comprehensive survey on minorities, although two newspaper organizations—the Association of Newspaper Classified Advertising Managers and the International Circulation Managers Association—have surveyed their own members, and the American Society of Newspaper Editors surveys minority participation in all U.S. newsrooms.

In 1978, ASNE adopted a goal of achieving racial representation in the newsroom equivalent to the racial composition of American society by 2000—or sooner. ASNE's first survey in 1978 showed that only 4 percent of newsroom employees were minorities (black, Hispanic, Asian American, and American Indian). The 1986 survey indicated that the proportion was up to 6.3 percent.

EEOC statistics show steady growth not only for blacks in the overall newspaper business (from less than 4 percent in 1966 to nearly 10 percent in '84) but also for Hispanics (from 1.3 to 3.9 percent).

But there are many who feel the newspaper industry is not doing enough to recruit and promote minorities (**presstime**, Aug. 1984, p. 14). Charles A. Martin, president and chief executive officer for the Institute for Journalism Education, says that the industry has three choices. "It can stagnate and stay at the level where it is now, it can move away from its commitment, or it can accelerate its activity and really begin to do the intelligent thing."

"We need to be preparing [minority] people for all levels" of the newspaper business, says Martin, whose organization strives to improve the minority-employment situation at newspapers. "Otherwise, I am fearful that we're going to lose a large segment of this country's most creative people to other professions. We are suffering at the level of middle managers. The people who are committed seem to be in the upper echelon."

Of all minority groups, the Hispanic population is the fastest-growing in the United States, but "it's not clear yet what that growing population will mean" to newspapers, says Edith Savre Auslander, human resources director for Tucson Newspapers.

Currently, Hispanics account for 7 percent of the total U.S. population and by 2020 may account for 12 percent, predicts Census Bureau demographer Gregory K. Spencer. He says the Hispanic population will surge in the next 20 years—from 18 million now to 23 million in 1996 and to 30 million early in the next century.

"This will affect newspapers regionally where there is a concentration of Spanish-speaking people," says Garrett of The New York Times Co. "It will give newspapers more opportunity to improve the results of their minority recruitment."

"I hope it will bring pressure on newspapers to pay more attention to the Hispanic community," says Frank C. Newton, executive director of the National Association of Hispanic Journalists. "I hope it will make them look at their hiring practices, not only in editorial but in other areas of the newspaper."

The tide of illegal immigration, especially from Mexico, led Congress to pass the Immigration Reform and Control Act of 1986. Employers are now required to verify that all new hires are U.S. citizens or legal aliens holding "green cards" issued by the Immigration and Naturalization Service.

The new law also granted amnesty to thousands of "illegals," and they are now in a position to compete for jobs better than the low-profile positions to which they previously were limited. At the present time, however, newspaper employment managers in the Midwest and Northeast say they have more job applicants from India and Pakistan than they do from the Hispanic community.

The Hispanic population is the fastest-growing in the United States, but "it's not clear yet" what that will mean to newspapers, says a Tucson executive.

COMPENSATION. An ever-present factor in newspapers' dealing with their workers, of course, is compensation. Historically, newspapers have lagged behind some other businesses in pay, and the numbers suggest that pay will be a particularly acute issue among younger and entry-level newspaper employees in the future.

Here's one example why: According to The Dow Jones Newspaper Fund, the journalism school graduate who got a job on a newspaper in 1964 received a starting salary of $4,900 a year, compared with $13,500 in 1985, the latest year for which figures are available. That's an increase of 175.5 percent. But during the same period, the Consumer Price Index increased 244 percent, which computes to a 25-percent loss of purchasing power for J-school grads entering the newspaper business.

On the other hand, experienced reporters represented by The Newspaper Guild have seen their purchasing power increase when adjusted for inflation. The average top minimum was $141.83 weekly in 1964, compared with $578.32 as of Dec. 1, 1986. This 308-percent gain compares with a CPI increase of 250 percent during that period. Thus, the experienced reporter had a 16.5-percent gain in buying power.

Some newspaper executives have expressed the concern that poor starting pay may be dissuading "the best and the brightest" from choosing newspapers as a career [presstime, Dec. 1986, p. 50].

Experts also say that women will be stepping up their efforts to obtain pay parity at newspapers. The study by University of Missouri faculty member Jean Gaddy Wilson, reported in presstime last October, showed that, on average, women were receiving no more than 86 percent of the salaries of men in comparable newspaper jobs, and as little as 52 percent.

"Women are going to demand and get the wage gap in earnings closed," says Providence newspaper executive Mock.

Other compensation matters being faced by some industries include paying new hires at lesser scales than people already working for the company—so-called two-tier wage scales—and accelerating the use of part-time workers as a means of controlling payroll and benefits costs. To date, the newspaper business has not been a major part of either trend. Some newspapers such as The Record in Hackensack do report, however, an increase in the number of part-time workers employed in the mailroom and in circulation.

DEALING WITH THE NEW WORKFORCE. As the newspaper workforce continues to become less white, less male and less young, publishers and other executives find themselves dealing with different value systems, different personal needs and different attitudes.

The differences in the workplace values and attitudes of people under age 40 and those over that age can be dramatic. The differences include the acceptance of authority and the importance of experience as a criterion for getting promoted. Studies show, for instance, that the older worker, having grown up during the World War II era and its aftermath, accepts authority. On the other hand, the younger worker, having grown up during the Vietnam War, does not trust authority.

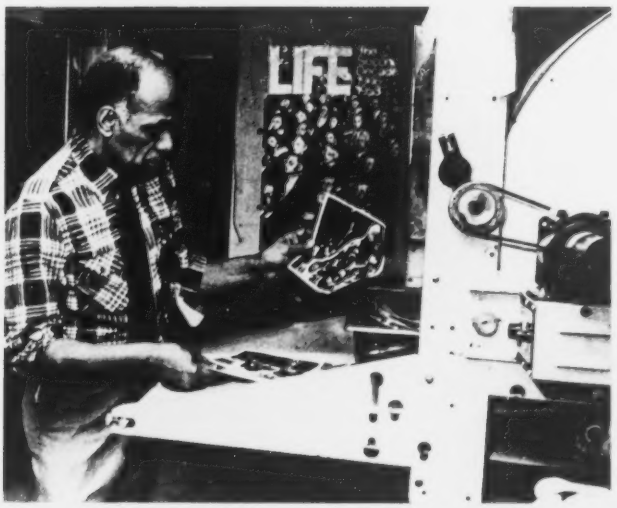
Michael Gallacher, Missoulian

Preparing market research materials at the Missoulian of Missoula, Mont., is Ann Andre Nybo, promotions director.

"Older people are more secure in their jobs," says Mock. "They aren't as career-minded as the younger people coming into the workplace. Older workers probably are less inclined to take chances and be innovative."

While newspapers must concentrate on accommodating an older workforce, they also must adjust their personnel practices to fit the new and changing views of those young people who will be coming into the business. To cite one effect, the younger generation doesn't view savings and retirement programs as an important part of their benefit programs. "That's one reason flexible benefits are becoming more popular," says McDonald of Richmond. With the "graying of America," one benefit that may be demanded in years to come, he says, is "eldercare"—that is, flexible or part-time work schedules or unpaid leave to care for elderly parents.

Because minority youth tend to have less education, they will need assistance to prepare for work, and employers will have to devote more resources to training.



Tennessean photographer Billy Easley processes sports pictures.

One change over the last two decades that affects workers of all ages, color and sex is that "People are more aware of their rights," says Mock. Management prerogatives once assumed to be inviolate are now being eroded by new legislation, federal and state agencies and the courts. "While at one time employers had an almost unlimited reign over all aspects of an employee's work life, employees now enjoy a number of protected rights," says L. Michael Zinser, a partner in the Nashville law firm King & Ballow. "Courts in some states are recognizing that there are areas of an employee's private life in which his or her employer has no legitimate interest."

"From the mailroom to the boardroom, from the composing room to the publisher's suite, in all walks of business, employers are facing a rising tide of lawsuits by former employees who had been terminated, but who are resurrecting the relationship by claiming they were wrongfully discharged," says Sandra E. Rapoport, an attorney and managing consultant in the New York City office of William M. Mercer-Meidinger Inc., an employee benefit and compensation consulting firm with many newspaper clients.

Another trend that is expected to continue is the growth of mental-stress related claims for workers' compensation. "Management of stress should concern employers if for no other reason than because our economy is moving away from claims for traumatic injury to stress claims deriving from the workplace," says Rapoport.

Stress—broadly defined—was the number-one complaint of The Newspaper Guild's membership in a recent poll. Stress-related answers to the question, "What do you like the least about your job?" accounted for 38 percent of the responses. Specifically, 15 percent complained about "long hours/irregular schedules," 14 percent identified "deadline pressure/hectic pace" as the worst part of the job, 5 percent said "overwork/short-staffed" and 4 percent complained of "paperwork/bureaucracy."

It has been documented that a newspaper's conversion from afternoon to morning publication, a frequent recent occurrence, can bring lingering personal problems that include insomnia, family and marital discord and even health problems resulting from the inversion of working hours [**presstime**, May 1984, p. 6]. And the government's Centers for Disease Control in Atlanta reports that workers on night and rotating shifts have more absences due to sickness and on-the-job injuries than do those on fixed day shifts.

To cope with the whole realm of workforce changes, newspapers are expected to devote more resources to training and retraining.

By a conservative estimate, says Martin of the Institute for Journalism Education, 72.5 percent of the entering workforce will be women and minorities by 1990.

Because minority youth tend to have less education than white youth, this group will need assistance to prepare for the world of work, and employers will have to devote more resources to training entry-level workers. What publishers can do is support education and provide role models for these human resources of the future, Martin says.

Retraining will be a requirement for the existing workforce, too, as still more automation is introduced. One group that is viewed as particularly susceptible to obsolescence is middle managers—those between first-line supervisors and senior management—whose "role has traditionally been as a sender and receiver of information up and down," says James D. Boswell, vice president of employee and public relations at the Los Angeles Times. "There will be more communication directly from top management to the first-line manager and employees through the computer. We need to be thinking about this and how we can retrain and assist middle management in this transition."

Boswell, who is heading ANPA's Human Resources 2000 study group, says the myriad of workplace changes that have taken place over the last two decades—and those that are yet to come—make human-resources expertise at newspapers more critical than ever.

"Just as the chief financial officer analyzes, recommends, structures and monitors the handling of a company's financial assets," he says, "the chief human resources officer must similarly address the company's people assets." □

One group that is viewed as particularly susceptible to obsolescence is middle managers—those between first-line supervisors and senior management.

For some newspaper people, working long after the customary retirement age is professionally and socially fulfilling. **(See story, p. 36.)**

SYMMETRY

A TOUCH OF GLOSS

SYMMETRY SC PAPER PROVIDES A HIGHLY POLISHED, SEMI-GLOSS FINISH WITHOUT THE HARSH GLARE OF COATED STOCK.

Fashion advisors say that the low lustre of fine pearls make them always the correct accessory choice. Pearls are elegant, understated and the perfect partner for everything from haute couture to casual wear.

Symmetry Supercalendered Paper has a similar understated and elegant appearance. Its polished, satin-like, gloss finish provides the ideal four-color printing surface without the harsh glare of fully-coated paper. It's the perfect partner for catalogs, inserts, newspaper distributed Sunday magazines and weekly and monthly publications.

Symmetry SC paper is widely used for both gravure and offset printing by leading publishers and catalog producers. The New York Times Magazine, a prestigious Symmetry paper user for five years believes that Symmetry paper has greatly contributed to its success. Last year, The New York Times Magazine carried more color ad pages than any other U.S. magazine.

Symmetry SC paper, a unique, non-glare, high-quality reproductive paper that offers 15-20% savings; truly a sophisticated choice.

presstime staff writer

Some choose not to retire: Witness this segment of the newspaper workforce that stays active way past 65 years old

Don't talk to Robert B. Atwood, publisher of The Anchorage Times, about aging or retiring. "The only time I feel old is when I talk to someone . . . who keeps harping on it," says Atwood, 79. "I'm doing my thing and getting along fine."

So is Roy McDonald, the 85-year-old publisher of the Chattanooga News-Free Press.

And Audrey Stubbart, proofreader and columnist for The Examiner in Independence, Mo. She's 91.

And James S. Moran, editor emeritus and columnist of The Springfield (Ky.) Sun. He will turn 99 in April.

And dozens of other people in their late 70s, 80s and even 90s working for U.S. daily and weekly newspapers. With their remarkable staying power, they are contributing to the trend toward an older workforce. However, they are clearly atypical, as estimates put the current average age of newspaper workers at about 40.

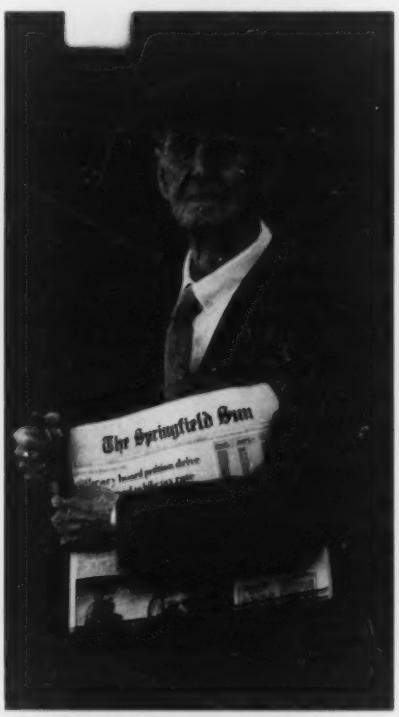
Not only must working newspaper people 75 and older be considered unusual in their own field, they also are rare commodities in the overall labor force. Today, only about 400,000 Americans 75 and older are employed full-time or part-time, according to the U.S. Labor Department's Bureau of Labor Statistics. This is less than half of 1 percent of the approximately 10 million Americans that age who are not in an institution such as a nursing home or hospital.

Why does this small minority of newspaper people persist in working? For love and money, they usually say. But primarily, for love.

"I would be miserable anywhere else," says McDonald. Maybe someone else could do what he does better, McDonald acknowledges, but he just enjoys doing it—and so he stays on.

With last year's enactment of amendments to the Age Discrimination in Employment Act, there is no legal reason why newspaper people (except top executives) cannot, if they wish, continue to work so long as they are able.

The National Council on the Aging, which lobbies for laws to provide senior citizens with the option of remaining on the job, likes to say that "ability is ageless."



John Brantel, The Springfield (Ky.) Sun

Kentuckian Moran may be the dean of working journalists.

"The only thing you really know about someone when you know their age is how many candles to buy for the next cake," says Jack Ossofsky, NCA president. "You don't know anything about their health, their skill, their experience, their flexibility, their capacity to learn."

Study after study have shown, Ossofsky says, that on the whole, older people are "exceedingly good workers." They normally know the short cuts in getting the job done, he says, and they have less turnover, less absenteeism and less illness than younger workers.

NIMBLE AT NINETY. Consider proofreader/columnist Stubbart in the hometown of President Harry Truman (who lived to age 88). She arrives at work every morning at 7:30 a.m. to begin her day in front of a VDT screen proofing The Examiner.

She joined the daily newspaper after reaching the then-mandatory retirement age of 65 at a local publishing house. At the time, she thought she would just be filling in "until they could find someone younger than I." Last September, she celebrated her 25th anniversary there. "I've loved every minute of it," she says. Four years ago, she began writing a weekly column, "Point of View."

She is not the only senior citizen at the newspaper; another columnist, who works part-time from her home, is 81. According to Stubbart, "She says when I quit, she's going to quit because she doesn't trust anyone else to spell the words."

Stubbart says she enjoys her job too much to quit. "I just love to read. Why not get paid for it?" Her job also keeps her "in touch with the world, with people, especially young people. They have a different slant on world affairs."

The 98-year-old Moran, who may be the oldest working journalist in the United States, also says he has no plans to stop working, although his 71 years of continuous employment at The Springfield Sun would certainly entitle him to a gold grandfather's clock, should he ever decide to retire.

"I don't like that word 'retire,'" he says. "It means quit, and I don't want to quit. As long as I can go, I'm going to keep going. I'm looking forward to celebrating my centennial."

Moran's theory is that staying active is the key to staying healthy. If an automobile is left sitting in a garage, its tires go flat and it deteriorates, he observes. "The human body's the same way."

His journalism career began as a country correspondent for various Kentucky news-

Doing Just Fine

papers, including all four of the Louisville dailies published at the time. In 1916, he purchased one of Springfield's two weekly newspapers, the News-Leader, and formed a partnership with the owner of the other paper, the Sun. They merged the operations, and 30 years later, Moran bought out his partner.

Subsequently, his son-in-law and grandson joined him in the business, and their company grew into a small group, which was sold in 1973 to Landmark Communications. Although he was 65 at the time, Moran chose to stay on as editor emeritus of the Springfield weekly.

"In this division (of non-dailies and small dailies), it has been our practice . . . to allow and encourage the former owners and publishers of those papers, who are so much a part of the history of those communities, to continue with us," says Patricia T. Darby, personnel director of Landmark Community Newspapers.

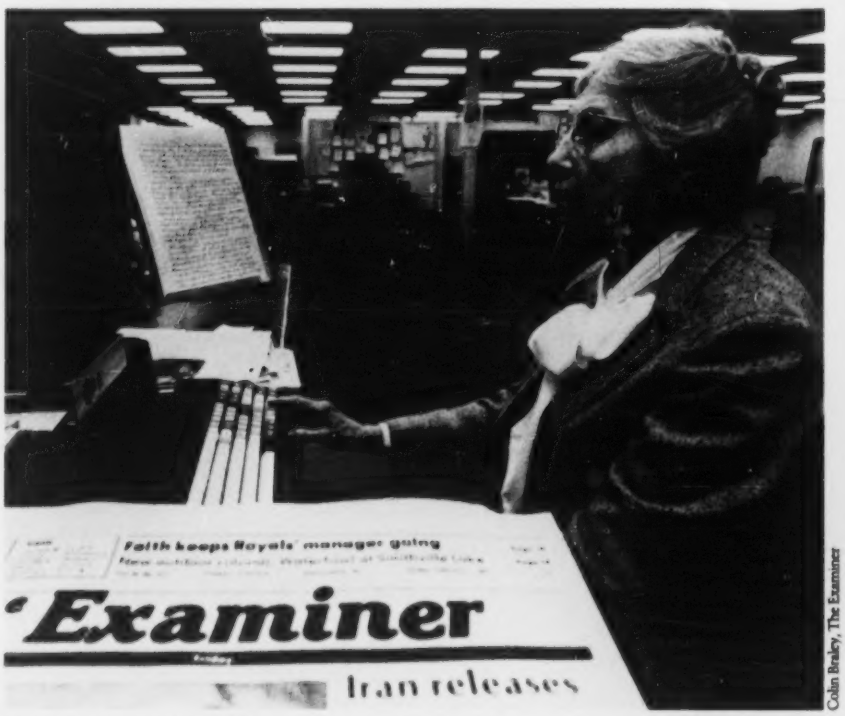
(Moran's grandson, James L. Edelen, is editor and publisher of The Sentinel-News, a Landmark weekly in Shelbyville, Ky., which, coincidentally, has an octogenarian columnist.)

Moran, who has seen the newspaper business go from hand-set type to offset printing, still pounds out his weekly column on an ancient Underwood typewriter. Although some reporters at the paper use personal computers, "I call them mechanical brains, and I don't like to use them," says Moran.

His comment on computers is typical of the plain talk he uses in his column, "Through My Bifocals." Some examples:

- "A friend told me the latest report on child abuse was that a man died and left a large farm to his children."
- "We never get too old to learn, but it is often too late. For instance, after using milk and milk products for more than 90 years, I am informed milk is detrimental. Wish I had known."
- "President Reagan deserves sympathy because of his physical condition and trillion dollar budget."

Moran arrives at the newspaper every day at 10 a.m., reads a raft of out-of-town newspapers, which provide information for his column, and leaves for the day at 3 p.m. In addition to writing his column, he maintains the bound copies of the newspaper and on Wednesdays when the paper comes out, Moran grabs a handful and distributes them to advertisers on Main Street.



Colin Braley, The Examiner

Stubbart, 91, writes for a Missouri newspaper that has another columnist age 81.

In addition, says Managing Editor John Bramel, Moran "serves as a valuable encyclopedia of information."

PUBLISHERS' PERSPECTIVE. Older people do indeed have a lot to contribute to a newspaper, says Publisher McDonald.

"I sometimes write memories of the past, and people like to hear about them."

He still lays out his paper in Chattanooga every day. "I know where the advertiser wants to be. I know how to do it. I know what will run on the press. I know where color will run. I know all those things."

McDonald goes to work six days a week. On weekends, he stays at the plant until the Sunday edition is off the press in the wee hours of morning. "I do not brag about it," he says. It's just that "if I was at home, I would be wondering what happened."

McDonald founded the newspaper as the Free Press in 1936, after three years of distributing an advertising flyer for his chain of grocery stores. He bought a competing newspaper, The News, in 1939 and merged it with the Free Press.

A son, grandsons, daughter and son-in-law all work at the newspaper. "We operate it kind of like a country weekly," he says.

McDonald believes he is "probably the

only publisher in America who has been continuously publishing for 50 years (and) who was the founder of his newspaper. You have to be pretty young when you start out, on that basis."

Atwood has been a publisher a year longer than McDonald, but he was not The Anchorage Times' founder. He bought it in 1935 after marrying the daughter of the president of the Bank of Alaska. "I realized for the first time that a reporter who marries a banker's daughter had credit," says Atwood.

If ever there was an example of "You are as young as you feel," it is Atwood. Last October, he physically subdued a man who entered the Times building brandishing a semiautomatic rifle and apparently looking to take Atwood hostage.

Even as he prepares to celebrate his 80th birthday at the end of this month, retirement is not in his plans. "I still think I have room for personal growth," says Atwood. "I'm involved in the world and the things going on around me. I have opportunities to study the problems of the day and to figure in decisions."

"I don't like that word 'retire.' It means quit, and I don't want to quit."

Only recently did he give up the title of editor, although he still writes editorials. His daughter, Elaine, is assistant publisher, and, according to Atwood, aspires to be publisher. "I don't know any reason she shouldn't, except I'm in the way."

OTHER POSITIONS. Columnist, editor and publisher are not the only newspaper slots being occupied by people 75 and older. For example, at the St. Petersburg Times, 78-year-old Arthur G. Hedden rises at 2:30 a.m. daily and delivers 160 newspapers in his high-rise apartment building. And at the San Jose Mercury News, Gordon Vallandigham recently retired from the night shift in the composing room at the age of 93.

But perhaps the area where older employees are most apt to be found is in the ranks of columnists and correspondents, many of whom work part-time or from their homes [**presstime**, May 1986, p. 16].

Every Monday and Tuesday, Rose Leo makes her rounds in Howard, Kan., stopping at the sheriff's office, the courthouse and other local spots to gather material for her "Howard Happenings" column in The Howard Courant-Citizen.

Now 92, Leo has been a writer since age 18, when she first started sending material to Howard's then-two weekly newspapers. "They furnished the paper and the stamps, and I just wrote items," says Leo, who still submits handwritten copy.

Like some of the other senior newspaper people, Leo is something of a celebrity. After being featured in a Detroit Free Press story, she was inundated with requests for television and radio interviews. She has answered more than 500 letters, many from older writers. She frequently gets requests for columns on what life was like during her youth. "Some people are anxious to know how we lived in those days and what we did."

But not all of the senior columnists savor the nostalgia beat.

"I sometimes write memories of the past, and people like to hear about them. But I wouldn't be satisified to write nothing than memories of the past," says Zula Bennington Greene.

Greene, who will be 92 March 2, has written a six-times-weekly column for the Topeka (Kan.) Capital-Journal for the past 53 years. Her column is called "Peggy of the Flint Hills," a pseudonym that dates from her first writing assignment for a newspaper.

Her "greatest problem" is coming up with new column ideas. "If I can't find anything to write about, I write anyway," she says.

Greene continues her column for several reasons: It provides a "connection to the community that I enjoy," a source of income and an opportunity for self-expression.

A 1981 readership survey found that she was the most popular columnist in the Topeka paper for readers over 65. Among all readers, she ranked above such syndicated stars as Jack Anderson, Art Buchwald and James J. Kilpatrick.

Greene says people tell her she's getting "better all the time"—praise against which she applies "the usual discount." She is a tough critic of her own column and says although she has no plans to stop producing it, "If I feel that I am slipping at all permanently, I think I will quit." □

What used to be black and white and read all over...

SECTION C

BUSINESS

Circulation down; Ad revenues slip

Recent surveys indicate a decrease in circulation for major daily newspapers that are still utilizing black and white print. Industry experts also agree that a black and white format directly relates to a decline in ad revenues.

Survey responses substantiate today's "color world." More than 90 percent of those surveyed own one or more color televisions. Almost all respondents read two or more color magazines per week.

Advertising, in print as in television, is a visual medium. Attaining the right "image" for whatever is being marketed is all important. For more and more advertisers, black and white no longer suffices, especially when their significant insertion rates are considered.

Recent surveys indicate a decrease in circulation for major daily newspapers that are still utilizing black and white print. Industry experts also agree that a black and white format directly relates to a decline in ad

...ate today's "color ...ed own

Can now be black and white and red and yellow and...

...in short, a more visually impressive, attention-getting newspaper with late-breaking color pictures! Hell Graphic Systems is your single-source for state-of-the-art products that allow you to conveniently and cost-effectively step up to full-page color composition. And the cost-savings, increased ad revenues, and greater circulation that go along with it!

We're contributing to newspapers' color revolution with innovative products such as:

- The NewsPlan system for video transmission of late-breaking news photos
- Chromagraph color scanners for the generation of high-quality separations
- The Scanskop for soft proofing assurance
- The LS210 laser image setter for combined output of text and graphics
- The Pressfax system for facsimile transmission of newspaper pages

Hell offers a complete product line that allows any newspaper of any size to feature late-breaking news, sports, and advertising in color. Get the edge on your competition! Join the color revolution...you'll see the results in increased circulation and ad revenues. And our systems can be easily configured to your exact production requirements.

BUSINESS
Circulation up;
Ad revenues rebound
The use of color is paying big dividends for news-
paper publishers across the nation.
Recent industry surveys indicate a marked rise in
readership and advertising revenues in major daily
newspapers that have switched from black and white
to color.
The use of new color technology has served a two-
fold purpose: heightening reader interest through a
more visually appealing format and reducing the time
gap between news deadline and press time. Now, even
the video camera can replace the traditional still photo
camera in the field.
The move to color also results in significant cost
savings. Although situations vary, the return on in-
vestment is quite favorable, with the new equipment
paying for itself in three years, on average.
The use of color is paying big dividends for news-
publishers across the nation.

and white

The Great Story of the Drafting Of the U.S. Constitution

BY WARREN E. BURGER

The reissue of *Miracle at Philadelphia*, written more than 20 years ago by the late Catherine Drinker Bowen, is a service to the country. This service is enhanced by the fact that The Book-of-the-Month Club, which has never offered the same book twice as its main selection, has for the second time made *Miracle at Philadelphia* a main selection (for November 1986), thus ensuring a very wide readership.

No single popular work will convey as much to the reader about our Constitution as this splendid book.

Junius Brutus Stearns' 1856 painting portrays Constitutional Convention.

Bowen devoted her talent and, indeed, her life to probing the history of governments and their leaders. Her most popular books were: *Yankee from Olympus: Justice Holmes and His Family, John Adams and the American Revolution, Francis Bacon: The Temper of a Man*, and *The Lion and the Throne: The Life and Times of Sir Edward Coke*. On one occasion, more than 30 years ago, I had the privilege of sharing a dinner with her, and I was fascinated to learn how she did her studies of 20th century figures, Oliver Wendell Holmes, for example, and then worked back into the 18th and 17th centuries.

The drafting of our Constitution—from May to September 1787—is one of the greatest stories in our history, and *Miracle at Philadelphia* tells it in a very readable way.

Bowen spent many months reading widely about the events that took place during that hot Philadelphia summer. Then she put her fine mind to work and created a narrative that is not only sophisticated and historically accurate, but also intelligible to the general reader and as exciting as a detective story. One of her purposes, as she later explained in *Biography: The Craft and the Calling*, was to make the reader anxiously ask: "Are they going to sign this Constitution, will it go through? Or are these 55 delegates simply talking themselves into an impasse?"

Bowen had a rare talent for description, an ability that makes the reader feel a part of the story. She makes us see and appreciate Madison's scholarship, Hamilton's organizational genius, Franklin's ability to use his seniority to score points in debate, and Washington's gentle but firm leadership.

Here is George Wythe of Virginia, the great law teacher of Jefferson, Marshall and other leaders: "At 60, Wythe looked like a sinewy old eagle. A long sharp nose nearly met a jutting chin, the head went into a point at the top." In the records of the convention, when James Wilson of Pennsylvania "rises to speak it is as if an electric charge passes down the page." And Gouverneur Morris, "once launched and on his feet—wooden leg, stout cane, flashing eye—seldom stopped short of his oratorical goal."

Bowen shows us how the delegates dressed, where they stayed in the city, how they spent their off hours. She also describes how, offstage, John Adams in London and Thomas Jefferson in Paris reacted to events at the convention.

She does something unusual in the middle of her narrative: She moves us from Philadelphia and, in a three-chapter digression, describes the country in 1787 as seen largely from the eyes of foreign observers. When we return to the convention, still in crisis, still unable to decide the most important issues, we understand better why the country needed a new government and why these men with their seemingly narrow sectional loyalties were somehow able to draft and complete a charter for the new nation.

Bowen goes on to describe the convention's dramatic conclusion—the "Great Compromise" that broke the deadlock between the large and small states over representation in Congress, the compromise over slavery, the rejection of a bill of rights, and the final drafting by the Committee on Style and Arrangement.

Her description of the signing ceremony is particularly poignant: Benjamin Franklin makes an eloquent closing speech urging the delegates to put aside their disagreements over particular points and to subscribe "to this Constitution with all its faults, if they are such." But three delegates, including Edmund Randolph, then governor of Virginia and later the first attorney general of the United States, have some reservations and apologetically decline to sign their names.

Bowen then describes, again in her inimitable, vivid style, the battle over ratification and the jubilant festivities when New Hampshire became the ninth state to ratify the Constitution. It is a remarkable story.

Last year when the President appointed me chairman of the Commission on the Bicentennial of the United States Constitution, I called Kevin Dolan at Little, Brown & Co., and urged him to consider republication of this excellent work. I am pleased that Little, Brown decided to do so. That decision is an important service to the Bicentennial of the Constitution and will contribute a great deal to its celebration.

Bowen's book is important not only for its literacy value, but also for its ability to foster widespread understanding of the origins of our freedoms. □

Burger, retired chief justice of the United States, is chairman of the Commission on the Bicentennial of the United States Constitution.

Tony Ridder

'Quick manager' tackles new job at Knight-Ridder

BY C. DAVID RAMBO
presstime staff writer

On his way to the top, P. Anthony Ridder has held just about every job in the newspaper business. He has been classified salesman, reporter, circulation district manager, publisher. In February 1986, he became the first to assume the new position of president of the Newspaper Division of Knight-Ridder Inc.

In the process, Ridder has come to be regarded in some quarters as one of the "superstars" of the business. His fame stems from a swift track record as publisher of the San Jose Mercury News from 1977 until that reassignment a year ago to the corporate post in Miami.

With Ridder at the helm and with a top-flight editorial staff, the Silicon Valley daily flourished. Media critic Ben H. Bagdikian, dean of the University of California at Berkeley Graduate School of Journalism, ranks it as "journalistically the best paper in the (San Francisco) Bay area" and one of the best on the West Coast.

Knight-Ridder President James K. Batten says Ridder performed "splendidly by every available measure" in San Jose. His business-side success was "extremely impressive," Batten says, and editorial quality improved significantly.

Ridder now is responsible for all operations of 33 of the 34 Knight-Ridder dailies (the exception is the Journal of Commerce) and for its seven weeklies.

And although there has been no announcement, it is expected that Ridder will assume an even greater corporate role when Knight-Ridder Chairman and Chief Executive Officer Alvah H. Chapman Jr. reaches Knight-Ridder's mandatory retirement age of 67 next year. Observers say Batten likely will succeed Chapman, and that Ridder and Richard G. Capen Jr., chairman and publisher of The Miami Herald, will serve directly under him.

A hallmark of Ridder's performance in San Jose was his penchant for action. "He was a quick manager who wanted to make decisions. He didn't want things lying around," says Robert C. Williamson, Mercury News display advertising director.

Robert D. Ingle, senior vice president and executive editor, says, "He has a very keen, analytical mind and is very good at zeroing in on essential information."

Particularly noteworthy is Ridder's "incredible energy," Ingle says. "He walks at a run. He eats lunch in about two and a half minutes."

Ridder has attacked his new corporate responsibilities with equal vigor. He says he is determined to "continue to strive to improve our newspapers and find ways to reach readers in the communities we serve."

One of his high priorities is addressing illiteracy. Ridder says this year every one of the Knight-Ridder papers under his purview will develop a program "to deal with the illiteracy problem in their communities."

Another high priority is minority employment. "There are not many minorities at the highest levels of our business, and I think that is something we need to change." He says recruiting more minorities "is just part of it"; also important is promoting minorities within the organization.

On the employment front, Ridder believes the newspaper business has done an adequate job of recruiting talented people for the news side. But on the business side "we have waited for people to work their way up through the industry" rather than recruit from good business schools, he says. "There are not many MBAs from Stanford and Harvard in the newspaper business."

Ridder has other basic business concerns. He says he wants to ensure that each Knight-Ridder newspaper grows in circulation and in advertising volume—not just in ad revenue. To accomplish this, he says, it will be important to use moderation in future circulation price and ad-rate increases.

Ridder, 46, was born in Duluth, Minn., with a leg up in the newspaper business—his family owned a group of newspapers known as Ridder Publications.

His great-grandfather, Herman Ridder, started the business when he bought the New York German-language newspaper Staats-Zeitung und Herold in the 1880s. That paper later was sold, but the organization went on to become a prominent newspaper group with holdings mainly from Minnesota to the West Coast. Ridder Publications in late 1974 merged with Knight Newspapers to become Knight-Ridder Newspapers. The name was changed last year to Knight-Ridder Inc.

Ridder received a bachelor's degree in economics from the University of Michigan in 1962. Before and after graduation, he worked at several Ridder papers including the Aberdeen (S.D.) American News, the Duluth News-Tribune and Herald, and the Pasadena (Calif.) Star News. He also worked one summer as a reporter at The Detroit News.

In 1969, he was named business manager in San Jose. He became general manager in 1975 and publisher in 1977.

"I worked in every department of the newspaper in a hands-on way," Ridder says, recalling his early years. His favorite job was the top one because "as publisher you get involved in everything. I'm not sure there's a better job anywhere."

Ridder also has employed his talents in newspaper associations including the Metropolitan Sunday Newspapers organization, the Industrial Relations Bureau in San Francisco and the California Newspaper Publishers Association. And he has been unusually active in civic affairs, especially in San Jose.

Despite his move to Knight Ridder headquarters overlooking Biscayne Bay in Miami, he continues to have strong ties to the Pacific Coast area. He is chairman of the Technology Center of Silicon Valley, which plans to build a high-tech science museum in San Jose featuring an outdoor area to be named "Tony Ridder Plaza," and retains membership on the advisory board of the Center for Economic Policy Research at Stanford University and the board of regents of the University of Santa Clara.

Outside of work and community efforts, Ridder keeps himself fit by running daily, hitting the road around 6 a.m. He has competed in the New York Marathon and the Montreal Marathon. He also is an amateur tournament golfer and a skier.

Ridder's wife, Connie, is a lawyer. They have four children—a daughter who works for the Conde Nast magazine organization, another daughter who works for Xerox, and a daughter and a son who are students at the University of Washington in Seattle. □

THE GROWING POWER OF THE RZ LASER SCANNING SYSTEM:

The only scanning system with on-line interactive previewing now packs the power of electronic dot generation.

INTRODUCING THE ROYAL ZENITH 210 L LASER SCANNING SYSTEM.

The RZ-210 L puts you way ahead in high-quality color, today and tomorrow. Controls are few and easy to master. On-line electronic previewing allows instant correction, with "fine tuning" and approval before you run film. With the 210 L System, you have the widest range (to correct transparencies), the highest color quality, and you're on your way to fully-electronic page make-up! (What's more, we've made it easy for present 200 S users to migrate upward to the powerful 210 L System.)

No wonder more newspapers use Royal Zenith color scanners than all other scanners combined!

Call Martin Sussman at **(201) 641-7200,** for information and a demonstration of the RZ-210 L System.

Royal Zenith
Scanner Division

The story behind nyloprint® is getting around. And more and more newspapers are changing over. Not just because it goes to press so quickly. And not just because it runs so long. The word has gotten out that there's even more to it.

For one thing, every plate is produced to exacting tolerances in one of the world's most advanced manufacturing facilities. And it's backed by a widely distributed sales force and a technical staff that many consider the best in the business. They, in turn, are supported by one of the largest and most innovative research programs anywhere in the printing industry—a program that has been leading the way toward the development of much long-awaited technology, including flexo plates suitable for newspaper printing using a direct anilox inking system.

It has been our experience that once a newspaper has all the facts, chances are they'll go with nyloprint.® And judging by the orders that are coming in, the facts are getting out. If you'd like to know more, call Christopher Webber, Product Manager, at 1-800-343-4700. Or, if you're coming to ANPA-TEC '87, come see us at Booth #748. BASF. Ahead in Photopolymer Performance.

LEGISLATION

New tobacco ad-ban bill readied

A bill that would ban all advertising and promotion of tobacco products was being prepared for reintroduction in the House of Representatives in late February.

At a Feb. 18 press conference, Rep. Mike Synar (D-Okla.) said his measure has 24 cosponsors, nine of whom are members of the Energy and Commerce Committee, which has jurisdiction over the legislation. Synar is also a member of that committee. Among the cosponsors is Rep. Henry A. Waxman (D-Calif.), chairman of the Commerce Committee's Subcommittee on Health and the Environment.

However, the bill does not have the support of the American Bar Association. The ABA House of Delegates Feb. 16 rejected a resolution that would have expressed the lawyer organization's support for legislation banning tobacco advertising.

The unsuccessful resolution was proposed by the New York State Bar Association [**presstime**, Jan. 1987, p. 42].

Prior to the vote at the ABA's mid-year meeting in New Orleans, the joint ABA-ANPA Task Force wrote members of the House of Delegates expressing opposition to the resolution.

ANPA also joined the Magazine Publishers Association in writing letters to the entire House of Representatives, urging members not to cosponsor the Synar bill. Saying the measure raises "constitutional problems of the greatest magnitude," the publishers' associations said it would be "ironic" if during the year the United States celebrates the 200th anniversary of the Constitution, Congress "acted to severely restrain constitutionally guaranteed individual rights."

The Senate also has an anti-tobacco advertising measure pending before it. Sen. Bill Bradley (D-N.J.) Feb. 3 reintroduced a bill (S 446) that would deny tobacco companies tax deductions for advertising expenses. The bill has four cosponsors. Bradley is a member of the Finance Committee, which has jurisdiction over tax matters.

ANPA has written to all members of the Senate asking them not to support the legislation. "If Congress and the President so determine—and the courts agree—they can declare activities and products illegal," the Association said. Short of that, however, "government should not censor the free flow of information in our free society about legal activities or products," ANPA said. "Further, it does not lighten constitutional responsibilities to use the tax laws discriminatorily to reduce speech." □

Bryan S. Berteaux, Times Picayune/States Item

Henry G. Miller of the New York State Bar Association speaks in favor of ABA resolution supporting a proposed ban on tobacco ads. It was later rejected.

COURTS

COURT BRIEFS

• Three San Francisco law enforcement officials have asked the U.S. Supreme Court to review the California Supreme Court's decision to overturn a **$4.56-million libel judgment** against The Hearst Corp. and two reporters over a 1976 series of articles in the San Francisco Examiner. It had been the largest libel damage award ever upheld by an appellate court [**presstime**, Jan. 1987, p. 43].

• A federal special prosecutor has asked the 1st U.S. Circuit Court of Appeals to meet en banc to review its earlier decision clearing The Providence Journal and an editor of a **criminal contempt-of-court conviction**.

A three-judge panel of the 1st Circuit ruled Dec. 31 that a lower court's temporary order prohibiting the Journal from publishing information about a reputed organized crime figure was "transparently invalid" [**presstime**, Feb. 1987, p. 38].

• In two **fairness doctrine** cases, a federal appeals court refused to decide whether the doctrine violates the First Amendment and ordered that the issue first be decided in other forums.

In *Meredith Corp. v. Federal Communications Commission and the United States*, the U.S. Circuit Court of Appeals for the District of Columbia ordered the Federal Communications Commission to consider the constitutional claims of a Syracuse, N.Y., TV station that the doctrine no longer serves the public interest and that it imposes restrictions on free speech.

In *Radio-Television News Directors Association v. FCC and the United States*, the appellate court told the plaintiff to bring the matter first before a federal District Court.

• A Maine judge ruled Feb. 20 that he would not reconsider his **contempt-of-court** charge against Concord (N.H.) Monitor reporter Bob Hohler, who refused to testify in a murder trial about his interview with the defendant [**presstime**, Feb. 1987, p. 39].

The defendant was convicted without Hohler's testimony. "We're not really sure what happens next," said Monitor Editor C. Michael Pride. He added that Maine prosecutors apparently plan to pursue the contempt charge.

REGULATIONS

Meese ruling on Detroit JOA imminent

A ruling was expected in late February from U.S. Attorney General Edwin Meese III on the application of Detroit's two daily newspapers for a joint operating arrangement.

Under the Newspaper Preservation Act of 1970, Meese's options were threefold: approve the application, thereby granting a limited antitrust exemption for the merger of the non-editorial operations of The Detroit News and the Detroit Free Press; deny it; or order public hearings as a prelude to a final decision.

The Justice Department's Antitrust Division has recommended hearings [**presstime**, Oct. 1986, p. 48].

"I don't think anyone expects him to reject it," said William J. Keating, chief executive officer of the Detroit Newspaper Agency, which would operate the proposed JOA.

Keating said the requirement has been met that at least one of the newspapers be a "failing" newspaper, under the terms of the Newspaper Preservation Act. The newspapers' combined losses in 1986 were "in excess of $30 million," he said, but he declined to provide a breakdown.

According to Keating, the newspapers are ready to implement the arrangement as soon as it is approved.

Between 3,800 and 3,900 workers are employed in departments that would be affected by the consolidation, and fewer than 1,000 of them would lose their jobs, he said.

Both newspapers have hired an outplacement firm, Jannotta, Bray & Associates Inc. of Detroit, to assist those employees find new jobs.

When The Stroh Brewery Co. closed a Detroit plant, Jannotta, Bray & Associates placed 97 percent of the people who sought other employment, said Keating. "When we were looking to find an outplacement firm like this, that certainly caught our eye." □

Patrick to head FCC

President Reagan has named Dennis R. Patrick to succeed Mark S. Fowler as chairman of the Federal Communications Commission. Fowler has announced he will resign this spring. Patrick has been an FCC comissioner since 1983 [**presstime**, Jan. 1984, p. 36]. □

ANPA hits preprint proposals

Proposed new postal rules on advertising inserts could have a severe negative impact on newspapers that use the mails extensively for distribution and even cause some of them to reject preprints, ANPA said.

"Rural newspapers (that) rely upon the mails almost exclusively to reach readers will simply have to turn away advertising," the Association said in comments to the U.S. Postal Service.

USPS proposed tightening rules on preprints that are carried in publications delivered through the mails. Among other things, authorities want to limit the number of pages permitted in supplements to the number of pages in the main body of the newspaper; to reinstate an abandoned requirement to print "supplement to (name of newspaper)" on the inserts; and to bar certain kinds of material mailable as inserts such as product samples.

ANPA said a relatively small insert in some cases may turn out to be larger in number of pages than the paper in which it is carried. Requiring an advertiser to print tailored "supplement to" notices on preprints, it said, "would provide a powerful incentive for the advertiser to abandon the newspaper."

USPS proposed the rules to crack down on alleged abuses involving preprints [**presstime**, Jan. 1987, p. 50]. □

Court upholds 2nd-class TMC rules

The 4th U.S. Circuit Court of Appeals affirmed new U.S. Postal Service rules that block newspapers from using second-class mail for their total-market-coverage programs.

The court rejected an ANPA appeal in which the Association argued the rules violate free-speech and equal-protection provisions of the First and Fifth Amendments.

The court did, however, remove ANPA's primary concern—that the rules discriminate between classes of publications. The court clarified that the rules do not treat publications differently by virtue of their publication frequency.

In that respect, "in my own view, the court did exactly as we wanted it to do," said W. Terry Maguire, ANPA vice president/general counsel.

Without examining most of the Association's claims, the court explained that USPS promulgated a "final rule" after briefs were filed in the case that prohibited second-class TMCs not only on the day of publication of the regular issue but also in the same week.

ANPA was concerned that the final rule also could be discriminatory, but the court removed that fear by saying the description of every week "is illustrative rather than definitive" [**presstime**, Dec. 1986, p. 56]. □

ANPA protests recommendation to lift Bell restrictions

ANPA has sharply criticized the Justice Department's recommendation that the regional Bell operating companies be unleashed and allowed to do such things as engage in electronic publishing.

"After only three years the Department of Justice has cavalierly dismissed the potential for monopoly abuse by the Bell operating companies in today's information marketplace," said Jerry W. Friedheim, ANPA executive vice president.

In a Feb. 2 report filed with U.S. District Judge Harold H. Greene, Justice recommended lifting virtually all of the line-of-business restrictions that had been imposed under the Modification of Final Judgment, or consent decree, governing the Jan. 1, 1984, breakup of AT&T.

Specifically, the agency recommended an end to the prohibitions against BOC provision of information services, provision and manufacturing of telecommunications equipment, and involvement in non-telephone businesses.

The government was obliged to report to Greene on the third anniversary of divestiture on whether there is a continuing need for the restrictions.

The information services prohibition "is not necessary to protect competition and may be depriving large parts of our society of the benefits of the information age," said Charles F. Rule, assistant attorney general in charge of the Antitrust Division, in a statement issued with the report.

In its 210-page report, Justice said that if the restriction is removed, the BOCs would be able to provide information services "only under the significantly improved regulatory framework" developed by the Federal Communications Commission in its "Computer III" and "Joint Cost" proceedings. Those proceedings were designed to ensure that BOC rivals enjoy equal access to the local telephone exchange, and that the BOCs not subsidize their unregulated businesses with revenues from the regulated telephone business.

In a footnote, the Justice Department said "electronic publishing" is encompassed within the consent decree's definition of "information services."

"As with other types of information services, the Computer III rules should be adequate to eliminate any competitive concern that might arise from BOC provision of electronic publishing," it said.

"The reasons given by the Court as supporting the temporary electronic publishing ban on AT&T . . . –the danger that AT&T might use its nationwide interexchange dominance to crush competition in a nascent industry to the detriment of First Amendment values–do not apply to electronic publishing by the BOCs.

"In addition, many of the competitors in information services, and indeed electronic publishing, markets are large firms such as IBM and Dun & Bradstreet that do not seem to be particularly vulnerable in this area. Moreover, a ban on electronic publishing by the BOCs would be contrary to the diversity goals underlying the First Amendment."

ANPA, which was instrumental in securing the information services prohibition in the MFJ, disagreed.

The Association has lobbied vigorously for what it calls the "Diversity Principle"—that monopoly telephone companies should not be allowed to own any interest in or control the information carried by their transmission facilities.

In response to the new Justice Department recommendations, Friedheim said they "do not provide protection against anti-competitive abuse. They will not ensure that consumers have the fullest choice in the news, advertising, product, service, financial, educational, transactional, sports, religious and other information transmitted over telephone company monopoly facilities.

"Nor do these recommendations ensure the kind of competitive environment that will lead to the lowest cost to the American consumer for these facilities."

ANPA plans to submit comments on the recommendations to Judge Greene by the March 13 deadline.

The Justice recommendations were based on a report by consultant Peter W. Huber, which also was released Feb. 2 [**presstime**, Jan. 1987, p. 44].

In a related development, the Commerce Department's National Telecommunications and Information Administration Feb. 4 issued a report assessing how changing the AT&T consent decree would affect U.S. trade.

NTIA said lifting the information services restriction for "auxiliary communication services," such as electronic mail and computer bulletin boards, "almost certainly would have significant positive U.S. trade effects both now and in the long run." It said allowing Bell companies to offer "computer database-related services" or "mass media-like services such as teletext . . . should have no negative trade consequences." □

Chilean editor to receive FIEJ Golden Pen

The International Federation of Newspaper Publishers, or FIEJ, has selected Chilean magazine editor Juan Pablo Cardenas to receive the 1987 Golden Pen of Freedom.

Editor of Analisis, Cardenas has been imprisoned three times and has lived under constant harassment for years, according to FIEJ.

Juan Pablo Cardenas

In announcing the selection Jan. 29, the FIEJ Board of Directors said: "Cardenas has paid and is continuing to pay dearly for his devotion to democracy and freedom of expression. He and the staff of his magazine have resisted numerous attempts to silence them, including campaigns of intimidation, the murder of a leading journalist, bans, censorship and imprisonment."

The board also said in making the award it wanted to "recognize the courage and commitment to the values of press freedom of numerous editors and journalists in Chile. It also wishes to pay tribute to the memory of Joe Carrasco Tapia, international editor of Analisis, who was abducted and murdered in September last year."

According to FIEJ Director Timothy Balding, Cardenas received word of the award at about the same time he learned that he had been sentenced to spend every night for the next three years in prison for "libeling" Chilean President Augusto Pinochet. An appeal is pending, Balding said.

Cardenas will be invited to accept the award at FIEJ's 40th Congress in Helsinki, Finland, May 24-27.

Among the speakers on the program is Robert M. Johnson, publisher, president and chief executive officer of Newsday of Long Island, N.Y., who will talk about press credibility. Other congress program topics include promoting a free press in developing countries and covering nuclear energy.

Executives of ANPA-member newspapers are eligible to be included in ANPA's delegation to the congress. ANPA will mail registration forms to member newspapers. For further information, contact Martin Casey, ANPA manager/government and international affairs, at The Newspaper Center, Reston, Va. □

Media groups protest Singapore action against Journal

Several media associations have protested restrictions imposed on The Asian Wall Street Journal by the government of Singapore.

According to a report in the domestic Journal, the Singapore government is limiting the sale and distribution of the newspaper to only 400 copies, when it normally sells 5,000.

The action was taken, according to the report, because the Journal has refused to print a government reply to an article about a securities exchange. The government said the story contained errors of fact. The Journal said it had investigated the article and found it accurate.

ANPA, the American Society of Newspaper Editors, the Committee to Protect Journalists and the International Federation of Newspaper Publishers sent separate messages of protest to Singapore government officials.

In its cable to Prime Minister Lee Kuan Yew, ANPA said: "Americans have long admired your leadership . . . in building in South East Asia a beacon for democracy and free enterprise. We hope that has not changed, but recent actions restricting the press indicate to us that serious and detrimental changes may in fact have occurred."

This will not be the first case to put into motion the proposals on combating worldwide censorship made at January's Voices of Freedom '87 conference in London [**presstime**, Feb. 1987, p. 42]. The organizations that sponsored the conference have not yet had a chance to meet and set up the machinery to implement the proposals, Dana Bullen, executive director of the World Press Freedom Committee, said in late February. □

Seib released after 6 days

Gerald F. Seib, a Middle East correspondent for The Wall Street Journal, was allowed to leave Iran Feb. 6 after being detained for six days by the government that apparently suspected him of being a spy for Israel.

ANPA was among the news organizations protesting Seib's detention and seeking his release. In cables to Iranian government officials, ANPA Executive Vice President and General Manager Jerry W. Friedheim said: "Professional journalists like Seib do one job only and that is to report for their newspapers." □

Paper plans seasonal editions

When it's 40 below zero and dark in Saskatchewan, subscribers to the Saskatoon Star-Phoenix want to stay home and read their evening paper. But in the summer, with warm temperatures and long days, people want to read a paper in the morning because they want to be outside the rest of the day and evening.

That's the theory, anyway, of the 59,785-circulation daily, which currently publishes in the evening year-round. "A good newspaper responds to the needs of its readers," said Ed Sebestyen, general manager.

The 39-year newspaper veteran told his 275-member staff earlier this year that if feasibility studies bear him out, he will convert the newspaper to morning publication in the four warm-weather months and revert to evenings the rest of the year.

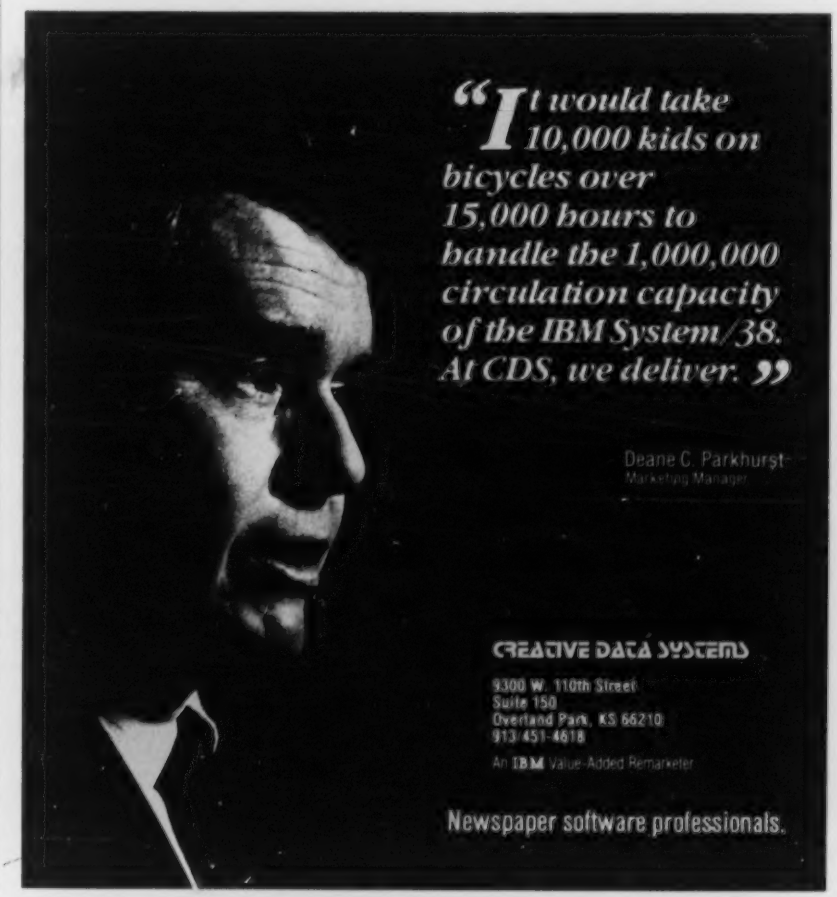
The Star-Phoenix calls its seasonal conversion "a bold move never before attempted in North America." Bill Peterson, assistant to the publisher for special projects, said the idea originated with Thomas E. Griffiths, former marketing director of the Los Angeles Daily News who served as a consultant to the Star-Phoenix.

Sebestyen is expected to make a final decision in early March based on reader polls, Peterson said. The paper would switch to mornings beginning May 19 and resume afternoon publication Sept. 8. □

Trial delayed

A California court in February postponed for several months a civil trial involving The Sacramento Union's circulation figures. Courtroom space was unavailable, authorities said.

The Union is being sued by three advertisers—two car dealers and an appliance store—in a case originating in 1983 when the newspaper found that circulation had been inflated under previous management [**presstime**, September 1983, p. 25]. □



"It would take 10,000 kids on bicycles over 15,000 hours to handle the 1,000,000 circulation capacity of the IBM System/38. At CDS, we deliver."

Survey shows Ohio adults rank newspapers as their favorite advertising medium

BY GUIDO H. STEMPEL III

Ohioans use newspaper advertising more than television advertising and like it better. That's the major finding of a survey conducted by Market Opinion Research of Detroit for the Ohio Newspaper Foundation. Results of the study were presented at the annual convention of the Ohio Newspaper Association in Columbus Feb. 19.

The survey consisted of telephone interviews conducted Nov. 4 and 18, 1986, with 1,000 randomly selected Ohio adults.

Respondents were asked which medium is the most useful source of information for eight kinds of goods and services. Newspapers were a clear winner in every category. (See chart.) Seventy-eight percent said newspapers were the best source of information for entertainment, and 77 percent said newspapers were the best source for housing and employment information.

The only category for which more than 10 percent of the respondents picked television as the best source was financial services; television was picked by 13 percent.

Newspapers had an even wider margin over radio and a clear margin over mail circulars, which did somewhat better than either of the broadcast media. Top category for circulars was food, but even there newspapers led by 68 percent to 18 percent. Respondents also indicated they preferred to have advertising circulars in newspapers rather than in the mail by a margin of 60 percent to 24 percent.

Further indication of the power of newspaper advertising came in response to a question asking whether respondents had made a purchase in the past two weeks because of advertising they had seen or heard. Forty-four percent said they had, and three-fourths of those said it was newspaper advertising that prompted the purchase. This seems particularly significant because respondents were free to recall any ad and any purchase, not just those in specified categories.

These results may well stem from the high penetration of newspapers and the high acceptance of newspaper advertising. The survey found that 71 percent of the respondents had read a daily newspaper the day before the interview, and 90 percent had read one in the preceding week.

Although television had even higher penetration, with 87 percent having watched the day before the interview, it was fragmented. For example, only 53 percent of the respondents had seen a local newscast the day before the interview.

And although 70 percent of the respondents had listened to radio the day before the interview, only 54 percent had listened between 6 and 10 a.m. and only 42 percent between 3 and 7 p.m.

Newspaper advertising was clearly less offensive and more believable than television advertising. Fifteen percent of the respondents said they often find newspaper advertising offensive, and 23 percent said they occasionally find it offensive–a total of 38 percent. Twenty-eight percent of the respondents said they often find television advertising offensive, while 35 percent occasionally find it offensive—a total of 63 percent.

Forty-one percent of the respondents said they find newspaper advertising usually believable; only 21 percent said they find television advertising usually believable.

The survey also indicated that the newspaper audience is somewhat more upscale than the television audience. For example, of those with more than $35,000 annual income, 79 percent read a newspaper yesterday, compared with 69 percent for those with less than $35,000 income. Television, on the other hand, was used less by those with higher income. Of those with more than $35,000 annual income, 85 percent watched television the day before the interview, and median viewing time was 1 to 2 hours. Of those with less than $35,000 income, 89 percent watched television the day before, and median viewing time was 3 to 4 hours.

Those with more than $35,000 income also were more likely to cite the newspaper as the best source of information about various goods and services. There were similar findings in relation to education and employment, with the more educated and the employed making greater use of newspapers and less of television.

The study leaves little doubt that in Ohio the best way to reach the most people is the newspaper, and this is even more so for the upscale segment of the population. □

Medium considered most useful source of information

Product or Service	Newspapers	Radio	TV	Circulars	Other/ None
House, apartment or other real estate	77%	0%	1%	1%	21%
Automobile, van or RV	65%	2%	8%	1%	24%
Employment opportunities	77%	1%	1%	0%	21%
Home furnishings, appliances	63%	1%	7%	12%	17%
Food and grocery items	68%	1%	4%	18%	9%
Clothing, apparel	56%	1%	7%	15%	21%
Financial services	47%	5%	13%	5%	30%
Entertainment, places to go	78%	5%	5%	1%	11%

NAB seeks volunteers for color test

The Newspaper Advertising Bureau is seeking newspaper volunteers to participate in a new multi-market test of color advertising effectiveness.

"The only requirements are that they print good color and can do A/B split runs of color versus black-and-white," said James Dunaway, NAB vice president, director of information. In an A/B split run, every other copy will feature one test advertisement in color, with alternating copies containing the same ad in black-and-white, he explained.

The test will be conducted later this year. NAB has placed no limit on the number of newspapers that can participate, Dunaway said.

For more information, contact Thelma Anderson, research manager, marketing/new technology, NAB, 1180 Avenue of the Americas, New York, N.Y. 10036; (212) 704-4543. □

Have You Looked at Your Yellow Pages; Lately?

It's Grown, Hasn't It?

And now you probably have 2 or even 3 directories in your market where there was just one a few years ago. Perhaps you haven't looked at the Yellow Pages as competition, but they may be your biggest competitor for local ad revenue.

American Consulting Services in Vancouver, Washington, has developed a marketing program for the newspaper industry which can teach your ad reps how to convert Yellow Page dollars into newsprint contracts. Millions of dollars have already been recaptured by the newspaper industry through this training program. You have an opportunity this year to increase your bottom line by simply checking into this cost-effective seminar.

Future of Advertising panel recommends standardizing national ad discounts

A task force of the Future of Advertising project has recommended that U.S. daily newspapers adopt 15 standard "break points" for national advertising volume discounts.

The recommendation was announced at the 138th sales conference of the International Newspaper Advertising and Marketing Executives.

The plan is intended to accommodate national advertisers that place multi-newspaper advertising schedules. "Most newspapers in the country have their own unique rate structure, which means that there is no easy way for a national advertiser to look across the board at the kind of a discount he would earn for a schedule at a given volume level," said Jerome S. Tilis, chairman of the FOA Task Force on Pricing and Positioning and president of the Detroit Free Press.

Dant (right) succeeds Momsen at the helm of INAME.

Each newspaper must establish its own rates to be charged at each break point, said Tilis, who recently was named vice president/marketing for Knight-Ridder Inc. and chairman of Knight-Ridder Newspaper Sales. Newspapers also may add break points to the 15 recommended, he said.

Tilis' task force also recommended newspapers review the differences in discounts offered national and retail advertisers, consider offering additional discounts for repeat ads, and look into the possibility of establishing special introductory rates for certain national product categories from which newspapers currently get little advertising, such as proprietary drugs and beer.

About 1,500 people attended the INAME conference Jan. 25-28 in Miami Beach. Although the attendees heard from a variety of speakers on such topics as Canada's NADbank (Newspaper Audience Databank), some Florida newspapers' successful advertising network for special food promotions and methods of improving staff training, a significant portion of the program was devoted to a status report on the FOA project launched by the Newspaper Advertising Bureau in 1985 to increase newspapers' share of advertising [presstime, Jan. 1987, p.52].

Keynote speaker Harold W. Andersen, chairman of the FOA Steering Committee, said all newspapers may not think they can accept every recommendation from the various task forces. But he urged all newspaper executives to consider them carefully and to be alert to publications coming out of the project. "None of what we're doing will have any value or any effect unless you all take it seriously, and that's up to each and every one of you," said Andersen, chairman and chief executive officer of the Omaha World-Herald Co.

There was some indication that at least one FOA task force recommendation is not being embraced immediately by newspapers. Only about half of the audience indicated by a show of hands that their papers will have adopted the Standard Advertising Invoice by the end of the year, the target date for implementation. "We have to do a little more sales work on you, I guess," said Sam S. McKeel, publisher of The Philadelphia Inquirer and a member of the Task Force on Standardization, which brought the invoice project to fruition.

Direct selling by telephone and on cable television are important new developments.

In another program segment, NAB President Craig C. Standen reported that in 1986 advertisers spent 7 percent more in newspapers than they did the year before, reaching a total of nearly $27 billion. There were gains in every category—national up 3 percent, retail 6 percent and classified 10 percent. "We expect the same kind of performance in '87," Standen said. "National will be up 5 percent, retail 7 percent and classified 8 percent, for an overall growth of 7 percent."

But NAB Executive Vice President Leo Bogart cautioned that newspapers will face a tougher selling climate: "We're going to face more resistance in making that gain than we did in 1986."

Bogart also predicted 1987 would see a "pause in the classified boom," more "disenchantment" with television and a greater willingness on the part of national advertisers to "try print."

He told the group to "look for new challenges from direct sales media." Direct selling by telephone and on cable television are important new developments of which newspapers should be aware, he said.

Incoming INAME President Alan H. Dant, advertising director of The Plain Dealer in Cleveland, said newspapers need "a marketing plan that sharpens our focus.

"If . . . currently our greatest deficiency is national advertising, shouldn't we be developing a national sales plan with very specific target goals on both a short and long-range basis?" Dant asked. He suggested that newspapers can and should do a better selling job with advertisers in the liquor, airline, automobile, financial and food sectors.

Dant succeeds Robert C. Momsen, vice president/community development of the St. Paul Pioneer Press Dispatch.

Other officers elected were: President-elect Roger H. Clapp, advertising director of the Richmond (Va.) Times-Dispatch and The Richmond News Leader; First Vice President Fred D. Crisp Jr., director of sales and marketing, The News & Observer and The Raleigh (N.C.) Times; and Second Vice President Norman R. Kirk, director of advertising, The Toronto Star. □

What blizzard?

Two January snowstorms in four days. A one-two punch that virtually paralyzed the Northeastern United States.

But for AD/SAT customers – advertisers and newspapers – it was business as usual.

In New York, Chicago, Boston, Newark, Philadelphia and Washington, normally tight production schedules faced a fresh snowbank of problems.

But while airports were closed and trucks and messengers struggled below, AD/SAT's network of newspapers received their ad material right on schedule, from 22, 300 miles above.

AD/SAT®

We deliver newspaper ads at the speed of light.

For the Boston Globe, $90,000 in recruitment and $35,000 in national display was saved. At the Chicago Tribune, it was $40,000 in classified and $5,200 in national. And at the Washington Post, $15,000 in retail beamed in safely. All on January 22.

Today, agencies, advertisers and a growing network of newspapers* look to AD/SAT to guarantee delivery at the speed of light.

Weather or not.

*As of 2/6/87: 93 newspapers representing 41% of U.S. daily and 54% of Sunday circulation.

AD/SAT, Inc. • 527 W. 34th St., New York, N.Y. 10001 212/330-0678 • FAX: 212/330-0660

Tax battles loom

Several states are seeking to eliminate sales-tax exemptions affecting newspapers as they redesign their tax codes in response to newly enacted federal tax revisions.

Legislatures in more than 40 states already are working on state tax reform. In the process, some "see this as an opportunity to broaden the tax base by extending the sales and use tax to all professional services, including advertising services, as well as eliminating the exemption for newspaper circulation sales," according to Kevin Grant, state relations coordinator for ANPA.

"We anticipate that more states will file bills aimed at repealing professional service exemptions as a way to raise revenue as the deadline for filing bills approaches," Grant said in a report to ANPA legal and government affairs committees.

Bills to repeal current exemptions or to extend sales taxes to newspapers have been filed in seven states: Washington, Oklahoma, Colorado, North Dakota, Mississippi, South Carolina and Utah.

Grant also is expecting legislation in economically strapped energy-producing states, such as Louisiana and Texas, to repeal exemptions for advertising services. Those two states enacted emergency bills in 1986 to increase or extend sales taxes owed by newspapers on circulation sales.

And it's not just the legislatures that are active. Governors in Arkansas, Washington and Oklahoma have recommended repeal of exemptions or additional sales taxes affecting newspapers, and the governor of Indiana is reconsidering his proposal for repeal. "The outlook in Washington . . . looks good against such a tax, and the situation is improving in Arkansas," but a tough battle is expected in Oklahoma, Grant said.

Legislation filed in Colorado would tax professional services, including the sale of advertising space, but an in-state coalition believes it will be killed in committee. In North Dakota, legislators have filed a bill to repeal the sales-tax exemptions for advertising income, circulation sales, and newsprint and ink purchases, but state press representatives do not believe it will pass.

Legislation has been introduced in Mississippi to repeal exemptions on advertising and circulation sales. The situation there is unique, Grant said, because the intent is to tax newspapers to finance new textbooks in the schools—a budget item that newspapers have been pushing editorially. Grant believes the legislation will be found defective because it would affect only newspapers.

In Florida, a sales-tax study commission has heard testimony from the Florida Press Association concerning the possible reinstatement of an advertising exemption. The commission is scheduled to issue its recommendations March 5, with the legislature scheduled to convene in April [**pressstime**, Jan. 1987, p. 50]. □

State production taxes examined

A state-by-state review of sales and use taxes affecting the production end of the newspaper business shows great variation, according to a new study by ANPA's Legal and Government Affairs staff.

At one end of the spectrum are four states that impose no taxes on newspaper production—Alaska, Montana, Oregon and West Virginia.

At the other end are Alabama, California, Hawaii, Michigan, Mississippi, Missouri, North Dakota, South Dakota, and Washington, which tax all categories of production materials, equipment or machinery used in newspaper publishing.

A booklet listing the various taxation and exemption criteria has just been published by ANPA in cooperation with International Newspaper Financial Executives. Titled "Taxes on Production Materials, Supplies and Equipment Used by Newspapers," it reviews sales and use taxes affecting capital purchases by newspapers in all 50 states. Copies have been sent to all ANPA-member newspapers.

The report "attempts to bring together the best available information," said its author, ANPA State Relations Coordinator Kevin Grant. The information was gathered from state press association executives or other state experts, supplemented by a review of state statutes where required, he said.

Grant said the report can be used in several ways: to determine prior to purchase whether a sales or use tax would be owed on certain equipment or parts; to estimate tax liabilities in preparing capital-expenditure budgets; and to assist newspapers in working with state revenue departments or legislatures.

State-by-state listings specify which categories of equipment, parts or materials are taxed and which are exempt. □

New syndicate starts with a blockbuster

A new syndicate has been established, and it has a prestigious first client: Ann Landers.

Both the syndicate and the switch by the famous advice columnist resulted from the sale of News America Syndicate to The Hearst Corp.'s King Features Syndicate [**pressstime**, Feb. 1987, p. 62]. With the sale, Landers' contract with News America expired.

Also with the sale, the 36-year-old president of News America Syndicate, Richard S. Newcombe, broke ranks to found Creators Syndicate Inc.

Not only did Newcombe attract a star-quality syndicated feature, he also announced that his company will operate under a policy that is highly unusual in the syndicate business: It will allow artists and writers to own the rights to their own work.

"I started it as the only major syndicate in history to offer free-agent status to all clients," Newcombe said. He said his is already a major syndicate, even though he has only one contributor so far, because Landers has 1,100 newspaper clients–the largest number of any syndicated columnist in North America.

Newcombe said his syndicate will be a boon especially to independent comic strip artists. "What I am addressing primarily is the cartoonist–the independent contractor who creates a comic strip."

"What is unique about Creators Syndicate is that writers and artists will be given the option of retaining ownership of their own material and will sign up for relatively short contracts," Newcombe said. He would not disclose the terms or length of contract with Ann Landers.

Along with her change to a new syndicate, Ann Landers also announced she will leave the Chicago Sun-Times, where her column originated for 31 years, for the rival Chicago Tribune. Tribune Editor James D. Squires said Landers' column will run on page 2 of the Tempo section. That's the spot now occupied by Landers' twin sister, Abigail Van Buren, who writes "Dear Abby." Squires said Abby will be moved to "a prominent new home."

Creators Syndicate will handle the Landers column jointly with the Los Angeles Times Syndicate. Creators will handle editing, sales and marketing, while the Times syndicate will be in charge of production, distribution and billing. □

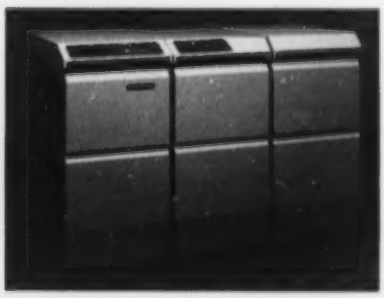
By Steven Findlay
USA TODAY
A new test helps determine more quickly how much damage a heart attack has done, researchers said Tuesday.
Until now, tests to measure the extent of heart damage took three to 10 days, often delaying appropriate treatment.
Man-made cells tagged with
obtained will be very helpful in making a more precise judgment as to what to do next,
years after more study.

If you think the headline of this ad has two meanings, you're right. On both counts.

USA Today has selected Autologic's new APS-6 Laser Imager for full-page imaging and typesetting.

For a very simple reason.



With all due modesty, it's the best laser imager available on the market today.

It images full pages of text and graphics at high speeds. With high resolution: our top quality halftones have hard, crisp dots, giving you 1,000 dpi, or a 90 line-screen.

Its full page width gives you production flexibility. And it has the reliability that Autologic imaging systems have always been known for.

Another advantage is that it's driven by Autologic's exclusive Page Image Processor, allowing you to hook up additional devices (such as a proof printer) at a lower cost. All fonts will match. And software needs no modification.

So make the smartest imaging decision in the USA, today. *USA Today* did. Call Autologic Marketing Services to find out about our APS-6 Laser Imager.

Nation's schools will join 'Celebration of Citizenship'

Teachers and students all over the country will commemorate the bicentennial of the U.S. Constitution this year by devoting Sept. 16 to a teach-in on the historic document.

ANPA Foundation and the Commission on the Bicentennial of the United States Constitution are cosponsoring the event, called "A Celebration of Citizenship," with 12 national education organizations.

The organizations joined Feb. 19 in a press conference to kick off their campaign to involve all of the nation's 57 million students from kindergarten through high school.

The Foundation later this month will mail materials containing suggestions for lessons and activities to the principals of every public and private school.

The centerpiece to the teach-in is scheduled for 1 p.m. EDT, when President Reagan has been invited to lead the nation's students, over radio and television, in a recitation of the Pledge of Allegiance. Retired Chief Justice Warren E. Burger, chairman of the bicentennial commission, also has been asked to read and explain the meaning of the Preamble to the Constitution.

Sponsors believe the program "will deepen (students') understanding of the rights and responsibilities of citizenship," said Ann Kahn, president of the National Congress of Parents and Teachers. The teach-in is timed to prepare students for the following day's observance of the anniversary of the signing of the Constitution.

Burger said the event addresses a deficiency in most young Americans' education about their heritage. "The basic problem is there needs to be more teaching of history and especially about constitutional history," the retired chief justice said.

"Nothing could be more important than teaching our young people the value of our nation's Constitution," he said.

Jerry W. Friedheim, executive vice president of ANPA and vice chairman of the Communications Advisory Committee to the commission, called the program "a historical event that will better enable an entire generation of young Americans to understand the U.S. Constitution and the principles that are at the heart of American democracy."

A recent national survey conducted by The Hearst Corp. found that most adult Americans have grown up with faulty knowledge of the Constitution's provisions. Nearly half of those surveyed could not identify the purpose of the Constitution, most did not know what the Bill of Rights is, and most held a mixture of true and mistaken beliefs about the document's provisions.

Friedheim delivers remarks with fellow panelists (from left) Ann Kahn, president of the National PTA; Judith D. Hines of ANPA Foundation; Burger; and Betty Southard Murphy, member of the Commission on the Bicentennial of the U.S. Constitution.

Among the false perceptions, for example, sizable majorities believed that the Constitution establishes English as the national language and that the Constitution guarantees citizens a free public education.

Sixty percent of Americans surveyed also said the Constitution should be amended this year through a constitutional convention to consider prayer in public schools, abortion and freedom of the press. But the survey also found that those Americans who know most about the Constitution are the least likely to want to change it. □

New curriculum guide caters to gifted students

A curriculum guide titled "Using the Newspaper with Gifted Students" has been published by ANPA Foundation.

The camera-ready guide suggests classroom activities ranging from imagining life without newspapers, to writing letters to the editor and analyzing comic strips as reflections of modern culture.

The 59-page guide is designed to expand the scope of Newspaper In Education programs to include activities specifically for gifted and talented students, as well as for high-achieving students in regular classrooms.

It was written by professor John Guenther of the University of Kansas and Margaret Anderson, former assistant professor there who is now principal of Rio Grande School in Santa Fe, N.M. Guenther is scheduled to lead a session about the gifted curriculum at the Foundation's NIE conference March 18-20 in Chicago.

The curriculum guide is organized around sections of the newspaper that can be used to study different subjects, and it seeks to give students an understanding of the total newspaper. It contains 50 activity sheets for students.

To obtain a copy, send a check for $20, payable to ANPA Foundation, to Ruth Finn of the Foundation at The Newspaper Center, Reston, Va. □

Newspapers' literacy projects include special sections, in-house ads, posters and tutoring

A monthly four-page tabloid in the Herald & Review of Decatur, Ill., is one of the latest newspaper projects aimed at improving literacy skills.

The insert, "READ: The News," is the brainchild of the newspaper's promotions coordinator, Annette M. Mulholland.

Mulholland has been writing the inserts herself by rewriting major national and local news stories at a fourth-grade reading level. The first insert ran Jan. 12.

Raves have come from unexpected quarters: young gifted children, older children in remedial reading classes, elderly readers who like the larger print, and even regular readers of the paper who could read it easily before rushing to work.

Crewmen from the USS Valley Forge read the Long Beach daily as part of the functional skills program.

"It's gone over really well," but the rewriting is "hard. It's really, really hard," Mulholland said. Each story is tested with the Star software program at Project READ in Decatur to determine the reading level according to such criteria as grammatical structure and number of syllables.

"It's a whole different way of explaining ideas, and in a lot of ways it's a lot more difficult," she said.

"Even though I shot for [grade] four, a lot of the stories are at the fifth- or sixth-grade level. One of the jokes around here was that I had asked the sports editor if he would write a story about the Super Bowl, geared toward the fourth-grade level. And the [software] program rated it with a reading grade level of 19.8."

Other new literacy projects involving newspapers include:

• The U.S. Navy Afloat Functional Skills Program now uses the Newspaper In Education program of the Press-Telegram of Long Beach, Calif., to teach reading skills to crewmen. Two ships now use NIE in the program with a third scheduled to begin soon. Eventually, NIE may reach all 30 ships participating in the Afloat Program, which offers remedial or college-level classes in English, reading and math, said Helen Wyatt, coordinator for the Afloat program.

• ANPA Foundation joined forces with the American Association of Retired Persons to launch a campaign Feb. 18 with a newspaper ad and poster to encourage AARP's 24 million members and other older citizens to volunteer as tutors, organizers and managers of literacy projects.

All ANPA-member newspapers will receive the ad. "We intend to make an impact on this unfortunate situation [illiteracy] by appealing, through newspapers, to the talents and conscience of the older persons of our population," said ANPA Foundation Chairman and President Edwin L. Heminger, editor and publisher of The Courier in Findlay Ohio.

Single copies of the poster and ad are free. Write: Literacy Poster, AARP Fulfillment, 1909 K Street N.W., Washington, D.C. 20049.

• The "Reading Partners" program at the Milwaukee Journal and the Milwaukee Sentinel has recruited 44 employees to tutor about 85 Milwaukee public school students, identified by their teachers as having reading disabilities. "They (teachers) welcome this help, because they can't take the extra time to do it," said Jack E. Knake, vice president of corporate communications for Journal Communications.

The employees receive time off, with pay, to work with a child for about an hour a week. Some give extra time on their own.

• The Palladium-Item of Richmond, Ind., organized a community-wide tutoring project, supported by Gannett Foundation grants of $12,100 since the program began in February 1986. The impetus for the program was the desire to retrain illiterate workers in Richmond after a local factory closed. But the program became "very broad-based" as the newspaper formed a literacy coalition and increased community awareness of the project through editorials, a talk by literacy expert Jonathan Kozol and other efforts, said Emmett K. Smelser, executive editor.

A review of dozens of other newspaper literacy efforts is available from Carolyn Ebel Chandler, ANPA Foundation, The Newspaper Center, Reston, Va. □

Big plans in store for newspapers' observance of fifth annual NIE Week

More than 500 U.S. daily newspapers will be participating in activities for the fifth annual Newspaper In Education Week March 2-6.

The event, cosponsored by ANPA Foundation and the International Reading Association, promotes use of the newspaper as a classroom teaching tool and student appreciation of the role newspapers play in society.

Newspaper plant tours, distribution of newspapers to schools, speeches by newspaper employees to students, and various reading, writing and drawing contests are among the many events that individual newspapers are sponsoring.

ANPA Foundation and state press associations also have distributed camera-ready curriculum materials for use by teachers during NIE Week. During last year's observance, hundreds of U.S. daily and weekly newspapers provided about 3 million copies of newspapers to 30,000 schools. Newspapers in at least eight foreign countries also participated [**presstime**, Jan. 1987, p. 47].

Following NIE Week, representatives from newspapers and educational organizations will meet for the 1987 Newspaper In Education Conference at Chicago's Westin Hotel. The March 18-20 conference will include sessions on using newspapers to teach current events, citizenship education, critical thinking and various subject disciplines. Sessions also are planned on teaching marketing techniques, initiating private sector partnerships between schools and businesses, and preventing job burnout. □

Journalists, educators have meeting of the minds on issues involving J-schools

Working journalists and journalism educators don't get together often. When they do, the mix is apt to be contentious.

But an effort to have a meeting of the minds Feb. 6-7 in Racine, Wis., brought an airing of views and a conciliatory spirit to issues that have more often divided than bound the camps.

Five working groups issued short-, medium- and long-term proposals to respond to shared concerns about the quality of curriculum, faculty, school facilities, mid-career development and training.

"I think the main accomplishment is in the set of actual proposals," which "have enhanced understanding" between journalism educators and working journalists, said Sharon M. Murphy, Marquette University journalism dean and one of the conference planners.

Formal reports of the proposals are being compiled for presentation at future meetings of appropriate committees within ANPA, the Associated Press Managing Editors Association, and the American Society of Newspaper Editors, Murphy said.

The conference, titled "We've Got to Talk to Each Other: Journalists and Journalism Education," brought together about 25 educators and 35 journalists primarily from schools, newspapers and other media organizations in the Midwest, with several from the East Coast.

It was held at the home of the host Johnson (Johnson Wax) Foundation—Wingspread, the last of architect Frank Lloyd Wright's "prairie houses"— and it revived a series of conferences held there in 1970, 1974 and 1976 to promote cooperation between newsrooms and classrooms.

As the discussions in Racine made clear, economic issues remain at the forefront, from the effects of media group ownership on editorial quality to the effects of low salaries on prospective journalists [presstime, Feb. 1985, p. 36]. Admission and graduation standards at journalism schools and continuing education for newsroom managers also sparked extended discussion.

Some proposals from the working groups stressed the need for comprehensive surveys and studies in various areas, while others urged concrete programs, particularly summer intern programs at newspapers for faculty members.

The group addressing faculty expertise also urged an expansion of incentives for critical applied research of the profession, taking a cue from the conference's keynote address by James H. Ottaway Jr., chairman and chief executive officer of the Ottaway newspaper group.

Ottaway challenged academics to "embarrass the worst among us" by scrutinizing "the dominance of the profit motive over quality by many newspaper owners, circulation and advertising managers."

Educators should ask themselves whether they shrink from critical analysis of newspapers because of "hesitation to bite the hand that feeds," he said.

"I think journalism education is caught in a serious conflict of interest," Ottaway said, citing the schools' dependence on media companies for financial support and for job offers for graduates.

"It's very thoughtful for (Gannett) management to contribute millions of dollars for journalism education, and I have nothing but good to say about it," Ottaway added. "But what school will sponsor a study of Gannett newspapers, one of our largest groups? How about the Don Reynolds Center (named for the president of Donrey Media Group) at the University of Nevada doing a critical study of Donrey newspapers?"

"Imagine what effect it would have on daily journalism," he said, if each school took one of the approximately 150 newspaper groups for extensive content analysis, followed by a long-term study of trends in its editorial quality. "Call it the 'adopt-a-group' program," he said. "Extensive public criticism of the best and worst newspapers would have a powerful effect."

While conference participants repeatedly hailed the address as "courageous," some were also quick to say that they have had complete freedom under Gannett grants.

Everette E. Dennis—executive director of the Gannett Center for Media Studies and the designated "commentating observer" of the conference—said in concluding remarks, "Educators have not been vigorous as critics, and it's kind of embarrassing when the CEO of a group tells us that you really ought to look at (deleterious effects of) chain ownership."

The Wisconsin gathering was remarkable for its "civility and mutual respect."

A study of a different nature, announced just prior to the conference, will analyze the qualifications of journalism professors. Supported by a $78,000 Gannett Foundation grant, the Indiana University Bureau of Media Research will examine the backgrounds and attitudes of 1,000 randomly chosen journalism-school teachers and administrators.

David H. Weaver, director of the bureau and professor at the IU School of Journalism, said it will be the most conclusive study ever done of journalism educators. It should allow comparison with the results of previous studies of working journalists, including those published in his book *The American Journalist* about the changing demographics and attitudes in newsrooms between 1971 and 1983, he said.

The study will address criticisms leveled at journalism educators by both working journalists and educators in other fields, such as charges that journalism teachers are not graduating well-rounded students and that the teachers lack creditable media experience.

Journalism educators can improve these perceptions through stricter controls on enrollment, James W. Carey, dean of the College of Communications at the University of Illinois, told the conference. Admission standards should be raised, not lowered, in response to a declining enrollment in news-editorial sequences because standards should address the quality of students, not the quantity, he said.

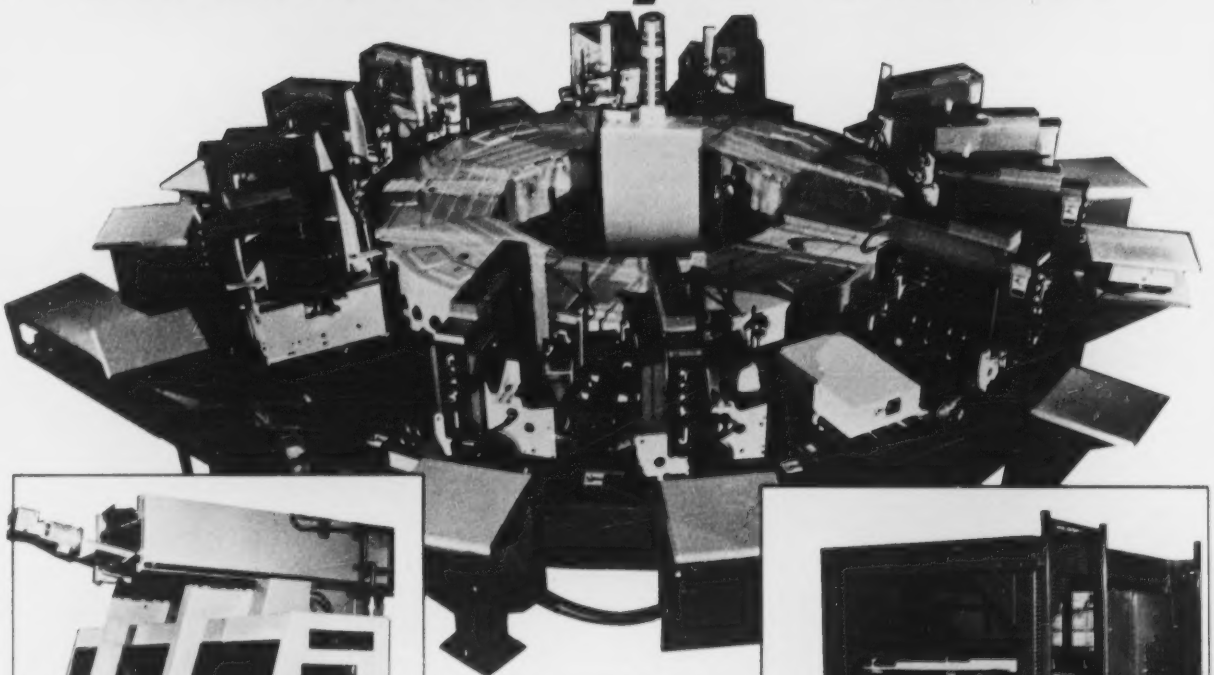
"The number one problem in the newspaper industry is its inadequate quality control," said Susan H. Miller, director of editorial development for Scripps Howard Newspapers. "If we want to work together, we need to address this."

"We strongly favor the idea of admission and exit tests (by schools) as a quality-control stamp," as well as adherence to accrediting standards that assist students in getting a broad education, she said.

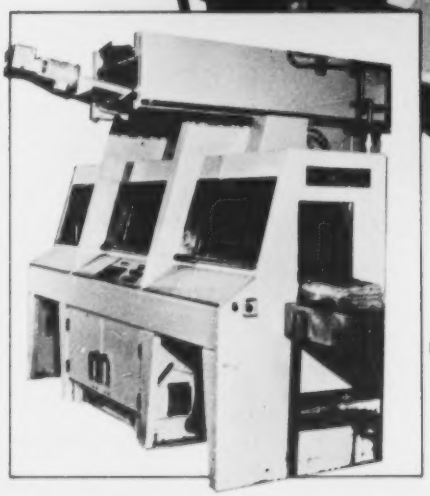
Despite differences aired in the full sessions and working groups, the gathering was remarkable for its "civility and mutual respect" and had "gone far beyond what we have done before," said Dennis in his closing remarks. "We have had very little of the grandstanding" that has characterized some past gatherings of journalists and educators, he said.

—Mary A. Anderson

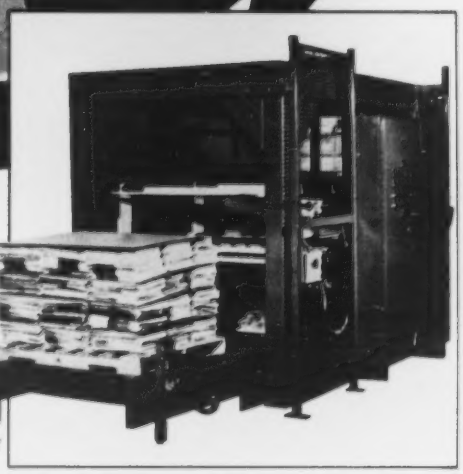
Automation is one thing. Productivity is three.



NP-1472 Newspaper Inserter



BOSS-60 Packaging System



NP-100 Programmable Palletizer

Harris Graphics' NP-1472 inserter, BOSS-60 packaging system and NP-100 programmed palletizer are designed to bring new productivity to newspaper mailrooms.

The NP-1472 has the versatility to adapt to any inserting job quickly and easily. It produces packages of up to 300 broadsheet pages in many jacket formats and automatically repairs incomplete sets.

The BOSS-60 automates packaging by doing the work of two conventional lines in half the floor space and with half the labor. The integrated functions produce high quality, strapped or unstrapped bundles at up to 50 per minute.

The NP-100 neatly palletizes stacks or bundles quickly, for better product protection and improved storage/retrieval. A programmable logic system controls all functions.

Alone, each is a dependable unit that pays off investment with lower operating costs and increased speed.

Together, the three form an integrated system that will raise mailroom efficiency higher than it's ever been. Each machine is designed to work smoothly with the others, moving product from press to pallet quickly, precisely, and with a minimum of labor.

The NP-1472, BOSS-60, and NP-100 bring more than automation to material handling. They deliver productivity.

Arbiter upholds restriction on reporter's coverage

The Toronto Star had the right under a labor agreement with the Southern Ontario Newspaper Guild to restrict a general assignment reporter from covering matters related to the labor beat because of a possible conflict of interest, an arbitrator has ruled.

The arbitration arose when the Guild protested a letter given to the reporter by the managing editor. The letter offered her the options of either resigning as an officer of the Organization of Working Women, taking a leave of absence while serving as an officer, or taking another position in the editorial department until her term as OWW president expired.

The union sought removal of the letter from her personnel file, contending that it was contrary to the labor agreement and was improper discipline.

The reporter was active in Guild matters, having served as head of the bargaining unit at the newspaper. She also was a member of the Metropolitan Toronto Labor Council and from time to time was a delegate to the Ontario Federation of Labor convention.

The letter resulted from a story in the union's newspaper reporting her activities at a union rally. The reporter, as president of OWW and in her capacity as Guild secretary, attended the rally for striking workers at a large Toronto department store. While at the rally, she spoke publicly and a photograph of her addressing the group with a loudspeaker appeared in the union's publication.

Arbitrator Owen B. Shime found that in discussions between the managing editor and the grievant, the primary concern was not over fairness and accuracy in her reporting, but over a possible public perception that a story written by her would be "tainted" because of her known public positions. The matter was resolved, pending arbitration, by assigning her to the courts beat.

A section of the labor agreement states that employees are free to engage in activities outside business hours that do not constitute a conflict of interest with normal job activities.

"At the outset," said Shime, "it is patently clear that the grievor's union activist position is incompatible with reporting news about labor relations matters. In that regard, her subjective interest in trade union matters conflicts with her objective duty to report the news in a fair and impartial manner. It is important and significant in this case that the grievor took an overt and highly visible position in connection with a very controversial labor matter, a position that could lead one to question her future reporting about labor matters."

Shime said the reporter was "not the person to judge her own impartiality or objectivity. . . . In short, the grievor has a conflict of interest and the employer is entitled to be wary of that conflict."

For a reporter, the arbiter said, "not only are actual objectivity and impartiality important, but so too is the appearance of objectivity and impartiality."

When management determines a reporter is in a conflict situation, it may remove that person from the area where the conflict exists, he said, and it was appropriate for the Star to do so.

Shime also said he was unconvinced that the grievant could not have remained as general assignment reporter covering subjects other than labor. Accordingly, he said she should be permitted to return to the general assignment staff under that restriction.

He denied the union's request that the letter from the managing editor be removed from her personnel file, because it was a letter "suggesting a solution to a real problem" and was sent with a view of resolving the matter. —*Clark Newsom*

Guild calls for labor summit

A summit meeting of the presidents of nine international unions with bargaining units in the newspaper industry has been scheduled for March 10 in Washington, D.C.

The meeting was recommended by The Newspaper Guild's Special Committee on Collective Bargaining in an effort to reverse what it called a deteriorating bargaining climate.

Guild President Charles A. Perlik Jr. sent invitations Feb. 11 proposing the March 10 meeting date to the presidents of the Communications Workers of America and its new Printing, Publishing and Media Workers sector, the Graphic Communications International Union, International Association of Machinists and Aerospace Workers, International Brotherhood of Electrical Workers, Service Employees International Union, Operating Engineers, United Paperworkers International Union, and Teamsters.

Unions protest 'training exercise' at Seattle papers

Union members at The Seattle Times and Seattle Post-Intelligencer have charged that management violated their labor agreements Feb. 1 by editing, composing and printing without union help a 24-page "practice" newspaper.

The unions were notified in advance of the "internal training exercise," and about 200 members of The Newspaper Guild demonstrated outside the building that Sunday.

The Graphic Communications International Union, which represents pressmen there, has filed charges with the NLRB alleging that the action by non-union and supervisory employees constituted an unfair labor practice.

"We don't believe we've violated any contractual agreements," said H. Mason Sizemore, president of the Times. He said all copies of the practice newspaper were destroyed.

Guild contracts at the newspapers, which are published under a joint operating arrangement, expired last July 21. Guild members voted Nov. 10 to give their bargaining committee strike-call authority, but no deadline was set. The Guild represents about 900 editorial and commercial employees at the two papers. □

NLRB charges filed over drug testing in Minneapolis

The Newspaper Guild of the Twin Cities has filed charges with the NLRB alleging that the Minneapolis Star and Tribune has unlawfully failed to bargain over its drug-testing policy.

The union represents about 350 editorial and commercial employees at the paper.

The policy, which was put into effect Jan. 12, requires medical examinations, including drug tests, for all job applicants. Current employees are required to have an examination when two members of management suspect that job performance or conduct is impaired by alcohol or drug abuse.

Alan W. Zaeske, vice president/human resources, said in late February that one job applicant had been denied employment after testing positive for marijuana use. He said no current employees had been asked to take a drug test. "We do not intend to do random testing," he said. □

NLRB withdraws complaint in merit pay bargaining case

Local 9 of The Newspaper Guild is appealing to the general counsel of the National Labor Relations Board the withdrawal of a complaint against The Cincinnati Enquirer in a case involving bargaining over "merit pay." The case is being followed closely by labor relations specialists in the newspaper business.

An NLRB regional director issued a complaint against the newspaper last July 24, based on charges filed by the Guild. A hearing before an administrative law judge was scheduled and then postponed [**presstime**, Nov. 1986, p. 34].

In reviewing the case, the Advice Section of the General Counsel's Office determined that the complaint should not have been issued. Emil C. Farkas, the regional director in Cincinnati, subsequently withdrew his complaint. Farkas said there was insufficient evidence of a violation of the Taft-Hartley Act, and further proceedings were therefore not warranted.

The parties are currently in negotiations for an initial labor agreement covering newsroom employees who had been represented formerly by an independent union. A federal judge ruled in 1986 that the Guild was not a successor to the former union [**presstime**, Dec. 1986, p. 71].

According to the NLRB's investigation of the case, the parties commenced negotiations in April 1985. During those negotiations, the company submitted its proposal that wages be based solely on merit. The union sought to negotiate a minimum wage scale, but the company refused to agree to minimum wages or to allow union participation in establishing a budget for merit pay increases.

However, Farkas found, the company repeatedly offered to negotiate the criteria for evaluating merit pay and "remains willing" to bargain over merit pay performance appraisal forms.

"Moreover," Farkas said, "under the employer's merit pay proposal, the union may accompany unit employees to their merit pay evaluations, object to the application of negotiated criteria and grieve over such application.

"Although the union could not invoke arbitration for a grievance not otherwise satisfactorily resolved, it would be free to strike over the issue or resort to court action. Under these circumstances, it was determined that the employer did not insist upon such unilateral control over employee wages as to amount to a refusal to bargain in good faith," he said.

(The Cincinnati Enquirer Inc., Case No. 9-CA-23190) □

NLRB elections

Bakersfield Californian, Guild: Editorial and commercial employees voted 174-60 to retain a provision in the labor agreement requiring covered employees to be members of the union and to pay dues as a condition of employment.

(NLRB Case No. 31-UD-205)

Jackson (Tenn.) Sun, ITU: Composing room employees voted 7-3 against continued representation by Typographical Union No. 24.

(NLRB Case No. 26-RD-736)

Tampa (Fla.) Tribune, IBEW: Electricians, machinists and stationary engineers voted 13-8 against continued representation by Local 108 of the International Brotherhood of Electrical Workers.

(NLRB Case No. 12-RD-598)

Recent contract settlements

Rocky Mountain News, Denver, GCIU: Three-year agreement covering photoengravers; retroactive to April 1, 1986.

San Francisco Newspaper Agency, San Jose Mercury News, GCIU: Forty-three-month joint agreement covering pressroom employees; retroactive to July 1, 1986.

San Jose Mercury News, GCIU, Guild, ITU: Forty-three-month agreements covering photoengravers, editorial and commercial employees, and composing room workers; retroactive to July 1, 1986.

(Details in March 1987 ANPA Labor & Personnel Relations Letter.)

INFE report lists results of survey on employee benefits

Employee benefits costs at U.S. newspapers run as high as 43 percent of payroll, according to a new survey by the International Newspaper Financial Executives.

The survey questionnaire was mailed to 653 INFE members at both daily and weekly newspapers, and 271 (42 percent) responded.

Pension plans are in place at 84 percent of the newspapers, but only 1 percent have a child-care benefit. There is a physical-fitness program at 13 percent of the newspapers, and 35 percent have an employee-assistance program dealing with individuals' personal problems.

Other survey findings show:

- 31 percent have a 401(k) salary-reduction plan
- 73 percent provide dental coverage in their health-care plans
- 36 percent provide optical coverage
- 65 percent provide alcohol/drug abuse coverage.

At some newspapers, the costs of health-care plans are shared by the company and employees. The cost of dental coverage, for example, is shared at 40 percent of the newspapers.

In another area, 54 percent of the papers said they provide free newspapers to employees and 35 percent give them to retirees.

Details about particular benefit plans, including how they are funded and eligibility requirements, are included in the 12-page report. Copies of the "Survey of Employee Benefits" can be ordered for $60 each from INFE, P.O. Box 17573, Dulles Airport, Washington, D.C. 20041. □

Trial under way in racial bias suit

Trial of a lawsuit alleging that the New York Daily News discriminated against black reporters and editors began Feb. 10 in U.S. District Court in Manhattan. The trial is expected to last five to six weeks, according to a spokesman for the newspaper.

The four plaintiffs, who still work at the News, have charged that they were given lower salaries, poorer assignments and fewer promotions than comparably qualified white journalists [**presstime**, Oct. 1982, p. 53].

The case reportedly is the first racial discrimination suit against a newspaper to go to trial. □

Daily upheld in age bias case

The U.S. Supreme Court has declined to review a ruling that upheld the Chicago Tribune in an age discrimination case initiated by a former employee.

In 1982, the employee, Charles Dale, was dismissed because of his failure to function efficiently as purchasing manager. He was given the option of accepting immediate termination with severance pay, or taking early retirement. Dale selected the latter.

He subsequently filed suit against the company alleging that his dismissal violated the Age Discrimination in Employment Act and other federal and state laws.

In 1986, the 7th U.S. Circuit Court of Appeals affirmed a lower court's entry of summary judgment in favor of the company. The appellate court said the record "clearly establishes" that the Tribune communicated its expectations to Dale long before he was dismissed, and that those expectations were reasonable. "In this case," the court said, "the record demonstrates that the Tribune terminated Dale because it no longer viewed Dale as qualified to fulfill his obligations as purchasing manager."

Under the ADEA, the court said, Dale had to prove that age was "a determining factor" in his dismissal. "Dale can point to nothing in the record, besides his own perceptions, to support his assertion that his performance was adequate," the court said.

"This court does not sit as a super-personnel department that re-examines an entity's business decisions," the court added. "The question is not whether the Tribune exercised prudent business judgment, but whether Dale has come forward to refute the articulated, legitimate reasons for his discharge."

The court said Dale's assertions of discrimination were not adequate to rebut the company's explanation for the discharge, "namely, poor job performance."

(Dale v. Chicago Tribune Co., U.S. Supreme Ct. No. 86-933) □

GCIU withdraws from second election

Local 327 of the Graphic Communications International Union and another union have withdrawn from a representation election at The Anchorage Times.

In a 1985 election, a unit of all workers except carriers, composing room employees and pressroom personnel voted 118-74 against representation by the GCIU and Local 341 of the Alaska State District Council of Laborers, joint petitioners. But the NLRB ordered a new vote because it found the company had engaged in an unfair labor practice [**presstime**, Sept. 1986, p. 58].

The NLRB regional director subsequently scheduled another election, but the two unions withdrew their objections to the earlier election and filed a "disclaimer of interest" in representing the employees. As a result, the NLRB canceled the second election and certified the results of the first one.

MEMORANDUM FOR: NEWSPAPER EXECUTIVES

FROM: presstime MAGAZINE

SUBJECT: Celebration of ANPA's 100th Anniversary Convention

The May issue of presstime will commemorate ANPA at 100 years!

Here's an opportunity to put your newspaper on record and in the spotlight as a supporter of and participant in ANPA's mission to advance the cause of a free press and ensure that newspapers have the economic strength essential to serve the American people.

Focus attention on your newspaper, your programs and activities in your community and market.

The May issue will just be off the press in time for special distribution at the Convention and, due to its special nature, additional distribution will be made to the advertising agencies that place business in newspapers.

Call your presstime representative now and reserve your space in this issue today!

10 technical seminars set for second half of year

ANPA has scheduled 10 "hands-on" technical seminars for the second half of 1987.

Conducted by the Association's Technical Services Department at The Newspaper Center in Reston, Va., these seminars are limited to 10 participants per session. Registration fee for each is $575.

There will also be 11 non-technical sessions during the six-month period. They were listed in the September 1986 issue of **presstime**, pp. 52-54. Any changes in the schedules for these seminars will be announced in future issues.

The July-through-December schedule for technical seminars is as follows:

Web Offset Newspaper Press Operations — **July 20-24, Aug. 17-21, Sept. 14-18, Oct. 19-23, Nov. 30-Dec. 4**

Pressmen will learn techniques such as web offset trouble shooting and quality control programs for consistent results on the press. Non-pressroom personnel will gain hands-on experience operating a newspaper press. This seminar will utilize ANPA's double-width M.A.N.-Roland 4/2 press and the single-width Goss Urbanite Press. Specific areas to be covered include: offset press unit components, precise adjustment of all systems, registration systems, plate processing and control, printing problems and offset press care and maintenance.

Newspaper Quality Control — **Aug. 3-7, Nov. 16-20**

This seminar reviews procedures needed to establish quality standards throughout the newspaper production cycle. Through lectures, demonstrations and "hands-on" operational experience, a complete system for documenting, measuring and maintaining high quality printing will prepare participants to initiate their own systems. The quality control system will proceed through the following steps: copy standards and photographic reproduction density ranges (color and black-and-white); establishing and maintaining typesetting procedures and equipment; process camera control of line copy and halftones; color separation standards for scanners and direct screen operations; and maintenance and set-up procedures for newspaper presses.

Newspaper Color Scanner Operation — **Aug. 24-28, Nov. 2-6**

Newspaper production and management personnel will learn the skills needed for utilization of electronic scanning systems. The program encompasses newspaper processes relative to producing consistent, high-quality color. Through a combination of classroom instruction and hands-on training, attendees learn the essential techniques for printing high-quality ROP process color for both editorial and advertising departments on offset and/or letterpress presses. Participants are given a thorough background in color reproduction —including the purpose of making additive and subtractive color theory, the relationship of ink and paper in color printing, and proper evaluation of colors.

Management Introduction to Newspaper Technology — **Sept. 28-Oct. 2**

Management personnel are introduced to the latest developments in electronic editorial and production systems. The seminar is intended to create increased awareness of the capabilities and limitations of modern newspaper production equipment. Instruction includes personalized sessions that assist attendees in achieving an understanding of the new technologies. They experience hands-on operation of modern phototypesetting equipment plus electronic editorial and advertising copy processing systems. Participants also produce their own four-page newspaper, working through all the procedures from copy preparation to the actual press run.

For more information on these seminars, contact Arthur M. Boudreau, manager/technical training, ANPA, The Newspaper Center, Reston, Va.; (703) 648-1217. □

ANPA's Boudreau explains platemaking at recent Newspaper Quality Control Seminar.

New process allows newspapers to improve wire-service separations

Newspaper photo editors have two primary quarrels with color photographs transmitted by wire services.

The first is that separations sent over the wire are monochrome and do not offer any real clues as to how the color actually looks.

The second, and perhaps more important, is that final pictures often contain muddy midtones and dark shadows–the result of midtone and shadow dots running together. John Harrington, ANPA color specialist, said it appears that dots expand during transmission, causing images to lose definition.

For the past six months, however, USA Today photo technicians have used a daylight horizontal process camera they say gives them more control over the color image. The RPS-6100, a product of Agfa-Gevaert Inc., a Belgian firm with U.S. offices in Waldwick, N.J., recombines the wire photo separations on one sheet of Agfa's CopyColor print paper. The paper is part of a system of diffusion transfer color print materials.

That print can then be separated on a scanner. Dots can be sharpened so that the resulting photographs are lighter.

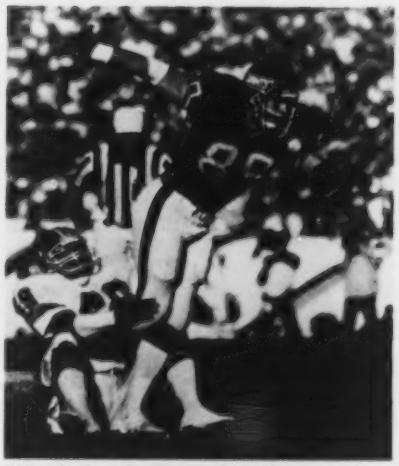
Because the process requires a scanner, Harrington observed that not all newspapers would find it useful. However, he said it could be a boon to many.

"With this camera we are able to hold the detail in color images we receive, and that is a tremendous advantage to us," said Paul T. Whyte, USA Today director/photography. "We've been very pleased with results. For example, we don't have to take the separations to an editor and say, 'Picture the sky blue here and another color there.' They can see the colors for themselves."

Whyte said he also likes the camera because it makes proofs in 10 to 15 minutes.

The system was used for color coverage of the Super Bowl in Pasadena, Calif., in January. The newspaper's photographers sent their pictures by wire back to USA Today headquarters in Virginia. Pictures that would have been too dark to use were rephotographed, enhanced by a scanner and separated, Whyte said.

The Agfa-Gevaert camera has a list price of $19,500, and each print costs about $2.50 to process. Whyte said the camera is used primarily for just a handful of color pictures every week. However, USA Today officials believe the good results justify the expense.



USA Today photos sent from Super Bowl were enhanced to make usable.

The camera has been on the market for about four years. It has been sold mainly to advertising agencies wanting quick color proofs.

Whyte said the USA Today photo department discovered last year that the Agfa-Gevaert camera was being used in the newspaper's promotion department for in-house work. The photo department quickly determined that such a unit would work just as well with transmitted photos, he said, and USA Today bought another one.

The Agfa-Gevaert camera works as follows. Each separation is photographed through a filter—cyan through a red filter, magenta through a green filter and yellow through a blue filter—and all three exposures are recombined on one piece of CopyColor print paper.

The paper moves through a diffusion transfer device, which is a series of rollers that draw the print through a chemical bath.

The user then has an almost-true color print or proof. This piece is then scanned and new separations made. Correction for color and other factors can be made.

"With this camera we are able to hold the detail in color images we receive."

The 6100 has diffusion-transfer equipment built in, but color diffusion-transfer prints also can be made by adding the CopyColor system to a newspaper's process camera, said Leon Harney, Agfa-Gevaert color specialist. Expenses would include CopyColor positive paper, which is $20 for 50 sheets, and the CopyColor 435 diffusion-transfer system, which has a list price of $1,395.

The camera's application to the newspaper business comes as the number of wire-service color photos being transmitted is steadily increasing.

The Associated Press every week transmits about 75 news, sports and feature color photos over its LaserPhoto network and via satellite on LaserPhoto II.

Brian H. Horton, AP Photo enterprise editor, points out that five years ago all of the color wire photos transmitted in one year could be filed away in half a drawer in a filing cabinet. Now, one drawer is filled every two or three months.

Even though Horton said he wasn't convinced the Agfa-Gevaert camera was necessary, he discusses the technology as well as other color diffusion methods in clinics he conducts around the country for newspapers. "We believe it's important for people to have as much information as possible," he said.

United Press International sends about three color photos a day over its network to all subscribers and others on demand.

Of course, not all color photos being transmitted by the wires need adjusting, noted Donald P. Hathaway, camera/platemaking superintendent for the Richmond (Va.) Times-Dispatch and The Richmond News Leader. Nevertheless, many of the wire separations he receives don't meet the newspapers' standards. "We have to kill a lot of them after the editors see the color proofs," he said.

The newspaper has been testing CopyColor, and Hathaway said he has been impressed with the results.

But even as the new color-enhancing system is introduced for the newspaper business, developments regarding electronic photography continue apace. (See story, p. 78.) And someday, experts say, electronic photography will render even the newest of today's color-separation processes obsolete. □

Six years ago there was only one UNIMAN 4/2 press

Today we are the world leader...

with sales of more than 100 presses to mid-size newspapers — worldwide. UNIMAN 4/2 is the fastest selling press in newspaper history, with an average of 20 complete presses sold every year.

We created a demand for UNIMAN 4/2 by offering a heavy-duty press at an attractive capital investment. A press with the ability to produce excellent process color while reducing operating costs. A press you can grow with.

If you enjoy being a leader in *your* market, ask the people who have already made the UNIMAN decision. Then call us — MAN Roland USA, Inc., 333 Cedar Avenue, Middlesex, NJ 08846 (201) 469-6600, Telex 833-330

Baltimore Sun keeps track of page flow with 'flick of a finger and glance' at VDT

The Baltimore Sun has developed a computerized page-flow tracking system that has laid to rest such things as chalk boards, check-off charts and notes scribbled in page margins.

The system shows—in color on a single screen—the up-to-the-minute status of every page of an edition. It warns of pages lagging and provides detailed performance reports.

"We can now, at the flick of a finger and a glance at a terminal screen, tell where each and every page is in the production system," said James P. Day, executive news editor of The Evening Sun.

The page tracker was developed over the course of more than a year by an in-house team of programmers and analysts. It cost several hundred thousand dollars, said Thomas M. Germroth, Sun production support supervisor who led the effort.

The system works as follows:

First, the production manager enters each department's hour and minute deadlines for each edition. These deadlines are used for minute-by-minute monitoring of each page.

Next, a day or so before an edition goes to press, the production manager enters particular data for the edition. These data include the number and name of each section, the number of pages per section, the pages that have spot or multicolor, the name of and color requirements for each ad, pages that are double-truck, presses to be run, etc.

Then actual tracking begins. Each department must enter into the system the fact that a page has first been received and then later sent from that area. Employees enter such data using terminals strategically placed in the ad makeup area, newsroom, composing room, engraving room and plate room. Terminals also are located in the mailroom and the pressroom, where workers can enter after-the-fact performance data.

A key feature of the system is the status screen located at every terminal. It displays the status of every page of an edition by listing each section in a row across the top of the screen and listing each page for each section as vertical columns down the screen.

Also displayed are:

- Changes in color of each page number as the page moves from one department to the next
- An "S" or "C" next to the page number to indicate spot or multicolor
- Number of pages still to close in composing
- The current time
- Status of any "chasers"—corrections to be made on a page
- List of double-truck pages
- Presses to be used
- The pages in any department, if desired
- Pages for which negatives have been damaged and need to be reshot.

Another key feature is the early-warning system of pages late or lagging. If a page has not moved out of a department by a pre-established deadline, the page number will flash on the status screen until the page is located, completed and logged out of the department.

A second warning signal was designed for pages between departments. If a page has been sent from one location, but not entered as received by the next production station within 15 minutes, the page number will flash until receipt is acknowledged.

A third type of alert is actually in the form of a message. The production manager may post a memo for viewing by all or selected departments. The words flash across the bottom of recipients' screens in red.

In case there is a system failure, printouts of the status data are made every 15 minutes. This has proven sufficient to recover and proceed manually if necessary.

The last operational feature is a method of providing after-the-fact, hard-copy management reports. These give full information about the makeup of the edition, the various production times, and pressroom and mailroom data.

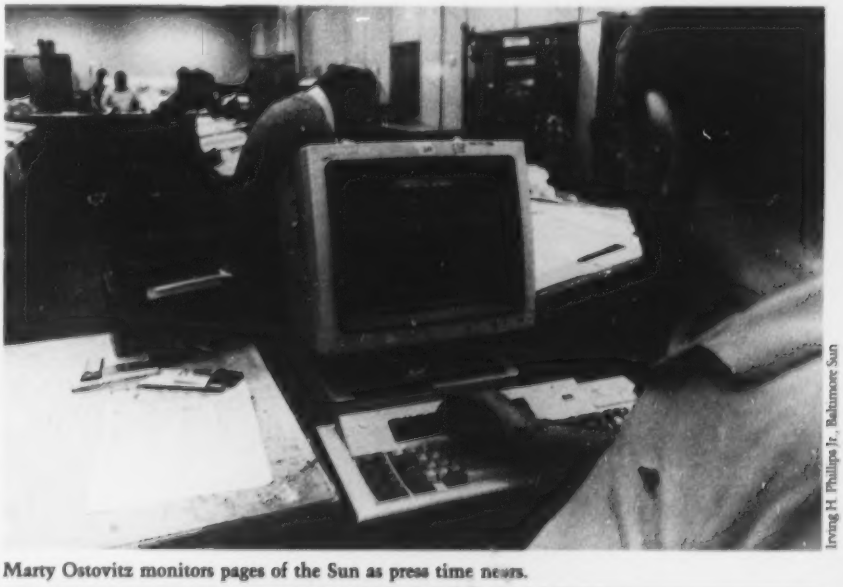
The system runs on an IBM mainframe computer with IBM's commonly used IMS database and IBM 3179 color terminals. It also can use appropriately equipped IBM-PCs.

Frank Edwards, manager of mechnical production, said all departments working with the page-flow system have learned to depend on it. "I've talked to some of our editors who originally thought it was just a new toy, but who now have changed their way of thinking after learning what this system can do for them."

He said the system "has really helped all of our departments stay on top of the operation, and has helped stop some of those costly, time-killing mistakes at closing time."

Executive News Editor Day added, "Now, if they can just teach it to make coffee and scratch my back. . . ." □

Editor's note: This story was submitted in response to ANPA Technical Committee requests for innovative technical ideas. Send submissions to Dawn D. Murphy, Technical Services Department, The Newspaper Center, Reston, Va.



Irving H. Phillips Jr., Baltimore Sun

Marty Ostovitz monitors pages of the Sun as press time nears.

What good is high technology when 1 out of 5 workers can't read?

Everyday, American business invests in highly technical equipment designed for the demands of the 21st century. Yet millions of its workers are barely equipped to function in the 20th century...simply because they're illiterate.

Twenty-seven million American adults cannot read or write. That's one adult in five, and probably, a shocking number of *your* employees.

What does illiteracy cost you? Get out your calculator. Illiteracy accounts for over 50% of our unemployment. It robs us of billions in lost productivity, swells our welfare costs, and diminishes our tax revenues. Illiteracy diminishes your community, too. It saps it of its most basic resource... the potential of its own people.

What can your company do? It can join in local efforts to fight illiteracy. It can make itself a resource in your community, volunteering dollars and company facilities for better adult education and tutoring programs.

The first step is to call the Coalition for Literacy at **1-800-228-8813** or fill out the coupon. Do it today. No investment your company has ever made is more important.

A literate America is a good investment.

West Virginia Tech pursues newspaper program

West Virginia Institute of Technology is working with an informal committee of newspaper production executives to establish the school's first newspaper production management program.

Officials said it tentatively will begin by the fall semester of 1988. Courses will include offset and flexographic printing and color technology.

The school's printing building will undergo a $500,000 renovation beginning this summer to accommodate a web offset press. The school is seeking a donation of that press and other production equipment from manufacturers and newspapers.

Like many other schools, West Virginia Tech has found that most graduates pursue careers in commercial printing. Jack W. Nuckols, chairman of printing technology/management, said about 15 percent of graduates have gone on to newspaper work.

"We want students to follow their own career paths, but we believe that increased exposure to newspapers and newspaper production work will encourage students to consider newspapers as a career," said Nuckols, who has taught at the school since 1965.

Finding skilled, qualified production workers is a problem for newspapers large and small [**pressstime**, Nov. 1986, p. 8]. Newspapers need production workers with a strong technical background and equally solid business and management skills at a time when graphic arts enrollments are dwindling.

"We need trained people because in most cases, our larger newspapers don't have the time to train them. We need people who can step out of school and do the job right away," said Tech alumnus Homer E. Taylor Jr., vice president/manufacturing and supply for Scripps Howard, which is donating 26 Mycro-Tek terminals to the school.

Taylor is a member of the newspaper-executive committee with which the school is consulting. The group is made up of more than a dozen people trying to get donations and help establish curriculum.

West Virginia Tech was founded in 1895. It currently has about 2,800 students, about 150 of whom are in the printing program. The campus is located in Montgomery, 20 miles south of Charleston. □

Correction

A story about flexographic press purchases in the February issue (p. 56) failed to list all of the components of the two Goss Flexoliner presses being purchased by The Blade of Toledo. Each press will have two four-color units for color printing. **Pressstime** regrets the error. □

TECHNOLOGY NOTES

• The New York Daily News has signed a letter of intent to purchase **18 four-color Flexoliner units** from the Graphic Systems Division of Rockwell International (Goss).

The units, to be positioned on letterpress presses in three different Daily News printing plants, will permit the newspaper for the first time to print color for both editorial and advertising purposes.

Officials of the Daily News said this will enable the newspaper to compete better in the increasingly competitive New York market [**pressstime**, Nov. 1986, p. 38].

• Rockwell International and Scripps Howard have formed a partnership, Hall Processing Systems, to manufacture and market **newspaper mailroom components and systems**.

Goss Processing Systems of Rockwell's Graphic Systems Division and Scripps Howard's Hall Systems Inc. currently manufacture mailroom equipment. They will sell not only their own products but also new ones from the joint venture.

• M.A.N.-Roland said it has **sold Uniman offset presses** to several daily and weekly newspapers in the People's Republic of China.

The dailies range in circulation from 200,000 to 900,000.

• Trading of common and preferred **stock of AM International Inc.** began Feb. 23 on the New York Stock Exchange. The stock will continue to be traded on the American, Pacific and Midwest stock exchanges. AM manufactures graphic arts supplies used by newspapers.

TECHNOLOGY CALENDAR

• **Seybold Seminars '87** will be March 9-13 at the Beverly Hilton Hotel, Beverly Hills, Calif.

• The annual meeting of the **Collier Jackson Users Group** will be March 13-17 at the Lincoln Hotel in Tampa.

• **America★East,** an annual newspaper operations conference, will be March 25-27 at the Hershey (Pa.) Lodge and Convention Center.

• **Composition '87 and Type-X '87**, the National Composition Association's convention and trade show, will be April 9-11 at the Marriott Marquis in New York.

• **Paper and Ink Problems in the Pressroom**, a Graphic Arts Technical Foundation seminar, will be May 2 at the International Hotel, Baltimore/Washington International Airport, and May 5 at the Holiday Inn, Milford, Conn.

• The 35th annual **Web Offset Meeting**, sponsored by Printing Industries of America, will be May 18-20 at the Royal York Hotel, Toronto.

Unparalleled choice of newspaper mailroom equipment

INSERTING MACHINES

- ☐ **227-E** - 14,000 per hour. Inserting machine for newspapers and shared mail. Also handles tabloids, quarter-folds, pre-inserted packages. Ideal for small to medium dailies and weeklies. Add stations as requirements grow.
- ☐ **227-S** - 14,000 per hour. Inserting machine similar to 227-E. Includes central lubrication and automatic reject for non-stop operation. Can be equipped for selective inserting for geographic zoning, alternate feed or double production.
- ☐ **308 BILINER** - 20,000 per hour. Dual track doubles production. Off-line operation or on-line with PrintRoll System to buffer press production or provide roll storage of preprints.
- ☐ **275 MODULAR Inserting Machine** - 38,000 per hour. Microprocessor controlled. Modular design. On-line or off-line operation. Single or dual delivery.
- ☐ **PrintRoll System** - For on-line inserting. Fully automatic processing of main sections with buffering capability eliminates overflow stacking. Automatic roll storage and retrieval of preprints.

TV-PROGRAM STITCHERS

Fully automatic stitching lines which fold, stitch, trim, and deliver booklets ready for inserting into newspapers. Eliminates the need for quarter-folding on press.

☐ **MINUTEMAN-TV** - 8,000 per hour. ☐ **321-TV** - 10,000 per hour. ☐ **335-TV** - 12,000 per hour.

COUNTER STACKERS

- ☐ **310-14** - 14,000 per hour. Compensating Counter Stacker for efficient delivery of stitched TV programs.
- ☐ **310-20** - 20,000 per hour. Compensating Counter Stacker for inserting machines and total market coverage applications, or for off-line mailing and automatic zip sorting. Programmable.
- ☐ **CS-25** - 25,000 per hour. Compensating Counter Stacker for small newspaper or commercial presses. Programmable.
- ☐ **285** - 40,000 per hour. Counter stacker for preprints, inserts, supplements, and commercial work.
- ☐ **CS-70** - 70,000 per hour. Compensating Stacker for Sunday magazines, comics and newspaper inserts. Heavy-duty, for 3-shift operation.
- ☐ **CN-70** - 70,000 per hour. Compensating Newspaper Stacker. Also handles commercial work. Squeeze rollers, shingle aligner and bin joggers standard.

MISCELLANEOUS

- ☐ **ZIPMASTER** - Automatic Zip Sorting System for newspapers and total market coverage applications. Operates in line with inserting machine, TV program stitcher, or automatic feeder. Includes optical mark reader, microprocessor and stacker.
- ☐ **DAVERIO CONVEYOR** - Versatile press-speed conveyor. Takes newspapers, preprints, magazines and supplements from press to mailroom. Grips product on outer edge.
- ☐ **ITM Folder** - Off-line, high-speed quarter folder for supplements, catalogs and direct mail.
- ☐ **Rotary Trimmer** - Trims products in line at press speed. Ideal for Sunday magazines, press finished TV programs, catalogs, and commercial work.
- ☐ **JETROUTER** - Ink Jet Addressing System with stacker for zip code sorting. For high-volume total market coverage mail programs or general addressing, in-line with the press or off-line.

1986 exceeds '85 as record year for newsprint use

Newsprint consumption by all U.S. users and by U.S. daily newspapers was at record levels in 1986, according to preliminary figures compiled by the ANPA Newsprint and Transportation Department.

All users consumed 11,949,081 metric tons, an increase of 3.1 percent from the previous record of 11,587,092 set a year earlier.

Consumption by U.S. dailies was up 2.5 percent from 1985's record total–8,945,230 metric tons versus 8,724,521.

December was part of the overall upward trend for 1986, as U.S. users increased their consumption by 0.8 percent from December 1985, and U.S. dailies consumed 2.4-percent more.

Canadian production for 1986 totaled 8,274,781 metric tons, an increase of 3.2 percent over 1985. Shipments from Canadian mills totaled 9,302,162, up 3.4 percent from 1985.

Production by U.S. mills in 1986 was 1,196,657 metric tons, an increase of 9.5 percent from 1985. Shipments from U.S. mills totaled 5,115,038 tons, up 3.8 percent.

Canada's operating rate for 1986 was 94 percent; in the United States, it was 94.4 percent.

Texas paperworkers ratify contract

A three-year contract has been ratified between the United Paperworkers International Union and Champion International Corp. at the company's newsprint mill in Sheldon, Texas.

Workers will receive a $1,000 lump-sum increase in the first year, a 42-cents-an hour increase in the second and a 2.5-percent raise in the third.

Negotiations continue between the UPIU and Augusta (Ga.) Newsprint Co. [**pressstime**, Feb. 1987, p. 53].

In Canada, the Canadian Paperworkers Union set its wage demands for this year's contract negotiations. It will seek a $1-an-hour increase (6.8 percent) for the first year and a minimum of $1.25 an hour (8 percent) for the second year. The majority of labor contracts at eastern Canada's newsprint mills will expire this year. □

Correction

A cutline in the January issue (p. 26) incorrectly described Madison Paper Industries of Madison, Maine, as a newsprint producer. The company produces higher-grade "supercalendered" paper used by some newspaper Sunday magazines and other publications. **Pressstime** regrets the error. □

Canadian price hike

Five eastern Canada newsprint producers announced increases in the price of newsprint for Canadian customers from $635 to $685 (Canadian) per metric ton, effective April 1.

The 7.9-percent increase originated at Abitibi-Price Inc. and Reed Inc. and was followed by Consolidated-Bathurst Inc., F.F. Soucy Inc. and Kruger Inc.

British Columbia newsprint producers raised prices to Canadian customers on Jan. 1 from $585 to $620 (Canadian) a metric ton [**pressstime**, Nov. 1986, p. 70]. □

NEWSPRINT NOTES

• Stone Container Corp. of Chicago **agreed to acquire Southwest Forest Industries Inc.** of Phoenix for $763 million.

Stone Container is one of the nation's largest producers of corrugated container and paperboard products. Southwest Forest has a newsprint and linerboard mill in Snowflake, Ariz., and a linerboard and pulp mill in Panama City, Fla. The company also owns 19 corrugated container plants.

The merger is subject to certain conditions, including approval by Southwest's shareholders.

• New Zealand-based Fletcher Challenge Ltd. agreed in February to **buy 47 percent of British Columbia Forest Products Ltd.** for $505 million (Canadian). FC said it would not attempt to purchase more than 49 percent. The purchase must be approved by Investment Canada, a government agency that scrutinizes the sale of Canadian companies to foreign firms.

British Columbia Forest Products and another FC company, Crown Forest Industries, each has a newsprint mill in B.C.

Rail mergers, sales continue

Illinois Central Gulf Railroad sold a 631-mile line from Joliet, Ill., to Kansas City to Venango River Corp. for $81 million. Venango will operate the line as the Chicago, Missouri and Western Railway Co. Interstate Commerce Commission officials said the sale is the last of a series of spinoffs planned by Illinois Central.

In other railroad developments:

• The public sale of Conrail's stock is expected to begin sometime this spring or summer [**pressstime**, Dec. 1986, p. 68]. Also, Conrail reported that revenue and net income dropped last year compared with 1985. In 1986, Conrail posted net income of $431 million from revenue of $3.144 billion. In 1985, Conrail had a net income of $442 million and revenue of $3.208 billion.

• The ICC approved CSX Corp.'s $803-million acquisition of Sea-Land Corp., the first merger between a railroad and an ocean carrier.

• Kansas City Southern Railroad asked the ICC to deny requests that it take another look at the proposed merger of the Santa Fe and Southern Pacific railroads and to permit KCS to make an offer for Southern Pacific [**pressstime**, Nov. 1986, p. 72].

• Directors of the Chesapeake & Ohio Railway Co. and Baltimore & Ohio Railroad Co. approved a plan in which the C&O will absorb the B&O. Both lines are owned by CSX Corp.

• The Soo Line Corp. said it will sell more than 2,000 miles of its railroad in Wisconsin and Northern Michigan because it was unable to obtain labor concessions. □

Greyhound sells bus operations

Greyhound Corp. has agreed to sell its 73-year-old bus operations to a group of Dallas bus-company executives for more than $350 million.

Greyhound also has closed or sold dozens of terminals, reorganized into several regional companies and scrapped some less-profitable routes.

Meanwhile, the Amalgamated Council of Greyhound Local Unions tentatively agreed to extend its labor contract with Greyhound through March 18 unless agreement is reached on a new contract before then. The tentative contract must be ratified [**pressstime**, Jan. 1987, p. 68].

Newspapers that ship bundles by bus to outlying areas are watching the developments closely. □

Minorities task force enters action stage

When the industry-wide Task Force on Minorities in the Newspaper Business met in February for the third time, members learned that their ideas are turning into reality, their plans into specific programs.

Washington Post columnist Dorothy Gilliam, speaking at a dinner opening the meeting in Reston, Va., said she believes the task force is "moving from the talking stage to the acting stage. The task force has . . . the challenge of really moving this industry much further along."

Founded in 1985, the group produced more "tangible" results over the past 12 months than in its first year, said Terri Dickerson-Jones, task force staff director and minority projects coordinator of ANPA Foundation.

Participation in the umbrella group has increased over the past year from 29 to 39 national and regional newspaper organizations that are committed to increase minority employment in all newspaper departments [**presstime**, March 1986, p. 66].

Representatives said minority employment and promotion at newspapers is far from the goal of fair representation. But the task force is emphasizing success stories as a way to motivate managers to improve their efforts.

Following the task force meeting, the ANPA Foundation Advisory Group on Minority Projects gathered for the first time, with Jay R. Smith, publisher of the Atlanta Journal and Constitution, as chairman. The group will recommend to the Foundation Trustees that they increase funding of task force job fairs and urge increased involvement by publishers in planning of job fairs, particularly concerning business-side opportunities.

It also recommended that there be a general session on minorities at an early ANPA Convention and that ANPA conduct a survey of minority employment at all ANPA-member newspapers, particularly in the business-side departments.

Among projects discussed in the task force session were a newly published nationwide speakers' directory, a video project to present role models in newspaper careers to minority youth, new mentoring programs and a proliferation of job fairs.

"It's a whole change in attitude," Dickerson-Jones said.

"It was really exciting in that respect," said task force Chairman Loren Ghiglione, publisher of The News in Southbridge, Mass. "There's more active participation by all the task force members. It's a better mix of minorities as well as non-minorities."

Publishers and other top newspaper executives who participate in seminars at the American Press Institute don't have to be sold on hiring and developing minority employees, said API director and task force participant Frank Quine. "We have gotten a very positive response" to API sessions on minority hiring, he said. "They wanted less 'why' they should do it, but more information on 'how to.'"

To that end, several resources have been developed over the past year by organizations in the task force.

One, a booklet published by ANPA Foundation on employing minorities, recently received an honorable mention in the annual publication contest conducted by Association Trends newsletter. "Recruiting and Retraining Newspaper Minority Employees: How To Do It" was cited in the category for books and manuals.

The booklet includes an eight-page form through which newspapers can document their own minority employment plan and send it to the Foundation for a confidential assessment and advice.

Another task force member, the Institute for Journalism Education, will sponsor a conference in Washington, D.C., March 9-11 on "Racial Diversity and the Media: A Blueprint for Action." The conference will assess efforts over the past 10 years to increase minority representation at all levels of the media and will serve as a foundation for future action, said Charles A. Martin, IJE president and chief executive officer. He said IJE plans to present findings from the conference during ANPA's 100th Anniversary Convention May 3-6 in New York City.

At the task force meeting, members repeatedly urged sensitivity programs and incentives for mid-level managers—the people who most directly influence employment decisions. But Mervin Aubespin, associate editor for development at The Courier-Journal in Louisville, warned against using performance evaluations of managers to implement minority hiring goals.

"I think, realistically, there is no utopia in the industry. . . . I think we should be extremely careful when we start a reviewing process that is going to suggest who the good guys and the bad guys are," Aubespin said, adding that managers may become discouraged or resentful of such a process. "I suggest we use a positive approach of showing how some companies have been able to do a better job than others."

"I'd like to suggest a way not to go," said Lee Stinnett, executive director of the Amer-

Task Force participants are (from left) Aubespin, Dickerson-Jones, Ghiglione, Bob Thrasher of The Plain Dealer in Cleveland, Margaret Clark-Price of the Native American Press Association, and Leila Austin of the Dayton (Ohio) Daily News.

ican Society of Newspaper Editors. "We considered creating a prize for the newspaper that has done the best. Nobody's doing quite good enough to start winning prizes, so we try to highlight success stories in our publications."

A workshop aimed at developing good working relationships between white and minority managers and employees also is in the planning stages, said Dickerson-Jones. ANPA Foundation will offer the workshop as an advisory service to newspapers.

Other reports by task force committees covered:

• **Job fairs.** The Washington Post will host its first minority job conference March 19-21, cosponsored by the task force and ANPA Foundation. It will be the first such conference to focus entirely on business-side careers, with the theme of "Jump In!"–an acronym for Joining Us Means Progress In Newspapering. Planners hope to draw 300 students and 50 to 60 newspapers.

It will be the last of five job fairs the task force has sponsored over the past year. ASNE reported that it has sponsored 15 job fairs, three of which were cosponsored with the task force. Preceding all the fairs were conferences designed to teach editors techniques of recruiting and retaining minority staff members.

• **Secondary school education.** The task force is contacting news organizations to provide mentors of any race to the most promising high school students "to continue to fan the fire of interest in journalism," said George J. Lockwood, managing editor/features of The Milwaukee Journal and president of the Inland Daily Press Association.

Project Target is conducting a pilot "mentor program" in which 20 talented minority teenagers were selected from Urban Journalism Workshop programs in four states to write news stories under the supervision of professional journalists. The articles are being carried during the 1986-87 school year by Youth News Service, a Washington, D.C.-based cooperative service that provides student-written stories about youth issues to 300 high school newspapers and several community papers.

The program, running from October 1986 through April 1987, is coordinated by the YNS publisher, Youth Communication, and supported by the task force and the Dow Jones Newspaper Fund.

ASNE also has awarded $500 scholarships to 22 minority students entering college in the 1987-88 school year. It plans to double the number of scholarships next year. ASNE also offered to share its information on establishing such scholarships with any newspaper that wishes to develop minority scholarships in any newspaper field.

–Mary A. Anderson

Charlayne Hunter-Gault of PBS' MacNeil/Lehrer NewsHour and formerly of The New York Times discusses the oil portrait of her (background) with artist Bryan McFarlane. It was one of 12 McFarlane paintings of black journalists commissioned by Miller Brewing Co. and unveiled Feb. 17 at the National Press Club in Washington, D.C. The exhibition was cosponsored by the National Association of Black Journalists.

Foundation announces recipients of 12 minority fellowships

Twelve newspaper employees have been awarded ANPA Foundation minority fellowships for the first half of this year.

The fellowships, awarded semiannually, cover travel, registration and lodging expenses for attendance at training seminars sponsored by ANPA and other newspaper organizations. The Foundation has awarded 118 fellowships since the program began in 1981 to expand management opportunities for minorities.

Winners of the current fellowships, and the training sessions they were selected for, are:

• Julio Naudin, promotion and marketing manager, The El Paso Times and The El Paso Herald-Post—Newspaper Executives Marketing Seminar, Houston, sponsored by ANPA and the International Newspaper Promotion Association, Feb. 8-14.

• Lorestine (Lois) Coley, assistant managing editor for administration, Dallas Times Herald; and Fabiola Santiago, assistant editor, The Miami Herald—ANPA Management Development Workshop, Miami, Feb. 16-19.

• James Barnett, director of human resources, Pensacola (Fla.) News-Journal—Budgeting and Planning Workshop, Los Angeles, sponsored by ANPA and the International Newspaper Financial Executives, Feb. 22-24.

• Dennis T. Tsukamoto, mailroom superintendent, Hawaii Newspaper Agency, Honolulu—ANPA Newspaper Packaging and Distribution Symposium, Chicago, March 24-26.

• O.J. Daniels, controller, The Clarion-Ledger and the Jackson (Miss.) Daily News—ANPA Total Newspaper Conference, St. Petersburg, March 15-18.

• Jeanie Huff, classified advertising supervisor, The Idaho Statesman, Boise—American Press Institute Classified Advertising Managers Seminar, Reston, Va., March 22-28.

• Tenzil H. Dixon, branch manager, Atlanta Newspapers—Managing People in the Circulation Department, Miami, sponsored by ANPA, the International Circulation Managers Association and the Newspaper Personnel Relations Association, March 30-April 1.

• Francis D. Arrieta-Walden, assistant news editor, The Olympian, Olympia, Wash.—The Poynter Institute Seminar on News and Informational Graphics, St. Petersburg, April 26-May 1.

• Vernon Smith, Jr., assistant city editor, The Detroit News—Leadership in the Newsroom Workshop, Washington, D.C., sponsored by ANPA, the American Society of Newspaper Editors and the Associated Press Managing Editors, May 11-13.

• Everette Carson, manager of human resources, The Tribune, Oakland—ANPA Labor Relations and Technology Seminar, Las Vegas, June 5-6.

• Ronald L. Jackson, regional general manager, USA Today/Western New York—ANPA/INPA Strategic Planning Seminar, Houston, June 14-18. □

Groups now own 73 percent of U.S. dailies; Clay Communications put up for sale

BUSINESS ROUND-UP

Although the number of newspaper groups in the United States declined last year, the number of group-owned newspapers and their total circulation continued to climb.

At the end of 1986, newspaper groups owned 1,217 U.S. dailies, 31 more than the 1,186 of a year earlier. Group circulation was 50.5 million, up more than 700,000 from the 49.8 million at the end of 1985. And those increased numbers were in the hands of fewer players—the number of groups declined from 155 to 146 during the year.

What this means, according to Bruce Thorp, media analyst at the Washington, D.C., brokerage firm Lynch, Jones & Ryan, is that groups now control an estimated 73 percent of all U.S. dailies and 80 percent of U.S. daily circulation. A year earlier, the percentages were 70.8 and 79.3, respectively.

The end-of-1986 percentages are estimated, Thorp explained, because an official count of U.S. daily newspapers was not available at the time Lynch, Jones & Ryan completed its annual report on group ownership.

Based on his current estimate that 1,670 dailies now exist in the United States, 453 of them remain independent of group ownership, 37 fewer than at the end of 1985, Thorp said.

The decrease may have stemmed from closings, sales to groups, or even as few as two dailies joining under common ownership, thus creating a new group, he said.

Although the number of groups shows a net loss of nine since 1985, 16 groups actually have disappeared, Thorp said. But seven of those were replaced by the formation of new groups, all of which were small.

In the past 10 years, Thorp said, the number of groups declined from 169 to 146, group-owned dailies increased from 1,037 to 1,217, and group circulation climbed from 43.4 million to 50.5 million. During the same period, he said, the number of independently owned U.S. dailies dropped from more than 700 to the estimated 453.

Groups vanished in different ways last year. For example:

- Oklahoma Publishing Co. closed its Colorado Springs Sun, leaving it with only one paper.
- State-Record Co. of Columbia, S.C. became part of Knight-Ridder Inc.
- Albritton Newspapers sold four of its five papers in 1986, leaving it with only one.
- Worcester Telegram & Gazette Inc., owner of four papers, was bought by Chronicle Publishing Co. of San Francisco.

Total Sunday circulation of group-owned papers reached 48.6 million by the end of 1986, slightly less than the 50.5 million circulation of group-owned weekday editions. But the Sunday circulation increased 1.9 percent over the previous year, outpacing weekday circulation growth of 1.5 percent.

"Acquisitions are a big part of this," Thorp said. "Some years, maybe (acquisitions) include more Sunday papers, some years less, and some have (Sunday) start-ups" [**pressime**, Nov. 1986, p. 44].

One of the next group-consolidation activities is expected to involve at least one of the dailies in Charleston, W.Va.

Few cities still enjoy the competitive contrast of Charleston, with two locally owned papers in its morning Charleston Gazette and evening Charleston Daily Mail. They are published under a joint operating arrangement.

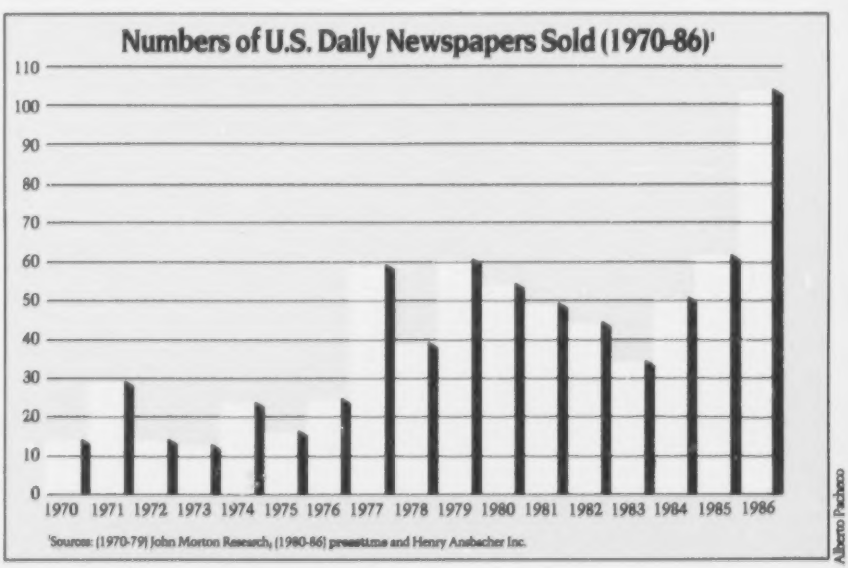
The Gazette has been owned by the Chilton family since 1907 and run in a liberal tradition by Publisher William E. "Ned" Chilton III from 1961 until his death Feb. 7. The Daily Mail, owned by closely held Clay Communications Investors, has been the Gazette's conservative rival since 1914.

Soon, all that will change. Clay has put the Daily Mail and its four other dailies up for sale as a lot, stating a preference for a major media group as buyer.

John F. McGee, managing partner of Clay Communications Investors, said in late February he did not know which prospective buyers have expressed interest, as the matter is being handled by the brokerage firm of Morgan Stanley. "But we expect to have a clear indication in two or three weeks," he said.

Clay is selling, McGee said, because "we are trying to posture this company in the strongest possible position . . . because, as principals, we are getting much older. At least we are preparing ourselves. If anything, I think the Daily Mail will be stronger, not weaker, as the result of what we do. I hope we're going to find ourselves with someone with whom we have a great deal of confidence."

Chilton's death also has made the Gazette a target for takeover. The paper's stockholders, primarily Chilton's relatives, indicated by a vote Feb. 13 that they do not wish to sell. But Gazette editor Donald Marsh told **pressime** he believes that it is only a matter of time before the few stock-



Alberto Pacheco

holders succumb to a good offer from a group.

In other recent newspaper-business activity:

• **Scripps Howard** has sold SCW Inc., its newspaper clip art subsidiary, for an undisclosed price to Metro Associated Services Inc. of New York, a competitor in the advertising graphics field. The New York company plans to change its name to Metro Creative Graphics Inc.

• **Gannett Co.** has sold the exclusive rights to market and distribute USA Today Radio to ABC Radio Networks. About 120 stations carried the USA Today service. The approximately 2,000 affiliates of ABC Radio Networks, a unit of Capital Cities/ABC Inc., will start broadcasting USA Today Radio's audio March 16 and will receive the radio scripts late this summer. Terms of the agreement were not released.

• **Gannett** also has agreed to sell its two Detroit radio stations, WCZY AM and FM, to Sky Broadcasting Corp. for about $15.5 million, pending FCC approval. The transaction is necessitated by Gannett's acquisition last year of The Detroit News. FCC cross-ownership rules prohibit a company from owning a newspaper and broadcast station in the same community.

• **Chronicle Publishing Co.** of San Francisco has sold its public-access videotex service Teleguide to GTEL, a unit of GTE Corp. GTEL provides local telephone service in California. Chronicle Publishing had been operating its Bay Area service since 1984 [**presstime**, Aug. 1985 p. 41]. It had 263 terminals in place. GTEL said it plans to expand the service in the San Francisco area and introduce it in Los Angeles. Sale price was not disclosed.

• Rupert Murdoch's **News Ltd.** of Australia has purchased another of that country's major media companies, The Herald and Weekly Times Ltd. The acquisition includes 17 major daily or Sunday newspapers and more than 50 smaller ones. The purchase reportedly gives News Ltd. control of about half of Australia's newspaper circulation, although officials at Murdoch's U.S. holding company, News America Publishing Co., could not confirm that report. Prior to the acquisition, News Ltd. owned 16 daily or Sunday papers and 14 weeklies.

• A 13-month strike against Murdoch's **News International** company in England came to an end in February when the involved unions voted unconditionally to call it off. "It's all finished," said William A. O'Neill, vice president of The News Corp., the parent company. The dispute began in January 1986 when News International moved its four newspapers from the area around Fleet Street to Wapping [**presstime**, Dec. 1986, p. 18]. □

Newspaper growth of 1.5 to 2 percent seen

A sluggish U.S. economy was responsible for marginal gains in newspaper revenues in 1986, and the industry should continue to grow at an annual rate of 1.5 to 2 percent over the next five years, according to the U.S. Commerce Department.

In 1986, "newspapers maintained their top position among advertising media," the department said in its *Industrial Outlook 1987*. The report observed, however, that newspapers' "share of total advertising expenditures has steadily declined," primarily because of competition from direct mail and television.

"Constant dollar (adjusted for inflation) 1987 receipts of U.S. newspapers should rise by an estimated 2.2 percent" because total U.S. advertising expenditures are forecast to rise slightly in 1987, and advertising volume should increase 2 to 3 percent, it said.

Newspapers showed no appreciable linage growth in 1986, but the report's outlook for the next five years is more favorable.

Regarding circulation, it noted that while Sunday circulation increased between 1 and 2 percent last year, daily circulation grew less than 1 percent. The slow growth is likely to continue, increasing about 1 percent yearly over the next five years. "Circulation growth is not expected to keep pace with the increase in the adult reading population (ages 35-64) or the increase in the number of households," the report said.

"Working against growth in circulation are the slow but continuing consolidation of daily newspapers, a drop in multiple newspaper readership, and growing competition for the discretionary income and time of individuals," according to the report. □

Responses sought

The ANPA Human Resources Department reminds member newspapers to return the questionnaires on personnel and training practices that were mailed in January [**presstime**, Jan. 1987, p. 58].

UPI to get digital photo system

United Press International has introduced a digital photo system that the wire service said "will greatly increase the speed and quality" of its news photos and graphics.

The system, called "Pyxys," should be up and running by late spring, said UPI President and Editor Milton R. Benjamin.

In other news regarding the wire service, the company named more top executives, including James R. Hood, UPI's new vice president/broadcast services, who was hired away from the Associated Press. UPI said Hood is the "highest-level executive ever to switch news agencies."

Benjamin, UPI Board Chairman Mario Vazquez-Raña and other company officials unveiled Pyxys at a press conference Feb. 20 in Washington, D.C.

Vázquez-Raña said with the introduction of Pyxys, "existing means of picture transmission become obsolete."

Tom Sudman, president of Digital A. V., a Knoxville, Tenn., firm that developed Pyxys, said digital transmission will eliminate picture degradation inherent in the traditional, analog style of wirephoto service. "If you've experienced what a digital compact disk system did to your home stereo, you're going to see that happen to the quality of photography," he said.

Pyxys is designed to handle all aspects of electronic photography—from shooting with an electronic camera to automatically producing a color or black-and-white print using a special printer.

Eventually, the system will be linked with newspapers' pagination systems, said UPI photo consultant Richard Clarkson, former director of photography of National Geographic and former managing editor for graphics of The Denver Post.

Initially, however, the system will involve "electronic darkroom" functions including scanning conventional photographs into the system for enhancing and cropping as desired, and storing them. Digital images will be sent from the main UPI electronic darkroom in Washington via UPI's satellite system to subscribers who must lease necessary equipment.

Leasing costs have not been set, UPI said. But subscribers will have three equipment-package options. The basic and least-expensive setup will allow users to receive UPI digital photos and print the ones desired on a compact printing machine. The second has been designed especially for the television industry and includes voice interviews. The third, which is the most-advanced, will allow users to enhance, crop and otherwise manipulate photos and graphics.

Benjamin said discussions are under way with "a number of newspapers" that have expressed interest in being among the first to receive wirephotos digitally.

In the personnel arena, Hood, who for eight years headed AP broadcast news and programming operations, took charge of UPI's broadcast product development and marketing. UPI veteran Bill Ferguson, managing editor/broadcasting, will continue to be responsible for broadcast news.

Also, Charles Hollingsworth, former national sales manager of The Washington Post, has been named UPI senior vice president for marketing and sales. Several other executives also have left the Post to take high-level UPI positions [**presstime**, Feb. 1987, p. 63]. □

Fort Lauderdale papers keep in touch

The Fort Lauderdale News and Sun-Sentinel wants to stay in touch with its "snowbird" readers after they migrate to their northern homes in the spring.

The south Florida daily is launching a weekly "Postcard Edition" to promote reader loyalty among seasonal residents and to help local advertisers reach that affluent market.

"As far as we know, no other newspaper in America publishes an edition like this," said Rick Seibert, the newspapers' Palm Beach circulation manager and project manager for the Postcard Edition. The only similar effort to come to the papers' attention is Canada News, published by The Standard of St. Catherines, Ontario, for Canadians who spend the winter in Florida [**presstime**, Jan. 1986, p.31].

Unlike Canada News, which is printed on-site in Florida, the Postcard Edition will be a special edition of the Fort Lauderdale dailies. It will be published from May to October and mailed north.

A prototype has a centerpiece color photo on the front page and a scenic postcard-type picture in the upper left corner. Stories will include some of the most noteworthy of the papers' south Florida coverage and columns, as well as summaries of local news.

The paper has started to promote the edition through in-paper advertising and inserts in south Florida. □

Pentagon again declares national press pool a success

For the fourth consecutive time, a successful test of a national press pool has been conducted by the Pentagon. "Success" in these exercises is measured by the maintenance of secrecy beforehand, and that was accomplished in the Feb. 11-12 training exercise in Honduras, according to Pentagon officials.

The 12-member pool, composed of newspaper and broadcast members, was activated at 4 p.m. Feb. 11 and departed from Andrews Air Force Base near Washington, D.C. Members were flown first to Fort Bragg, N. C., then to Honduras where the 82nd Airborne participated in a parachute exercise.

The press pool approach to military coverage developed after newspapers and broadcast media protested their being barred from the 1983 invasion of Grenada. This was the fifth test of the pool concept and the first outside the United States since April 1985. That one failed the secrecy test as information about it was leaked beforehand. The next three pool tests were domestic, and secrecy was maintained in each [**presstime**, Sept. 1986, p. 45]. □

Recent acquisitions

Gozia-Driver Co. of Boerne, Texas, acquired The McCook (Neb.) Daily Gazette, circulation 10,175.

Stauffer Communications Inc. of Topeka, Kan., acquired The Daily Highlander, Lake Wales, Fla., circulation 5,335.

Ingersoll Publications Co. of Princeton, N.J., acquired The Courier-Tribune, Asheboro, N.C., daily circulation 18,123.

The Mooney family of Rome, Ga., acquired sole ownership of the Rome News-Tribune, daily circulation 25,000.

Phillips Media Inc. of Berryville, Ark., acquired the Le Mars (Iowa) Daily Sentinel, circulation 5,245.

David R. Jackson of Ludington, Mich., and members of his family acquired The Ludington Daily News, circulation 8,218.

Francis and Gene Stipe of McAlester, Okla., and Jim Monroe of Idabel, Okla., acquired The Mena (Ark.) Star, daily circulation 5,219, and the Tahlequah (Okla.) Pictorial Press, daily circulation 7,020.

The Johnstown (Pa.) Tribune Publishing Co. acquired The Columbia (Pa.) News, daily circulation 4,314. □

ANPA/TEC 87

Who: You are invited to attend, with your colleagues in the newspaper and graphics arts industries.

What: ANPA/TEC '87 — ANPA's 59th annual Technical Exposition and Conference.

The Exposition. ANPA/TEC hosts the most extensive display of newspaper and graphic arts systems, equipment and supplies in the world.

The Conference. Thought-provoking general sessions, practical workshops and informative panel discussions are scheduled. Topics of this year's sessions and workshops include voice recognition and artificial intelligence, ad composition and ad tracking, and electronic cameras.

When: June 6-10, 1987

Where: Las Vegas Convention Center

Why: The ANPA Technical Exposition and Conference —ANPA/TEC — is a unique opportunity for you to see and discuss state-of-the-art newspaper publishing and graphic arts technologies and ideas.

Ferré, Warren to be nominated as directors

Two new ANPA directors will be elected at the Association's annual business meeting May 5 during the ANPA Convention in New York City.

The Nominating Committee, chaired by Richard J.V. Johnson, president of the Houston Chronicle, will nominate Antonio Luis Ferré, president and publisher of El Nuevo Dia of San Juan, Puerto Rico; and Richard J. Warren, vice president/editor and publisher of the Bangor (Maine) Daily News, for two-year terms [**presstime**, Jan. 1987, p. 70].

Antonio Luis Ferré

Richard J. Warren

A member of the ANPA Circulation and Readership Committee, Ferré also serves on the Governor's Economic Advisory Council of Puerto Rico and on the boards of American Airlines and Banco de Ponce. He is vice chairman and consultant to the Puerto Rican Cement Co., a company he formerly served as president and chairman. He has been president of the Puerto Rico Manufacturers Association.

Ferré received a bachelor's degree from Amherst College and a master's in business administration from Harvard University. He also has studied at Dartmouth College and Lausanne University in Switzerland.

Warren, a member of the ANPA Government Affairs Committee, is immediate past president of the Maine Daily Newspaper Publishers Association and of the Bangor Action Committee of Fifty, a local economic development organization. He is president of Northeast Publishing Co. of Presque Isle, Maine, a subsidiary of Bangor Publishing Co., which owns six weekly newspapers and a commercial printing operation, and is a director of Rockland (Maine) Courier Gazette Co. He also serves on the Audit Committee of the Associated Press and on the Eastern Regional Advisory Board of the American Press Institute.

Warren is a trustee of the Eastern Maine Medical Center and a director of Merrill Trust Co. of Bangor. He received a bachelor's degree from Trinity College in Hartford, Conn., and attended the Small Company Management Program at the Harvard University Graduate School of Business Administration.

Also at the business meeting, two directors will be nominated for re-election to two-year terms: Donald E. Newhouse, president and general manager of The Star-Ledger in Newark, N.J., and Charles S. Rowe, editor and co-publisher of The Free Lance-Star in Fredericksburg, Va.

The terms of 13 directors do not expire this year. They are: Garner Anthony, chairman and chief executive officer of Cox Enterprises Inc., Atlanta; Frank A. Bennack Jr., president and chief executive officer of The Hearst Corp., New York City; Charles T. Brumback, president and chief executive officer of the Chicago Tribune Co.; John J. Curley, president and chief executive officer of Gannett Co., Arlington, Va.; Robert F. Erburu, chairman and chief executive officer of The Times Mirror Co., Los Angeles; Edward W. Estlow, chairman of the Executive Committee of Scripps Howard, Denver; Jacques G. Francoeur, president of UniMedia Inc., Montreal; Sandra C. Hardy, vice president of Calkins Newspapers, Levittown, Pa.; Edwin L. Heminger, editor and publisher of The Courier, Findlay, Ohio; Joe Hladky, president and publisher of The Gazette Co., Cedar Rapids, Iowa; Uzal H. Martz Jr., president and publisher of the Pottsville (Pa.) Republican; John G. Montgomery, publisher of Montgomery Publications Inc., Junction City, Kan.; and James M. Moroney Jr., chairman of the executive committee of the A.H. Belo Corp., Dallas.

The customary tenure for directors is four consecutive two-year terms, which may be extended for those who are elected officers. Two directors who have reached the end of their tenure are Johnson of the Houston Chronicle and Charles M. Meredith III, publisher of The Free Press in Quakertown, Pa.

Alvah H. Chapman Jr., chairman and chief executive officer of Knight-Ridder Inc., who will step down as ANPA chairman and president at the Convention, will continue on the Board for another year and will serve as chairman of the 1987-88 Nominating Committee.

Making up the final four members of the 22-member Board are four current Board members who will be nominated at the May meeting for election to one-year terms as Association officers. They are: for chairman and president—George W. Wilson, president of the Concord (N.H.) Monitor; for vice chairman—Arthur Ochs Sulzberger, chairman of The New York Times Co. and publisher of The New York Times; for secretary—William H. Cowles 3rd, president and publisher of The Spokesman-Review and Spokane Chronicle; and for treasurer—Lloyd G. Schermer, chairman and chief executive officer of Lee Enterprises Inc. □

New presstime, ANPA writers named

Mary A. Anderson has joined **presstime** as a staff writer.

Mary A. Anderson

She worked for five years as a daily newspaper reporter in Florida for the Fort Lauderdale News and Sun-Sentinel and The Ledger of Lakeland. She was awarded two Florida Bar Media Awards for articles written in 1983 and 1984.

Anderson earned a bachelor of arts degree in American studies at Stanford University and has a master's in journalism from Northwestern University.

Dawn D. Murphy joined ANPA's Technical Services Department as a publications coordinator and technical writer. Murphy has worked as a technical and graphic artist and as a publication specialist and coordinator for several firms in Northern Virginia and Maryland.

Dawn D. Murphy

She earned a double major in art and anthropology at the University of Colorado and has a master's degree in anthropology from Catholic University, Washington, D.C. She is currently working for a master's in industrial psychology from George Mason University in Fairfax, Va.. □

Dole, Hart and Carter added to Convention speakers' list

Two potential 1988 presidential contenders and a former President will address ANPA's 100th Anniversary Convention May 3-6 in New York City.

Senate Minority Leader Robert J. Dole (R-Kan.) and former Sen. Gary Hart (D-Colo.) are scheduled to appear at the ANPA Lunch Tuesday, May 5.

President Jimmy Carter is scheduled to speak at the ANPA Lunch Wednesday.

Both Dole and Carter have addressed previous Conventions—in 1983 and 1978, respectively.

In another program development, Katherine W. Fanning, editor of The Christian Science Monitor, agreed to serve as moderator of the Tuesday morning general session on "The Next 100 Years." The segment will feature a panel discussion by leading writers and thinkers on what the great issues will be in the future.

And in a change of plans, the Tuesday morning general session and Newspaper Advertising Bureau annual meeting will be at the Convention hotel, The Waldorf-Astoria—not at Radio City Music Hall as previously announced [**presstime**, Jan. 1987, p. 70].

The Convention will begin with ceremonies Sunday at Castle Clinton, a national monument in Battery Park. Prior to the ceremonies, Knight-Ridder Inc. will sponsor an opening reception at the park at 4:30 p.m.

For families of Convention attendees, an optional breakfast at Sardi's and a tour of Lincoln Center has been scheduled on Monday.

Among the other peripheral events, The New York Times Co. will host a party Monday evening from 5:30 to 8:30 at The Metropolitan Museum of Art.

Special attractions will include the new Lila Acheson Wallace Wing, devoted to 20th Century art, and the Courtauld of impressionist and post-impressionist masterpieces.

An art critic for The New York Times and the museum staff will map out three different itineraries to help conventioneers tour the museum.

Convention registration and hotel reservation forms, which were mailed in February, must be returned to ANPA by March 30. After that date, hotel reservations will not be handled by ANPA. However, it will still be possible to register for the Convention at The Waldorf-Astoria the weekend before and during the event. □

A good reason to turn off the tube more often this year

By congressional joint resolution and presidential proclamation, 1987 has been designated the "Year of the Reader."

The idea of a yearlong tribute to reading was the brainchild of Patricia Holt, book review editor of the San Francisco Chronicle.

Holt first advanced the notion two years ago when she was an advisor for the Library of Congress' Center for the Book.

Newspapers are getting involved in marking the year, according to John Y. Cole, director of the Center for the Book. Holt's paper was instrumental in establishing a Year of the Reader office, and the Chicago Tribune is providing support for a statewide celebration in Illinois, Cole says.

ANPA Foundation, which has its own literacy project, has embraced the observance. Says Assistant Director Linda B. Skover, "We'd hope that every year would be the 'Year of the Reader.'"

Newspaper numbers

7.4—percentage of newspaper newsroom staffers who have taken college meteorology classes to help them prepare weather stories.

10.81—average hourly dollar earnings of newspaper production workers in 1986.

45.86—average age of working members of the International Typographical Union in 1985.

148 million—number of dollars the U.S. Postal Service received in 1986 for delivery of in-county, second-class mail. Just under $54 million came from the congressionally appropriated subsidy known as "revenue forgone."

2.8 million—number of metric tons of newspaper newsprint recycled in the United States in 1986.

IAPA attacks 'lawlessness' close to home

The Inter American Press Association monitors press freedom in the Western Hemisphere and usually is seen championing the causes of beleaguered Latin American newspapers. Recently, however, it found a cause a few hundred miles *north* of its Miami headquarters.

In a protest telegram to South Carolina Gov. Carroll A. Campbell Jr., IAPA President Alejandro Miro Quesada, editor and publisher of El Comercio of Lima, Peru, said the organization was "shocked to learn of the state of lawlessness reported in McCormick County in your state, affecting the press freedom of the McCormick Messenger and its editor Ken Fortenberry."

Fortenberry and his family have been targets of harassment since he published articles about corruption in the local sheriff's office, shortly after purchasing the small weekly in 1985.

Edward Seaton, chairman of IAPA's Executive Committee, said he could not recall the last time IAPA got involved in such a case in the United States.

"We determined that this one looked a lot like cases we deal with involving individual newspapers outside the United States, and so decided, to be even-handed about it, we ought to treat this just like we would any other," said Seaton, publisher and editor in chief of The Manhattan (Kan.) Mercury.

An especially faithful reader

Peoria's oldest newspaper subscriber wouldn't dream of giving up her daily Journal Star. Now that the paper knows about her, it wouldn't dream of letting her pay for it.

Olive Alleshouse had wanted to reduce the term of her subscription to six months at a time because she was not sure how much longer she will be able to enjoy it. "As I am now past 104 and 1/2 years old, I may not be able to read the paper a year from now," she wrote in a letter to the paper.

The Journal Star ran an article quoting from the letter and from a subsequent interview with its oldest subscriber, and the story was picked up by the Associated Press. Soon, letters were arriving at the newspaper from people all over the country, offering to buy her a subscription.

What the Journal Star and AP stories did not say was that the newspaper had already decided to give her a subscription, says Managing Editor Marjorie Fanning.

Alleshouse considers her daily paper a necessity. "I've got to take the paper. I want to know what's going on in the world and you can't get it all from television," she wrote.

The retired teacher and librarian has been a widow since 1936. In 1956, she entered a retirement home. "Some ladies here share a paper," she told the Peoria daily, "but I want my own."

BERKLEY SMALL

STRONGER THAN EVER

Berkley Small, the leader in circulation supplies, has made a "Stronger Than Ever" commitment to service, technically advanced products, and circulation management support. We are currently directing our technical resources toward product improvement and the development of circulation management systems. Our expanded product line includes reliable single copy vending equipment and totalizing coin mechanisms.

The New Berkley Small Designer Series of coin operated and honor newspaper racks combines durability with unique graphic design potential. The use of aluminum and poly-carbonate plastic reduces corrosion and physical damage, creating more value than in any product of its kind. The Berkley Small "Stronger Than Ever" commitment will definitely strengthen the overall effectiveness of your circulation sales and distribution operation.

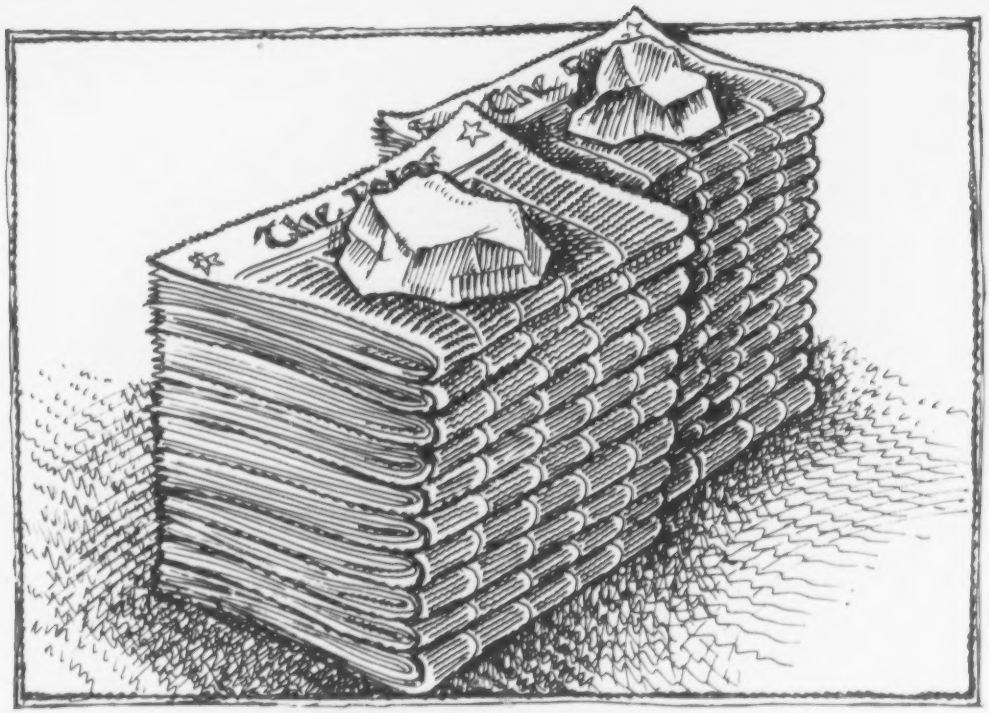
SPECIAL REPORT

Classifieds Come Up A Winner



Mutual protects you against paper waits.

A lot of papers can pile up during a newspaper strike, and that means a lot of lost revenue. Even when a paper is able to continue printing and distributing, extra expenses such as additional security and advertiser boycotts can be burdensome.

That's why strike insurance from the Mutual Insurance Company of Hamilton, Bermuda, is so important. Strike insurance from Mutual minimizes the financial damage caused by strikes, and provides newspapers with the economic backing needed to endure a strike while a settlement is being negotiated.

A Mutual strike insurance policy covers net profits, fixed charges, and ordinary business expenses in the event of a full or partial strike. Mutual also provides for extra security to protect both personnel and physical plant. As unionization and resistance to automation increase, the protection that Mutual's strike insurance provides is now more valuable than ever.

Mutual offers strike insurance only once a year, with coverage effective from July 1st through June 30th, so contact Mutual immediately to qualify.

INDEX VOLUME 9, NUMBER 4 APRIL 1987

Special Report *Look what's happened to classified! The little ads in the back of the newspaper have come up a big winner in the newspaper advertising sweepstakes in recent years. Today, they account for more than a third of daily newspapers' advertising expenditures. But classified is volatile. Heavily dependent on three categories—automotive, employment and real estate—classified mirrors the state of the local economy. Newspapers are working to decrease this dependence, meet the competition and improve the process of getting the ads into print.* **22**

Great givers *There are at least 100 foundations established by newspaper-related individuals or companies. They tend to go their own ways.* **6**

Pulitzer payoff *How The Dallas Morning News' investment of money and time yielded a series that won the 1986 Pulitzer Prize.* **12**

What's in a slogan? *They may be boastful, biblical or, in some cases, barely grammatical, but newspaper slogans are a fascinating part of newspaper lore.* **14**

Everyone into the pool! *A few newspapers provide their employees with recreational facilities. It's a fringe that's a favorite.* **16**

The PC trend *Personal computers are continuing to make headway at newspapers. Some papers have even ditched their mainframes in favor of all-PC systems.* **18**

A piece of the action *There are only a few newspapers with employee stock ownership plans, but tax-law changes may inspire more ESOPS.* **32**

Essay: Literacy tutoring *Martha Smith describes the rewards of helping an otherwise successful 50-year-old man learn to read.* **36**

Profile: Beverly A. Klein *She rose through the ranks from classified phone sales to advertising director of The Milwaukee Journal and Milwaukee Sentinel.* **38**

Promotion yardstick *The Future of Advertising project has developed a formula that gauges the effectiveness of circulation promotions.* **55**

Mailers flee CWA *Many mailers are leaving the Communications Workers of America and joining the Teamsters.* **60**

100th Anniversary Convention *ANPA goes to New York City for its Convention May 3-6. Here's a look at the program.* **78**

CHAIRMAN'S CORNER

Visiting international colleagues helps bolster press freedom

One of the opportunities we all have during our ANPA participation is the chance to work with and to know newspapering colleagues from other parts of the world. One of the very best ways we have of learning about ourselves is by studying the situations and techniques and challenges of others.

ANPA affords us the chance to know our international colleagues by including them in our own activities here; by helping us know whom to see when we are, ourselves, overseas; by organizing U.S. delegations to key events such as the May Congress in Helsinki of the International Federation of Newspaper Publishers, or FIEJ; and through occasional special events.

Alvah H. Chapman Jr.

One of those special international events was completed recently by members of the Board of Directors when we traveled (not at ANPA expense, of course) to see our close newspaper friends in Australia and New Zealand. We had formal, seminar sessions and many informal talks with government, business and newspaper leaders in those nations.

And we found the state of newspapering there robust, enlightened, technically advanced and absolutely committed to the press freedoms that underpin our social democracies.

Many of our Australian and New Zealand newspapering friends have been here to attend ANPA training sessions, conventions and ANPA/TEC Expositions. But few of us had been to see their countries and their operations. We were reminded that learning is a two-way street. As much as we read or think we know from a distance, I am convinced we never can adequately understand our friends until we have walked with them in their own homes and businesses. It takes time and resources from both directions to make this possible; I'm convinced it's worth the effort. Because, simply put, only we and our close, free-press colleagues from around the world can assure that various governments, courts and would-be dictators do not subvert the free flow of information that makes our peoples free. If we don't tend this bulwark, none will.

I urge each of you to look "Down Under" the next time you consider an overseas trip for combined business and pleasure. The ANPA staff can help you with specific Australia, New Zealand and South Pacific ideas and suggestions. It's a part of the world we need to know more and more about—and we'll have another chance to study it at our 1988 Convention in Honolulu.

"G'Day Mate!" and "Kiwi Magic" are concepts we North Americans can learn from; they are "among-friends" values we must cherish and nurture!

FOUNDATIONS

Many of them sprang from newspaper fortunes, and most of those give some support to journalism projects, but there is no clearinghouse to coordinate activities

BY MARY A. ANDERSON
presstime staff writer

Among the 20,000 foundations in the United States, at least 100 were formed by individuals, corporations or associations that have owned, operated or served newspapers.

The 10 richest of these newspaper-originated funds—all bearing the names of prominent newspaper families—held combined assets at the end of 1986 of more than $2.2 billion. They spent more than $75 million last year on various charitable, research and educational projects.

Those contributions primarily benefited the local communities in which the affiliated newspapers were published. However, grants that were disbursed nationwide were more likely to support journalistic interests than any other cause.

Until 1986, only Gannett Foundation and a pair of foundations formed by William Randolph Hearst have ranked among the very largest U.S. foundations, with assets of about $500 million and $300 million, respectively.

But in the past year, Knight Foundation and the McCormick Charitable Trust received large infusions of funds related to the estates of their founders, and this has propelled them into the stratosphere of the nation's grant makers.

The myriad newspaper-related foundations overlap, to the extent that most of them support projects in the field of journalism. However, there is no consortium or clearinghouse to coordinate their activities.

"Everyone seems to say they'd like a meeting . . . to see what the different foundations are doing," says Judith D. Hines, vice president and director of ANPA Foundation. But that sentiment has not taken hold.

Students from a Chicago public housing project learn computer skills in a program operated by Chicago Youth Centers and funded by the Chicago Tribune Foundation and Charities.

One reason is that foundations formed by newspaper magnates, corporations or press associations are "apples and oranges in terms of their grant-making," says Mary K. Leonard, a program director at the Council on Foundations in Washington, D.C. "Most news-related foundations are very multipurpose, with almost a United Way quality. [They support] anything from the arts, to health care, to recreation."

Gannett Foundation spent about a quarter of its 1986 grants on journalism-related efforts and the remainder on community-based programs, a national effort against illiteracy and special events.

The two Hearst foundations, on the other hand, support no journalistic interests except for an annual awards program for collegiate writers and photographers.

What the different tax-exempt foundations support depends on their charters and on the varying philosophies of their founders.

Their sources of funds place them into three categories:

- "Independent" private foundations, such as those of Gannett, Hearst, Knight and McCormick. They generally are endowed from the gift of an individual or family and by law must pay out annually at least 5 percent of the market value of their assets.
- "Company-sponsored" private foundations, such as the Chicago Tribune and The New York Times foundations. They obtain money from corporate profits and/or an endowment of stock, and also must pay out at least 5 percent of their assets each year.
- "Public" foundations formed by at least a dozen newspaper organizations, including ANPA, the National Press Club, the Southern Newspaper Publishers Association and the American Society of Newspaper Editors. "Public" means they can solicit funds from public sources.

Unlike private foundations, most public ones concentrate on the interest of their sponsoring organization—in this case, journalism. Another factor distinguishing private from public foundations is that the former are grant makers, the latter, primari-

ly grant seekers. In fact, the private foundations are major benefactors of the public ones.

Knight Foundation President C. Colmery Gibson says private foundations "sometimes get inundated" with redundant requests for money from foundations of journalism associations. Knight and other private foundations "get approached eight times and respond three, and sometimes they (private foundations) think that is about enough."

CORPORATE LINKS. Private foundations usually are linked to the corporate source of the donor's wealth, according to author Waldemar Nielsen, a philanthropic consultant and former foundation trustee who has written two books on large foundations.

In his 1985 book *The Golden Donors*, Nielsen reported that private foundations typically have arisen from American industrial fortunes, and no more so than in the newspaper industry.

Among the nation's oldest and richest foundations, "The two cases that represent the most intimate relationship between a corporation and a private foundation both happen to be based on wealth acquired from newspapers and other mass media, namely Hearst and Gannett," he wrote.

In regard to both, Nielsen has questioned "the extent to which it is appropriate and ethical for a private foundation to work through and publicize a profit-making company with which it is associated."

In the case of Gannett, as with many other independent foundations, Nielsen believes the practice of limiting community giving to those areas that contain a related corporate property is a self-serving one, whereas widely disbursed contributions help divorce the charitable interest from the profit motive.

He also criticized the Hearst foundation, calling it "troubling" that the board is composed solely of company executives and Hearst family members. Nielsen claimed the Hearst arrangement has resulted in a "narrow" outlook that is "indentured to the executives and interests of a profit-making corporation."

Not surprisingly, executives at the Hearst foundations—which last year expended about $12 million of its $339.8 million in assets—were "extraordinarily upset" by the accusations, says Ilene Mack, program officer for the Hearst Foundation. While acknowledging Nielsen's influence in the philanthropic field, she says his statements suggest a knee-jerk reaction to the Hearst name by a writer with liberal sensibilities.

"I think it was written with a very slanted pen" and "with tremendous bias," she says. "We are not indentured to anybody. Our business is to make grants in the best possible way we can—intelligently and thoughtfully," says Mack, citing The Hearst Foundation's "many, many endowed scholarships for minorities."

Knight Foundation President C. Colmery Gibson says private foundations "sometimes get inundated" with redundant requests from foundations of journalism associations.

Mack says the Hearst foundations severely limit their giving in the field of communications because their charters specify broad charitable giving "for the betterment of mankind." The largest share of their giving supports a broad spectrum of community projects, some of which correspond to national concerns such as literacy.

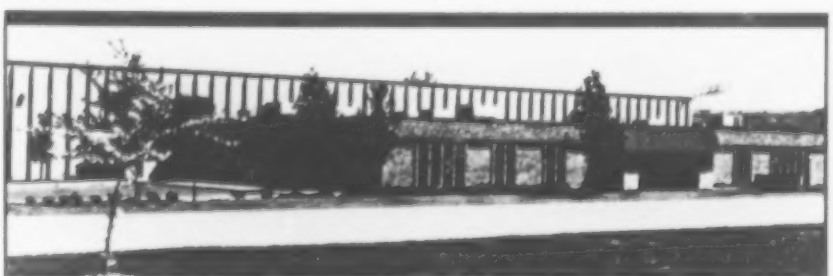
Nielsen applauded Gannett Foundation for developing "a program of such quality that it more than compensates for what otherwise might be a questionable situation" in terms of making donations in communities served by Gannett media.

Gannett Foundation was so pleased with Nielsen's plaudits that it opened its 1985 annual report with a quote from *The Golden Donors*.

The foundation's director of media relations, Brian J. Buchanan, says he understands why there might be some continuing confusion about the Gannett Foundation's relationship with Gannett Co. The grant money, he says, "is not coming from Gannett but from the Gannett Foundation. To most people, that's a distinction without a difference."

Buchanan adds: "We can't make any grants that financially benefit the Gannett Company. . . . But we are interested in promoting particular interests, many of which are the same as the Gannett Company has."

BRANCHING OUT. The two private newspaper foundations that last year joined Gannett and Hearst in the top rank of foundations, the Knight Foundation and the McCormick Charitable Trust, held assets of between $50 million and $60 million in 1985. Both portfolios zoomed in value last year to between $400 million and $500 million.



PROFIT FROM OUR EXPERIENCE

The experience we've gained from serving the printing industry for 75 years can help you in making equipment decisions ideally suited to your capacity and needs. So when it comes to pre-owned web offset presses, add-on units, typesetting systems or auxiliary equipment, come to the source.

An Inland Industries Company

As the various foundations grow in value, some people in the newspaper business say it becomes important for the foundations to sit down together. Others disagree.

Both have been reorganizing and expanding their programs, not only to accomplish more with their giving but to satisfy the 5-percent annual payout requirement for independent foundations.

After reviewing its entire program of grants, Knight Foundation plans to expand its community giving beyond the 11 cities where Knight published papers before the 1974 merger with Ridder publications. Now, its giving will extend to about 30 cities served by newspapers in the current Knight-Ridder group.

"In view of the fact that the capital from the settlement of Mr. (John S.) Knight's estate was greatly increased, the board has decided to include most of the Knight-Ridder cities as well," says Knight Foundation President Gibson.

However, he says, "journalism will undoubtedly be the main thrust of our foundation in the future. . . . (The board) will recommend significant grants over the next year or so in the area of precollegiate or postgraduate, and even mid-career, journalism education."

Knight's fund was valued at just under $25 million in 1981, when founder Knight died. Over the next five years, the assets doubled in value. Then they soared to $460.1 million when the estate was closed and the bulk of its holdings—including 13.5 million shares of Knight-Ridder stock—passed to the foundation, which sold 9.5 million shares back to the corporation.

The increase in assets of the McCormick Charitable Trust from $50.7 million in 1985 to "more than $400 million" in 1986 resulted from a transfer of funds from a residuary trust within the McCormick family following the death of Col. McCormick's second wife in 1985, according to the trust's executive director, William N. Clark.

LITTLE CONSENSUS. As organizations like the Knight Foundation and the McCormick Charitable Trust grow in value, some people in the newspaper business say it becomes more important for representatives of newspaper-related foundations to sit down together at a table. Others disagree.

One meeting of newspaper-related foundation heads occurred under the auspices of ANPA Foundation in 1978, but the mixture of grant-making private foundations and grant-seeking public ones proved awkward, and no concerted effort has been made since then, says ANPA Foundation's Hines.

There was "one major problem" with the 1978 meeting, wrote one of the attendees, Gerald M. Sass, vice president/education of Gannett Foundation, in response to a 1983 questionnaire from ANPA Foundation. "The presence of potential fund recipients for any part of the conference makes for limited dialogue," he said. Sass added that he would prefer a survey or a comprehensive report on the various groups' activities to another meeting of both private and public foundations.

Only when such a meeting is limited to organizations that are fundors, Sass wrote, can foundations "discuss confidentially their long-range planning."

In recent interviews, other foundation specialists agreed that any attempt to assemble probably would have to segregate the interests of private and public foundations.

"The idea of coordination sounds good on its face. But sometimes coordination of efforts among foundations can work against some of the grantees," says Buchanan of Gannett Foundation.

If grantmakers tried to reach any consensus about worthy projects, or attempted to divide the pie of fund-raising requests among themselves, Buchanan says, many

15 Richest Newspaper-Related Foundations in 1985

	Assets (millions)	Gifts and expenses
Gannett Foundation	$500	21.7
The Hearst Foundation Inc. and Hearst Foundation[1]	292.6	12
Carter Foundation (Amon G. Carter, former owner and publisher, Fort Worth Star-Telegram)	172.2	8.7
Knight Foundation[2]	56.8	5.4
Newhouse Foundation Inc.	53	3

[1]The Hearst Foundation Inc. and the (William Randolph) Hearst Foundation are treated as one entity although they submit separate tax returns.
[2]Knight Foundation assets increased to $460.1 million in 1986; expenditures increased to $8.5 million.
[3]McCormick Charitable Trust and Foundation's assets increased to more than $400 million (estimated) in 1986.

Sources: The Foundation Center and presstime

grantees could lose out. Examples would be those that depend on an accumulation of grants from many sources to finance their projects.

"Perhaps independently made decisions give grantees a better shot" at foundation money, he says.

Knight Foundation President Gibson also is leery of joint meetings, because of a strong desire to preserve that foundation's autonomy. "We do not have any secrets from any other foundations," says Gibson. "We'll talk to them any time. But I don't believe our board would want us to be part of a group of journalism foundations.

"One of the great strengths of a private foundation is that it doesn't really have an obligation to be consistent. . . . John Knight had the feeling our board should look at every grant as if we had never looked at a grant before and may never make a grant again."

Knight Foundation decided to address the problem of repetitive requests on its own. It formed a non-trustee advisory committee in 1986 to assist the foundation board in eliminating redundancies and thereby making the most effective grants.

Clark, of the McCormick Charitable Trust, also sees no need for contact with other foundations with newspaper origins. He gets enough information either from the large philanthropic organizations or, indirectly, through the grant proposals it receives.

"We're made aware of what other newspaper foundations are doing through word from the recipients, saying, 'Such-and-such gave us so much. Why don't you?'"

But a different view prevails elsewhere in the same Chicago building—at the Chicago Tribune Foundation and Charities, a corporate foundation that receives all its money from newspaper profits, unlike McCormick, which has an endowment from the estate of the late Tribune publisher.

"I'd love to meet with people from other newspaper foundations involved with corporate (giving) because I think there's a lot of information that could be shared," says J. Nicholas Goodban, executive director of the Tribune Foundation. "If we never meet and sit and talk, we'll never know what we ought to sit and talk about," he says.

The chance to give some constructive criticism to those grant-seeking associations is a good reason to meet with them rather than avoid them, says Goodban.

Another in favor of meeting is Vernon Snow, president of the John Ben Snow Charitable Trust and Foundation, named for the founder of Speidel Newspapers (which were later acquired by Gannett Co.). "We certainly would be interested in getting together" regarding journalism-related programs, he says. "We talk informally, but it would be good to have a forum. . . . The things that we would want to know are: What are the frontiers both in journalism education, journalism research, and what is the future vis-a-vis the other media?"

Currently, about 20 other "affinity groups"—ranging from the arts to environmental protection—have been organized by the Council on Foundations.

"In terms of journalism, there's no place to go right now" to discuss goals and methods in a group setting, notes the council's Leonard, who serves as program director for a so-called "affinity group" on precollegiate education. "The next question is, 'Do they need a place to go? Is this something they'd like to talk about on a continuing basis?'" □

The story behind nyloprint® is getting around. And more and more newspapers are changing over. Not just because it goes to press so quickly. And not just because it runs so long. The word has gotten out that there's even more to it.

For one thing, every plate is produced to exacting tolerances in one of the world's most advanced manufacturing facilities. And it's backed by a widely distributed sales force and a technical staff that many consider the best in the business. They, in turn, are supported by one of the largest and most innovative research programs anywhere in the printing industry—a program that has been leading the way toward the development of much long-awaited technology, including flexo plates suitable for newspaper printing using a direct anilox inking system.

It has been our experience that once a newspaper has all the facts, chances are they'll go with nyloprint.® And judging by the orders that are coming in, the facts are getting out. If you'd like to know more, call Christopher Webber, Product Manager, at 1-800-343-4700. Or, if you're coming to ANPA-TEC '87, come see us at Booth #748. BASF. Ahead in Photopolymer Performance.

SERIES SHATTERED STEREOTYPES

Anatomy of a Pulitzer Winner

BY SANDRA LANE

Rodrigue (left) and Flournoy show some of the material compiled in their investigation of public housing segregation.

(Editor's note: The 1987 Pulitzer Prizes will be announced April 16. This article describes how one newspaper's news staff prepared a series of articles that won one of the 1986 Pulitzers.)

The editorial endeavor that captured the 1986 Pulitzer Prize for national reporting started modestly enough. "The original assignment was to do a story on a housing project in the east Texas town of Clarksville," recalls Howard Swindle, assistant managing editor of The Dallas Morning News.

In late 1983, U.S. District Judge William Wayne Justice ordered the town of Clarksville to integrate its two housing projects immediately. Twenty-five white families were ordered to move into the all-black project, and 25 black families were ordered to move into the white project.

During a hearing on the issue, an attorney for the government said that the conditions in Clarksville were no different from those in other east Texas towns. The News decided to find out if that allegation was correct.

Over a period of three months, investigative reporters George Rodrigue and Craig Flournoy went to 43 east Texas counties and surveyed conditions in 182 housing projects. They found that, 20 years after passage of the Civil Rights Act, 80 percent of the housing projects were racially segregated and that black housing was inferior in every way to white housing.

"To whites, public housing meant new construction, air conditioning and paved parking lots. To blacks, it meant old buildings, torn screens, muddy parking lots and no heating or air conditioning," says Swindle, who was closely involved in planning, researching and editing the Rodrigue-Flournoy series.

Lane is an undergraduate journalism student at North Texas State University, Denton.

The News then decided to find out if the east Texas situation was unique, or if it was representative of housing projects in urban areas of Texas as well. The two reporters found, almost to identical percentage points, that the same conditions existed in Dallas.

The investigation was broadened to cover other Southwestern urban areas. By that point, the team had already invested six months' time and had spent thousands of dollars. "We felt a tremendous amount of self-imposed pressure to complete the series," Swindle says.

Nevertheless, he asked for permission to continue the work for three more months, enabling the team to examine randomly selected cities nationally. Despite the newspapers's concern about tying up two of its best reporters even longer, it gave the go-ahead.

The News used the federal Freedom of Information Act to request information from the Department of Housing and Urban Development concerning federally subsidized housing projects [**pressetime**, July 1986, p. 22]. The agency "recognized that the potential for embarrassment to the government was substantial," Swindle says. "HUD knew what the figures were. They set out on a course to obstruct us from getting the documents."

Unable to obtain many of the requested documents, Rodrigue and Flournoy began cultivating potential sources among HUD employees.

"Top-level officials were excluded. They concentrated on the mid-level bureaucrats, the people who really cared about public housing laws," Swindle says.

The reporters located people who were disenchanted with the Reagan administration's stance on housing and who were willing to provide some computer tapes containing racial-occupancy data—data that HUD had said was not available.

Rodrigue and Flournoy had computer experts from local universities make the tapes compatible with the News' computers. This made it possible to assess the information in the newsroom.

After the reporters completed their interviews in 47 cities nationwide, they could write with authority that the conditions found in east Texas existed across the United States.

In the end, the news-gathering process lasted a year, and it took another two months to edit the series. For the last three months of the project, except for Christmas day, Swindle says he and the two reporters did not take a day off, their families' objections notwithstanding.

The eight-part series, which cost $35,000 (excluding salaries) to produce, ran Feb. 10-17, 1985. "It violated every rule for reader interest," he notes. "If you run a series longer than three days, you will usually lose reader interest."

But "Separate and Unequal: Subsidized Housing in America" shattered stereotypes, Swindle says. "Welfare mothers with six kids were not the majority occupants in federally subsidized housing projects. The majority of the occupants were white and/

or elderly." The team also discovered some unusual interpretations of public housing. "We found some rather lavish uses of tax money. Some subsidized projects were 20-story buildings with indoor swimming pools, libraries and sometimes shuttle-bus service," he says. "This all existed with the approval of HUD. Some regulatory functions of HUD have never been enforced. What we saw was a government-sanctioned form of segregated housing."

The News' project led to investigations by the House Committee on Housing and Urban Affairs, which is continuing, and by the U.S. Civil Rights Commission, which has ended.

The eight-part series in The Dallas Morning News "violated every rule for reader interest. If you run a series longer than three days, you will usually lose interest."

Swindle says the series reflected the most judicious editing he has ever done. When the project was finished, the material, which included tape recordings, records and notebooks, filled an entire closet. It also filled the newsroom of the Morning News with cheers on April 17, 1986, when the 1986 Pulitzer Prizes were announced. □

Project Manager Sees Media as Court of Last Resort

Listening to Howard Swindle is like attending a revival meeting. He resurrects all those long-forgotten dreams of making the world a better place for mankind. He rekindles the hope that perhaps a few people can make a difference.

Unlike many journalists who become cynical after years in the business, Swindle continues to believe that he and the media have a mission in life: to serve as a watchdog and a court of last resort for people who can't fight for themselves.

Swindle is assistant managing editor in charge of projects at The Dallas Morning News, and he was editor and project manager for the News' series that won the 1986 Pulitzer Prize for national reporting.

Before becoming an editor five years ago, he was a reporter who thrived on investigative reporting on behalf of the down-and-outers. "I like writing for the underdog—people who for some reason or the other aren't very high in the social pecking order," he says.

"One of my editors told me . . . I would grow up and not write about underdogs," he says. "Another told me I would be miserable because the system can't change." But the News' Pulitzer-winning series on public housing segregation and other investigative stories prove . . . the media can change the system."

Swindle, a 1969 graduate of North Texas State University, first became interested in investigative reporting in his first job after college—covering police for the Lubbock (Texas) Avalanch-Journal. Working that beat, he discovered a file on a long-unsolved murder of a woman. It contained only one sheet of paper—an investigative report written on the day of the crime.

Police had not made the usual effort to find the murderer, Swindle ascertained, because of the woman's lifestyle and sexual promiscuity. However, the police reporter traced a television set stolen at the time of the murder to a man who was later indicted for and convicted of the murder.

"After this experience, I became addicted to the challenge of doing this type of reporting," Swindle says. "It was terribly self-satisfying."

Howard Swindle

He also recalls an incident in which nine members of a family were killed in their sleep by hydrogen sulfide gas escaping from a leak in an oil pump. His subsequent research established that 60 people had died in the South and Southwest in one year as a result of similar leaks.

With these facts, he wrote an article for the Lubbock daily (and later a similar one for Texas Monthly magazine). As a result, the Texas Legislature drafted and passed some stringent laws on the use and safe handling of hydrogen sulfide gas. "Once again," he observes," a system that was flawed was changed by the media."

After going to work for The Dallas Morning News in 1978, Swindle wrote an investigative series about two east Texas narcotics agents who had been instrumental in obtaining indictments against more than 80 people. Also, because of their efforts, four others had been sent to prison.

Swindle found that the two agents had planted drugs, used stolen evidence and perjured themselves to obtain the indictments. The agents were indicted for their crimes, the four people in prison were released and indictments against the others were dropped.

"This was a textbook case of a system breaking down and creating a class of people who were disenfranchised," Swindle ways. "The media became a court of last resort for more than 80 people."

That was also true for the News' project on segregation and inequality in federally subsidized public housing.

—Sandra Lane

Newspaper Slogans

Everything from biblical quotations and whimsy to questionable grammar and civic pride tell readers why their publications are something special

BY MAL MALLETTE

Newspapers adopt slogans for diverse purposes. Slogans tell variously of the importance of a free press, length of publication, regional pride, service to readers, competitive stance, humor and the whims of publishers.

Whether on Page 1 or the editorial page, slogans also pose a couple of questions. Through repetition do they become almost invisible to readers and then just clutter the nameplate? And when several newspapers claim superiority, do slogans help dig a credibility gap?

In America, slogans go back to post-Colonial days. In 1789, this noble thought, to be echoed in many ways, appeared on the nameplate of The Gazette/The Journal in Boston: "A free press maintains the majesty of the people." Today, the most famous slogan is that of The New York Times: "All the News That's Fit to Print."

The Times first carried that slogan on its front page 90 years ago last month, shortly after Adolph Ochs bought the paper and affirmed a straightforward news policy. Ochs and his editors stuck with their own creation despite a slogan contest that drew thousands of entries, all duly published. A New Haven, Conn., man was awarded $100 for this slogan: "All the World News, but Not a School for Scandal."

Recently, the Times has used its long-standing slogan as a promotional theme, a project that could signal a resurgence of slogans. Although no one keeps statistics on such matters, slogans appear to have tailed off in recent years.

Meyer Berger described the genesis of The New York Times' slogan in his history of the newspaper. Tracking the origin of other newspaper slogans is more difficult. Take The Wenatchee (Wash.) World slogan, "Published in the Apple Capital of the World and in the Buckle of the Power Belt of the Great Northwest." The apple and power elements are obvious today, but the slogan first appeared Aug. 26, 1925, eight years before work began on the Grand Coulee Dam. Managing Editor George Richardson and Publisher Wilfred R. Woods theorize that in 1925 the late Rufus Woods, Wilfred's father and founder of the paper, heard the first drumbeats for a Columbia River dam and wrote the prophetic slogan.

Librarians are usually all-knowing about their newspapers, but several gulped when asked recently about their newspapers' slogans. A few grabbed for their papers to be sure of the exact wording, which says something about the impact of slogans over time.

In 1982, when The Baltimore Sun was making design changes, Managing Editor James I. Houck asked Clem Vitek, the librarian, to determine the origin of decoration around the nameplate slogan "Light for All." The slogan's origin is lost in musty files, and one wonders if the Sun's first address—21 Light Street—was a factor. The Sun began publication in 1837, the slogan in 1840. At any rate, librarian Vitek found nothing about the decoration.

Slogans are sometimes changed. Today, The Denver Post's slogan is "Voice of the Rocky Mountain Empire." Mary Asper of the library staff says that Harry Tammen and Frederick Bonfils, founders of the Post, liked slogans and used several different ones from 1895 on. For a while, the slogan was: "Your big brother, the newspaper with a heart and soul." Another time the editorial page slogan was, "There's no hope for the satisfied man."

And for years, until 1978, the Post's editorial page carried this slogan, which deserves a blue ribbon for length: "Dedicated in perpetuity to the service of the people, that no good cause shall lack a champion and that evil shall not thrive unnoticed."

Although no one keeps statistics on such matters, slogans appear to have tailed off in recent years.

WE'RE NUMBER ONE! As one of many newspaper examples of boastfulness, the Post in 1920 lauded itself as "The Best Newspaper in the U.S.A." Readers had cause to be confused, because three years earlier the Rocky Mountain News, also published in Denver, had begun calling itself "Colorado's Greatest Newspaper."

In San Francisco in the 1930s, the Examiner gave scanty disguise to immodesty, calling itself "Monarch of the Dailies."

The "best" parade seems to have been started by The Chicago Daily Tribune, now the Chicago Tribune. In 1847 it was calling itself "The World's Greatest Newspaper." The Tribune dropped that slogan Jan. 1, 1977. Editor James D. Squires says slogans can create credibility problems: "I think it's better to let the readers decide."

Modesty showed faintly in other slogans. The Pittsburgh Post-Gazette once called itself "One of America's great newspapers." Meanwhile, the co-owned Toledo Blade carried this self-description: "One of America's great newspapers—in one of America's great cities."

Florida readers today face a choice of superlatives: the "Florida's Best Newspaper" of the St. Petersburg Times or "The best newspaper in Florida" of The Orlando Sentinel. The Times got there first, in 1965, after winning its first Pulitzer Prize. The Sentinel joined in 1983, amid major changes in the newspaper's appearance and content. Earlier, the predecessor Orlando Sentinel-Star's slogan was "Florida's Most Interesting Newspaper." And The Miami Herald at one time called itself "Florida's Complete Newspaper."

Smaller papers are not without their pride. In Wenatchee, even before its apples-and-power slogan, the World carried a boxed ear boasting "Greatest Daily in the World for Cities under 10,000"—or 8,000 or 12,000, as the population fluctuated. The boast was dropped abruptly in 1969 after

Mallette is director of development of the American Press Institute in Reston, Va.

George Richardson attended an American Press Institute seminar. A seminar discussion leader had circled the ear and scribbled "The credibility gap starts here."

CATCHY, COMPETITIVE. Some slogans catch on, some don't. Thousands of readers and most newspaper people can recite The Atlanta Journal's slogan: "Covers Dixie Like the Dew." Far less known is "For 118 Years, the South's Standard Newspaper," slogan of the Journal's sister paper, The Atlanta Constitution. (The number changes annually.)

In a rival Southern city, Birmingham, the Post-Herald has fun with a spinoff of The Atlanta Journal's slogan. The newspaper's weekend magazine slogan is "Covering Birmingham Like . . . Kudzu." In the South, kudzu vines, imported to control erosion, grow at jogging speed.

Newspapers find slogan inspiration from different sources. The Indianapolis Star quotes II Corinthians: "Where the spirit of the Lord is, there is liberty." In Abilene, Texas, the Reporter-News quotes Lord Byron: "Without or with offense to friends or foes we sketch your world exactly as it goes."

Slogans sometimes reflect competitive circumstances. The Nashville Banner, a p.m., uses "Today's News Today," surely a dart at its a.m. rival, The Tennessean, which by nature of its deadlines publishes yesterday's news. The once-flourishing Cleveland Press, now a memory, sloganized in the 1960s that it was "The newspaper that serves its readers."

In the 1930s, the San Francisco Chronicle, competing with Hearst's Examiner, called itself "The city's only home-owned newspaper." Before the Audit Bureau of Circulations, there must have been hanky-panky among New York City papers, for The World in 1895 published in slogan fashion: "Circulation Books Open to All."

Span of publication is a point of obvious pride. The Hartford Courant notes: "Established 1764." The Peoria Journal Star says: 'Serving Central Illinois for 131 Years." In New London, The Day cites: "Serving Southeastern Connecticut Since 1881." The Sun Herald in Biloxi, Miss., has a variation: "Serving the Mississippi Gulf Coast for 103 Years." Similar examples are numerous.

In slogans, words like "serve" or "dedicated" are common. But woe unto those who scar the language. In Asheville, N.C., the Citizen-Times carries the slogan "Dedicated to the Upbuilding of Western North Carolina." Long-time Publisher Richard B. Wynne, who recently joined the corporate staff of parent Multimedia Newspapers, isn't sure of the slogan's origin, which dates at least to the 1930s. He does know that some readers notice it, witness periodic protests that "upbuilding" appears in no dictionary. Wynne concedes the point on usage, but he adds, "I'm comfortable with the slogan."

Slogans appear in type as large as 36-point. Mario Garcia, a newspaper designer, says he would limit slogans to 10-point lightface. Another designer, Phil Nesbitt, now with The Record in Hackensack, N.J., would use 14-point type but thinks slogans have outlived their usefulness. Garcia would not prescribe a slogan for a start-up newspaper but favors retaining traditional slogans. "They relate," he says, "to how readers perceive a newspaper."

Designer Mario Garcia says slogans "relate to how readers perceive a newspaper."

Slogans can be amusing, and weeklies probably have the most fun of all with them. Consider the Bent County Democrat, circulation 2,500, in Las Animas, Colo., published near John Martin Dam. Until recent years, its slogan was: "Best newspaper by a dam site."

Design expert Edmund C. Arnold once wrote about the Brewery Gulch Gazette of Bisbee, Ariz., which observed that "The sun shines on Brewery Gulch 330 days of the year, but there is moonshine every day."

The Gazette has gone to Boot Hill, but The Itawamba County Times of Fulton, Miss., (circulation 7,000) is thriving. The reason? True to its slogan, it is: "The Only Newspaper in the World That Cares Anything About Itawamba County." □

Providing A Place To Work And Play

BY CLARK NEWSOM
presstime labor writer

Nyle Leatham, The Arizona Republic and The Phoenix Gazette

Phoenix newspapers' Lazy R&G Ranch is an "institution" among employees.

A recreational facility for the use of employees and their families is unusual in any industry, but newspaper employees in at least four U.S. cities enjoy this rare fringe benefit, as do retirees of those newspapers. Another communications company with newspaper holdings maintains a vacation spot for its far-flung employees.

The facilities are spread geographically, with two in the Midwest and one each in the Southwest, Southeast and West.

The oldest known recreation center for newspaper workers is outside Bloomington, Ill., on a lake that was developed in the 1930s to supply water to the city. The Pantagraph, Bloomington's daily, supported the project and leased property on Lake Bloomington when it was completed. The newspaper had a cabin erected there in 1934.

"It's primarily an employee benefit," says Personnel Manager Michael L. Meece, although advertisers can reserve the facilities at Davis Point, which is named for William O. Davis, who for 40 years was the newspaper's publisher.

Davis Point is open from May 1 through Nov. 1. The newspaper's 235 employees can use the cabin on days when it's open to all staffers, or they can reserve the cabin for exclusive use on a first-come, first-served basis. A list showing reserved and open dates is posted at the newspaper.

Recreational opportunities include volleyball, horseshoes, swimming, fishing and boating. There also are picnic tables and a charcoal grill. "It's like a small park," Meece says. The cabin has a full kitchen, a deck and dining areas.

In the Southwest, the milder climate makes it possible for the 2,500 full-time employees of The Arizona Republic and The Phoenix Gazette to get more frequent use out of their company-provided facility, the Lazy R&G Ranch.

In 1953, Nina and Gene Pulliam, the newspapers' owners, bought a 20-acre tract in a remote citrus grove midway between Phoenix and Scottsdale. On the land was a Mexican-style adobe house that had been built in 1930.

Within 90 days, the house was converted into a clubhouse, a pavilion was constructed and two swimming pools installed. Since that time, the ranch has been the recreation center of the newspapers' employees, their families and up to 20 guests per employee. No outside groups are allowed.

"Through the years," says William R. Shover, director of community and corporate services, "the ranch has been the site of weddings, baptism parties, first communion parties, bar mitzvahs, family reunions and one memorial service."

"It's an institution among our employees," says Nyle Leatham, a photographer at the Phoenix papers. "We didn't build a swimming pool (at home) because the ranch had one."

Company-sponsored holiday parties are held at the ranch, along with adult dances, movies and swimming lessons. Events are organized by an employee committee.

Shover says the newspapers have entertained at the ranch "virtually every newspaper group" that has met in the Phoenix area. Last year, for example, "we hosted seven groups at the ranch, and the total came to just over 1,200 guests," he says. "Based on that, it is safe to say more than 25,000 newspaper-related guests" have spent an evening at the Lazy R&G.

Two other newspapers associated with the Pulliam family—The Indianapolis Star and The Indianapolis News—also have a recreational center exclusively for the use of their employees and their families.

Established 36 years ago and operated seasonally, the 16-acre center in the city has been known as the Fourth Estate since 1955. It includes three swimming pools, horseshoe pits, shuffleboard courts, a basketball court, a softball field, a volleyball area and children's playground. A shelter has two large fireplaces. A booklet is issued each year listing a schedule of events, such as an annual Easter egg hunt.

"It's a fringe benefit we like to talk about," says James E. Pauloski, public relations director. A side benefit is that the park provides summer jobs as lifeguards and groundskeepers for the children of some of the newspapers' 2,000 employees.

The State-Record Co. of Columbia, S.C., has a year-round, 470-acre recreational area for its employees. Opened in 1952, The Frank Hampton Recreation Center, named after a former board chairman, includes a pond for swimming and fishing, a large cabin, and eating areas.

"It's heavily utilized in the summer," says Benefits Manager Phillip L. Webb. Outside groups can rent the facilities for a nominal fee, he says.

The communications company with a vacation spot for its full-time employees and their families is Lee Enterprises Inc. of Davenport, Iowa. Opened in 1963, Lee Lodge, surrounded by five cabins, is located in Polson, Mont., on Flathead Lake. The company, whose properties include 18 daily newspapers, begins accepting applications in March for summer use of the facilities.

"It's completely booked for the period it's open," says Shirley E. Fatchett, employee relations director. Seventy-five families used the lodge and cabins in 1986. "It's one of the nicest benefits Lee offers employees," she says. □

Jim Borgman on political cartoons:

"The most important thing is to challenge readers and keep them engaged in the debate. As long as people are thinking about the issues then we'll make better decisions as a country. I like to change the pace of my delivery—sometimes I throw curves, sometimes I throw fastballs!"

PCs

Newspapers are finding new uses for personal computers. And there's no end in sight.

BY ROSALIND C. TRUITT
pressetime technical writer

(Editor's note: This article is the second in a four-part series on new electronic prepress technologies and how they are transforming the newspaper business.)

Although their use is growing, personal computers remain a supporting player at most newspapers, with "dumb" video display terminals and central computers still holding center stage.

However, all indications are that PCs will continue their rise to star billing in the newspaper business. As experts are quick to point out, the little machines are versatile, relatively inexpensive, easy to use, capable of storing increasingly large amounts of data, and processing that information faster all the time.

"Personal computer use is more and more common in newspapers, and the use will continue to grow," says George Cashau, ANPA director/technical research.

"I don't think we can turn around at this point and go back to one-use terminals," says William D. McKenzie, systems analyst for the Antelope Valley Press of Palmdale, Calif., a four-days-per-week paper that circulates 53,000 copies in Los Angeles and Kern counties.

"It's too easy to bring in a Macintosh or (other) personal computer and sit it down on the corner of your desk to do computations—and all of the other things a one-use terminal can't," Kern says.

As the trend toward PCs evolves, smaller newspapers are using them in just about every department and for most all computing functions. Larger publications are using them for more individual, specific tasks—graphics, for example—while continuing to rely on big computers for many chores.

However, that may be changing. Experts say the rise in use of PCs is having impact on makers of the big, central systems. John W. Iobst, ANPA manager/computer applications, sees "steady" growth ahead for personal computers at newspapers because many publications believe the stand-alones are a good choice to replace worn-out VDT systems. (The issue will be further addressed in the next installment of this series.)

The Seybold Report on Publishing Systems assessed the use of personal computers at newspapers earlier this year and concluded: "Surely, everyone must realize by now that PCs are *the* central fact for everyone involved in newspaper systems. You cannot ignore them. They are not going away."

Several experts interviewed by **pressetime** estimate that as many as three-fourths of all daily and non-daily newspapers in the United States and Canada are using at least one personal computer somewhere in their operations.

Will Dickey, Florida Times Union/Jacksonville Journal

A PC-based editorial system at Jacksonville's dailies features a color monitor.

Future Computing Inc., a Dallas market research firm that compiles statistics on computer usage, last year conducted a demographically balanced survey of 100,000 households. It indicated that 21 percent of workers in the publishing industry—including newspapers, magazines and books—use personal computers on the job. In addition, another 14 percent predicted they would be using a PC at work within a year.

Future Computing estimates 242,000 personal computers are currently in use in the publishing industry.

Popularity of PCs is reflected in sales of the units, which have soared in the past six years. International Business Machines Corp., which has the largest share of the market, has sold more than 3 million personal computers. Apple Computer Inc., which claims to be selling about 50,000 Macintoshes monthly, sold its one-millionth "Mac" earlier this year. The company estimates 50 percent of U.S. newspapers will have "some type of Macintosh system" by the end of the year.

Sales of personal computers should continue to grow at a rate two to three times that of mainframe systems and minicomputers over the next several years, according to International Data Corp., another research firm that tracks computer sales and use. A mainframe is a large computer that controls the flow of data between a dozen or more "dumb" terminals. A minicomputer performs similar functions but generally is smaller, governing fewer terminals.

There are many reasons personal computers continue to make headway in the newspaper business as well as in other industries. Chief among them is that central-computer systems are known to "crash" from time to time, incapacitating each and every workstation. That can't happen with stand-alone PCs, even if they are linked in a network. When something goes wrong, the bad unit is simply unplugged and a good one is substituted while repairs are made.

Another PC advantage is that they are substantially cheaper per workstation than a mainframe system. A PC usually costs a few thousand dollars at most, while a complete mainframe-based system can average out to $10,000 or more per terminal.

And, of course, there's now a love affair going on between smaller publications and PCs because of what has come to be known as "desktop publishing"—using PCs and a laser printer to produce plain-paper copy at far less expense than phototypesetting systems [**pressetime**, March 1987, p. 22]. While smaller papers are using the technology to produce text and ads for paste-up, larger ones generally have more modest applications. For instance, The Star-Ledger in Newark uses Macintoshes to create promotional materials for potential advertisers and others.

In addition, unlike a regular computer workstation, a personal computer offers almost unlimited versatility. It can serve as a text-editing terminal, do complicated spreadsheets, handle mailing lists, calculate bills, process the payroll, keep schedules and perform numerous other tasks.

Features that one newspaper department uses often come to be embraced by others.

For example, accountants find spreadsheets useful in the business office. But investigative reporters like George P. Rodrigue of The Dallas Morning News use such software to analyze statistical data for stories.

With information gleaned through a computer analysis, Rodrigue and colleague Craig Flournoy won a 1986 Pulitzer Prize for stories showing that public housing tenants were being discriminated against according to race. (See story, p. 12.)

ALL-PC SYSTEMS. Although most newspapers with PCs use them in specialized situations, there have been recent cases in which papers have abandoned a mainframe or minicomputer completely and switched entirely to PCs.

One PC arrangement that is being touted as an alternative to traditional mainframe-based systems is what was once called the "Morris Publishing System" for editorial and classified advertising. Developed by Morris Communications Corp., parent firm of Southeastern Newspapers Inc. of Augusta, Ga., the system has replaced mainframe setups in most of the group's newspapers and has been sold to other papers as well.

In February, a supplier of pagination systems and VDTs, Information International Inc., acquired exclusive rights to the system, which has been renamed "TECS/2 by Morris." As part of the deal, Triple-I will provide sales and customer support for the system while Morris will handle maintenance and enhancements.

TECS/2 runs on IBM-PCs with internal hard disks and color monitors. Rather than employing a central unit to store data, text entered on one personal computer is stored in another PC paired as a backup. The computers are grouped into a "local area network," which makes it possible to transfer data from one to another.

The system also offers automatic spell checking, a split screen and more than 30 programmable keys.

There are more than 800 of the workstations operating at 13 newspapers around the country. Morris' Jacksonville dailies, The Florida Times-Union and the Jacksonville Journal, have the largest configuration of terminals so far—235.

Joseph E. Kelly, vice president of Morris Publishing Systems says the company developed its software after deciding nothing on the market was suited to replace the aging front-end system at The Augusta Chronicle and the Augusta Herald.

Michael J. Kazala and Maureen Simonelli of The Star-Ledger in Newark prepare promotional materials on a Macintosh computer.

Among the purchasers of the system is the Antelope Valley Press, and systems analyst McKenzie declares: "It had the fingerprints of newspaper people all over it. The system has features that newspaper people would think of, as it should because newspaper people designed it."

THE DOWNSIDE. But as with most new-technology ventures, the world of personal computers is not a perfect one. A number of problem areas have cropped up as PCs are put through their paces in a workaday environment.

Many newspapers believe the stand-alone PCs are a good choice to replace worn-out VDT systems.

Experts say one of the biggest problems is that the rise of PCs came almost too quickly. People began buying them without regard for whether they might be compatible with other PCs being used in the same building. "This new technology grew so fast that before anyone realized it, it was almost too big to manage," says Donald P. Ruthig, circulation systems manager for the Los Angeles Times. "Now, we [newspapers] have to step back and look at the situation and figure out a way to deal with it," he says.

Some newspapers are now issuing edicts limiting hardware and software purchases to specific product lines, so they can get a grip on managing PC usage.

Another problem is that buying PCs often means dealing with a host of different vendors. Over the years, in buying mainframe computer systems, newspapers have become accustomed to purchasing, from one supplier, "turnkey" systems complete with programs written especially for them. With PCs, the hardware, software and peripherals can come from a dozen or more sources.

Also on users' problem lists are lingering glitches in the networking of multiple PC units. Some newspapers say they have encountered occasional difficulty in sending data from the host computer to another PC.

PCs' champions do not regard any of the problems as insurmountable.

For example, James Farrington, a computer analyst for Newhouse Newspapers, views in a positive light the matter of so many choices and companies with which to deal. He says this gives newspapers more flexibility in the long run.

"What you had in the past was so-called 'customer-designed systems' that, once you got them running, didn't really have this [desired] feature or didn't do the things" they were supposed to do, he says. With PCs, "purchasing the software and hardware [separately] offers more versatility. A newspaper can put together a system based on what it really needs."

And on the networking problem, PC advocates say "protocols"—the rules and formats for conducting communications on a large network—can usually be devised to resolve it.

LATEST OPTIONS. Some newspaper executives say they are hesitant to buy PCs because the technology is changing so rapidly. There is lingering fear that a computer bought today will be rendered obsolete by another one in a matter of months.

But just as ongoing product announcements put an extra burden on newspapers sorting through the options, they also raise new opportunities.

Apple, for example, has introduced two new models that computer watchers consider significant.

One is the Macintosh SE, an enhanced version of the Macintosh Plus that is 15- to 20-percent faster than earlier models.

The other is the Macintosh II, which analysts say is the company's most important product introduction since the LaserWriter laser printer.

Because the two new Macs operate at faster speeds, they will allow newspapers to design graphics on them more quickly, says Howard McComas, operations manager for the Knight-Ridder Graphics Network [**pressstime**, Sept. 1986, p. 12]. The Mac II will have a color display and larger screen than current models, also good for graphics.

A lot of people say the smaller machines make their jobs a great deal easier.

The Mac II has an "open architecture," allowing it to run, with help of a special circuit board, both Apple and IBM personal-computer software. The plug-in board enables the new machine to run software written on the MS-DOS [Microsoft Disk Operating System] program developed by Microsoft Corp. for IBM-PCs and IBM compatibles. That means newspapers, using just the Macintosh, will be able to do both editorial and business-side functions for which many newspapers currently use two different brands of machines.

To date, newspapers have tended to pigeon-hole particular types of computers for different functions. IBM personal computers and IBM-compatibles like Hewlett-Packard and Compaq are favored for business-office work, although experts say IBM PCs' graphics capabilities are improving.

And if things aren't complicated enough, Microsoft is working on a new operating system that would supersede, and be incompatible with, its MS-DOS operating system.

The new system, Microsoft says, will make it easier to send data through a network of personal computers. It is not expected to be on the market until early 1989 but raises yet another layer of complicated questions for users assessing what and when to buy.

Even so, there is no doubt that the use of personal computers will continue to increase at newspapers and elsewhere for one simple reason: A lot of people say the smaller machines make their jobs a great deal easier.

"Speaking for myself and not for the Los Angeles Times, as a user I like personal computers," says Circulation Systems Manager Ruthig. "It simplifies things for me. I can do my own thing when I want." □

Helping to meet the challenge
Dynamic art: Every month, full pages, spot art and business building ideas covering the major classified areas of transportation, real estate promotion and telephone selling are produced in the "Classified Illustrated." The clip art book is filled with timely artwork that salespeople can sell.
Timely management information: Up-to-date articles about important classified topics such as section design, incentive plans and technological innovations are found in "Classified Executive" and "Telemanaging."
Applicable sales ideas: Selling ideas that have proved successful for newspapers throughout the country are featured monthly in "Transportation," "Classified Promotion," "Real Estate" and the "Real Estate Ad Selector."
More options: Four package options that can be tailored to suit your needs and budget are available. Contact Jan Koning, sales associate, for a free sample of the service.

The MacDonald Classified Service

It's about time we put you on the map.

The new advertiser's-eye-view of America

The AD/SAT Network is now 100 newspapers strong.

As of March 4, 1987, newspapers representing 41% of U.S. daily and 55% of Sunday circulation can look to AD/SAT for repro delivery at the speed of light.

As you see by the map, AD/SAT is changing the advertiser's-eye-view of America. Join now, and you can be operational by the end of 1987. (You'll have your very own pushpin even sooner.)

AD/SAT.

The Quiet Revolution whose time has come, for you.

AD/SAT.

We deliver newspaper ads at the speed of light.

AD/SAT, INC. • 527 WEST 34TH STREET, NEW YORK, NEW YORK 10001 • TELEPHONE 212/330-0678 • FAX 212/330-0660

AD/SAT welcomes ANPA 100th Anniversary Convention!

THERE IS A BOOM IN CLASSIFIEDS. THE QUESTION IS: HOW LONG WILL IT LAST?

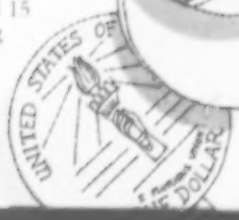
BY MARGARET GENOVESE
presstime staff writer

WANTED: Newspapers' fastest-growing source of advertising revenue seeks ways and means to continue growth. Traditionally, have relied on three major ad categories, but willing to go in new directions. Contact Classified Advertising Manager, Any Paper, Anytown.

ITEM: In 1985, The Hartford Courant sold a record 1.5 million classified ads. The record-setting ad was sold in December. In 1986, the Courant did even better, reaching the 1.5-million mark a month earlier. Classified Advertising Manager Patricia Barnes estimates linage there has "probably doubled" since 1982, as the region rebounded from the recession of the early 1980s.

ITEM: In February, The Press-Enterprise of Riverside, Calif., tallied its 48th consecutive month of gains in classified linage. "I have a bunch of professional sales people, and they are right on top of everything," boasts Classified Advertising Manager Earl Clapper.

ITEM: Last year, The Boston Globe's classified advertising linage increased 15 percent overall, led by a whopping 25-percent gain in real estate linage. Classified Advertising Manager Frank M. Limoncelli is proud not only of all the revenue his section brings in but also of the readership it attracts. "As many people buy the Globe to read the classified ads as to read the paper itself," he asserts.



ITEM: With Louisiana hit hard by the decline in oil prices, classified advertising linage in the State-Times and Morning Advocate of Baton Rouge plunged 18 percent in 1986. "We are trying, but nothing works," says Classified Advertising Manager James T. Conner. "When the economy is down, it seems like there is not a whole lot you can do."

These vignettes illustrate a key point that newspaper classified advertising executives make over and over again. More than any other advertising category, the fate of classified depends on the state of the economy. When the economy is healthy, a daily newspaper's classified business booms; but when the economy suffers a downturn, classified sinks with it. Classified is so sensitive to economic ticks and trends that the Conference Board, a New York City think tank, fashions a monthly economic index out of the number of help-wanted ads in 51 U.S. newspapers.

Buoyed by generally favorable national economic conditions, classified advertising has been coming up a big winner in the

past four years, and, despite some worries, its long-term prospects remain bright.

Last year, advertisers spent $9.3 billion for classifieds in U.S. dailies, up 11 percent from 1985, according to the Newspaper Advertising Bureau. This follows boom years of 1983 and 1984 in which classified expenditures grew by 23.8 percent and 27.5 percent, respectively. Growth slowed in 1985 to 9.4 percent, but even then the percentage increase continued to surpass that of the other two categories, retail and national.

No industry-wide volume figures exist, but Media Records of New York City reports full-run ROP classified linage increased 3.4 percent in 1986 in newspapers in 45 major markets.

Canadian dailies have been experiencing the same kind of growth in classified. The Canadian Daily Newspaper Publishers Association estimates that revenue from classified ads in 1986 was $379 million, up 10.8 percent from 1985. Based on reports from 90 newspapers, CDNPA concludes that classified linage in Canadian dailies grew 8 percent in 1986.

Now some newspaper executives are beginning to worry about their companies' greater reliance on the highly-volatile category of classified. What will happen if and when the economy slows—and the classified boom goes bust?

Hartford Courant's Barnes (left) oversees newspaper's classified-ad telephone room that is coping with tremendous growth.

This much is known: More is riding on the answer to that question than ever before because of classified's greater piece of the newspaper advertising revenue pie. In 1986, one out of every three dollars spent on advertising in U.S. dailies came from classified. In 1950, less than one in five did. Actually, classified's impact on a newspaper's bottom line is even greater than those ratios suggest. That's because since 1950, revenues from circulation have dropped from about 33 percent of a newspaper's total revenues to about 23 percent, this magnifies the importance of each advertising dollar.

Classified's revenue impact is also heightened by the fact that generally it is more profitable than the other two categories. "The costs are a lot less," says Bruce Thorp, a securities analyst who tracks the newspaper business for the brokerage firm of Lynch, Jones & Ryan in Washington, D.C.

Most observers say classified will continue to grow, but the pace of growth will slow in the short term. "I don't think anyone is willing to predict it is going to continue at the same pace," Thorp says.

In January, NAB Executive Vice President Leo Bogart warned a conference of the International Newspaper Advertising and Marketing Executives: "Expect a pause in the classified boom."

Robert J. Coen, senior vice president and director of forecasting for McCann-Erickson Worldwide, agrees. "From the reports I've gotten, in 1986 the classified category was relatively strong and saved the bacon for many of these newspapers," he says. "But in 1987, I don't think we can look for that to happen again. The category may hold up or show modest gains, but it's not going to be the source of bailing everybody out again."

For the long term, Coen is bullish on classified. While it will "wax and wane" with economic conditions, classified will continue to "creep up" on the retail category, newspapers' traditional revenue leader, he says.

Another prognosticator, Edward T. Parmelee, vice president of marketing for Knight-Ridder Inc., says classified "still offers some of our strong opportunities for growth" and "may well, in time, account for a 40-percent share of total newspaper advertising revenue."

Others go even further. Says William J. Ford, classified consultant with the ad representative firm of Landon Associates Inc.: "It's going to be the largest revenue producer before it's over."

WORDS OF CAUTION. Not all predictions are so rosy. At the other extreme is trend-spotter John Naisbitt, who five years ago told newspapers: "I'm afraid you're going to have to give up the want ads. . . . I never read them and many people don't. There are pounds of classifieds delivered on my doorstep on dearer and dearer newsprint." In time, he added, it will be possible to retrieve classified advertising from a computer database.

Today, Naisbitt says he has not changed his mind about the possibility of electronic classifieds. "I think over the next decade we will see that."

Readership statistics do not bear out Naisbitt's notion. The Newspaper Advertising Bureau estimates the total adult audience for daily newspaper classifieds averages 57.1 million on weekdays and 59.3 million on weekends.

Nonetheless, there is concern about classified readership. A comparison of NAB studies in 1979 and 1986 suggests there was an overall decline in classified readership, and it shows a definite decline in weekday classified readership among the leading classifications of automotive, employment and real estate.

In addition, the idea that classified ads could be more efficiently and economically delivered electronically to a home computer is one that many people share with Naisbitt.

"I'm not so sure that [electronic classifieds] pose an immediate, current threat that everyone needs to get all excited about," says Robert M. Johnson, publisher, president and chief executive officer of Newsday, Long Island, N.Y. "But I think

ultimately the day will come when electronic Yellow Pages will emerge as a reality, and it will become a competitor to newspaper classified advertising," says Johnson, vice chairman of the ANPA Telecommunications Committee.

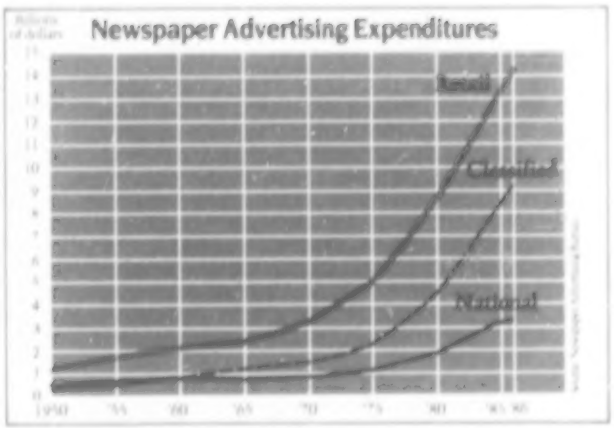
Whatever their future, classifieds have had a long and distinguished past. In fact, according to *The History and Development of Advertising* by Frank Presbrey, the oldest written advertisements were want-ad-type notices—announcements of rewards for runaway slaves found on the papyri of the ancient Egyptians.

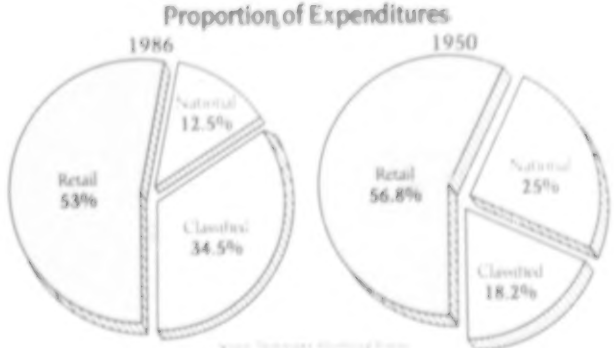
While today's "typical" classified ad looks much like it did a generation ago—several lines of agate type with no illustration—the field has undergone some important changes.

One of the most visible has been the increasing role played by display advertising. The Los Angeles Times' classified advertising last year, for example, consisted of 66 percent "straight" classified, 16 percent display classified, with the remainder a hybrid consisting of a straight classified with a logo.

A few major newspapers have clung to the clean, "classic" classified look, refusing display advertising for their classified columns. But some of them are buckling. The San Jose Mercury News, for instance, which now limits display ads to its "Professional Career" sections on Sundays and Mondays, probably will begin accepting display ads throughout the classified section in the near future, says Classified Advertising Manager Ronald G. Beach.

The Mercury News has resisted the temptation to do so up to this point because display ads are harder and more expensive to handle. "We need to maximize revenue, even at a slightly higher sales cost," Beach says.





Despite its extreme sensitivity to economic conditions, a classified section is not entirely a crap shoot. Newspapers can do many things to keep it strong.

Regardless of whether they accept display classifieds, all newspapers view their classified section as a "marketplace" where individuals, as well as businesses, can offer their products and services to the public. Individual, or "private party," ads may account for more ads, but commercial advertisements typically occupy more space.

And although newspapers like to say a person can sell anything from A to Z through the classifieds, the three major types account for 80 percent of classified revenues. This is the key to classified's tendency to expand and contract along with the economy—all three are extraordinarily susceptible to economic fluctuations. When the unemployment rate goes up, newspapers' help-wanted classification goes down. When interest rates go up, real estate and automotive linage goes down. Conversely, when unemployment and interest rates go down, linage in all three categories goes up.

Despite classified's extreme sensitivity to economic conditions, the health of a newspaper's classified section is not entirely a crap shoot. Newspapers can do a number of things, in good times and in bad, to keep the category strong.

- Offer new classified advertising vehicles, such as special real estate sections, and creative pricing schemes—even giving some ads away.
- Increase the use of telemarketing, particularly to develop new business.
- Move toward more standardized formats and procedures to accommodate multi-market advertisers.
- Emphasize staff training, reward classified managers with increased responsibilities and polish a lackluster image among college advertising students.
- Use new technology such as personal computers, pagination systems and voice mail to modernize operation of classified departments.
- Keep an eye on potential competitors that might use new electronic technology to the detriment of newspaper classifieds.

INFLUENCE, STRUCTURE. In Colonial days, most publishers considered want-ad-type notices "simply a nuisance," according to a history of classified advertising published in 1977 in the Journal of Advertising. "They felt that carrying them was a service, and they had trouble deciding whether to charge for them or to run them for nothing." Some even began to refuse them, but continuing demand forced publishers to carry the public notices.

In the 1830s, the New York Sun became the first newspaper to group all the notices together on one page. And by the turn of the century, their volume had grown to such an extent that they were grouped, or classified, into categories.

In the 20th century, classifieds began to be used by business advertisers as well as individuals. Volume surged, spurred by population growth, industrialization and increased automobile sales.

As newspapers approach the 21st century, they find that

Donna Wells, promotion coordinator of Journal/Sentinel Inc., sits amid a record 111,450 entries to "Classified Jamboree" contest.

classified has taken on an increasingly prominent revenue role, "really by default," says analyst Thorp.

Retail advertising revenue has been eroded by the shift to preprinted ad supplements, for which newspapers charge lower rates because they often distribute the circular but do not print it.

National revenue, never strong in the newspaper business, has been soft in the past several years. "That really puts the burden on classified," Thorp notes.

Classified will continue to be newspapers' fastest-growing advertising category, he says. But like most other observers, Thorp believes its rate of expansion will slow. "Each year, the base for comparison is getting bigger," he explains. "If you just look at the arithmetic of it, a million-unit gain in 1987 will not be the same percentage increase as the same unit gain was in 1986."

Always worrisome, of course, is the specter of an economic slowdown and what it is known to do to classified sales. The Plain Dealer of Cleveland provides a good example. In 1980, as the economy slid into a recession, The Plain Dealer's classified linage dropped 2.3 percent, according to figures compiled by the Association of Newspaper Classified Advertising Managers. The newspaper didn't show an increase again until 1983, when the economy rebounded.

In its December 1986 Newspaper Newsletter, Thorp's brokerage firm pointed out that "classified offers the greatest potential for unexpected disappointment" because it hinges so much on consumer spending and overall economic health.

There is ample evidence today in oil-producing areas of what a local economic plunge does to classified. Full-run classified linage in the Houston Chronicle dropped 21.3 percent in 1986 from the year before; at The Daily Oklahoman in Oklahoma City, it declined 13 percent.

"In our area right now, we have a very high unemployment rate; there just aren't jobs available," says Conners, CAM of the Baton Rouge papers. "That affects not only your help-wanted classification, but real estate (sales), rentals and even car sales."

The Dallas Morning News, in the same region but not hit as hard as Houston by oil-induced economic woes, experienced an 8.2-percent drop in its full-run linage for 1986. Nevertheless, it still managed to hold onto first place in linage among the major-market newspapers whose classified linage is measured by Media Records.

Newspapers have learned to deal with economic nosedives by "looking around for new categories" of classifieds to emphasize, says Eric D. Anderson, NAB senior vice president in charge of classified sales. And when the economy rebounds, as it did following the recession of the early '80s, this new business joins with the "big three" classifications to propel classified to new heights.

David S. Anderson, CAM of The Fresno (Calif.) Bee and a frequent lecturer on classified advertising at the American Press Institute, says newspapers should develop the "general merchandise" classification as a way to decrease dependence on what he calls the "IRS"—Interest Rate Susceptible—classifications of automotive, employment and real estate. Among the classifications Anderson suggests newspapers develop are: computers, stereo and video equipment, cellular phones, building materials, musical instruments, office and business equipment and yard and garden supplies.

They also can go outside the regular classified section and develop directories or guides. For instance, the Bee has a guide to leisure activities that runs four days a week, each time in a different section of the paper. Some newspapers have been particularly successful with "professional services" directories, says Anderson.

Developing new revenue is an aspect of classified advertising being probed by the Classified Task Force of NAB's Future of Advertising project. Preliminary results of a survey of newspapers released last year to task force members revealed that 63 percent of newspapers over 100,000 circulation had developed new classifications in the past three years, as had 52 percent of newspapers with less than 100,000 circulation. Most also had developed new products such as guides.

Sheila Parker, director of advertising development for Gannett Co., suggests newspapers also build a more solid foundation within the three major classifications by developing "subcategories." Within the automotive classification, these might include auto servicing, accessories and leasing, for example.

She recommends newspapers first conduct an "audit" of their markets using the Yellow Pages to identify commercial advertising prospects. "We've seen cases where a newspaper will have 15 active contracts and think that is good." But when that was compared with the 526 prospects turned up by the audit, "that 15 all of a sudden looked very, very paltry."

But active solicitation of commercial accounts outside classified's traditional big-three categories could bring a classified department in conflict with the newspaper's retail-ad department, cautions Timothy W. Collom, assistant CAM of the

Newspapers have learned to deal with economic nosedives by "looking around for new categories" of classifieds to emphasize.

Rocky Mountain News in Denver. Unless the two departments cooperate, "you are selling against your own product, and that defeats the purpose."

A newspaper classified advertising department usually is divided into an "inside" sales staff, selling over the telephone, and an "outside" staff, providing in-person service to larger contract advertisers. According to Gannett's Parker, a small newspaper may have one outside sales person and two to three people inside on the telephone, a medium-sized paper, three to four outside sales people and a telephone staff from 10 to 12, a large newspaper, six to eight outside sales people and 35 or more people on the phones.

Several years ago there was a movement to consolidate newspapers' retail and classified outside sales staffs. Some newspapers that tried it have since gone back to separate staffs, Parker reports. Unless they are thoroughly trained, she says, former retail advertising salespeople will tend to continue to emphasize retail.

Gannett's San Bernardino Sun is one newspaper that combined its outside sales staffs, and the merger has lasted. Advertising Director Orage Quarles III says training was the key to the staying power of the venture.

The newspaper also had an advantage in that the members of its retail sales staff had first worked in the newspaper's six county offices, where they sold both retail and classified, he says. Moreover, when it combined the staffs five years ago, the Sun stressed that the move was not experimental. Says Quarles: "We went in with the philosophy that this is going to work."

Foley of the Worcester Telegram & Gazette says buyers and brokers refer to the "Homes" section all week.

> *One prediction is that future classified staffs will consist of fewer outside sales people and more "telemarketers."*

In recent years, emphasis on classified departments' inside sales has been on new forms of "telemarketing"—selling by telephone.

Patricia Barnes, CAM of The Hartford Courant, recalls that when she was hired as an "ad taker" at Newsday in 1971, her job was to answer the telephone when someone called to place an ad. "There was no requirement to sell anything."

Now, when someone calls to place an ad, says Barnes, it is the job of the classified sales person to sell a larger ad, to sell multiple insertions and to suggest the addition of an attention-getting headline or piece of art.

Twenty-two of the Courant's 45-person telephone staff take incoming calls primarily from individuals, 19 service commercial accounts, and four work on developing new business.

Emphasis by inside sales staffs on developing new business is a recent trend, says Kitty Vance, NAB's vice president, telemarketing. She predicts that newspapers' future classified staffs will consist of fewer outside sales people, more telemarketers. Telemarketers can handle more accounts for less money than outside sales people, she notes.

Two newspapers in the Northeast provide examples of how telemarketing can pay off.

• At The Asbury Park (N.J.) Press (evening, circulation 139,585), a five-person telemarketing staff works almost exclusively selling classified "theme pages," such as an Easter dining guide. Since it was formed in 1984, the staff has generated more than $1.9 million in sales, according to Telemarketing Supervisor Geri A. Olborne.

• At The Leader in Corning, N.Y. (evening, 16,432), two part-time telemarketers solicit new business to coincide with national observances such as Children's Dental Health Month and National Pasta Week. "I get a book of all the special dates," says CAM Mary L. Kosty. The effort, begun in early 1985, averages $2,000 a week in new business. "It's been wonderful," says Kosty, "and there is much more there" to be mined.

KEEPING COMPETITIVE. Daily newspapers are not the only ones trying to drum up classified business. Preliminary results of a survey of classified ad managers, reported last year to members of the Future of Advertising project's Classified Task Force, revealed the extent and type of competition.

After other daily newspapers, radio and television had the largest share of the automotive market, the survey revealed. In real estate, dailies' largest competitor was that fairly recent phenomenon—the magazine-like guide to homes on the market. For employment advertising, larger dailies got their principal competition from weekly newspapers, smaller dailies.

from shopping publications. Shoppers also were dailies' biggest competitor for classified advertising by individuals—so-called "private-party ads."

David R. Jolley, president and chief executive officer of Toronto Star Newspapers Ltd., chaired a FOA task force subcommittee that looked at daily newspapers' print competitors, particularly specialty advertising publications. The "great advantage" many such publications have over dailies is their ability to run photographs, Jolley says. "They have a very small distribution, so their rates are much cheaper," he adds.

One of his recommendations is "wherever possible, try to offer pictures for classifieds"—such as homes and automobiles for sale—at reasonable rates.

The Chicago Tribune is trying that. The Tribune had grown so much and become so expensive that it no longer was a "cost-efficient buy" for neighborhood real estate brokers, who turned to smaller local papers, primarily weeklies, says CAM David D. Williams. Not only were these publications cheaper, but they also offered high-quality photo reproduction.

In 1983, the Tribune began zoning its classified section. Two years later, when it got new printing facilities, it began offering photographs in the real estate section. At the same time, it rearranged its Friday classified tabloid section, leading with real estate classifieds and adding articles and other features on the subject. Last year, it carried "several hundred" pages of real estate ads with pictures, Williams says.

Other newspapers have created new sections. The Worcester, Mass., Sunday Telegram, for example, launched a "Homes" section last April. "We see it being used throughout the week," says CAM John J. Foley. "The buyers and brokers carry that package around."

Some newspapers have even taken on the specialty publications head-to-head. One is The Flint (Mich.) Journal, which publishes "A Picture Guide to Homes for Sale" every other week and distributes it free via participating advertisers and at drop-off points throughout the area. CAM Robert Vance says the newspaper decided to publish the guide because real estate advertisers expressed a desire for such a product. "When you walk into a customer today, you want to try to be able to say, 'Yes, I can do that,'" says Vance. "For years, I think newspapers spent too much of their time saying 'No, we can't do that.'"

Creative pricing schemes are another way newspapers are meeting the competition. The Bradenton (Fla.) Herald, for example, stresses multiple-insertion discounts. "It may cost only two or three dollars to run a three-line ad in a weekly publication, but that's only a one-time ad," says CAM David C. Munster. "We attempt to sell 15-time ads for a reasonable rate."

Like many other dailies, the Herald also has a special free-classified program. A two-line "Snap Ad" can be run free for three days if the item costs less than $50. Not only do free ads keep a daily newspaper competitive, they also keep ad count and readership up. "The more readers we have," Munster observes, "the more result potential we have for our advertisers."

Promotion is the key. "I believe that your private-party volume is in direct relationship to the amount of promotion you do," says Beverly A. Klein, vice president/advertising for Journal/Sentinel Inc. in Milwaukee. (See profile, p. 38.)

Promotion can also be effective in attracting business advertisers. Former CAM for The Milwaukee Journal and Milwaukee Sentinel, Klein in 1982 introduced a twice-yearly, major classified campaign called "Classified Jamboree." The promotion features a readership-building contest—this year it was a crossword puzzle with the answers found in the classified section. The first time the campaign ran, the promotion

© David Kamilos

Help-wanted ads are second only to auto advertising in classified linage.

accounted for 50,000 additional lines, says Klein. "Each year we have been building on that."

Although classified readership can be pumped up by such promotions, the chairman of a group of newspaper executives that has been studying classified readership, is concerned. John T. Williams, publisher of the Plano (Texas) Star-Courier and president of Harte-Hanks Community Newspapers, worries that classified readership has dropped and about "what that says about how solid our franchises are."

According to an analysis of readership studies conducted for NAB in 1979 and 1986, there apparently has been some slippage. In response, Williams' FOA Readership Subcommittee will develop a list of ways newspapers can achieve a "particularly effective and well-read" classified section.

The subcommittee already has found some key ingredients by examining a group of classified sections with high readership and another group of sections with lower numbers. "There were a number of things that were obviously important to a good classified section," says Williams. Among them:

- A large number of individuals' ads.
- A prominent location. Classified pages that led a section were better read than those that were sandwiched between sports pages, for example.
- A masthead or index that explains the categories.
- A minimum of abbreviations. Subcommittee members were

Perhaps the most eagerly awaited standards for classified advertising are those for the "remote entry" of ads via a personal computer.

baffled by some of the abbreviations they found—"3-2-2" for a house with three bedrooms, two baths and a two-car garage, and "wbfp" for wood-burning fireplace.

The subcommittee also is interested in determining whether there is "one best typeface" for classifieds, says Williams. It is working with The Poynter Institute for Media Studies in St. Petersburg on ways to improve the appearance of a classified section.

Related to appearance, of course, is format, and efforts are under way to bring a more standardized format to newspapers' classified pages.

Classified was excluded when the U.S. newspaper business adopted the Standard Advertising Unit system six years ago, and again three years ago when the SAU® system was refined to establish a 6-column format for most newspaper advertising. The current sentiment to standardize classified flows from the same desire that motivated newspapers to move to SAUs: to make it easier for advertising agencies and advertisers to "buy" more than one newspaper. "It (classified) is a complicated business," says Don Clark, director of classified advertising for the Los Angeles Times and chairman of the ANCAM Standardization Committee. "We are trying to simplify it."

Perhaps the most eagerly awaited standards are those for the "remote entry" of classified ads via a personal computer. The ANCAM committee hopes to offer recommendations at the association's convention June 21-24 in San Diego. In addition, Clark says, the committee is expected to suggest "basic guidelines" for

- Classified format. "Our general feeling at this time is we will standardize this in stages." The first stage would be the establishment of three standard formats—6-column, 9-column and 10-column. "Over the long term, I think you will see newspapers evolving to a 10- and a 6"-column format.
- Rate card standardization (as was done recently for other types of ROP advertising).
- Providing a standard number of tear sheets to various classified advertisers.

GROWING STATURE. With classified contributing more to newspaper revenues, publishers are paying more attention to classified departments and trying to upgrade them, their managers say. Besides the revenue factor, the specter of legal problems arising from classified ads is a major reason for greater emphasis on classified staff training and recruitment.

ANCAM President Lee C. Bollinger, classified advertising manager of The Press Democrat of Santa Rosa, Calif., recalls that

Unusual Examples Illustrate the Draw of Classifieds

Today, newspapers often use testimonials from satisfied customers to promote their classified sections.

In 1791, Dunlap's American Daily Advertiser in Philadelphia could have requested a humdinger of a testimonial—from President George Washington. The newspaper ran this ad: "WANTED: A steward for the Household of the President of the United States. Any person well qualified for, and willing to act in this capacity, may learn particulars by enquiring at the President's house."

Prominent people also have *responded* to newspaper classifieds. Until it gave up the practice in the early 1970s, the Association of Newspaper Classified Advertising Managers gave an annual award to notables who got their start by answering a help-wanted ad. The honorees included cartoonist Walt Disney, who in 1920 answered an ad for an artist in the Kansas City Star, and comedian Groucho Marx, who in 1905 responded to one for a singer with a vaudeville act in the New York Morning World.

Many newspaper classified advertising managers today can cite their own "most memorable" classified ad.

R. David Cherry, CAM at the Times-Union and Knickerbocker News in Albany, N.Y., recalls a poignant plea from a student for financial assistance so she could finish college. "I think it came to a happy ending," he says.

USA Today, which bills itself as "The Nation's Newspaper," had a happy ending to its brief run at being the nation's matchmaker. "Two people actually did meet, fall in love and marry through USA Today," reports Lise R. Chin, vice president, classified advertising. The newspaper learned of the success story last spring after it had eliminated the category for lack of response, Chin says.

Not all personal ads are as well-received. Gregory J. Ward, classified sales manager for The Charlotte Observer, recalls an episode at another newspaper in which a woman discovered that her husband had responded to a personals ad—and sent off her own scathing reply to the advertiser.

ABC TELEVISION NETWORK: YOUR SERVICES, such as they are, will no longer be required as of 12/20/86 —Jimmy Breslin —ADVT

Newsday CAM Lewis F. Roberts reports the paper has carried ads for lobster "parts" instead of lobster "pots"; "fortified men," instead of "four to five men"; "gross opportunity," instead of "growth opportunity"; and "gentile puppy," instead of "gentle puppy." The paper's policy in case of error is to rerun the ads for free, Roberts says.

Among the most unusual classifieds today are the ones that appear on the front page of The New York Times. These "reader" ads have been used to announce everything from a marriage proposal to a 50th wedding anniversary. Recently, New York Daily News columnist Jimmy Breslin announced his resignation from a late-night TV talk show via a reader ad. The ads are not cheap; they run $200 on weekdays, $260 on Sunday, with a two-line minimum and six-line maximum.

Front-page classifieds once were commonplace on a great many newspapers because they were used to fill columns, according to Times spokesman Leonard Harris, who adds: "We retain them for the same reason we retain so many things: tradition."

some years ago new staffers were seated next to an experienced telephone sales person to observe for three or four days before being turned loose on the telephone. Many "now have a two- to three-, even four-week training program," he says.

Peter J. Caruso, a Boston lawyer with a special interest in advertising law, calls the classified department a "fertile field" for legal problems in the newspaper. Of all the things newspapers can do to protect themselves, "first and foremost is training," he says.

Why is classified prone to legal problems? Caruso, who was CAM at the Lawrence (Mass.) Eagle-Tribune before he began practicing law, gives several reasons. Classified handles a "tremendous volume" of ads; most come from individuals, not business people; there is an immediacy to publication; most ads result from telephone conversations rather than face-to-face meetings with customers; and most classified staffs are large.

Caruso says classified staffers should know the legal constraints on the content of classifieds. For example, federal and state laws prohibit discrimination in the sale and rental of housing. Last year, the Justice Department filed suit against a Mississippi newspaper, alleging violations of fair housing law [**presstime**, Sept. 1986, p. 38].

Classified staffers also need to know what types of ads the newspaper may regard as taboo, even though they may be perfectly legal. Most newspapers have published "standards of acceptance" for classified advertising, Caruso notes. A second line of defense, he says, is the classified rate card, which should contain such things as a notice of the publisher's right to reject an ad.

Classified's growing stature is also reflected by the fact that when it comes time to fill advertising director positions, newspapers now tend to look for people with classified experience, says A. Dean Welch, vice president, classified, for The New York Times Regional Newspaper Group. "I think if you go back even four or five years, you'll find that the ad director's position was mainly filled through the retail advertising manager's position," says Welch. Even when a newspaper went outside its own staff to fill the slot, he notes, it seldom went to a classified advertising manager.

Agreeing with Welch is Raymond A. Jansen Jr., senior vice president and general manager of The Hartford Courant. Jansen, who himself started out as a classified telephone salesperson at Newsday, comments: "I don't know if you could say it's a trend, but it's certainly happening more than it did a couple of decades ago in this business."

Classified provides good preparation for higher management positions because "you have to deal with . . . so many 'publics' within the advertising community," Jansen maintains. He also says the "ultimate involvement" of readers with the newspaper is when they "put down money to buy advertising in that paper because they have faith that it will do the job for them. That requires that the classified manager be totally in tune with what the paper means to the community and how it fits the fabric of the lives of its readers."

Despite the increasing importance of the classified department to newspapers, and the increased recognition accorded the classified staff, the field does not attract college advertising students in appreciable numbers. "They have no interest in the area and very little knowledge of it as a career," says W. Ronald Lane, associate professor of journalism at the University of Georgia.

Part of the indifference can be traced to educators who do not spend much time on newspaper advertising in their classes, Lane says. But, he adds, newspapers share the blame for not doing a better job of selling themselves to advertising majors.

Classified provides good preparation for higher management jobs because "you have to deal with . . . so many 'publics' within the advertising community."

Durwood G. Canaday, chairman of the ANCAM Education Committee, concurs that the industry hasn't been effective in reaching students. As a consequence, newspapers are losing out on hiring bright young people for their classified departments, and the students are missing out on "one hell of a career."

Canaday, classified advertising director at The News & Observer and The Raleigh (N.C.) Times, says students "see classified as a low-end medium, where people only advertise their used cars and washing machines."

ANCAM plans to correct that misconception by providing course materials to college advertising programs. The Danville, Ill.-based association will seek educators' views on the form the material should take, Canaday says.

NEW TECHNOLOGY AND THE FUTURE. Not only the people working in classified departments but the tools they use have been upgraded in the past decade. Classified managers say flatly that the greatest trend to hit their departments during that time has been computerization.

It was the computer that allowed the telephone ad taker to become a seller, Baton Rouge's Conner points out. With a video display terminal, he says, "You can redo the ad for the customer right in front of you, make it a better ad—one that will get better results for the customer and better linage for the newspaper, too."

Computers first made inroads at classified departments, just as in newsrooms, in the form of VDTs driven by central computers. Today, as is happening elsewhere in the newspaper plant, personal computers are showing up in classified departments. (See story, p. 18.) Some newspapers also have gone to complete pagination of classified sections. Among the first was the San Jose Mercury News. One of the principal advantages of pagination, says CAM Beach, is that "it avoids the classification heads at the top of the page being pasted up incorrectly by a human being." The newspaper has been able to save $100,000 a year in error adjustments because of that alone, he says.

Pagination also has allowed the newspaper to extend its deadlines an hour. And, Beach says, it has put total control of the section in the hands of the classified department.

The Mercury News has been at the technological forefront in another way, too. It was one of the first newspapers to use a "voice mail" system in the classified department. Basically a sophisticated telephone answering machine, it is used to record messages left for the sales staff.

According to a report by ANPA Telecommunications Department, other newspaper classified departments have found additional uses for voice mail. For example:

- The Record of Hackensack rents "voice mailboxes" to customers for 72 hours after a classified ad runs. The mailboxes, which cost customers $10, are an electronic version of the traditional newspaper service of providing classified advertisers with a box number for replies.

Chicago Tribune CAM Williams and Project Manager Barbara Wentz review revamped classified section.

• The Rocky Mountain News offers customers a "Sale Saver" voice mailbox in conjunction with a classified. The customer may record a message with additional information about the ad, as well as receive recorded replies.

The ANPA report was prepared for a subcommittee of the FOA Classified Task Force that is also studying how competitors might use new technology "to take dollars away from classified," says Welch of The New York Times regional newspapers, the subcommittee chairman. The panel will examine how publishers can identify a "threat" in their markets and what they can do to counteract it.

Newspapers long have seen both an opportunity and a threat in electronic classifieds.

"I see at some point in the future the direct possibility that there will be a market for electronic classified. And I also see it possible that somebody else could have a go at that same market," says Uzal H. Martz Jr., president and publisher of the Pottsville (Pa.) Republican, and chairman of the ANPA Telecommunications Committee. "But I also think, from our point of view, that we have a good shot at it to begin with." Newspapers have the database and the reputation for being the place to go for classified advertising, Martz notes.

The Los Angeles Times recently looked at the potential for electronic distribution of newspaper classifieds and found little there. "We didn't think that the existing classifieds, as they are now constituted in the newspaper database, provided a lot of opportunity for republishing, either to consumers or to businesses," says James Holly, director of information services development of The Times Mirror Co.

However, says Holly, "possibly there are some better opportunities" if the ads were altered to make them more informative. For instance, an employment classified available in electronic form might contain additional information about the company that placed the ad.

Recently, the Times has been keeping its eye on a new practice of aerospace companies of putting a telephone number at the bottom of their employment classifieds, advising readers they can dial up additional employment information if they have a personal computer and modem. In the short term, Holly does not believe this ploy will adversely affect the newspaper's classifieds, unless it means that the jobs are filled faster and the ads do not run as long. However, over time, it could result in less employment advertising for the newspaper, he says, because companies might simply advise job-seekers to use the computer to obtain listings.

Newspapers also are keeping their eye out for the emergence of electronic Yellow Pages telephone directories.

The main difference between a Yellow Pages ad and a newspaper classified is that the former typically is updated only once a year, says Holly. If a Yellow Pages directory is available electronically and constantly updated, "then it at least begins to move in the direction of a business classified ad."

In some areas of the country, there already are "talking Yellow Pages" whereby a person dials a number and an operator provides the information being sought.

At least one newspaper company has gotten involved in that kind of enterprise. The Journal Co. of Providence, publisher of the Providence Journal and Bulletin, recently entered into a joint venture with a local entrepreneur to offer "Livewire" in the Providence area. Currently, operators provide information on more than 30,000 businesses, says David F. Donnelly Jr., director of electronic information services for the company. Soon, operators will be able to connect callers directly with businesses.

Telephone companies also are interested in the field. Cincinnati Bell Telephone Co. entered into an arrangement with Donnelley Information Technology, a division of the Dun & Bradstreet Corp., to provide a talking Yellow Pages service in Cincinnati.

The consent decree governing the breakup of AT&T currently prohibits the seven regional Bell operating companies from providing information services. (Cincinnati Bell is not a BOC and thus is not restricted by the decree.) But that prohibition would be lifted if the Justice Department gets its way. (See story, p. 45.)

The department has said in comments to U.S. District Judge Harold H. Greene that electronic classified ads would be "one of the benefits of unleashing the BOCS," notes ANPA Telecommunications Committee Vice Chairman Johnson. This suggests, "at least in the minds of some people in the Justice Department, that electronic classifieds should happen sooner than later," he adds.

Committee Chairman Martz says the newspaper industry would have a problem if a BOC launched an electronic classified service in its own service area. "The threat is still there of an anticompetitive situation if the telephone company has the monopoly bottleneck facilities."

Despite the potential of competition from electronic classifieds and the ever-present economic uncertainty, the chairman of the FOA Classified Advertising Task Force sees "a very bright future" for newspaper classifieds.

"I wouldn't forsee major change," says Ashton Phelps Jr., president and publisher of The Times-Picayune in New Orleans. But he says it will be "crucial" for newspapers to hold on to "private-party ads by making sure we offer them at attractive prices. Particularly, the metros must keep a good mix of private-party classifieds. It's vital to the readership and the role of classified as an active marketplace. That's what makes it tick."

In sum, the New Orleans publisher says he looks forward to a "fine-tuning of our classified operations rather than any radical overhaul. . . . The primary thing we are going to need to do is do what we have been doing, but do it better." □

ANN LANDERS

What a great move! Same city...a world of difference.

Chicago Tribune welcomes Ann Landers, beginning March 15

At the Chicago Tribune, Ann Landers will be surrounded with quality:

- largest editorial staff in the Midwest, including eleven foreign bureaus and nine domestic bureaus
- state-of-the-art print production, color and black and white
- extensive distribution systems that bring the Chicago Tribune to the entire Midwest on a timely basis, including printing sites in Champaign, Illinois, Madison, Wisconsin and Holland, Michigan, which receive the Chicago Tribune direct via satellite transmission.

And, at the Chicago Tribune, Ann Landers will be surrounded with quantity. The Chicago Tribune's top circulation in the market—744,969 daily and 1,112,200 Sunday—is comprised of an affluent, discriminating readership.

Chicago's best read newspaper welcomes America's best read columnist...and her legion of loyal readers.

Chicago Tribune

A great Columnist deserves a great newspaper.

ABC Publisher's Statement, September, 1986

ESOPs

Getting a piece of the action

BY CLARK NEWSOM
presstime labor writer

Employee stock ownership plans, known as ESOPs, had their genesis in the newspaper business. But only a handful of newspapers have adopted the plans in which employees get "a piece of the action"—even majority ownership, if that's the desire of the owner setting up the plan.

The publisher of one daily with an ESOP, John T. McConnell of the Peoria (Ill.) Journal Star, says the main reason there are not more such plans in the newspaper business is "greed." He says an ESOP "may require a sizable financial sacrifice on the part of the owning families"—that is, instead of selling the property to an outsider for a large sum, the owner allows the company to remain in local hands.

Some benefits specialists also say that the plans are complex and difficult to administer, and this has been an impediment to their being more widely established.

On the plus side, ESOPs do offer tax advantages—even more so under the Tax Reform Act of 1986. And although McConnell does not expect the number of newspaper ESOPs to proliferate in the near future, he reports he has received "inquiries from publishers about what we're doing here."

In recent years, the biggest movement on behalf of newspaper ESOPs came from The Times Mirror Co. In 1985, the Los Angeles-based company added an ESOP to the employee benefits programs at three newspapers—the Los Angeles Times, Newsday of Long Island, N.Y., and The Morning Call in Allentown, Pa. The program may be extended to other Times Mirror newspapers in future years, according to the company.

The three-paper ESOP holds about 3 million shares, or 4.8 percent, of Times Mirror common stock, which was purchased with $150 million in bank loans over a 10-year period.

Employee ownership advocates have long held that employee-owned firms tend to be more productive and successful than firms without ESOPs. "The ESOP gives employees a chance to participate in the ownership of the company," says James D. Boswell, vice president of employee and public relations at the Times. "We feel employees who share ownership will have a greater commitment to the company's success."

Also in 1985, Persis Corp., the principal subsidiary of which is The Honolulu Advertiser, adopted an ESOP that now owns 30 percent of the company.

The Cape Codder of Orleans, Mass., also is about 30-percent owned by its employees through an ESOP set up in 1981.

"We didn't have a formal pension plan before," says Paul Donham, vice president of the semiweekly, and the stock ownership program helps provide for employees' long-term financial needs.

It is a "morale builder," says Donham, who notes that although he cannot prove the ESOP is totally responsible, "profits have increased the last six years."

TAX BENEFITS. But an employee stock-ownership plan is much more than something to buoy employees' spirits. Under current federal estate tax law, an ESOP "enables the owner to have a vehicle to dispose of his stock" with better tax consequences than selling to other parties, Donham says.

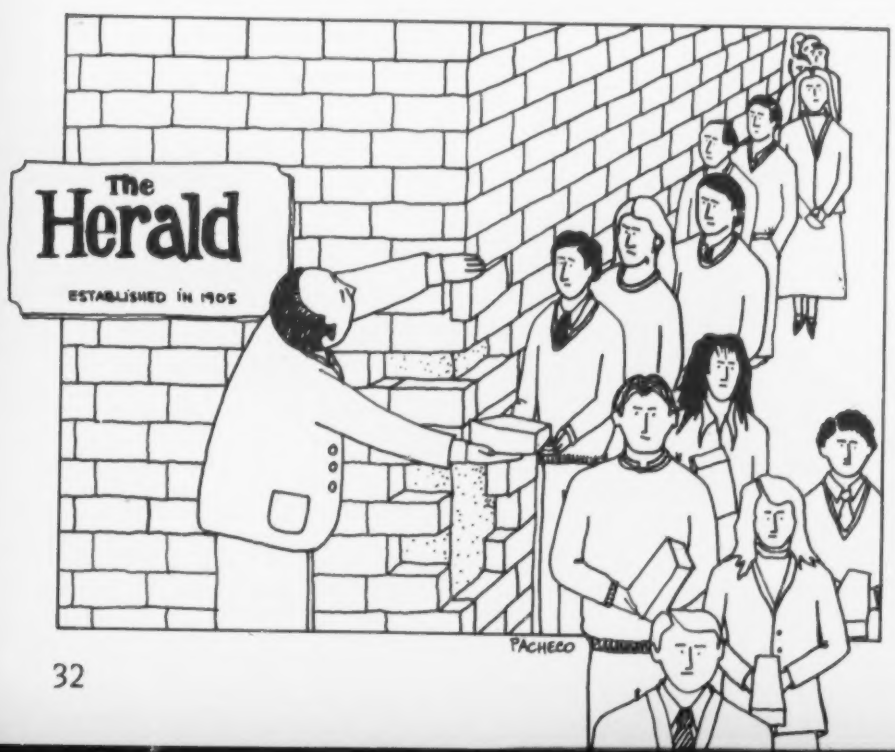
The ESOP also gives the owner peace of mind that there will be "continuity" to newspaper operations—that is, the newspaper will continue publishing under local ownership after the death of the owner.

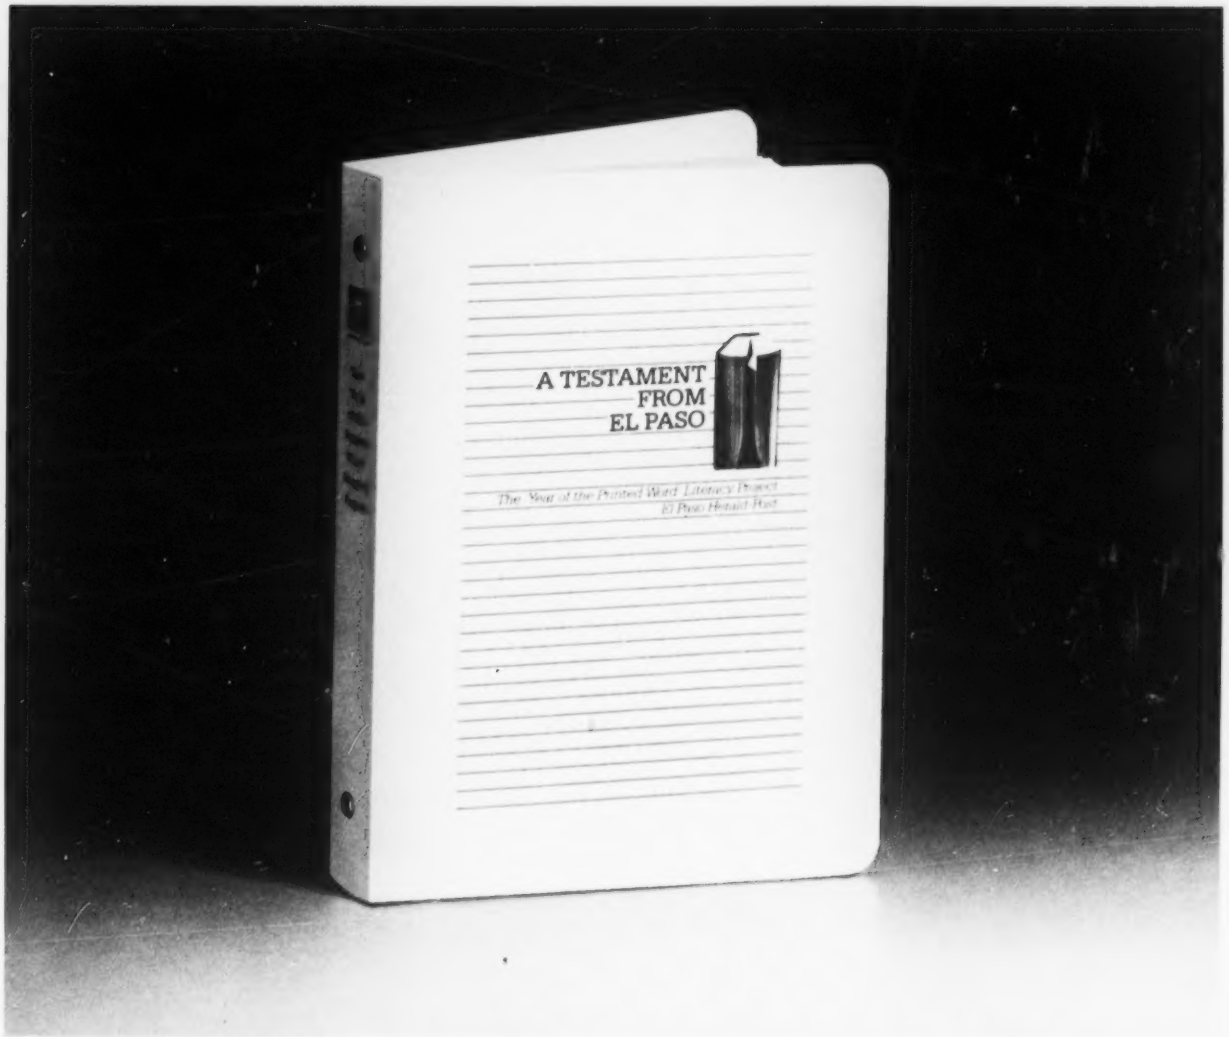
However, despite their apparent advantages for employees and owners alike, there are only about 7,500 ESOPs in all U.S. industry and proportionately few—a handful, experts say—in the newspaper business.

The ESOP concept was developed in 1957 by Louis O. Kelso, a San Francisco investment banker, lawyer and author, as a way for the owner of Peninsula Newspapers Inc. of Palo Alto, Calif., to convert the company to employee ownership. (Twenty years after the Palo Alto ESOP was established, the newspaper was sold to Tribune Co. of Chicago and the program ended.)

The plans did not catch on until 1974, when then-Sen. Russell B. Long (D-La.) persuaded Congress to provide such plans with a series of tax benefits and a legal framework—the Employee Retirement Income Security Act, or ERISA—within which to operate. Since then, according to the National Center for Employee Ownership in Oakland, Congress has passed 16 different laws encouraging employee ownership.

ESOPs generally are viewed as retirement plans that invest primarily in company stock. Unlike plans in which workers can





OPENING DOORS TO A WIDER WORLD: A TESTAMENT FROM EL PASO

"The time has come to preach the word, the printed word, to celebrate reading and its many rewards; to defend the greatest civilizing force in the history of mankind against the ravages of inadequate education and social neglect."

With these words Jay Ambrose, editor of the El Paso Herald-Post, launched what is perhaps the most comprehensive literacy program in America. The Herald-Post has organized or helped sponsor more than 30 community literacy projects during "The Year of the Printed Word."

To help other interested newspapers organize similar projects, Ambrose has summarized his experience in a handbook, "A Testament From El Paso." Published by Scripps Howard Newspapers in Cincinnati, it describes both what worked and what didn't. A copy is being mailed to the editor of every daily newspaper in the United States.

"A Testament From El Paso" gives new meaning to the power of the printed word.

Additional copies of the booklet are available at $2.25 per copy from The American Society of Newspaper Editors Foundation, P.O. Box 17004, Washington, D.C. 20041.

ESOPs generally are viewed as retirement plans that invest primarily in company stock. Employees receive shares at no charge based on length of service and straight-time salary.

purchase stock through payroll deductions, employees do not put up any money in the ESOP. They receive stock in the plan at no charge and based on length of service and straight-time salary. Annual statements on the value of ESOP accounts are furnished annually to each member.

ESOPs also offer at least one unique advantage: They are the only employee benefit plans that can borrow money. Typically, an ESOP borrows money from a bank and gives it to the newspaper in exchange for stock. The ESOP repays its bank loan from annual payments the company makes to the ESOP.

All three parties come out ahead: The ESOP gets richer, the newspaper gets working capital and can write off the annual payments as a business expense, and the bank gets a loan on which it is required by law to pay tax on only half the interest payments.

In Peoria, the four-year-old ESOP owned 82 percent of The Peoria Journal Star Inc.'s stock as of Dec. 1, 1986. The ESOP obtained a $25-million, 10-year bank loan in 1986 to acquire additional stock. Fred L. Bergia, business manager and controller, says the ESOP will hold 100 percent of the stock by 1996 "or sooner."

The stock price has doubled in three years. "Even with the sluggish economy in Peoria, it's been a very successful program from a financial standpoint," says Bergia. "Employees have seen their accounts go up dramatically. Also, it's kept the newspaper locally owned," which was the intent of President and Chairman Henry P. Slane when he established the plan.

There are at least four other ESOPs in the newspaper business [**presstime**, Aug. 1983, p. 36]—at The Columbian of Vancouver, Wash., and The Daily News-Miner of Fairbanks, Alaska, both started in 1975; at The Salt Lake Tribune in Salt Lake City, which was launched a year later and The Cedar Rapids (Iowa) Gazette, which established an ESOP in 1986.

The State-Record Co. of Columbia, S.C., established an ESOP in 1984, but it was terminated with payouts to employees in December 1986 after the company was acquired by Knight-Ridder Inc.

[In addition to newspapers with ESOPs, several other papers have employee-ownership programs that are not ESOPs as defined by tax law. Examples include The Milwaukee Journal and Milwaukee Sentinel, and the Omaha World-Herald.]

NEWSPAPER ADVANTAGES. Some observers predict that tax advantages provided in the new tax law will be the impetus ESOPs have needed to become established at more newspapers.

The new law contains changes that preserve tax advantages to a newspaper owner who establishes an ESOP while giving the owner added protection against loss of control of the newspaper's operations. These changes are "very favorable toward newspapers," says John A. Beam III, an associate in the Nashville law firm King & Ballow, which has numerous newspaper clients.

The act applies two special rules for newspapers whose stock is "not publicly traded and a substantial portion of whose business consists of publishing a newspaper for general circulation on a regular basis."

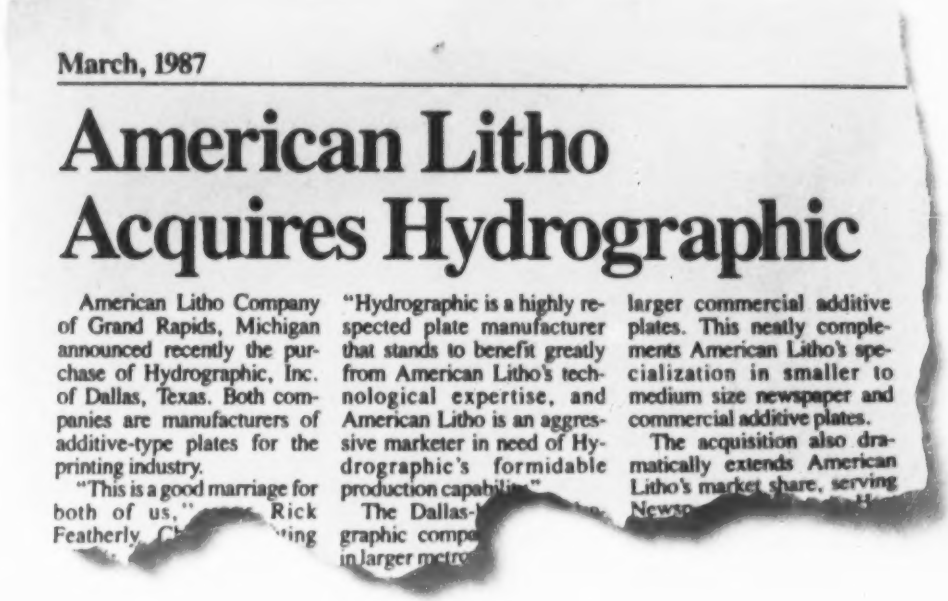
First, Beam says, for an ESOP holding newspaper stock not registered with the Securities and Exchange Commission, the new law eliminates a requirement that each participant be allowed to vote on certain corporate issues. This special rule gives the plan trustee control of major corporate decisions, such as selling the business.

Second, the law permits newspaper ESOPs to acquire non-voting common stock. This means plan participants would not attain a position of being able to control the business. Additionally, creating a non-voting class of stock could reduce potential estate tax liability for a closely held newspaper by providing multiple-ownership discounts in the valuation of newspaper stock for estate tax purposes.

Corey Rosen, executive director of the National Center for Employee Ownership, says ESOPs are among the least understood business developments of recent years. "They are very flexible vehicles that can be used for a variety of purposes," he says.

But Rosen adds: "How well they meet the needs of employees and management depends on how well they are used." □

We're making more than just headlines.



March, 1987

American Litho Acquires Hydrographic

American Litho Company of Grand Rapids, Michigan announced recently the purchase of Hydrographic, Inc. of Dallas, Texas. Both companies are manufacturers of additive-type plates for the printing industry.

"This is a good marriage for both of us," [illegible] Rick Featherly, [illegible]ing

"Hydrographic is a highly respected plate manufacturer that stands to benefit greatly from American Litho's technological expertise, and American Litho is an aggressive marketer in need of Hydrographic's formidable production capabili[illegible]"

The Dallas-[illegible] graphic compa[illegible] in larger metro[illegible]

larger commercial additive plates. This neatly complements American Litho's specialization in smaller to medium size newspaper and commercial additive plates.

The acquisition also dramatically extends American Litho's market share, serving News[illegible]

When a young, aggressive company acquires an older, established industry leader, *that's* news! And that's exactly what happened when American Litho recently announced its acquisition of Hydrographic, Inc.

But *this* news-making partnership means a lot more than just headlines.

It means an expanded product line for both companies. And greater production capacity.

It means improved service. And faster turnaround and delivery times.

It means we've combined American Litho's technological expertise and fanatical devotion to quality with Hydrographic's long-standing leadership in the industry.

It means you're going to get the best of the old and the new.

In short, it means we've created a company that will set a new standard for quality... for innovation ... and for service.

So, after you've seen the headlines, get the full story on how *you* are going to benefit from the American Litho/Hydrographic team.

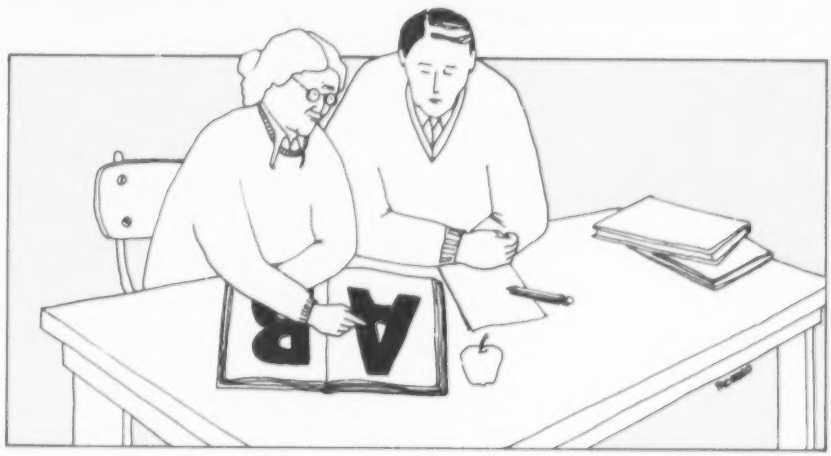
The Payback for Tutoring Is Watching a Face Light Up

BY MARTHA SMITH



For a year, a 50-year-old man and I have worked together so he can learn to read. He completed nine grades in a New York public school system, but he couldn't read. His confused alphabet had only 19 letters.

"I've faked it all the way," he said at the beginning of our classes.

This man faked it very well. He is financially secure and successful in the business he owns with his wife. If something required reading, his wife did it. Nobody except his wife knew he was unable to read.

He told me that when we were almost three months into his new learning. By that time he'd enjoyed some exciting mental adventures. From the day he could recognize "a as in apple," he was sailing on a voyage of discovery equal to Marco Polo's.

Soon he could write a love-letter to his wife—very short and simple—something he longed to do for more than 20 years. Now, he says, he pens her a brief note almost daily. She likes the lessons, too; she's very proud of him.

Now he visits the public library, clawing through the new "young adult" books. He browses in bookshops. He even bought a book about his hobby, photography. Sadly, he found that book too difficult; but not forever, he says. The man still strives.

He enjoys the lessons; he finds funny things. An early struggle with the difference between "this" and "the" brought this wry comment: "If you move the letters around in 'this' you can make another word." The astonished tutor said, "Yes, but we won't find THAT word in these lessons."

He took his wife on a brief holiday. For homework he produced a short story, "My Vacation." He had some odd spellings and some curious grammatical constructions, but it's a triumph. Seven months earlier he could not write a sentence.

He likes the easy crossword puzzles provided by the local Literacy Council. He gets two of them when the tutor thinks he earned A-plus.

About two months ago his skill in reading improved markedly. When he could recognize basic marks of punctuation, his reading aloud made a quantum leap ahead. At first he read in a monotone; now he can make the sentence a question, and he elevates his voice when he sees an exclamation point.

Sometimes he despairs of remembering everything. Then I show him a piece of his earlier work, and his face lights up with joy because he can view his own progress.

He's very good with numbers; practice at home now enables him to spell out the numbers he needs to write a check. He says he could never write a check before these lessons.

I was not trained to be a teacher; he asks questions I can't answer. At this time he is in the area of "long i" sounds and spellings. He doesn't understand why "igh" is long in "high" or "flight," but not in "eight" or "freight." Neither do I. My stock answer must be: "I do not know why. After a while you will connect the word with other words in the sentence and simply recognize it."

He says, "I will never remember all of this." I say, "If I can, so can you." Then his jaw tightens. I see determination in his eyes and he says, "Well, maybe so."

One of his big ambitions is to read a newspaper, especially the classified ads. His business involves buying old rat-trap houses and refurbishing and repairing them for resale. He needs to read the ads.

He wants to read the stories about zoning and politics in the local community. He hates it when friends discuss current events in national and international news and, he says, "I just sit there like a dumb zombie because I can't read the paper."

He will soon stop feeling like a zombie, because already he can read headlines and grocery-store ads. That's part of the lesson plans.

We are now in the last book of instruction. By late May our adventure together will end.

We meet twice a week for one hour of work each time. He wants to meet more often and work longer. This is not possible; my own life prevents more frequent meetings. More than an hour of concentrated effort and I discover his brainwork slows—not to speak of my own.

In a way, tutoring is like rearing a child. It's wonderful to note his progress and realize I help him. To watch him write a practice check for "Three hundred and thirty-four and 52/100" is as big a thrill as viewing your child exhibit sterling table manners.

It's a glorious experience to be a tutor. I will be sad when we complete the course. □

Beverly Klein

Small, Steady Steps Lead Part-time Sales Rep To the Top

BY MARGARET GENOVESE
presstime staff writer

Few newspaper people look back on a strike with fondness. Beverly A. Klein does.

Hired in 1961 as a part-time telephone sales representative in the classified department, she had only been on the job a few months when the mailers' union struck The Milwaukee Journal—the first strike the newspaper had ever experienced.

"All other employees in the company just pitched in and did everything they could in the spirit of cooperation," says Klein. Instead of answering phones, she found herself composing the classified pages.

That 26-day walkout was the start of a 26-year love affair with newspapering in general and The Milwaukee Journal and Milwaukee Sentinel in particular for Klein, now vice president-advertising director for Journal/Sentinel Inc. The spirit that infused the newspaper was "contagious," she says. "I picked it up, and I never lost it."

The story of Klein's rise from the phone room to the executive suite is one of a series of small but steady steps. First to full-time telephone sales, then classified copy editor, training supervisor, sales supervisor and telephone sales manager.

In 1977, she became classified advertising manager. Although many women were classified managers at smaller newspapers, it was still unusual for a woman to be found at the helm of a major metropolitan newspaper's classified department. However, that is changing. According to a national survey, "The Media in the '80s," almost a quarter of the newspapers with over 100,000 circulation now have female classified managers [presstime, Oct. 1986, p. 31].

"This is the way it is throughout the workforce now," says Klein. "Women are staying in the workforce. They are striving for goals that they no longer consider unreachable."

In 1982, she was elected president of the Association of Newspaper Classified Advertising Managers, the second woman to hold the office. A 1985 article published by ANCAM says Klein's name is "perhaps . . . mentioned more than any other when discussing influential women in classified."

In 1984, Klein was named advertising manager for the Milwaukee papers, becoming an example of another trend some see emerging at newspapers: the increasing tendency to promote classified managers to advertising director. A year later, she got the additional title of vice president of the company.

"I think that her particular career path has given her an excellent background of the details of advertising, and yet she transcends that and understands the big picture extremely well," says Mal Malette, director of development for the American Press Institute in Reston, Va., where Klein is a frequent discussion leader on advertising and marketing.

"She makes it a point to know her business, and she's been very successful at it," says Marvin C. Veal Jr., former classified advertising manager recently promoted to assistant advertising director of The Dallas Morning News.

Although Klein no longer has daily responsibility for classified advertising, it comes within her purview as advertising director. She also is chairman of a subcommittee of the Future of Advertising project's Classified Task Force.

Classified is a "sleeping giant," according to Klein, a category that will continue to grow and expand. She also expects growing recognition of classified's importance to newspapers. "I think there are some papers that have always recognized the vast importance of classified," she says. "I think as more and more newspapers have leaders who come up through the classified ranks we will see more of this."

Colleagues describe Klein as energetic, enthusiastic and optimistic.

"She's always up," says Abigail J. Nash, vice president-promotion director for the Milwaukee papers. "She always sees the potential benefit in programs and ideas."

A rapid-fire talker, Klein packs a lot of activity into the workday by getting an early start. "She's given to holding breakfast meetings at 7 in the morning, and frequently I'm invited to those meetings," says Journal/Sentinel President Robert A. Kahlor. Although Kahlor admits "that's not my best time of the day," he says "that's the way she is. She's a hard driver."

Klein has "led the way to managing change in our organization," Kahlor adds. She was responsible for directing the computerization of the classified department and is now working at developing incentives for advertisers to increase business.

She is so sensitive to her responsibilities, confides one co-worker, that she has put off buying a new car because, with automotive advertising so important to the papers, she does not want to risk alienating any dealers. This "fence-sitting" has made her the object of some kidding at the papers.

A Milwaukee native who attended Mount Mary College, a small, Catholic women's school there, Klein, 59, says her greatest satisfaction as a manager has been watching the development of young talent. "When I became classified manager, our publisher at that time said to me, 'Always remember that the most important part of your job is to hire, train and develop the people who will someday be running this paper.' I have never forgotten that, and I have always tried to work with that in mind."

She also has taken an active role outside the newspapers to encourage young people to consider newspaper careers, participating in student activities sponsored by the Milwaukee Advertising Club, on whose board of directors she serves.

A member of the executive committee of the International Newspaper Advertising and Marketing Executives, she also is chairman of the advisory committee for the INAME Foundation. In the past two and a half years, the foundation has raised $1.56 million from newspapers for a program to increase the visibility of newspaper advertising in college advertising programs.

In the past, newspapers have not done as good a job as some other media in working with college advertising professors, Klein says. However, the industry today is "vitally interested in educating students (about) our industry, and we are willing to put our money to back this concept," she says.

The mother of five children and a grandmother, Klein says she "likes to stay active" by participating in aerobic exercise classes three days a week and playing golf.

"Most of all," she says, "I love my work. I love what I'm doing, and I can get very excited about this business and the people in it." □

Publishers on Parade

Why does Jack Harrison distribute Parade in all of his Sunday newspapers?

JACK HARRISON
Group President
N.Y. Times Regional Newspaper Group

"As important as The New York Times with its own Sunday magazine is, so are each of the 14 other Sunday papers in the group. And for them, Parade provides a fine Sunday magazine. It's a magazine with strong editorial strengths, a kind of strength that helps build readership.

"The talent of Parade's nationally recognized authors and the genius of Lloyd Shearer, writer of Walter Scott's Personality Parade and Intelligence Report, along with Parade's variety of other editorial features, develops reader loyalty and is a constant aid to our growing circulations.

"Yes, Parade brings us a dimension that's in keeping with the style, traditions and standards one would expect from any paper in The New York Times group."

Featured in 297 newspapers every Sunday.

© 1987 Parade Publications, Inc. All rights reserved.

For information on why Parade is important in major markets, contact Carlo Vittorini at (212) 573-7111, and talk publisher to publisher.

COURTS

Supreme Court to hear two press cases

The U.S. Supreme Court will review cases involving newsracks and the First Amendment rights of high school journalists.

In the newsrack case, the justices agreed to hear Lakewood, Ohio's, appeal of a lower court ruling that struck down part of the city's newsrack ordinance. The overturned portion governed permits, design and insurance for newsracks.

The ruling by the 6th U.S. Circuit Court of Appeals also had upheld Lakewood's ban on newsracks in residentially zoned areas [**presstime**, Feb. 1987, p. 38]. That part of the ruling, however, is not being appealed.

The Supreme Court action has newspaper interests concerned that the justices could reinstate the struck-down portion of the ordinance while the residential ban would continue.

In the second case, the Hazelwood, Mo., School District obtained review of the 2-1 ruling by a panel of the 8th U.S. Circuit Court of Appeals that its censorship of a student newspaper was unconstitutional because the publication constituted a "public forum" [**presstime**, Feb. 1987, p. 38].

The school district contends, and the dissenting appellate judge agreed, that school officials may "edit" certain controversial student articles because they are legally liable for them.

ANPA is studying the possibility of filing a friend-of-the-court brief in the newsrack case.

Another cause that has drawn some newspaper interest is that of Hustler magazine Publisher Larry Flynt's appeal of a $200,000 jury award to evangelist Jerry Falwell for "intentional infliction of emotional distress." The Supreme Court has been asked to review the case but has not yet taken action on the petition.

Among those who have filed friend-of-the-court briefs in an effort to get the decision overturned are the Reporters Committee for Freedom of the Press, Richmond (Va.) Newspapers Inc. and The Free Lance-Star Publishing Co. of Fredericksburg, Va.

The verdict against Flynt stemmed from a parody, bearing a disclaimer, of a liquor advertisement featuring Falwell's picture, and a fictitious interview describing an incestuous relationship with his mother.

A U.S. District Court jury in Roanoke, Va., did not uphold Falwell's libel or invasion of privacy claims against the publisher, but it made the emotional-distress award that was subsequently upheld by a three-judge panel of the 4th U.S. Circuit Court of Appeals.

"The way it now stands, a hard-hitting cartoon could easily be found to 'inflict emotional distress' on Ronald Reagan," said Charles S. Rowe, editor and co-publisher of The Free Lance-Star and chairman of the ANPA Government Affairs Committee.

The Supreme Court also declined recently to review two cases involving the press.

In one case, the court let stand a ruling from the 11th Circuit that the public is not entitled to see names of unindicted co-conspirators in a criminal case. Although it had released the names of the unindicted co-conspirators to the indicted defendants in a Florida racketeering case, the prosecution claimed the list did not constitute a court record that "traditionally has been available . . . to the public."

In response to a challenge filed by The Tampa Tribune, a U.S. District Court ordered the list sealed to avoid "publicly branding" the unindicted co-conspirators associated with the 45-count indictment against 30 defendants.

In the other case, the justices let stand an Alabama ruling that a libel suit can proceed against a Mobile, Ala., television station. The gist of the Alabama ruling is that news organizations have no constitutional privilege to repeat false, defamatory statements even if they were made at a public meeting on a matter of public concern and are neutrally reported.

A Mobile official is suing station WKRG-TV for reporting false accusations leveled at him during a meeting of a citizens' group. The station reported the accusations, as well as denials from two sources. □

Media groups voice concern over Winans case

Ten media organizations have jointly filed a friend-of-the-court brief in the U.S. Supreme Court on behalf of R. Foster Winans, former financial columnist for the Wall Street Journal whose conviction for securities fraud is being reviewed by the court [**presstime**, Jan. 1987, p. 43].

The organizations contend that Winans' conviction for unlawful trading in securities based on knowledge he obtained as a reporter "threatens infringement of First Amendment rights" because the conviction was not based on a violation of any duties related to the securities market, but rather on a violation of Winans' duty to his employer under the Journal's code of ethics.

Such a conviction makes the government an enforcer of "vague ethical obligations of a reporter to his employer" and portends a government influence to restrain publication, the media groups contend. □

Weekly suspends operation after ruling

Publishers of the Brunswick (N.C.) Free Press, fined $6,000 by a federal appeals court for running ads first produced by a rival weekly, said they have suspended publication and will have to sell the paper or go out of business if their further appeals fail.

In addition to the fine, the 4,000-circulation weekly Free Press was ordered to pay still-unspecified legal fees of the rival weekly, The Brunswick Beacon. Bernard C. and Lou Hopchas, the husband and wife who co-own and publish the Free Press, estimate that they would have to pay $40,000-$50,000.

They are asking for reconsideration of the case by the entire 4th U.S. Circuit Court of Appeals.

A three-judge panel of that court ruled 2-1 that The Brunswick Beacon held the copyright to three ads which it had produced, according to provisions in the Copyright Act of 1976 giving the copyright to the party that performed the creative work. The ads had been republished in the Free Press on the authorization of the advertisers—and, the judges noted, at lower rates than those charged by the Beacon. The Beacon had included a copyright notice on the ads and registered the copyrights.

The Free Press argued that it had not infringed on the copyright because the advertisers held the copyright for their ads. The dissenting judge agreed with the Free Press, saying that an advertiser who pays to have an ad produced should retain control of its publication.

Lawyers on both sides said the ruling would have significant effect on the way some smaller newspapers and their advertisers do business. The ruling places the burden on the advertiser to obtain a written agreement with a newspaper that has designed an ad should the advertiser want to claim a copyright for republication purposes. □

North Carolina law prevents gag-order problems

The kind of restraining order issued by a federal judge against The Providence Journal and its editor could not happen in the state judicial system of North Carolina. That's because the General Assembly there enacted a statute in 1977 that prohibits gag orders by state judges and automatically renders them "null and void and of no effect."

"No person shall be punished for contempt for the violation of any such void rule or order," the statute says.

William C. Lassiter, longtime general counsel for the North Carolina Press Association and now counsel emeritus, recalled that the association started lobbying for such a law following two U.S. Supreme Court decisions in 1975 and 1976 rendering invalid the gag orders of lower courts seeking to prohibit publication of public information.

"The General Assembly responded favorably" to the press association's arguments, Lassister said. The result, he said, is that "no person can lawfully be punished for violating such an order" even if the individual did not take steps to have it invalidated beforehand.

Lassiter's recollections were prompted by the case in which a federal judge convicted The Providence Journal and its executive editor for contempt because they violated his order not to publish information, gained through the Freedom of Information Act, about a reputed organized-crime figure. The convictions were later overturned by a panel of the 1st U.S. Circuit Court of Appeals, but a special prosecutor has asked the full court to review that ruling [**presstime**, March 1987, p. 48].

Lassiter observed that "to cover a situation like that involved in The Providence Journal case, a federal statute would be neccessary." But he said newspaper editors and publishers in states other than North Carolina "should be interested in attempting to obtain legislation" that would protect them from state-issued gag orders. □

IRS may appeal ruling to allow depreciation of subscription lists

The Internal Revenue Service is considering an appeal to the U.S. Supreme Court of a court decision that the subscription list of an acquired newspaper is a depreciable asset with a limited useful life.

A three-judge panel of the 8th Circuit U.S. Court of Appeals Jan. 20 voted 2-1 to uphold a lower court's judgment in favor of Donrey Media Group, thereby challenging the IRS's position that the value of such a list is "goodwill" and therefore non-deductible.

The panel affirmed the verdict of a U.S. District Court jury that the subscription list of The Washington (Ind.) Times-Herald, which Donrey acquired in 1972, had a value separate and apart from goodwill, that value being $599,406, with a useful life of 23 years [**presstime**, Aug. 1985, p. 36].

Donrey filed the action in 1985 to recover $50,000 in taxes and interest paid following audits of its 1977 and 1978 tax returns, which disallowed a deduction for depreciation of the subscription list.

The IRS has contended that the subscription list was not depreciable as an intangible asset because it did not have a value apart from "goodwill" and because it did not have a limited useful life that could be ascertained with reasonable accuracy.

The court noted in its opinion that the IRS had argued before and during the trial that a jury should decide the matter. "Only after the jury resolved these issues in a way unfavorable to the government did it assert that these lists were non-depreciable goodwill as a matter of law," the opinion said. □

Tavoulareas verdict overturned

The full U.S. Circuit Court of Appeals for the District of Columbia March 13 threw out a jury's $2-million libel verdict against The Washington Post, ruling that a 1979 story saying that former Mobil Corp. President William P. Tavoulareas had "set up" his son in business was "substantially true" and not libelous.

The 7-1 decision was the third reversal in the case, and perhaps a final victory for the Post. The court said the trial judge, U.S. District Judge Oliver Gasch, was right back in 1982 when he found insufficient evidence to support the libel award and threw out a jury verdict for Tavoulareas [**presstime**, July 1985, p. 54]. □

Florida court curbs press access to depositions

Several newspapers have asked the Florida Supreme Court for a rehearing of its 4-1 decision in February that criminal depositions do not become public until they have been transcribed and filed with a trial court.

Palm Beach Newspapers Inc., The Miami Herald Publishing Co. and the News and Sun-Sentinel Co. of Fort Lauderdale contend that the ruling does not represent a constitutional majority of the court, said Richard Ovelmen, general counsel for The Miami Herald.

Although the court has seven justices, only four who voted in the decision are current justices, and they split 3-1. The fourth vote came from a retired justice who had heard the case last April but had since left the bench; he was brought in, for lack of a quorum, to participate in the case.

If it stands, the decision threatens to halt the practice of recent years whereby Florida reporters attend depositions in newsworthy cases.

The state's news media believe that because depositions often are crucial to the outcome of a case, they should be considered pretrial judicial proceedings.

The issue is complicated by the fact that Florida, like many other states, followed the federal lead several years ago in abolishing requirements that all depositions be filed in court. Suddenly, a whole class of documents that traditionally had been public no longer fell under any public-disclosure requirement, Ovelmen said. Thus, reporters frequently gained access to depositions only by attending them.

Prior to the Florida Supreme Court's ruling, media attorneys believed they had an excellent chance in pressing the issue there because the Supreme Court and lower Florida courts often have favored press interests in the past.

"Florida was the very best state to be in and still is, generally, in public records and access. This decision changes that dramatically," Ovelmen said. "If it holds up, it will be a big departure for Florida."

Several other cases involving access to depositions under different circumstances also are awaiting review by the Florida Supreme Court.

"Basically, we are asking for a complete rehearing, but if they don't do anything else in this case, they at least ought to provide access to the unfiled transcripts, and then we'll see what happens in the other cases," Ovelmen said. □

LEGISLATION

'Inert' FTC gives impetus to ad ban, Florio says

Opponents of a bill to ban the advertising of tobacco products should make sure that the regulatory apparatus is in place to deal with advertising abuses, Rep. James J. Florio (D-N.J.) warned the ANPA Government Affairs Committee at its semiannual meeting March 5-6 in Washington, D.C.

Florio, a member of the House Commerce Committee, said the Federal Trade Commission has jurisdiction over advertising, but the agency is "inert." The FTC "has not done anything of consequence to justify its money for the last five or six years," he said.

Florio also observed that another federal regulatory agency, the Consumer Product Safety Commission, currently is prohibited from reviewing tobacco products.

He told the newspaper executives that opponents of legislation to prohibit tobacco advertising should be "in the forefront" of support for an "FTC that works" or for review of tobacco products by an agency such as the CPSC.

Subsequently, the ANPA committee agreed to continue its opposition, on First Amendment grounds, to a legislative ban on tobacco ads [presstime, Sept. 1986, p. 39].

The committee also:

- Expressed concern about hostage Terry Anderson, Middle East correspondent for the Associated Press. Subsequently, ANPA Chairman and President Alvah H. Chapman Jr. wrote Secretary of State George P. Shultz, asking that he "continue to put hostage release as a very high priority in your activities, and that you insure that every proper means is used to achieve freedom for Terry and the other hostages."

Chapman, chairman and chief executive officer of Knight-Ridder Inc., noted that the second anniversary of Anderson's having been taken hostage in Beirut, March 16, coincided with the United States' observance of Freedom of Information Day.

- Voted to recommend to the ANPA Board of Directors that the Association support the proposals on fighting censorship contained in the "Declaration of London," issued at the recent Voices of Freedom '87 conference in London [presstime, March 1987, p. 51].
- Was told that major trade legislation introduced by Senate Finance Committee Chairman Lloyd Bentsen (D-Texas) contains a proposal for a 1-percent duty on all imported products, including newsprint, to fund a worker-retraining program.

Newsprint became subject to a .22-percent customs user fee last December, with a .04-percent port-user fee scheduled to take effect April 1 [presstime, Nov. 1986, p. 52].

- Learned that congressional hearings will be held in May on circumvention of the Government in the Sunshine Act, the federal open-meetings law.

In a related development, the committee was informed that the American Bar Association has proposed guidelines to federal agencies and courts on the interpretation of "meeting" under the Sunshine Act that could result in more closed meetings.

"We expressed concerned that the proposed definition, which is a very narrow one with exclusion of 'briefing sessions and exploratory discussions of commission members,' could lead to widespread abuse and more closed meetings," said Katharine P. Darrow, chairman of the ANPA Legal Affairs Committee, co/chairman of the ANPA/ABA Task Force and general counsel of The New York Times. Co. □

William M. Boyd (left) of The Home News Publishing Co., New Brunswick, N.J., and Douglas H. McCorkindale (center) of Gannett Co. chat with Rep. Florio.

REGULATIONS

Expedited JOA hearing denied in Detroit

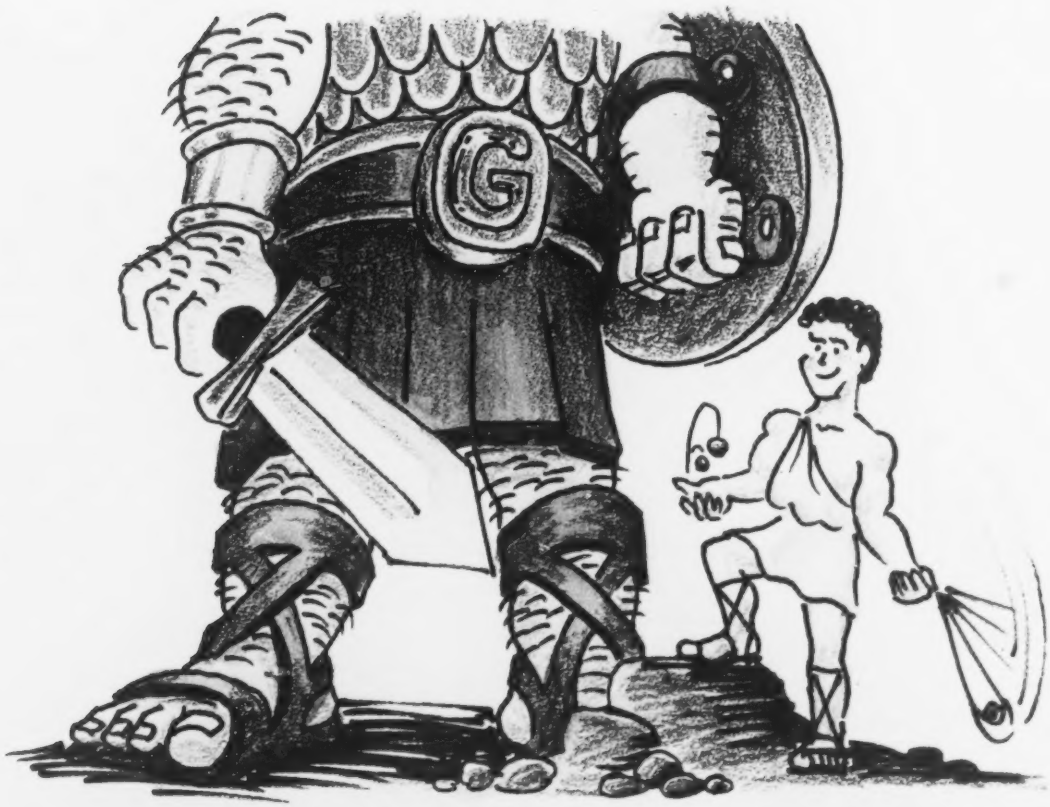
A "prehearing conference" will be held in Detroit April 9 to establish a schedule for a public hearing on the application of Detroit's two daily newspapers for a joint operating arrangement.

The conference will be presided over by Administrative Law Judge Morton Needleman, named March 6 by the Justice Department to hold the public hearing. Needleman is a former administrative law judge for the Federal Trade Commission.

On March 23, Assistant Attorney General William Bradford Reynolds denied the request of the Detroit Free Press and The Detroit News for an expedited hearing schedule similar to the one issued in the case of two Seattle dailies that entered into a JOA in 1983. That schedule called for completion of the hearing 60 days after the judge was appointed.

In his order denying the expedited hearing, Reynolds said Attorney General Edwin Meese III had indicated his intention that the hearing be conducted "as expeditiously as possible." Reynolds added: "The administrative law judge appointed to conduct the hearing has full authority to ensure that the Attorney General's intention is carried out."

On Feb. 25, Meese had ordered the public hearing, concluding that it was necessary for a "proper resolution" of "weighty and extremely difficult factual questions involving the future of the Detroit newspaper market" [presstime, March 1987, p. 49]. □



Who says bigger is better?

When you're ready for a new flexo press, Motter will be ready to build it for you.

- ☐ We're small enough to respond to your needs quickly, large enough to build whatever size press you need.
- ☐ We have the engineering and manufacturing expertise to provide a flexo slip-in unit or a full press line.
- ☐ You'll have personal contact with top management. Your press *will not* be treated as just another order!
- ☐ The AMERICAN MOTTERFLEX FX-4 offers operating simplicity, top quality, versatile color capability.

For the AMERICAN MOTTERFLEX FX-4, there's no such thing as an order that's too large or too small! Call or write today for complete information. Motter Printing Press Co., P.O. Box 1562, York, PA 17405, 717-755-1071, designers and manufacturers of web-feb printing equipment.

MOTTER PRINTING PRESS CO.

Postmaster general says new rate case may be filed 'before summer'

U.S. Postal Service officials, despite previous statements to the contrary, say they are considering filing for a rate increase this year that would result in higher rates next year.

"We are considering filing for a rate increase," said Postmaster General Preston R. Tisch March 4 in remarks before the National Newspaper Association Government Affairs Conference. "If the Board of Governors approves a filing (with the Postal Rate Commission) this year, an increase may indeed become a reality in 1988," Tisch said.

Preston R. Tisch

Asked by **presstime** specifically when a rate case may be filed, Tisch said, "I hope the governors will approve it before summer." Implementation of new rates can take a year or longer after a rate-hike request is filed [**presstime** Feb. 1987, p. 41].

Consideration of a new rate case is on the agenda for the closed portion of the governors' April 6 meeting in Dallas.

When a filing might actually be made is unclear, however. David Harris, secretary of the board of governors, observed that the last rate case was filed with the rate commission in November 1983; the matter had been on the governors' monthly agenda starting in February of that year. Current postal rates took effect in February 1985.

Observers are unsure how much of an increase the Postal Service will request or how much the Postal Rate Commission might recommend, but some speculate that the cost of a first-class stamp will jump from 22 to 25 cents. The reason partly is psychological, having to do with the convenience of using quarters and not having to make penny change.

Tonda F. Rush, ANPA assistant general counsel, said at an ANPA Postal Committee meeting March 11 that the extent of increases in other classes of mail may hinge on the amount of revenue generated by that 3-cent increase in first-class. If the amount happens to cover most of needed additional funds, the theory goes, the other increases will be proportionately small; if the amount is far shy, other increases will be heavier.

The Postal Service ended its 1986 fiscal year with a $304-million surplus. It lost $251 million the previous year.

Rate increases will be needed despite last year's surplus partly because of unexpectedly high costs related to the Federal Employee Retirement System, postal officials said. □

Members urged to keep postal cost data

ANPA Postal Committee Vice Chairman Gregg K. Jones has called on ANPA-member newspapers to keep track of how much they spend on individual classes of mail. The data will be useful in future ANPA studies on newspapers' mail expenditures, he said.

ANPA conducted such a survey on 1985 expenditures. It showed that responding newspapers able to break down the figures spent the most on third-class [**presstime**, Feb. 1987, p. 41].

"I suspect that we'll be asking for it regularly from now on," said Jones, co-publisher of The Greeneville (Tenn.) Sun.

POSTAL NOTES

• The Tennessean of Nashville and The Nashville Banner sued the U.S. Postal Service over rules adopted last July **disallowing total-market-coverage programs to travel in second-class mail**. The newspapers said the rules constitute a mail-classification change that requires a formal proceeding at the Postal Rate Commission.

They asked U.S. District Court in Nashville to declare the rules unlawful, to require USPS to pay them amounts in additional postage incurred as a result of the rules and to order that the newspapers' TMC programs be allowed to use second-class.

The Tennessean and Banner said they previously modified their TMC programs to comply with USPS rules adopted in June 1986 on so-called "plus" issues. At issue are "interim" rules that were announced by USPS a short time later [**presstime**, Feb. 1987, p. 41].

• Companion legislation has been introduced in the House and Senate to **restore a portion of a newspaper-related postal subsidy** eliminated early last year. The bills would provide funds to reduce rates once again for "limited circulation" mail, in which fewer than 5,000 copies of a second-class publication are mailed to counties adjoining the county of publication.

Similar proposals did not succeed in Congress last year [**presstime**, Aug. 1986, p. 38].

Both new bills include a restriction on use of another subsidized category—in-county mail. They would limit use of favorable in-county rates to the first 20,000 copies of a publication.

• The ANPA Postal Committee recommends newspapers pay close attention to **tougher new USPS rules on third-class "solicitation" notices**. Many newspapers use such notices, mailed at the relatively cheap carrier-route presort rate, in lieu of bills mailed first-class.

The new rules, implemented March 21, take a harder line on requirements that a disclaimer be printed prominently on the face of the solicitation piece. In one alternative phrasing the new rules provide for mailers, the disclaimer states in part: "This is not a bill. . . . You are under no obligation to pay the amount stated above unless you accept this offer."

For information, contact the ANPA Legal Department at The Newspaper Center, Reston, Va.

• Because of objections raised by Advo-System Inc. and other third-class mail groups, the Postal Rate Commission has not yet decided whether it will recommend a slight **increase in the minimum size for carrier-route-presorted, third-class mail** that would benefit many newspapers.

However, experts still believe the commission likely will agree to the change from 11½ by 13½ by ¾ inches to 11¾ by 14 by ¾ inches [**presstime**, Feb. 1987, p. 41].

Advo said it does not oppose the revision outright. But Advo does not support it, either, because of the "potential adverse impact on carrier route mail costs and rates." ANPA said there is no evidence that any adverse impact would result.

World Press

USPS to amend preprint proposal

Postal officials have backed away from a controversial proposal on advertising inserts that newspapers lambasted as unworkable and unreasonable.

In its place, the U.S. Postal Service is preparing another proposal on inserts, one that may focus more on what it calls abuses involving inserts in magazines in the second-class mail stream.

The original USPS proposal called for such things as limiting the number of pages in supplements to the number of pages in the main body of the publication, restoring a former requirement that publications print "supplement to (name of paper)" on inserts, and barring certain kinds of material that may be mailed as inserts [**presstime**, March 1987, p. 49].

ANPA said such rules would impose hardships on newspapers that depend heavily on the mails.

Addressing the National Newspaper Association's Government Affairs Conference March 4 in Washington, D.C., Stephen E. Miller, assistant postmaster general for rates and classification, acknowledged that the proposal had "some things in there that clearly created problems for you." Miller said there probably will be another proposed set of rules introduced, and "you can have another shot at us."

He noted that the original proposal was intended, in part, to "test the waters" of industry reaction.

One person in the NNA audience asked why USPS simply didn't ask newspapers for thoughts before publishing a formal rule-making proposal. "Wouldn't that have been a lot easier and a lot easier for some peoples' blood pressure?"

The USPS concern about inserts is centered in part on the growing practice of magazines in the second-class mail stream to carry preprints—often lumped together with the magazine in a plastic "polybag"—that postal officials think should travel via more expensive third-class.

One example is The Family Handyman, a publication aimed at "do-it-yourselfers." Its April 1987 issue was mailed in a plastic bag that also separately contained two business-reply cards and ads for men's clothing, lawn care and an electronics school.

"The Postal Service thinks we're in competition with them. From my perspective, we're not," Handyman Publisher Greg Carey told **presstime**. □

Lara sues to get U.S. information

Lawyers for Colombian journalist Patricia Lara have filed suit against three federal agencies to compel disclosure of information relating to Lara's detention and exclusion from the United States last October.

Meanwhile, ANPA staff members are analyzing some documents relating to the incident that the Association received under the Freedom of Information Act.

A State Department official has said that Lara was refused entry because of her membership in and support of terrorist organizations and for her role as a Cuban operative [**presstime**, Dec. 1986, p. 56].

In Lara's suit, filed Feb. 19 in U.S. District Court in New York City, her lawyers said the State Department and FBI failed to respond to her FOIA requests, while the Immigration and Naturalization Service released a portion of requested materials.

ANPA filed its FOIA request to Attorney General Edwin Meese III seeking materials accounting for the INS's inclusion of Lara's name in its "lookout book" of aliens who are inadmissible to the United States.

In response, the INS March 9 released 22 full and eight partial pages of materials, but it withheld another 50 full pages and parts of eight others. □

Old UNESCO issue sparks new debate

A UNESCO-sponsored conference called to evaluate the effect of its 1978 Mass Media Declaration has drawn concern from some members of the Western media.

The June 26-28 conference in Tampere, Finland, will be conducted by the Prague-based International Organization of Journalists.

According to Martin Casey, ANPA manager/government and international affairs, the concern is that the conference will reopen a dispute over the role of the press in achieving national goals. As the declaration was being considered by UNESCO, the Western press "fought very hard" to eliminate from the document statements to the effect that governments should "use" the media to further their national goals, he said.

"Acceptance by UNESCO's member states of the 1978 Mass Media Declaration ended years of intense confrontation and cleared the way for more positive activity. It put to rest controversial issues that should not be revived," said Dana Bullen, executive director of the World Press Freedom Committee. □

Telecom

Markey lauds 'Diversity Principle'

The "Diversity Principle" has "served us well," the new chairman of the House Telecommunications Subcommittee told the ANPA Telecommunications Committee. It should not be altered unless "strict, workable safeguards" against anticompetitive behavior by the regional Bell operating companies are in place, added Rep. Edward J. Markey (D-Mass.).

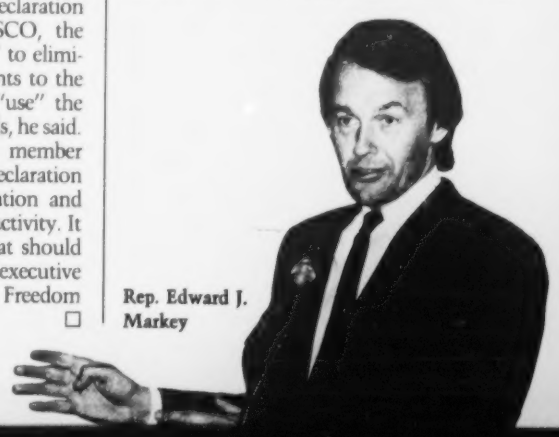
The Diversity Principle, which was developed by ANPA in the early 1980s, holds that telephone companies that control transmission facilities should be barred from originating, controlling or having an interest in information transmitted via those facilities.

The policy statement was the basis of the prohibition against the BOCs' entry into information services, including electronic publishing, contained in the consent decree governing the breakup of AT&T.

The Justice Department recently recommended to U.S. District Judge Harold H. Greene, who oversees the decree, that the information-services restriction be lifted [**presstime**, March 1987, p. 50].

Speaking at the March 18-19 meeting of the ANPA committee in Washington, D.C., Markey said his subcommittee will conduct hearings on the decree before Greene issues a decision on the Justice recommendation. "The subcommittee will closely examine BOC entry into information services," he said.

In comments submitted March 13 to Judge Greene, ANPA said there is "no basis at this time for allowing the BOCs to provide electronic publishing services over their own facilities." However, the Association said "some modification or clarification" of the information-services restriction "may be appropriate"—for instance, to allow the BOCs to provide certain services that do not involve information content. □



Rep. Edward J. Markey

Florida considers sales tax on newspaper advertising

The battle is on in the Florida Legislature over whether to preserve tax exemptions for professional services, including newspaper advertising.

If the Legislature does not retain the exemption for advertising after it convenes April 7, a 5-percent tax on all advertising will go into effect July 1, and "newspapers would become tax collectors when they sell the space," said Richard Shelton, executive director of the Florida Press Association.

Advertising had been one of more than 100 service classifications exempted from Florida's sales tax until the Legislature passed a sunset measure late last year to remove the exemptions. At the same time, the Legislature established a special state revenue commission to study the issue before the exemptions actually expire.

The commission completed its study and on March 5 announced it would recommend that the exemptions be allowed to expire.

Subsequently, the House Finance and Tax Committee, assisted by the Florida Department of Revenue, developed a tax measure that would impose the 5-percent tax on those Florida entities previously exempted and go even further to extend the levy to advertising in national media circulated in Florida and to Florida advertising placed in media outside of the state.

It is this broader measure that will be considered by the Legislature when it convenes.

The measure has won support from the governor, the Senate president and the speaker of the House because they say the state needs an infusion in revenue to handle increased needs in social services, education and prison construction and other areas to accommodate the state's growth.

Also proposed is elimination of an exemption on circulation which would force carriers to collect a tax.

"There are so many variables and so many different players, it's hard to tell" the outcome of the tax battle, Shelton said. "It will be a really tough session because everybody will still be trying to get their exemption back."

The FPA and many of its member newspapers have joined the "No Ad Tax Coalition" to retain the exemptions. But at least four Florida newspapers are editorially supporting the tax: The Orlando Sentinel, The Palm Beach Post, The (Palm Beach) Evening Times and the St. Petersburg Times.

"They said the needs were so great, and the availability of funds so limited," that letting the exemptions die was in the best interests of Florida citizens, Shelton said. Florida's constitution prohibits a state income tax.

The press association and other interests are arguing that if state and national advertisers cut back on their advertising budgets, media revenues shrink, or if advertisers increase their budgets to accommodate the tax, some might pass on costs to consumers.

An FPA survey indicates that newspapers expect a blow to their revenues from such a tax, while Florida advertisers said they are likely to cut their advertising budgets by 5 percent to compensate.

Seventeen other states also have been active with proposals to extend taxes on sales and professional services to newspaper circulation and advertising, according to Kevin Grant, state relations coordinator for ANPA [**presstime**, March 1987, p. 56].

Measures to tax circulation and/or advertising recently were defeated in Arkansas, North and South Dakota, Mississippi, Utah and West Virginia. A New Mexico bill to extend the gross receipts tax to newspaper sales also died in committee.

New legislation in Maine would tax newspaper sales.

And a bill just passed by the Idaho Legislature awaits the signature of Gov. Cecil Andrus. It would make permanent a now-temporary 3 to 4 percent tax on circulation sales.

Governors in Illinois and Wisconsin also are expected to raise new proposals to tax advertising and/or circulation revenues. □

Carriers exempt from Va. seat belt bill

Virginia Gov. Gerald L. Baliles was expected to sign a mandatory seat-belt law that contains an exemption for newspaper carriers.

At least one other state legislature is considering similar legislation. The Wisconsin Senate March 17 passed a seat-belt bill containing an exemption for newspaper delivery personnel.

According to the ANPA Government Affairs Department, eight states enacted seat belt laws in 1986 that provide an exemption for newspaper delivery vehicles. Two had done so previously [**presstime**, Aug. 1986, p. 40]. □

Tenn. groups disagree on proposed exemptions to records law

In the latest development in a brouhaha that has split the state's media organizations, Tennessee Attorney General W.J. Michael Cody said in an advisory opinion March 19 that a proposal to change the state's open records law is constitutional.

At issue is legislation that would exempt from the open-records law those records whose disclosure would "endanger the life, physical safety or property of law enforcement personnel, a police informant, witness or their families, or lead to the identity of a confidential informant" or would "substantially jeopardize a present active and ongoing investigation."

The legislation was agreed to by the Tennessee Press Association after negotiations with the Tennessee Association of Police Chiefs and the Tennessee Sheriffs Association.

TPA Executive Director Don R. McNeil called the two provisions "narrowly drawn." He said they are similar to those rejected by the law enforcement agencies two years ago. "They wanted to go far beyond that."

The measure is opposed by other media organizations, including the Society of Professional Journalists, Sigma Delta Chi; Associated Press Managing Editors; Associated Press Broadcasters; Radio-Television News Directors Association; and the Tennessee Association of Broadcasters.

The legislation amounts to "a license for law enforcement agencies to close anything they want to close under the guise that that information would interfere with an investigation," said L. Frank Gibson, metro editor of The Tennesseean of Nashville and a member of the national board of SPJ,SDX.

Gibson said the groups will continue to oppose the bill, despite Cody's opinion, which was sought by a legislator who opposes the bill. The attorney general's opinion "says that it's constitutional, but the legal opinion doesn't say that it is needed or right," Gibson said.

Although they disagree with the position TPA has taken on the bill, Gibson said the groups' argument is with the police chiefs and sheriffs organizations, which are pushing the bill.

"We are not in a fight with the Tennessee Press Association," he said.

The legislation was scheduled to be considered March 24 by the Civil Practice Subcommittee of the House Judiciary Committee and March 31 by the Senate's State and Local Government Committee. □

Newsplate

presensitized offset plates are prepunched for you!

This gives you speed and convenience in getting to press faster, with absolutely no chance of punching inaccuracies!

Likewise, Newsplate's factory-applied coating frees you of the need to mix chemicals on the spot. This eliminates any possible coating inconsistencies, and, not incidentally, does away with messy roller coaters and punch/coaters.

Thus Newsplate cuts out two time-consuming steps in makeready from package to exposure, and eliminates two problems as well. It offers you the security of hassle-free plate processing, backed up with a two year shelf life—for dependable operation today, tomorrow, next year and the year after!

That's not all. Newsplate's presensitized coating is applied to Hoechst's tough electrochemical grain: a powerful combination that offers sharp dot reproduction for clean, clear images and pressruns you can count on of 250M+ impressions.

Now you've got a lot of powerful reasons to put Newsplate in your pressroom. Call us for more information.

Interest in news-ed declines as J-school enrollment grows

Overall enrollment in schools of journalism and mass communications continues to rise, but interest in news-editorial sequences has declined proportionately.

"Journalism and mass communication majors remain extremely popular with today's university students," said Professor Paul V. Peterson of Ohio State University, in an analysis accompanying his annual enrollment survey.

According to Peterson's study, in which 180 journalism schools responded out of 279 surveyed, enrollment increased by more than 7 percent for the 1986-87 school year, while enrollment in the nation's four-year colleges and universities grew 1 percent.

Peterson's survey found 88,661 journalism majors at the responding schools at the start of the current school year, compared with 82,766 majors in 175 schools the previous year [**presstime**, March 1986, p. 48].

The rise in journalism enrollments this year marks the second consecutive year of significant increases. Last year's enrollment was up 4.9 percent after several years of "pretty level" enrollment, Peterson said.

Michigan State University reported the largest enrollment with 3,844 journalism students, and the University of Texas was second with 2,259.

Of the 73,561 journalism students who were listed by majors in this year's survey, 13,695 were news-editorial majors—up from 13,401 last year but representing a drop in the percentage of all journalism enrollees from 20.4 to 18.6.

Even with the decrease in news-editorial's share of the J-school pie, it remained the most popular sequence. Advertising, with 17.8 percent, was second.

The survey also showed that of all undergraduate journalism or mass communications degrees granted last year, 20.3 percent were in the news-editorial sequence. As recently as 1983, slightly more than 25 percent of all journalism degrees were in that sequence, from which newspapers draw heavily for reporters and editors.

However, Peterson said he believes the surge of interest in advertising and public relations has occurred not at the expense of those who otherwise would consider news-editorial careers but "primarily at the expense of other disciplines," such as business.

The complete findings will be reported in the spring issue of Journalism Educator, published by the Association for Education in Journalism and Mass Communication. □

High school journalism contest winners named

Winners have been announced in the annual ANPA Foundation/Quill and Scroll National Writing and Photo Contest that recognizes excellence in high school journalism.

The winners and their schools, who receive plaques commemorating their achievement, are:

- *Advertisement:* Wendy Broad, Clearwater (Fla.) High School
- *Editorial:* Lisa Robertson, Nimitz High School, Irving, Tex.
- *Editorial cartoon:* Darin Davis, Canyon Del Oro High School, Tucson
- *Feature story:* Margy Adams, Elkhart (Ind.) Memorial High School
- *In-depth reporting/individual:* Julie Ramsey, Sam Rayburn High School, Pasadena, Texas
- *In-depth reporting/team:* Ty Buckman and Ria Tadeo, Aberdeen (Wash.) High School
- *News story:* Paul Diedrich, Valley High School, West Des Moines, Iowa
- *Photo/news-feature:* Kevin Wood, Mt. Vernon (Mo.) High School
- *Photo/sports:* Pat Doty, Hinsdale (Ill.) Central High School
- *Sports story:* Billy Whitson, Duncanville (Tex.) High School. □

University publishes graphics guide

A guide explaining the basics of computer graphics and typesetting to journalism educators, students and professionals is available from Florida A&M University, which published the book with assistance from ANPA Foundation.

The handbook, *Learning Computer Graphics for Journalism Educators. Professionals and Students*, provides examples of work done with various computers and printers, and it makes suggestions for installing a system and buying the right equipment.

For a copy, send $7.50 by check or money order payable to "FAMU Foundation" to Desktop Guide, P.O. Box 6163, Tallahassee, Fla. 32314. □

First Amendment Congress names Sam Archibald executive director

Sam Archibald, a professor of journalism at the University of Colorado, has been appointed the first executive director of the First Amendment Congress.

He will set up a national office for the organization in Boulder, Colo., with the opening scheduled in June, said Judith D. Hines, president of the First Amendment Congress and vice president and director of ANPA Foundation.

Sam Archibald

Archibald gained prominence by directing an 11-year investigation of government secrecy by the House Government Information Subcommittee, which developed the Freedom of Information Act of 1966.

He also has been a newspaper reporter in California, an editor in Colorado and executive director of the Fair Campaign Practices Committee.

The First Amendment Congress consists of 17 media organizations committed to safeguarding the freedom of expression guaranteed by the First Amendment [**presstime**, Dec. 1986, p. 68]. □

Professor-publisher exchange expands

The Publisher-Professor Exchange Program now offers extended visits for journalism educators to work at newspapers, providing sabbaticals of up to a semester for faculty to update themselves on the newspaper business.

The new program was developed at the request of journalism educators to augment the briefer exchange visits that ANPA Foundation has promoted since 1977.

Currently, 69 newspapers in the United States and others in Argentina and Trinidad have offered to participate in the project to send newspaper staff members to the classroom and faculty members to the newsroom. Of those, 52 have said they are willing to host sabbaticals for journalism educators.

For more information, contact Judith D. Hines, ANPA Foundation vice president and director, at The Newspaper Center, Reston, Va. □

Some people think the American press is too powerful.

Ferdinand Marcos, for one.

For 20 years, rumors circulated that the Marcoses and their friends were stashing away a fortune overseas.

But the public had no proof.

Reporter Lewis Simons of the San Jose Mercury News had made several trips to the country dominated by Ferdinand and Imelda Marcos. Conversations, he recalled, "often led to comments like – you know she owns such-and-such. And he owns so-and-so."

Simons wanted to find out how much of this was fact, and how much was fiction.

He plugged into every rumor pipeline in the Philippines. Weeks turned into months.

Simons sent back a massive file.

San Jose Mercury News reporters Pete Carey and Katherine Ellison took over. They sifted through thousands of pages of legal documents from California to New York.

On June 23, 1985, they broke the story. It documented how the Marcoses and eight associates were "systematically draining vast amounts of wealth from their nation and hiding it overseas."

They owned banks, condominiums, office buildings, mansions and other properties in the U.S. and Europe. They had spent $10 billion since 1979.

The stories created a political tidal wave.

There were calls for impeachment.

Marcos promised early elections.

The rest, really, is history.

Corazon Aquino is the new Philippine president.

Pete Carey, Katherine Ellison and Lewis Simons won the 1986 Pulitzer Prize for International Reporting.

The whole project was a gigantic effort. A year of research, reporting and writing. Of probing elusive offshore holding companies and dummy corporations. Then, staying with the follow-up.

Most papers, regardless of size, wouldn't have invested that kind of effort on a story 7,200 miles away.

But the San Jose Mercury News is a Knight-Ridder newspaper.

KR

KNIGHT-RIDDER

We never underestimate the American people.

Knight-Ridder, winner of an unprecedented seven Pulitzer Prizes in 1986, is a nationwide communications company with eight television stations, cable systems, business information services and 34 daily newspapers.

Studies focus on prize winners, Sunday magazines, journalists

BY GUIDO H. STEMPEL III

Spring is the time when a journalist's fancy turns to thoughts of prizes, from Pulitzers to the many state press association and wire-service awards. And do these awards bring happiness? Not necessarily, according to a study by Sharon Dunwoody and Gerald M. Kosicki of the School of Journalism and Mass Communication at the University of Wisconsin and Randal A. Beam of the School of Journalism at the University of Oregon.

They made a mail survey of 506 randomly selected members of the Society for Professional Journalists, Sigma Delta Chi, to find out what effect prizes have. They received responses from 280, or 59 percent. From these respondents they selected working journalists and divided them according to whether they had ever won a journalism prize.

Guido H. Stempel III

The researchers constructed a 10-item prestige scale including such items as whether the respondent thought in the past year their worth had increased, sources had been more cooperative and their advice had been sought more often. They also constructed a 10-item job satisfaction scale including such items as how satisfying their work was, whether their abilities were being used and whether they had respect for their bosses.

They found that the prize winners had significantly higher scores on the prestige scale but not on the satisfaction scale. So, winning a prize may make you feel more important but not happier in the job.

The study is reported in the Winter 1986 Journalism Quarterly.

• • •

Newspaper Sunday magazines have been the source of a good deal of speculation and not very much research. Now a study in the Winter 1987 Newspaper Research Journal tells us something about how publishers view them. The study was done by Samir A. Hunsi, head of the Service Journalism Program at the University of Mississippi.

Hunsi sent a questionnaire to 536 publishers and received 189 responses—102 from publishers distributing Parade and 87 from publishers distributing Family Weekly (since replaced by USA Weekend).

Most publishers do not believe that Sunday magazines increase their circulation. Seventy percent of those carrying Parade and 60 percent of those carrying Family Weekly said circulation was not affected by inclusion of the magazines. They also did not think that advertising was affected.

Hunsi also asked publishers to estimate the percentage of the audience that read the magazines. Of those that carried Parade, 46 percent said a half to three-fourths read it, and 39 percent said more than three-fourths read it. Of those carrying Family Weekly, 54 percent said a half to three-quarters read it, and 21 percent said more than three-fourths read it.

Most publishers see a good future for the magazines, although some expressed concern about contractual arrangements.

• • •

We frequently make the distinction between newspaper journalists and broadcast journalists, as if there were a clear line of demarcation.

A study by three Indiana University faculty members, David Weaver, Dan Drew and G. Cleveland Wilhoit, suggests that television news people may have more in common with newspaper people than they do with radio news people.

In particular, they found that television journalists are more like newspaper journalists than radio journalists in perceptions of journalistic roles and ethics and in education level. Newspaper and television journalists are more likely to endorse adversary and interpretative roles than are radio journalists. The latter prefer a neutral role.

Eighty percent of television journalists and 74 percent of newspaper journalists have college degrees, while only 53 percent of radio journalists have college degrees.

The study also shows remarkable similarity among all journalists in degree of job satisfaction and factors they consider important in judging jobs. It is reported in the Winter 1986 Journalism Quarterly. □

Stempel is distinguished professor of journalism at the E. W. Scripps School of Journalism at Ohio University, Athens, and editor of Journalism Quarterly. He is a regular contributor to presstime.

Investors say provide best

Newspapers ranked highest of all sources in a survey of individual financial investors who were asked where they got the information they needed to invest wisely.

The survey showed that 35 percent of individual investors listed newspapers as their "best" source. Business periodicals were named by 19 percent; stockbrokers, 18 percent; friends and relatives, 4 percent; statistical and advisory services, 4 percent; annual reports, 3 percent; radio and television, 2 percent; and other sources, 15 percent.

When investors were asked to rate the *importance* of a number of sources, newspapers again scored highest. Seventy-nine percent named newspapers as somewhat or very important. Business periodicals and stockbrokers tied for second at 67 percent. Statistical services such as Standard & Poor's were named by 66 percent, annual reports by 65 percent, radio/television by 45 percent, computer databases by 36 percent,, and friends and relatives by 24 percent.

The survey is conducted annually by Hill and Knowlton Inc., a public relations firm

Media await Commerce on photography

After a year of study, the Commerce Department is preparing to publish final rules governing the use of remote pictures taken from space satellites.

The rules were expected to be ready for publishing in the Federal Register about the end of March, a Commerce Department spokesman said.

ANPA and several other media organizations last year asked Commerce to take First Amendment rights into account in developing the regulations. The Association's position is that restrictions on satellite photos should be no more stringent than those on photographs taken on Earth [presstime, Sept. 1986, p. 8.].

The State and Defense departments have told Commerce the rules must protect national security interests.

In its comments on the proposed rules last year, the State Department said: "This sensitive (satellite) technology can be used to detect troop presence, troop movements, location of missile sites and the like. Even weather information may be deemed to have national security implications."

News media have obtained satellite pictures from the U.S.-owned Landsat satellite and the French-owned SPOT satellite. Japan

newspapers information

that contacted 501 individuals chosen at random from common and preferred stockholders nationwide.

Of the 35 percent who named newspapers as their first choice for investment information, about half specifically mentioned The Wall Street Journal, said Edward O. Raynolds, Hill and Knowlton senior vice president.

In a related survey, the firm asked 50 financial analysts how they rated various sources of information. Newspapers came in fifth, with 62 percent of analysts saying newspapers were important or very important sources.

The analysts gave somewhat important or very important ratings to other sources as follows: company managements, 98 percent; annual reports, 94 percent; Form 10K and other Securities and Exchange Commission documents, 88 percent; meetings with groups of analysts, 84 percent; financial fact books, 52 percent; reports from Wall Street, 50 percent; computer databases, 20 percent; and radio and television, 6 percent. □

Department's new rules from satellites

recently launched its own photographing satellite, and several other countries have similar projects under way.

There has been talk of the news media eventually launching their own private satellite. Newspaper publishers and broadcasters have voiced fears that the proposed Commerce Department regulations may restrict the use of such a satellite.

In a related development, Eastman Kodak Co. announced it will open a processing center in Lanham, Md., in August that will enhance satellite photography. A Kodak spokesman said the company expects the news media to be good customers. □

First Amendment booklet

The Society of Professional Journalists, Sigma Delta Chi, has made available a brochure containing information about the First Amendment.

The brochure is part of SPJ,SDX's promotion of Project Watchdog, a program to safeguard the First Amendment [**pres**stime, Nov. 1986, p. 58].

The brochure can be obtained by calling (800) 542-1600. □

Reprinted by permission of United Feature Syndicate

History will be made when this strip appears in some newspapers April 20.

Peanuts first to be offered in color every day

"Peanuts," the world's most widely syndicated comic strip, will be available in full color seven days a week beginning April 20.

United Feature Syndicate said the popular strip, drawn by Charles M. Schulz, will be the first one ever to be offered in color on a daily basis. "Peanuts" is syndicated in more than 2,000 newspapers.

Victor Oleffson, sales representative for United Media, the parent company of UFS, said newspapers that want the weekday color service will have to pay a premium for it. Although he declined to specify how much this extra amount will be, Oleffson said it will merely cover the additional production costs associated with providing "Peanuts" in color.

The strip will be sent to newspapers with coded color separations in red, yellow and blue, enabling papers with color capability to make the strip as colorful as the traditional Sunday comics.

The separations will be made by Greater Buffalo Press, which prints Sunday comic sections for many newspapers.

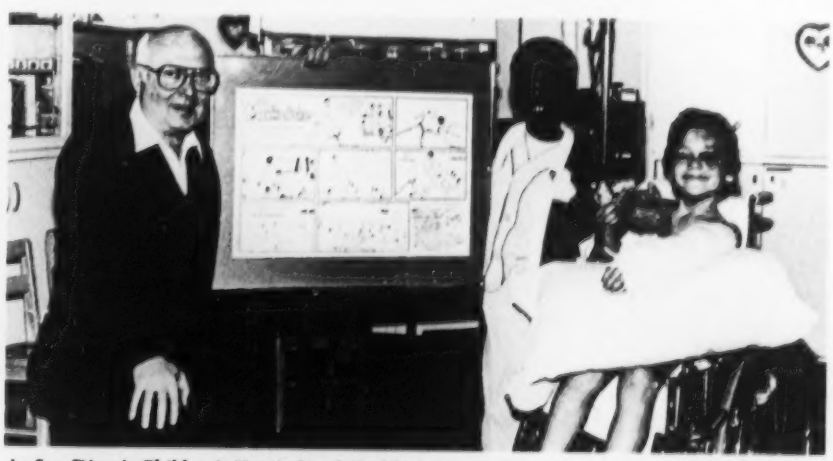
A handful of U.S. newspapers individually have been adding color to weekday comics, sometimes with results that have displeased cartoonists [**pres**stime, Dec. 1986, p. 58].

Whether the breakthrough by UFS will start a trend among syndicators of comic strips depends on the reaction from newspapers, observers say.

"If this works, we'll think about it for other top-of-the-line strips," said United Media's Oleffson.

"I think it's going to be marvelous," said Catherine Walker, executive director of the Newspaper Features Council (formerly the Newspaper Comics Council).

Mort Walker, Catherine's husband and the creator of the comic strip "Beetle Bailey," says the idea of supplying separations for daily color has been talked about for a number of years, but there hasn't been enough response from newspapers. As more papers achieve color capability, however, their attitudes may change, Walker says. □



At San Diego's Children's Hospital and Health Center,"Marmaduke" creator Brad Anderson donates comic strip in United Feature Syndicate's "Laughter is the Best Medicine" program.

Newspaper people are beaming about satellite transmission of advertisements

BY CRAIG C. STANDEN

One of the first priorities announced by the Future of Advertising project was the support of AD/SAT, a company formed to deliver advertising materials from advertisers and agencies to newspapers via satellite.

Last April at the ANPA Convention, Joe D. Smith Jr., chairman of the FOA Standardization Task Force, asked the newspaper business to make a commitment to the future of our business by signing up with AD/SAT.

In the 10 months since then, a good deal has happened:

• **In November, AD/SAT completed a successful two-month test** of its facilities and equipment [**presstime**, Jan. 1987, p. 52]. Four major New York ad agencies—N W Ayer, Ogilvy & Mather, J. Walter Thompson, and Young and Rubicam—took part, along with newspapers from Boston, Chicago, Houston, Los Angeles, New York, Newark, Philadelphia, San Francisco and Washington, D.C.

Reproduction quality of the transmitted material was excellent. It's impossible to tell the difference between impressions printed from original material and those printed from material transmitted via AD/SAT. The few "bugs" in the system were quickly corrected.

• **On Jan. 5, AD/SAT began commercial operation** from its transmission center in New York City. In the first two months, 11 additional agencies—including such giants as DDB/Needham, Grey, BBDO, and Bozell, Jacobs, Kenyon & Eckhard—have used the system to transmit national advertising to one or more of the 12 original AD/SAT newspapers.

• **Several retailers have expressed a great deal of interest** in the potential of AD/SAT for distribution of their advertising materials. One retailer, Lord & Taylor, which has stores in six of the 10 cities already served by AD/SAT, has been sending as many as 50 ads per week via the system.

• **On March 9, AD/SAT announced the signing of the 100th newspaper** to join its network. Because the facsimile equipment for the newspapers must be manufactured, there is a six-month lead time between the signing of the contract and the installation of the receiving equipment. Thus the number of newspapers actually able to receive ads via AD/SAT won't increase until July. But sometime in September or October, AD/SAT should have in its network 100 newspapers with combined circulation of 25.2 million daily and 31.4 million Sunday. And we have every reason to believe that these numbers will continue to grow.

Craig C. Standen

Looking toward that time and beyond, AD/SAT in March began a major promotional and advertising campaign directed at ad agencies. The campaign includes large-space ads in the advertising trade press and a six-and-a-half-minute videotape cassette briefly explaining how the system works and containing testimonials from print production people at the test agencies as to the quality and speed of transmissions.

What about the future of AD/SAT?

I believe it is an important step forward in our long-range effort to increase newspapers' share of the advertising market.

It will save our advertisers a lot of time and money. Instead of having to produce multiple copies of newspaper ad slicks or Veloxes, an agency or retailer can produce one copy of the ad. Instead of wrapping, labeling and shipping each copy of the ad, the agency merely delivers that one copy to AD/SAT. Instead of a day or two in transit (and the possibility of some of the packages getting lost or being delivered late), the ad can be transmitted by AD/SAT simultaneously to every newspaper in the network in three and a half minutes. Receipt of an ad is confirmed instantly by AD/SAT's electronic message system.

Cost to the advertiser for this fast, high-quality transmission is only $15 per newspaper for each ad transmitted, versus more than $70 each the older, slower way—a saving of nearly 80 percent.

What do newspapers get out of AD/SAT?

Eventually, they should get a lot more advertising—not just national advertising, but retail and classified advertising as well. As we have noted before in this space, there is a steady, long-range trend toward the centralization of advertising among retailers and among classified advertisers in the categories of recruitment and real estate. These advertisers are becoming more like national advertisers in many ways. They increasingly use ad agencies to prepare their ads, they tend to have all their advertising prepared in the same place, and they are quick to take advantage of new ideas and new technology that save them time and money.

But there is a much more immediate benefit for newspapers. In the course of a year, many newspapers lose thousands of dollars in advertising because of the aforementioned transmission problems, or because the lead time in getting an ad into print is too long. Some of this advertising is run at a later date, but much of it is revenue lost forever.

AD/SAT will get most of this lost advertising into the newspaper. I suspect for quite a few newspapers, the revenues saved by AD/SAT will more than pay for its cost.

The Newspaper Advertising Bureau has no financial or other interest in the ownership or management of AD/SAT. But the NAB Board of Directors and the Future of Advertising Steering Committee regard AD/SAT as an important step forward for our business. □

Standen, president of the Newspaper Advertising Bureau in New York City, is a regular contributor to **presstime**.

ATHENA contest open

The Newspaper Advertising Bureau has called for entries to its annual ATHENA Awards competition.

The awards recognize outstanding newspaper advertising (the acronym stands for "Awards To Honor Excellent Newspaper Advertising").

To be eligible, the ads must have run in a daily or Sunday paper published between June 3, 1986, and May 15, 1987. Winning ads will be published in NAB's "Creative Newspaper 12."

Deadline for submission is May 15. Entries should be sent to Creative Newspaper 12, NAB, 1180 Avenue of the Americas, New York, N.Y. 10036.

ANPA
1887-1987

A Star-Spangled Event . . .

ANPA 100th Anniversary Convention

The Waldorf-Astoria, New York
May 3-6, 1987

"The Blessings of Liberty: The Next 100 Years"

Marking two special anniversaries—the 100th anniversary of ANPA and the 200th anniversary of the U.S. Constitution.

Invited speakers include President Reagan, Nancy Reagan, former Presidents Jimmy Carter and Gerald Ford, Gov. Mario Cuomo, Sen. Robert Dole, former Sen. Gary Hart, and Mayor Edward Koch. Other expert speakers and panelists will join the program to highlight what the future holds for our country and for the newspaper industry.

Don't miss the special opening ceremonies at 4:30 p.m., Sunday, May 3, at Castle Clinton, a national monument in lower Manhattan overlooking the Statue of Liberty.

Convention Registration Forms were mailed earlier. Additional forms and Convention information are available from ANPA Membership Services (703) 648-1097 or 1098.

See you there!!

Commemorating a Century of Service to Newspaper People

For latest program details see page 78, this issue.

Media asked to participate in major anti-drug campaign

In what organizers hope will become the biggest public-service advertising campaign during peacetime, the media are being asked to donate space and time to run anti-drug abuse ads created free by advertising agencies.

The print and broadcast campaign is sponsored by the Media-Advertising Partnership for a Drug-Free America, a coalition formed under the auspices of the American Association of Advertising Agencies [presstime, Sept. 1986, p. 46].

Major daily newspapers will be asked to run the equivalent of a page of advertising a week during the three-year campaign. "We know that's a lot, and we know that a lot of them can't do it, but we would like to have a heavy campaign in newspapers," said Richard T. O'Reilly, national director of the partnership. "Newspapers and magazines are the only place where we can get a significant amount of information to the public. That's why we are asking for heavy schedules."

The Wall Street Journal is one of the major newspapers that has agreed to participate. It is "very rare" for the business daily to run public-service ads, said Angela Santoro, spokeswoman for the Journal's parent Dow Jones & Co. "There are a lot of good causes," she said, but "the drug problem is critical." Santoro said the Journal will decide how much space to devote to the ads after they are received and reviewed.

Smaller newspapers will be asked to "do the best they can" in providing space, O'Reilly said. "We'd like to be in every newspaper every week if we can, because we have extraordinarily persuasive and good advertising messages."

The newspaper ads—targeted toward parents, chief executive officers of companies and a mass audience—will be sent to newspapers by the end of April from the AAAA's 28 regional coordinators, he said.

The coalition hopes to receive the equivalent of at least $500 million of free ad space and time each year.

A three-year research program will coincide with the campaign. It will measure attitude changes and usage trends.

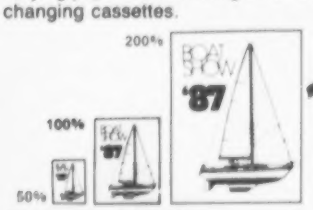
Newspaper business leaders on the coalition's board of directors are Daniel B. Burke, president of Capital Cities/ABC Inc., who serves as a vice chairman; ANPA Executive Vice President Jerry W. Friedheim; Craig C. Standen, president of the Newspaper Advertising Bureau; and Bernard T. Flanagan, vice president/marketing of The Wall Street Journal.

O'Reilly will appear at the ANPA Convention May 4 in New York City on a panel discussing the drug problem. (See story, p. 78.) □

Reduce or Enlarge Artwork for Positioning 50% to 200%

And Everywhere In Between

The 1824 Graphic ZOOMER copies artwork, ads, even full newspaper pages on **18" x 24" size plain paper.** Select varying paper sizes or weights without changing cassettes.



Reductions Ideal For:
• Positioning artwork • Mailing proof copies • Ease of filing • Facsimile transmission.

Faithfully reproduces pencil and marker layouts...even accepts vellum or mylar for special applications.

INAME study shows ad network outlook 'encouraging'

The outlook for newspaper advertising networks "seems encouraging," according to a study by the International Newspaper Advertising and Marketing Executives. By combining into networks, two or more newspapers offer advertisers a larger circulation base and the option of one insertion order and one bill.

Of the 149 INAME-member newspapers responding to the survey, 73 said they had been involved in networking presentations to advertisers during the past year; 56 said they planned such presentations within the next year.

Asked whether the presentations had resulted in ad linage, 44 respondents—four out of five of those who responded to that question—said yes. Of these, 26 said the linage was in the form of new ad schedules; 29 said it was additional linage from already existing advertisers. Eleven of the 44 said the presentations resulted in more linage.

The number of newspapers involved in the networks ranged from two to more than 10. Two-thirds of the respondents said the networks were confined to newspapers in the same state [presstime, Oct. 1986, p. 21]. □

Formula measures promotions

The art of getting and retaining newspaper readers is being transformed into a science.

In what may be a significant breakthrough, a task force of the Future of Advertising project has developed a formula that enables a newspaper to gauge how good or bad a specific circulation promotional effort is. It measures the results in terms of how much the promotion costs for each new subscriber who keeps on taking the paper.

By applying the formula, a newspaper should be able to discard promotional efforts that typically, after bundles of money and energy have been expended, result in a temporary surge in subscribership—only to have the subscribers tail off after a few weeks or a few months.

The formula was developed by Knight-Ridder Inc. under the auspices of the Readership and Retention Task Force of the FOA project.

Task Force Chairman Reg Murphy, chairman of The Baltimore Sun, said the guidelines "provide clear-cut definitions and formulas that will allow any newspaper to plan and monitor its circulation-building and retention efforts more reliably and efficiently."

The system results in a newspaper being able to ascertain its cost per unit, or CPU, of circulation. This is defined as being the cost of conducting a particular type of solicitation effort (telephone, sales crew, carrier, etc.) that results in new customers remaining on the subscription list 12 months later.

The results are obtained by applying the formula CPU = SPR (sales pressure ratio) x CPO (cost per order).

Sales pressure ratio is a percentage figure arrived at by determining how long new subscribers kept taking the paper after the initial promotion drive. Cost per order is arrived at by dividing the number of new orders into the total dollar amount spent to get the orders.

How to work out the somewhat complicated mathematical formulas is explained in a new task force booklet titled "Measuring Retention and Circulation Sales Effectiveness."

The report is an outgrowth of circulation studies begun by the FOA project, said Albert E. Gollin, director of research at the Newspaper Advertising Bureau. The result of the studies was published last June in a manual called "Readers: How to Gain and Retain Them." Gollin described that manual as the "nuts and bolts" of circulation problems, designed to inform newspaper executives about what the critical issues are [presstime, July 1986, p. 71].

The second phase was a questionnaire sent to members of the International Circulation Managers Association seeking information about their circulation promotion activities. From the replies of 58 newspapers, marketing researcher John B. Mauro identified and analyzed 15 different promotional strategies.

"The analysis showed that the evidence on circulation promotion was pretty low," Gollin said, "so it was extremely difficult, if not downright impossible to do an analysis of what worked, and didn't work, at what cost and why." That motivated the task force to look for and find "a set of measurement techniques on exactly what can be done, the cost, the benefits and the ability to compare different techniques across a period of time," Gollin said.

Copies of the new report are available from NAB, 1180 Avenue of the Americas, New York, N.Y. 10036; (212) 921-5080, ext. 397. □

Same-day coupon promotions employed by fewer than 100 newspapers

Same-day coupon promotion by newspapers has had a lukewarm response, the vice president in charge of marketing for the Newspaper Advertising Bureau said in March.

"I believe we can say probably fewer than 100 newspapers are promoting coupons," Uldis Grava said. He said one problem is that some advertisers do not send enough free-standing inserts with coupons to cover a newspaper's entire circulation.

"That's been a major problem," Grava said. "If they don't send enough coupons, it's kind of difficult to put an ear on your masthead or use the radio to promote coupons that aren't there. Some people are going to get mad."

The Audit Bureau of Circulations last June approved a one-year suspension of its Rule C 1.14, which prohibited promotion of the coupons on prior days or the same day the coupons appear in the newspaper. The suspension, called for in a joint resolution by ANPA and NAB, began Oct. 1 [presstime, July 1986, p. 75].

The rule has been a point of contention among advertisers and the newspaper industry for several years.

The ANPA/NAB-ABC Liaison Committee learned of the lukewarm response to the option of same-day promotions at a meeting Feb. 25. Next, it must decide whether to recommend that the one-year rule be made permanent. □

Adult carriers slain on job

Two adult carriers on opposite sides of the country have been murdered recently, prompting renewed concerns about carrier safety.

On Feb. 24, David L. Ritchey, 32, was beaten to death around 5 a.m. in a high school parking lot as he was delivering papers for The Spokesman-Review of Spokane.

No motive has been established. Cowles Publishing Co. has offered a $2,500 reward for information leading to the arrest and conviction of the killer. The Spokane newspapers also launched a fund drive for Ritchey's wife and three children. The fund had surpassed $25,000 when it was turned over to her.

Shaun O'L. Higgins, manager of consumer marketing and public relations for Cowles Publishing, said the company is increasing the number of two-way-radio-equipped circulation vans.

Higgins said most of the newspapers' 1,800-member carrier force is made up of youth carriers. After Ritchey's death, "a couple" of carriers resigned, he said.

In the other slaying, which occurred in December, Sean Rogers, 20, was struck on the back of the head with a hammer and his throat was slit while making collections between 7 and 8 p.m. on his route for the Niagara Gazette of Niagara Falls, N.Y.

Rogers was robbed of approximately $60 in cash he had collected. Police later arrested and charged a man with the slaying.

The Gazette circulation department subsequently sent a list of safety tips to carriers, advising them not to carry more than $25 or $30 cash and to collect only during daylight hours.

Many newspapers distributed safety tips during a rash of serious crimes against carriers, primarily youths, that occurred in 1984 [presstime, Sept. 1984, p. 6]. □

Most dailies still cost a quarter, but many are shifting to 35¢ or more

The ranks of 25-cent daily newspapers continued to decline in 1986, but nearly two-thirds—64.3 percent—held fast at that price level.

This compared with 70.9 percent that sold for a quarter in 1985 [**prestime**, March 1986, p. 54].

The biggest single change was newspapers in the 35-cent range, which increased from 202 in 1985 to 344 last year, suggesting that the 35-cent paper may supplant the quarter paper as the dominant one in the future.

The figures come from ANPA's annual survey of single-copy, city-zone, street-sale prices. A total of 1,778 newspapers were surveyed in the United States, Canada, Bermuda, Guam, Puerto Rico, the Bahamas and the Virgin Islands.

Along with the decline in 25-cent newspapers have come increases in the number selling for more than that amount:

- The number of 50-cent dailies rose from six to 15.
- Two dailies now sell for 45 cents, whereas none sold for that amount in '85.
- There were increases from 15 to 22 in the number of 40-cent papers, and from 171 to 177 in the number costing 30 cents.

Two daily newspapers published in the Canadian province of Manitoba retain a newsstand price of 5 cents. They are the Daily Bulletin of Dauphin and the Report of Swan River.

Continuing another trend, the predominant price of Sunday newspapers remained 50 cents in 1986, but the number at that level decreased to 273 (33.9 percent) from 295 (36.5 percent) in 1985. A total of 804 Sunday newspapers were surveyed.

The continued increase in Sunday prices was most pronounced in the highest price category. From one in 1985 (The New York Times), the number of Sunday papers selling for $1.25 jumped to 14 in 1986.

Sunday papers selling for $1 increased from 123 in '85 to 144 in '86, and the number of 75-cent papers climbed from 230 to 257. Four Sunday newspapers sold for 40 cents, compared with three a year earlier, and the number costing 95 cents went from one to two. The last remaining 20-cent Sunday paper, the Jennings (La.) Daily News, went to 25 cents in October. □

CPI is lower

Between January 1985 and January 1986, the average price of a newspaper rose 4 percent while the consumer price index increased 1.4 percent, according to the U.S. Department of Labor's Bureau of Labor Statistics. The previous year, the average price of a newspaper increased 4.4 percent and the CPI 3.8 percent [**prestime**, March 1986, p. 55].

Youth carriers dropped; parents protest

A group of parents in Santa Rosa, Calif., picketed The Press Democrat (morning, circulation 77,707) for a day to protest the removal of youth carriers in favor of adults.

The newspaper has employed both youths and adults as deliverers for several years, but Publisher James C. Weeks has begun a conversion to an all-adult force that will take about five months.

Weeks said he undertook the conversion after two major readership surveys showed that the number-one complaint of readers was late newspaper delivery. He noted that California state law prohibits youths from starting out on their routes before 5 a.m.; with adult carriers, a 3:30 a.m. start is possible.

The publisher also said youth-carrier turnover has been about 120 percent per year, "and it always escalates when you get near the summer."

Nationally, such problems have fed a trend toward more adult deliverers [**presstime**, Feb. 1987, p. 20].

Weeks said he does not expect to save any money by switching to adults. He said the paper will reduce the number of routes from 700 youth-carried routes to 325 adult routes.

After The Press Democrat held a series of meetings to explain its plans to youth carriers and their parents, some parents held a protest meeting at the YMCA, and a local radio station conducted a four-hour call-in talk show on the issue.

The day of picketing took place at the newspaper's downtown building and an outlying printing plant. Estimates of the number of people involved ranged from 25 to 50.

Some parents also have begun circulating petitions calling for retention of youth carriers.

"We've been taking a lot of flak from some of the parents," Weeks said, "but basically what we had was an antiquated system that should have been changed years ago."

The paper has offered youths the option of making the route a family affair, with one parent going along with the child to deliver papers on a motor route.

The Press Democrat, which is owned by The New York Times Co., will continue to pay young people to solicit new subscribers, Weeks said. □

Efforts made to forestall lawsuit in ongoing circulation dispute in Dallas

The Dallas Morning News and the Texas attorney general were negotiating in late March in an effort to forestall a possible lawsuit by the attorney general against the newspaper growing out of a dispute between the Morning News and the rival Dallas Times Herald over circulation claims.

Jeremy L. Halbreich, executive vice president of the Morning News, and Ron Dusek, spokesman for Attorney General Jim A. Mattox, confirmed that the two sides have held "confidential" talks.

The dispute started on Oct. 7 when the Times Herald published a story charging that the Morning News had been inflating its circulation figures by 40,000 to 50,000 copies. The Times Herald then filed suit against the Morning News on Nov. 10, also naming the Audit Bureau of Circulations as a defendant. The suit charged that the ABC knowingly published inflated circulation figures [**presstime**, Dec. 1986, p. 56].

The Morning News answered in court with a counter-claim that the Times Herald shreds 25,000 to 40,000 papers a day and claims them as paid circulation.

Both papers have denied each other's charges.

The attorney general on Nov. 4 sent both papers a "civil investigative demand" asking for the same information they had given to the ABC for circulation audits.

The Morning News filed suit in Dallas County District Court Nov. 18 asking that the attorney general's demand for circulation information be quashed. Halbreich said the court has put everything into abeyance until the attorney general decides whether to sue.

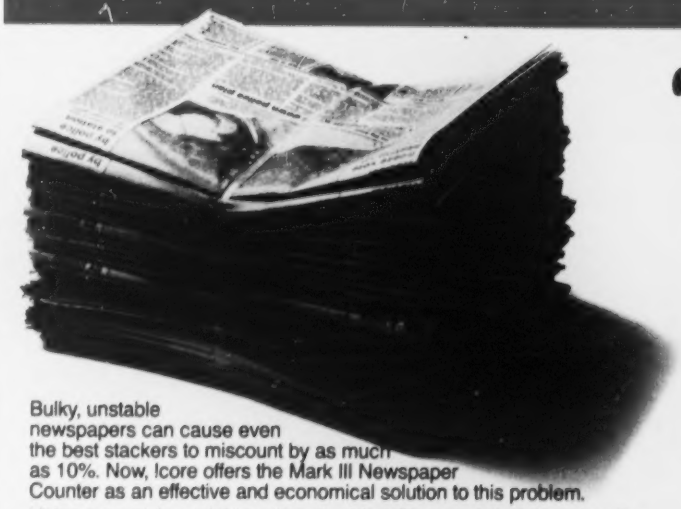
Meanwhile, another ABC audit of both Dallas papers has been suspended, and ABC officials are making no comment.

The Morning News, however, is commenting.

Noting that the newspaper editorially supported Mattox's opponent in last November's election, the newspaper has charged that his probe is politically inspired. The Times Herald supported Mattox.

The ABC Board of Directors adopted a clause on Nov. 14 that indemnifies the ABC from damages arising from publication of circulation figures. But the Times Herald suit was filed four days before the ABC gave final approval to its indemnification clause.

One of the events that led to the bureau's indemnification action was a 1983 lawsuit whose defendants were ABC, The Trenton (N.J.) Times and William Dean Singleton, who was then the newspaper's president. Last year, Singleton's MediaNews Group bought the Times Herald and he became chairman of the paper. □



Bulky, unstable newspapers can cause even the best stackers to miscount by as much as 10%. Now, Icore offers the Mark III Newspaper Counter as an effective and economical solution to this problem.

Using a count by weight system, the Mark III accurately determines the number of papers in each bundle leaving the stacker. Because the Mark III is a true in-motion weighing device, you can maintain a maximum line throughput of 60 bundles per minute. The Mark III effectively monitors line performance with its easy-to-operate microprocessor electronics.

Cost-conscious newspapers like the *Louisville Times, Omaha World Herald, Richmond News,* and *Tallahassee News* rely on the Mark III to eliminate shorted stacks and reduce distribution costs.

To learn how the Mark III could figure into your operation, call Icore today. (612) 633-5150.

"For an accurate count, our numbers stack up."

The Ramsey/Icore
Mark III Newspaper Counter
from the world's leading manufacturer of In-Motion Weighing Systems.

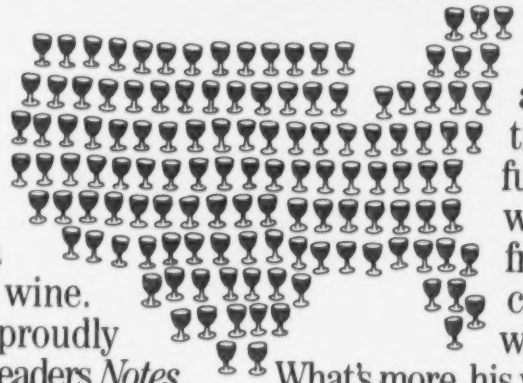
THE WINE COLUMN THAT GOES TO THE HEART OF AMERICA.



Millions of Americans from Tampa and Toledo to Tucson and Tacoma won't plan a dinner party, or a night out, without wine.

That's why we proudly offer you and your readers *Notes from the Wine Country* by Anthony Dias Blue. Wine editor of *Bon Appetit* magazine and host of a daily program on CBS Radio, Anthony Blue is one of the few Americans to receive the *Diplome d'Honneur* from France's *Corporation des Vignerons de Champagne.*

Most important, he's an expert who believes that wine should be fun. *Notes from the Wine Country* is as entertaining as it is informative, full of delightful stories about wines, the regions from which they come and the people who make them. What's more, his weekly companion piece, *Critic's Choice,* featuring the best of new wine releases, is available at a nominal charge.

To order, call Chronicle Features. And treat your readers to a premium column they'll look forward to every week of the year.

Notes from the Wine Country by Anthony Dias Blue. The wine column your readers can feel comfortable with. Once a week.

Growing number of mailer units renounce CWA

Since last July, mailer unions in 19 cities have voted to disaffiliate from the former International Typographical Union, now a sector of the Communications Workers of America.

As a result, about 3,000 members have been lost to the sector. Many of them have or are in the process of affiliating with the Teamsters. Before the ITU merged with the CWA Jan. 1, about 13,000 of the ITU's 40,000 active members were mailers.

Members of San Francisco-Oakland Mailers' Union No. 18 voted in July 1986 to disaffiliate [**presstime**, Sept. 1986, p. 57]. Members of Minneapolis-St. Paul Mailers' Union No. 4 followed in October.

In San Francisco, a new local has been chartered by the Teamsters as the Northern California Mailers' Union. It and the Minneapolis-St. Paul local have combined with former ITU locals in Cleveland, Columbus and Youngstown, Ohio, to form a new "trade district" within the Teamsters' Newspaper Drivers' Division. The division in Cleveland is headed by Carmen Parise, secretary-treasurer of the Newspaper and Magazine Delivery Drivers Local 473.

The International Teamster, the union's official publication, said the trade district arrangement within the Newspaper Drivers' Division "will preserve longstanding collective bargaining and representation traditions in the printing trades and will facilitate the unionization of unorganized workers in that craft."

In addition to Minneapolis-St. Paul and San Francisco, mailer locals in the following cities have voted to disaffiliate from their former international: Albany, N.Y., Albuquerque, Baltimore, Boston, Cincinnati, Dayton, Ohio, Des Moines, Detroit, Houston, Indianapolis, Louisville, Memphis, Milwaukee, Newark, Phoenix, Seattle and Topeka, Kan.

Earlier this year, CWA President Morton Bahr said his union would not "stand idly by and let the Teamsters decimate the ranks" of the former ITU [**presstime**, Feb. 1987, p. 50].

Yet in Houston, for example, Elmer C. May, employee relations director of The Houston Post, said the CWA "did nothing . . . to court the mailers."

"With the initial success of the Teamsters in gaining affiliation of mailer units, it likely will be only a year or two before several pressroom units cast their lot with the Teamsters," commented Charles D. Cole, ANPA manager/labor relations.

—Clark Newsom

Newspaper union leaders chart future course at summit meeting

Leaders of newspaper unions have established a task force to work out a program for coordinated bargaining in the newspaper industry.

The action came at a March 10 summit meeting called by Charles A. Perlik Jr., president of The Newspaper Guild, in an effort to "bring back the climate of progress and achievement to newspaper bargaining tables" [**presstime**, March 1987, p. 62].

Attending the meeting at Guild headquarters in Washington, D.C., were representatives of six unions that represent newspaper employees. They included Perlik; James J. Norton, president of the Graphic Communications International Union; Morton Bahr, president of the Communications Workers of America; Robert S. McMichen, president of the CWA's printing sector; Carmen Parise, director of the Teamsters' Newspaper Drivers Division; and representatives of the Service Employees International Union and of the International Association of Machinists.

The group agreed to meet again April 28 at Guild headquarters. Before that meeting, each union is to compile a list of the expiration dates of all its contracts in the newspaper industry. A major objective of the task force will be to achieve common contract expiration dates at newspapers.

Each union agreed to designate a senior, staff-level representative to the task force. The representatives will be charged with working out the bargaining program.

The Guild Reporter

At union leaders' meeting are (clockwise from left foreground) Parise, George Kourpias of IAM, David Cromer of SEIU, McMichen (partially obscured), James N. Wood of CWA, Bahr, Michael P. McNally of GCIU, Norton and Perlik.

"We want to re-establish a climate for achievement," Perlik said after the meeting. "The publishers are taking their cue from other industries in the country like steel, automobile and textile that have off-shore problems that don't apply to the newspaper business."

"We're in agreement with Perlik that the collective bargaining process needs to be restored to its former level of dignity," said the GCIU's Norton. "Establishing an international unions' committee is the initial step in helping to bring that about."

"As far as the Teamsters union is concerned," said Parise, "in the newspaper business we feel coordinated bargaining is a must. I think its good for the membership and good for the industry. Here in Ohio, I've accomplished that for the most part."

Perlik said he would encourage other unions with bargaining units in the newspaper industry, such as the Operating Engineers, International Brotherhood of Electrical Workers and the United Paperworkers International Union, to attend the April 28 meeting.

Joseph F. Barletta, director of newspapers for Freedom Newspapers Inc. of Irvine, Calif., and chairman of ANPA's Human Resources Committee, said he could not recall a previous union meeting "of this nature." But he said he believes it will "take more than meetings" for the unions to "regain their strength" in the newspaper industry. □

Court rules dismissal did not violate Rehabilitation Act

The 11th U.S. Circuit Court of Appeals has upheld a lower court's ruling that Atlanta Newspapers Inc., publisher of the Journal and Constitution, did not violate the federal Rehabilitation Act of 1973 when it terminated the employment of a pressman who had multiple sclerosis.

The pressman's doctor had recommended that he not work near machinery. The pressman, Raymond L. Burnett, was let go after he declined other jobs offered by the company.

Burnett subsequently filed a complaint with the U.S. Department of Labor's Office of Federal Contract Compliance Programs, alleging employment discrimination on the basis of a handicap. The complaint was based on the 1973 federal act that applies to the government and government contractors. A publication that accepts a contract for a government advertisement in excess of $2,500 is deemed a government contractor under terms of the act.

U.S. District Judge Robert H. Hall granted the company's motion for summary judgment. Hall ruled that the newspapers were not government contractors on the day of the termination—on May 28, 1981—because that day's editions did not contain a government ad costing $2,500 or more.

The Court of Appeals affirmed Hall's decision, finding that earlier and subsequent advertisements placed in the newspapers by the U.S. Air Force Reserve did not make the company a government contractor within the narrow definition spelled out in the act.

(Burnett v. Brock, USCA11 No. 86-8310) □

Paper faulted for not arbitrating

An administrative law judge of the National Labor Relations Board has found The Idaho Statesman of Boise violated the Taft-Hartley Act by refusing to arbitrate a grievance initiated by Typographical Union No. 271.

At issue was whether the arbitration provisions of a labor agreement survived its expiration date.

Judge Joan Wieder said that generally, the terms and conditions of an agreement survive its expiration until such time as a new agreement is signed or an impasse in bargaining is reached. She noted that the case is related to an earlier one, now under appeal, in which the board found that the company had violated the act by bargaining to an impasse over a non-mandatory subject [**presstime**, Nov. 1986, p. 67].

Wieder said she was bound by the board's earlier decision and found that the newspaper "did have a duty to arbitrate" under the continued terms of the contract. She recommended that the board order the newspaper to rescind its unilateral change in working conditions.

The company is appealing Wieder's decision to the board.

NLRB upholds work assignment

The NLRB has upheld the New York Daily News in its assignment to employees represented by a deliverers' union the processing of pre-inserted Sunday sections. The work had been claimed by another union.

The jurisdictional dispute involved the Newspaper and Mail Deliverers' Union of New York and Vicinity, and New York Mailers' Union No. 6.

The company filed charges with the NLRB after the deliverers' union threatened to strike if the processing work at a new distribution center was taken from its members, or if the company agreed to arbitrate the dispute as demanded by the mailers' union.

The mailers sought an order in U.S. District Court compelling arbitration of the dispute, contending that its members had previously performed the work at another company facility, but the court deferred to the board under Section 10(k) of the Taft-Hartley Act. That section requires the board to make an award of disputed work after considering various factors.

The NLRB concluded that for reasons of economy, efficiency and the company's preference, employees represented by the deliverers were entitled to the work.

(Newspaper and Mail Deliverers' Union and New York News Inc., 282 NLRB No. 97) □

AP contract ratified

The Wire Service Guild said March 20 that its members had ratified a new two-year labor agreement with the Associated Press by a 300-180 vote [**presstime**, Jan. 1987, p. 48].

Guild's Perlik sets October retirement date

Charles A. Perlik Jr., president of The Newspaper Guild for the past 18 years, will retire Oct. 14, 1987, a month before his 64th birthday.

Perlik has served as president longer than anyone else in the union's 54-year history. Before becoming president, he was secretary-treasurer for 14 years. Announcing his decision to retire, he said it "was made neither hastily nor under any duress, physical or otherwise."

Charles Dale

Charles Dale, currently secretary-treasurer, has announced his candidacy for president. Perlik is urging other Guild leaders and the membership to support Dale's bid.

Nominations for the presidency and other international offices will be made at the union's June 22-26 convention in San Diego.

Any contests that emerge will be resolved in an international membership referendum. If there are no contests, the candidates will be elected by acclamation at the convention.

The union has headquarters in Washington, D.C. □

NLRB dismisses charges in Tacoma

An NLRB regional director has declined to issue an unfair labor practice complaint against The Tacoma (Wash.) News Tribune.

The charges against the newspaper, filed by Mailers' Union No. 54, stemmed from a July 31, 1986, asset sale of the newspaper to McClatchy Newspapers of Sacramento. In the ownership transfer, McClatchy accepted no labor agreements or other contracts [**presstime**, Aug. 1986, p. 51].

The union alleged that by voluntarily recognizing it as the bargaining representative of mailroom employees, the newspaper became obligated to assume the terms of the old labor agreement.

John D. Nelson, the regional director in Seattle, said there was "no authority" for the union's position.

(Tacoma News Inc., Case 19-CA-18688) □

EMPLOYEE RELATIONS NOTES

• A telephone "hot line" for members of the Inland Daily Press Association to get **free advice on labor and personnel relations matters** has been activated by the Park Ridge, Ill.-based association.

"It's part of Inland's goal to help newspapers operate more efficiently," said Ray Carlsen, executive director. "We urge members to have their facts together before making a call."

The Chicago office of the law firm Seyfarth, Shaw, Fairweather & Geraldson is providing the service at no cost except for telephone charges. Members are charged for services involving more than telephone consultation.

• Labor organizations continue to represent **a declining proportion of the civilian workforce**, according to the U.S. Labor Department's Bureau of Labor Statistics.

The proportion of wage and salary workers belonging to unions fell from 18 percent in 1985 to 17.5 percent in 1986, BLS reported. While the decline was small, a BLS economist said it was part of a historical trend [**presstime**, March 1986, p. 22].

• Five former employees of Gannett Co.'s USA Weekend have filed a lawsuit charging the company with violations of the **Age Discrimination in Employment Act**.

The plaintiffs, who worked for Family Weekly before Gannett bought the Sunday magazine and converted it into USA Weekend [**presstime**, March 1985, p. 68], allege they were dismissed or demoted because they were over 40 years of age, a class protected by the act.

The five seek reinstatement to their jobs, back wages, damages and court costs.

Gannett has filed an answer to the charges in U.S. District Court in New York City.

• The discharge of a pressman at the Houston Chronicle for damaging a vending machine **has been sustained by an arbitrator**.

The long-term employee was fired after he kicked a candy machine in anger after depositing money and failing to receive merchandise. Glass on the machine was broken.

Arbitrator Charles R. Milentz said that although the vending machine incident by itself would not warrant discharge, the grievant's poor past record turned the event into a "last straw" situation.

• A jury has awarded the former classified advertising manager of the Visalia (Calif.) Times-Delta **$550,000 in a discharge case.**

The newspaper's lawyer is in the process of filing post-trial motions.

The plaintiff was fired for allegedly misappropriating company funds, but a Tulare County Superior Court jury found he had been wrongfully discharged.

Additional arbitration awards

Bellevue (Wash.) Journal-American, Guild: Michael H. Beck, ruling on three grievances, found the company violated the labor agreement by not paying student interns, but he upheld the company's refusal to pay overtime to a part-time employee for work on a sixth shift and its refusal to pay a minimum of four hours per shift for mailroom employees.

Chicago Sun-Times, Teamsters: Bert L. Luskin sustained the discharge of a truck driver who was convicted of gambling.

Erie (Pa.) Daily Times, Guild: Lewis R. Amis converted to a 30-day disciplinary suspension the discharge of a photographer for selling photographs for personal profit.

Eugene (Ore.) Register-Guard, Guild: Janet L. Gaunt overturned the discharge of a copy editor whose termination had been based on job performance.

San Diego Union and Tribune, Guild: Sharon K. Weizenbaum sustained the five-day disciplinary suspension of a circulation district manager for failing to report a driving accident.

San Francisco Chronicle, Guild: Armon Barsamian overturned for lack of evidence the discharge of a reporter for alleged falsification of time-cards.

San Jose Mercury News, Guild: Patrick J. Boner converted to a seven-month disciplinary suspension the discharge of a janitor for sleeping on the job.

Washington Post, Guild: Malcolm L. Pritzker found two free-lance writers were actually part-time employees and awarded them back pay and benefits.

Post-press prognosis: Labor still heavily needed

A mention of preprinted inserts usually brings moans and groans from newspaper production people. It did so once again at ANPA's second symposium on "Newspaper Packaging and Distribution."

Speakers and attendees at the March 3-5 conference in Chicago traded horror stories and said they believe mailroom woes will continue for the immediate future. With no end in sight to the proliferation of preprints, there was general agreement that the mailroom (some people prefer the newer terms "packaging and distribution center" or "post-press area") will remain a labor-intensive aspect of newspapering.

"I call it pre-press deja vu," George Cashau, ANPA director/technical research, said after the symposium. "That's because we're at about the same place in the post-press area that we were in the pre-press area about 10 years ago. The automation will come. We're just not there yet."

Symposium Chairman Larry D. Marbert, director/construction and mechanical systems for Knight-Ridder Inc., told the 205 attendees: "I believe if there is any theme to the symposium, it is that newspapers need to be open to new ideas and not simply rely on what's always worked to get the job done."

One of the presentations that attracted a high level of interest concerned the joint research and development effort just launched by The Washington Post and Harris Graphics Corp. The project features a computerized collating system that stacks inserts one on top another rather than inserting one into another.

Initially, only a fraction of the newspapers' preprints for the Sunday edition are being collated, said Michael Clurman, manager of the newspaper's Springfield, Va., plant. The rest of the collating equipment will be phased in over the next several months, he said, adding that if the equipment proves itself in the field tests, it should lead to significant reductions in mailroom staffing requirements.

The collating system has 40 hoppers situated along a conveyor belt, or linear "raceway," 225 feet long. Early in the week, individual preprints are fed into hoppers, and the preprints drop from the hoppers onto the moving raceway. The hoppers feed the raceway consecutively so that inserts are stacked in order.

Computers control the sorting of preprints for different zones and the number of preprints per stack.

Devices known as "pusher pins" separate the stacks and move them along the raceway.

Completed stacks enter an automatic plastic bagging machine manufactured by Sitma, an Italian firm. Clurman said the Post expects to produce 7,000 collated packages per hour on days prior to the Sunday edition's press run. The plastic packages are palletized and stored for eventual hand-stuffing into the newspaper "jacket" at the Post's three printing plants.

Even as the Post is looking forward to increased automation, an executive of Philadelphia Newspapers Inc. told the symposium there have been problems with the automated inserting equipment installed at PNI last year.

Glen E. Nardi, vice president/production, said the Ferag Inc. units were purchased in an effort to achieve efficiency in inserting preprints for The Philadelphia Inquirer and Philadelphia Daily News.

PNI purchased six Ferag Rotosert inserting drums, Rotodisc palletizing and depalletizing equipment, two 4-into-1 inserters, and four 8-into-1 inserters [**presstime**, July 1986, p. 26].

The equipment has not met PNI's expectations, Nardi said, because the size of the newspapers proved to be more than the inserting drums could handle, because the number of preprints received was considerably more than had been expected, and because employees did not learn to operate the equipment as quickly as anticipated.

Nardi said the Sunday edition has been split from two basic components to four parts to make the individual packages smaller and thus easier for the machines to handle.

A Ferag spokesman said the company is working with PNI to resolve the problems.

"Newspapers need to be open to new ideas and not simply relying on what's always worked."

In two other locations, the symposium audience was told, new equipment is working satisfactorily.

The Times-Colonist in Victoria, British Columbia, has been using Muller-Martini Corp. Bi-Liner inserters and Printroll Buffer system (storage drums) for little more than a year, and Production Manager Steve Majorki said the units are operating at capacity.

The newspaper is the first in North America to have that mailroom system installed, said Majorki, adding that it has enabled the Times-Colonist to reduce labor costs, increase productivity and accept inserts within an hour of press time.

The Lansdale (Pa.) Reporter is also satisfied with its new inserting equipment, the Graphic Management Associates SLS-1000, installed last year. The so-called "straight-line," single-gripper machine has made it possible for the newspaper to halve its mailroom staff, said Production Director Larry Stasulis.

Other speakers described computer software innovations for the mailroom. At The Boston Globe, for example, computers have been programmed to keep newspaper bundles, mailroom equipment, trucks and drivers flowing smoothly, said Michael Ide, assistant production director.

The Pittsburgh Press uses software in a different way. A program called Zip/Zap gives advertisers a choice of total market coverage or targeting certain ZIP code areas. William J. Lee, director/data processing for the newspaper's parent firm, Scripps Howard, said preprint advertisers are given 378 different truck routes used for delivery of the Sunday Press; the advertisers then select the routes based on the areas they want to target, and that information is fed into the computer.

As newspapers try these and other tactics in the logistical battle associated with handling billions of preprints annually, ANPA Chairman and President Alvah H. Chapman Jr. put the problem into perspective by reminding the group that preprints offer newspapers an opportunity to attract new advertisers and increased revenues.

"The combination of the zoning we (newspapers) have done and the additional volume of preprints, much of which is also zoned, has brought us many new customers," noted Chapman, chairman and chief executive officer of Knight-Ridder.

THE GROWING POWER
OF THE RZ LASER
SCANNING SYSTEM:

The only scanning system with on-line interactive previewing now packs the power of electronic dot generation.

INTRODUCING THE ROYAL ZENITH 210 L LASER SCANNING SYSTEM.

The RZ-210 L puts you way ahead in high-quality color, today and tomorrow. Controls are few and easy to master. On-line electronic previewing allows instant correction, with "fine tuning" and approval before you run film. With the 210 L System, you have the widest range (to correct transparencies), the highest color quality, and you're on your way to fully-electronic page make-up! (What's more, we've made it easy for present 200 S users to migrate upward to the powerful 210 L System.)

No wonder more newspapers use Royal Zenith color scanners than all other scanners combined!

Call Martin Sussman at **(201) 641-7200,** for information and a demonstration of the RZ-210 L System.

Royal Zenith
Scanner Division
2 Oxford Drive
Moonachie, N. J. 07074
(201) 641-7200

Put the growing power of the RZ-210 L to work for you!

Scanner use still growing

The use of electronic color scanners at newspapers in the United States and Canada continues to rise, a new ANPA survey revealed.

Of the 703 newspapers responding to the survey, 182 reported scanners in use. In the last survey, conducted two years ago, 103 newspapers were using electronic scanners [**pressTime**, March 1985, p. 56].

Exact comparisons between the two surveys are not possible because of differences in the number of respondents. The earlier survey drew 600 final responses.

Nevertheless, ANPA officials said the latest survey and other communications with newspapers indicate a definite increase over the past two years.

"Electronic color scanners are having a significant impact because color quality is so important to newspapers," said Peter P. Romano, ANPA director/technical services. The scanners are used to make color separations and to correct color tones in a picture.

Among other findings of the 25-question survey, which was mailed to ANPA's nearly 1,400 member newspapers late last year are:

- The scanner models most commonly used are Royal Zenith's 4050 and 2008, Hell Graphic Systems' 299 and 299L, Crosfield's 645 I.E., and D.S. America's SG-608, in that order.
- More than five times as many offset newspapers use color scanners as letterpress papers. Five papers with flexographic presses have them.
- Among newspapers without a scanner, 40 said they plan to buy one in 1987; 136 said they are considering a purchase. The rest, 345, said they did not plan an acquisition.
- Most papers using scanners—146—use transparencies (slides) for separations, 46 use color prints, and seven use color negatives. (The numbers total more than the 182 newspapers with scanners because some papers make separations from more than one type of photographic element.)
- Far more separations are made for editorial use than for advertising or for third parties on a commercial basis. Seventy-two newspapers said they make 40 or more editorial separations weekly. On the other hand, only 17 newspapers said they make that many advertising separations, and just five reported making that many commercial separations.
- Respondents use duPont film most often, followed by Fuji, Kodak and Agfa-Gevaert. For development chemistry, duPont is chosen most often, followed by Kodak, Agfa-Gevaert, Chemco and Fuji. Chromacheck is the most popular proofing system, followed by Color Key, Naps and six others.

Despite the benefits scanners offer, respondents reported that the machines can have their problems, too, including: "soft" dots; difficulty with installation and start-up procedures; slow, inconsistent service by manufacturers; blown fuses; dark lines appearing on negatives; sizing inconsistencies; vacuum-pump failures; loose belts; and difficulty in getting replacement parts.

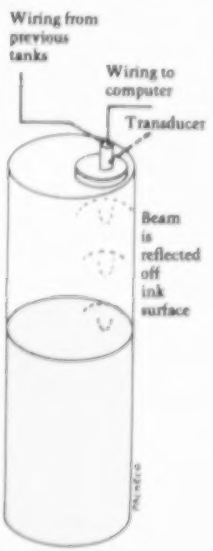
Asked what scanner concerns or related services ANPA should consider, respondents replied: training and retaining scanner operators, comparing systems, working with wirephotos, and controlling paper waste by getting the color right in the initial separation process.

Survey results will be mailed to ANPA member-newspapers this month. □

Sonar system gives continuous ink-tank readings

The concept of sonar usually brings to mind such nautical applications as finding fish or enemy submarines. But in the port city of Baltimore, it has taken on new meaning for the benefit of newspapers.

The Baltimore Sun has developed an inexpensive, sonar-based system in which its printing ink-tank levels are checked continuously to within an accuracy of one-tenth of 1 percent error—in other words, within 10 gallons in a 10,000-gallon tank.



Readings in gallons appear on an alphanumeric display in the press foreman's office located about 140 feet from the Sun's six ink tanks.

The monitoring system also enables the Sun to generate on ink usage per shift or per press run. They are useful in fine-tuning the presses for the most economical operation, training press crews for maximum efficiency and keeping track of ink deliveries.

The heart of the system is a commercial version of a simple rangefinder/transducer developed by Polaroid Corp. for the focusing mechanism in a line of instant-picture cameras. The Sun installed one of these transducers mounted in a special plastic fixture measuring 6-8 inches in diameter in the manhole cover of each of its six tanks.

Cost for the hardware was about $2,000. Total development time was about six months.

The devices emit short pulses of ultrasonic sound down into the tank, and they detect the echo that bounces back from the surface of the ink stored there. Distance from the sensor to the ink is determined by measuring the time it takes for a pulse to travel down and back. Depth of the ink is derived simply by subtracting the transducer-to-ink distance from the height of the tank. Volume then is calculated automatically and displayed in gallons.

The transducers accurately measure distances to within one-eighth of an inch with a range of 35 feet. They are linked to a custom microprocessor that produces the six alphanumeric readings in the foreman's office.

Thomas M. Germroth, the Sun's supervisor of production support, said readings from the system eventually will be transmitted to a personal computer for further analysis. The Sun also plans to set up an alarm indicating such things as low ink levels, tank overfill and a sudden drop in ink level caused by a broken ink line or other problem.

Germroth said the sonar system has proven far superior to other ink-measuring devices such as in-line flow meters, which are "delicate and costly", and specific gravity gauges and "float and repeaters," which are much less accurate. □

Editor's note: This story was submitted in response to ANPA Technical Committee requests for innovative technical ideas. Send submissions to Dawn D. Murphy, Technical Services Department, The Newspaper Center, Reston, Va.

Solution to offset tinting, toning found to give erratic results

About 100 newspapers have contacted Anchor/LithKemKo for information since the plateroom chemicals and supplies manufacturer announced last fall that it had found a possible solution to offset newspapers' tinting and toning problems.

However, company President James F. Meister said it now appears the solution, which involves exposing gummed offset plates a second time with an ultraviolet light [**pressti**me, Oct. 1986, p. 16], has something in common with many remedies tried in recent years—sometimes it works and sometimes it doesn't.

No one has been able to determine why.

"Some newspapers have had great success, and for others it hasn't worked at all," Meister said.

The Anchor/LithKemKo procedure calls for coating an offset plate with a photosensitive chemical, diazo resin, and then exposing it with a negative on a light table—fusing the diazo as an image to the plate. A second exposure of three to four seconds is thought to bond any residual diazo to the plate and thus prevent stray particles from becoming ink-receptive and mottling the printed page.

"We would like to trace back through the times it was successful. That might provide a clue as to why it doesn't work all the time," Meister said.

ANPA will do just that. George Cashau, director/technical research, said his department will include that in its new in-depth study of tinting and toning problems.

The research, which may take several years and may well result in several, not just one, solutions to the problem, will concentrate on the following areas:

- The effects of various water, ink and paper combinations
- The range of optimal operating temperatures for newspaper offset printing presses, with special attention to ink train rollers and plate cylinders
- The effect of ink flow
- The effect of plate surface graining
- The possiblity of setting guidelines for raw materials used in the offset process.

Cashau, who spoke on the subject at the Great Lakes/Midstates Newspaper Conference in Chicago in late February, described tinting and toning as an offset printing defect that involves the coloring of the non-image area with the color or colors being printed. This creates a dirty-looking background that is severe in some cases, barely noticeable in others.

"The cause or causes of the problem are not known partly because the offset printing process is a complex chemical, material, mechanical printing operation involving hundreds of variables. We believe that this problem can be caused by ink, fountain solutions, plates, newsprint, pressmanship, plate exposure, atmospheric conditions and gremlins," Cashau said, the last item noted at least partially in jest.

Because a cure to the problem has proved so elusive, he called tinting and toning "the common cold" of offset printing. Cashau said no offset-printed newspaper is spared the malady and added: "It is an industry problem that all of us must resolve."

Until research helps determine a cause and develop a solution, newspapers can follow some procedures to minimize toning, he said.

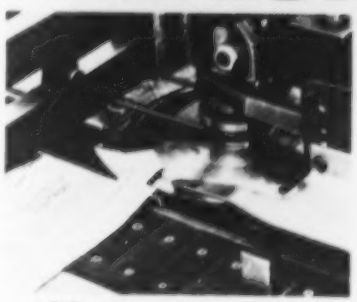
"I firmly believe that a good quality control program makes trouble-shooting easier," Cashau said. "If a newspaper has established checkpoints along its production system and has recorded equipment settings, variances in these routines can easily be spotted. In other words, you know where to look." □

Equipment exchange

For sale: Two Hendrix 6490 systems. In use now, producing 42 pages daily. One system has four RK05 drives and 15 VDTs with full classified and composition packages. One has three RK05 drives, no classified, no composition, 24 VDTs. Three TTYs, one heavy-duty. Includes spare readers, punches, drives, boards, etc. Contact Pam Byrne, production manager, Concord Monitor, 3 North State St., Concord, N.H. 03301; (603) 224-5301.

Editor's note: Exchange notices are published without charge as a service to ANPA-member newspapers.

STUFFING TABLOIDS?



Only McCain's 660 newspaper stuffer uses a rotating disc to open tabloid jackets!

...it's more accurate... it's faster...it's easier to set up...and it eliminates the need for a lap.

If you're thinking of automating your hand stuffing operation, or if you're just tired of the problems of your present system, write or call for complete information on our 660 systems.

New infrared equipment predicts and prevents downtime

When an overheated bearing fails on a press, it can cause a catastrophic equipment failure.

To guard against that and other thermagraphic problems, two Texas newspapers owned by The Hearst Corp.—the Midland Reporter-Telegram and the Beaumont Enterprise—have an outside company come into their plants with sensing equipment to locate problems before they happen.

George B. Irish ordered his first survey from Witte Energy Management of Midland when he was publisher of the Reporter-Telegram there in 1982. Irish said he found the information to be so beneficial that he has ordered expanded evaluations on an almost annual basis since then.

After Hearst purchased the Beaumont newspaper, Irish moved there in 1984 as publisher and again instituted the thermographic surveys. The Midland daily, meanwhile, has continued them.

"It really makes a lot of sense," Irish said. "We have been warned of a number of problems that, left unattended, would have resulted in substantial costs." Those problems range from overheated motors that would have burned out to faulty electrical connections, he said.

Richard E. Witte, president of the energy-management firm, visited The Newspaper Center in Reston, Va., in March to demonstrate his company's service, which is more widely used by the oil, bottling and some other industries.

After the demonstration, William D. Rinehart, ANPA vice president/technical, said pressroom, mailroom and plateroom equipment all are potential candidates for such an evaluation. "Equipment can be checked out in minutes without disassembly that could take days, and that could be very valuable for newspapers," Rinehart said. "Downtime can cost newspapers a lot of money. It would be great to predict such failures ahead of time."

George Cashau, ANPA director/technical research, noted the trouble-shooting procedure is "predictive as well as preventative."

Other companies perform thermographic inspections, but Rinehart and Cashau said they were not aware of others that are soliciting business from newspapers.

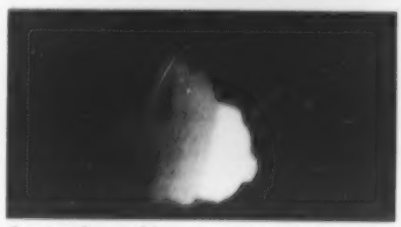
Witte explained that locating equipment that is likely to fail is possible because worn parts give off more heat than do those in good working order. Witte, an engineer, uses portable infrared imagers and non-contact spot thermometers to inspect motors, electrical switchboxes and other components. The infrared sensing equipment detects hot spots not visible to the naked eye and creates a thermal image in a camera-like viewer.

Equipment failures generally are not sudden but rather are progressive, with the troublesome part growing hotter and hotter over time, he said.

In addition to detecting potential mechanical failure, thermographic inspections can also be useful in energy-conservation programs by identifying areas of heat loss.

A detailed report, including infrared photographs of specific parts, is prepared. Equipment to be watched or that needs immediate attention is pinpointed.

The cost of the surveys at the two Texas dailies has averaged about $500 to $1,000. Irish said he regards this as "money well-spent." □



Sensors detected bearing wear on a shaft at the Beaumont Enterprise.

TECHNOLOGY NOTES

• Camex Inc., a manufacturer of display-ad makeup systems for newspapers, **purchased Intertext Inc.**

Intertext, founded in 1984, makes personal-computer-based editorial and classified systems for small-to-medium-size newspapers.

• Dow Jones & Co., Apple Computer Inc. and MCI Communications Inc. are joining forces to create and market communications software that **integrates electronic mail functions with graphics capabilities** of the Apple Macintosh.

Desktop Express will allow users to send documents with graphics to remote locations.

• Digital Equipment Corp. signed a marketing agreement with Aldus Corp. to **market PageMaker desktop publishing software** as part of DEC's VAX Integrated Publishing system.

Widely used by newspapers, PageMaker is a page-composition program that allows the computer screen to be used as an electronic paste-up board.

• AM International Inc., which acquired Harris Graphics Corp. in 1986, has combined Harris' Web Press USA and Web Press Europe Division into a **new Web Press Group.**

The move is part of AM's plans to consolidate its Harris subsidiary.

TECHNOLOGY CALENDAR

• **Composition '87 and Type-X '87**, the National Composition Association convention and trade show, will be April 9-11 at the Marriott Marquis in New York City.

• **Paper and Ink Problems in the Pressroom**, a Graphic Arts Technical Foundation seminar, will be May 2 at the International Hotel, Baltimore/Washington International Airport, and May 5 at the Holiday Inn, Milford, Conn.

• The **Gutenberg Festival**, will be May 14-17 at the Long Beach (Calif.) Convention Center.

• The **annual Web Offset Meeting**, a technical seminar will be May 18-20 at the Royal York Hotel in Toronto.

• **ANPA/TEC '87**, the 59th annual ANPA Technical Exposition and Conference, will be June 6-10 at the Las Vegas Convention Center.

Kodak dropping Ektaflex; newspapers seek alternative color print system

Eastman Kodak Co.'s announcement that it will stop making Ektaflex color-print-making equipment and supplies has resulted in a quandary for some newspapers.

The problem, according to photo directors and technicians, is that there is no product on the market that equals the performance of Ektaflex—a system in which color prints can be made quickly and without running water.

Ektaflex is popular especially among newspaper photographers who need to make color photos while traveling on assignment. It is used mostly in conjunction with color negative film, now the standard at a number of newspapers [**presstime**, Feb. 1987, p. 12].

Kodak recently told its dealers it will stop making Ektaflex materials in late 1987. Spokesman David D. Holtz said the reason is insufficient demand. "We liked the product a great deal, but the market demand is really very, very low," he said. "It is not cost-effective to keep producing" the line.

Some newspaper photo chiefs speculated that Kodak will cease production as part of the aftermath of a lawsuit that Polaroid Corp. won against the Rochester company. Polaroid protested Kodak's introduction of instant-print cameras.

However, Holtz said the technology involved in Ektaflex and instant cameras is "sufficiently different" to eliminate that kind of possible legal entanglement. Of the Ektaflex decision, he said, "I really don't think there is any relevance" to the lawsuit.

Kodak's decision has left newspapers to ponder a world without Ektaflex.

One option is to make prints with traditional technologies that require running water and temperature control. "It's a little harder but not that much harder," said Brian H. Horton, photo enterprise editor of the Associated Press. AP, a heavy user of Ektaflex, has stockpiled a supply of the paper, film and chemicals involved, he noted.

Harlin D. Smith, graphics editor of The Sacramento Bee, said another alternative is to shoot slides rather than negatives and to send the transparencies back home via a new transmitter designed especially for positive film. He is not sure that will be his newspaper's course of action, however.

Andreas C. Constantinou, darkroom technician in the New York City office of Newsday, said he lacks sufficient hot water to do traditional color printing conveniently. He laments the loss of Ektaflex. "I'm sunk without it," he said. □

Transportation

Safe-driving programs may lead to insurance-rate discounts

ANPA's Newsprint and Transportation Department suggests that newspapers ask their auto and truck insurance companies about reduced premiums that might be available if the newspaper implements a safe-driving program.

Carriers in some states may give a credit for such programs.

Insurance Services Office Inc. of New York City, an insurance statistical, advisory and rating firm representing about 80 percent of the commercial auto and truck business, said safety campaigns lead to fewer claims and ultimately to lower premiums.

ISO offered the following explanations of two basic insurance rating plans that could benefit newspapers.

• "Experience" rating plans, which generally apply to businesses with five or more vehicles of any type, use the actual loss experience of the firm being insured to determine premiums. If the company's loss record is better than average, it will get a credit; if the record is worse than average, it will pay more. Most carriers use the insured's loss record for the previous three years to determine any needed modification. Changes can be made to premiums that provide liability, comprehensive and collision coverage.

• "Schedule" modification plans, permitted in most states, allow an underwriter to raise or lower rates to reflect changes in a risk. For example, if a newspaper installs a safety program that the underwriter believes will improve its loss record, the underwriter can allow a credit in anticipation of the improved loss record over the next few years. The underwriter also can raise rates under this plan when he or she does not get cooperation in trying to improve a loss record.

In a few states where experience rating is mandatory, schedule rating is not permitted.

An example of a safety program that can result in lower insurance rates is the safe-driving campaign jointly sponsored by ANPA and the International Circulation Managers Association since 1941. Open to all dailies at no charge, it is designed to reduce highway fatalities and injuries in the United States and Canada and to build a safe-driving record in the newspaper business.

The program has been successful. The accident rate among 619 participating newspapers in 1985 was more than 42-percent lower than that of 1941 [**presstime**, June 1986, p. 66]. Information on the 1986 program currently is being compiled.

Details of the ANPA-ICMA campaign and of some individual newspapers' programs are available from the ANPA Newsprint and Transportation Department or from ICMA at The Newspaper Center, Reston, Va. □

Truck deregulation reintroduced

Legislation has been reintroduced in Congress to deregulate the trucking industry and provide for phasing out the Interstate Commerce Commission.

The measure would keep railroad freight regulation intact but would transfer virtually all of it from the ICC to the Department of Transportation. The ICC would close Oct. 1, 1987.

Common-carrier liability for shipments regulated by the ICC would be retained. □

Conrail prepares to sell stock

Conrail has filed with the Securities and Exchange Commission a registration statement covering the federal government's proposed initial public offering of 58.75 million shares of the railroad's common stock.

The public offering is being made under the Conrail Privatization Act, enacted last year [**presstime**, March 1987, p. 73].

According to reports, initial offering price will be $26-29 per share, which would generate $1.52-1.7 billion. Congress last year envisioned a yield from the sale of about $1.7 billion. □

New truck brake rules issued

The Federal Highway Administration has ordered that by Feb. 26, 1988, front-wheel brakes must be on commercial motor vehicles exceeding 10,000 pounds gross vehicle weight and manufactured after July 24, 1980.

The FHA said a one-year grace period will be allowed, however, where retrofitting is required.

CPU targets Abitibi-Price; UPIU strikes Arizona mill

The Canadian Paperworkers Union has picked Abitibi-Price Inc. as the target company in contract negotiations with paper workers in Manitoba, Ontario, Quebec and the Maritime Provinces. The majority of Canadian mill contracts expire this year [**presstime**, March 1987, p. 73].

Preliminary talks are under way between the CPU and Abitibi, with full-scale negotiations scheduled to begin April 21. The union is seeking a $1-an-hour increase (6.7 percent) for the first year and a minimum of $1.25 an hour (8 percent) for the second.

ANPA's statistics indicate that U.S. newspaper publishers are keeping newsprint inventories at a good level in anticipation of a possible labor problem.

Canada supplies the U.S. with more than half of its newsprint supply, most of which comes from Eastern Canada.

In labor news at U.S. newsprint mills:

• The United Paperworkers International Union March 17 struck Southwest Forest Industries' Snowflake, Ariz., mill. The company planned to resume operations using salaried and replacement workers as negotiations between management and the union took place. The contract expired Feb. 28.

• A three-year contract was ratified between the UPIU and Augusta (Ga.) Newsprint Co. Workers will receive a 3-percent raise in the first year, a $1,000 lump-sum increase in the second and 3 percent in the third. □

Peladeau and Maxwell acquire Donohue Inc.

The Quebec government agreed to sell its 56-percent share in Donohue Inc. to Quebecor Inc. and British Printing and Communications Corp. for $320 million.

Quebecor is a Montreal-based printing and newspaper publishing company, and British Printing—headed by press magnate Robert Maxwell—is the parent company of the Mirror Group of newspapers with headquarters in London.

Donohue is a Quebec City-based forest products concern with newsprint mills at Amos and Clermont, Quebec.

Pierre Peladeau, Quebecor president and chief executive officer, said Quebecor and British Printing will respect Donohue's joint newsprint operations with The New York Times Co. and Gannett Co.

In a related development, the Quebec government decided not to sell its 28-percent share of Domtar Inc. Control of Domtar assets will remain in the hands of Dofor Inc., which in turn is 90.7-percent held by Societe Generale de Financement du Quebec, a provincial holding company [**presstime**, Jan. 1986, p. 68]. □

Another price hike

Two Canadian newsprint firms have announced they will increase prices to U.S. customers on July 1.

MacMillan Bloedel Ltd. made the first announcement, saying its list price would be raised to $600 per metric ton less discount.

Abitibi-Price Inc. followed with an announcement of an increase to $610.

Last Oct. 1, most newsprint producers raised the list price to $570 per metric ton for U.S. customers [**presstime**, Nov. 1986, p. 70].

NEWSPRINT NOTES

• Crown Forest Industries Ltd. plans a **$25-million expansion** of its Elk Falls thermomechanical pulp mill at Campbell River, British Columbia. By 1989, newsprint capacity there will be increased by 50,000 metric tons to 500,000 tons a year.

• CIP Inc. has **started up a new 155,000 metric-tons-a-year newsprint machine** at its Gatineau, Quebec, mill. The machine replaces one with 95,000 tons of capacity that was closed in 1985 [**presstime**, June 1986, p. 77].

• CIP has joined Kenaf International on a task force to study the **feasibility of using kenaf** as a fiber for newsprint. A mill test of kenaf grown in Texas will be made in October—possibly at one of CIP's mills—with actual pressroom trials to follow [**presstime**, Feb. 1987, p. 52].

• Tasman Pulp & Paper Ltd.'s newsprint mill in Kawerau, New Zealand, is expected to be shut down for a few months because of **damage from an earthquake.**

Three-year contracts were industry norm in '86 negotiations

More than three-fourths of the labor contracts negotiated in 1986 at U.S. pulp and paper mills were for three years, according to an annual study by the American Paper Institute.

Of the 129 agreements, 98 were for three years. Fifteen were for four years, 14 for two years, one for one year, and another for six years.

First-year wage increases amounted to a weighted, national average of 0.3 percent. Deferred increases [**presstime**, April 1986, p. 67] averaged 2.2 percent for the second year and 2.4 percent for the third.

The following charts summarize the wage provisions for 1986 contracts:

1986 first-year wage increases[1]

Region	Mills[2]	Employees[2]	Weighted average[2]
New England	15	6,111	1.0% (12¢)
Eastern	21	5,234	0.6% (6¢)
Southern	48	30,458	0.1% (3¢)
Midwest	37	16,322	0.5% (4¢)
Pacific	8	2,903	0.2% (2¢)
National totals 1986	129	61,028	0.3% (3¢)
National totals 1985	101[3]	35,068[3]	2.1% (24¢)[3]

Deferred wage increases (negotiated in 1986)[2]
Second year (1987)

Region	Mills[2]	Employees[2]	Weighted average[2]
New England	15	6,111	1.2% (12¢)
Eastern	21	5,234	2.7% (27¢)
Southern	48	30,458	2.4% (32¢)
Midwest	36	16,132	2.7% (32¢)
Pacific	8	2,903	(0%) (0¢)
National total	128	60,838	2.2% (28¢)

Third year (1988)[1]

Region	Mills[2]	Employees[2]	Weighted average[2]
New England	14	5,996	3.0% (35¢)
Eastern	18	4,593	2.2% (22¢)

Newsprint seminar set next year

ANPA and the Canadian Pulp and Paper Association's Technical Section will sponsor a newsprint seminar Oct. 13-14, 1988, at the Chicago Hilton. Further details will be published in **presstime**. □

'87 consumption opens on upswing

Newsprint consumption by all U.S. users increased 1.5 percent in February compared with February 1986, while U.S. daily newspapers' consumption increased 1.4 percent. For the first two months of 1987, consumption was up 0.4 percent for all users and 1 percent for daily newspapers.

Newsprint inventories of newspapers in ANPA's statistical sample were estimated at 42 days' supply at the end of February, the same as at the end of January but down from 45 days in February 1986.

Worldwide shipments from Canadian mills for the first two months of the year were running ahead of last year by 6.9 percent. Shipments to the United States were up 4.8 percent.

Domestic shipments from U.S. mills during the two-month period increased 6.3 percent, while shipments overseas were up 14.4 percent. The lower value of the U.S. dollar contributed to the increase in exports.

Estimated consumption of all U.S. daily newspapers[1]

Region	January 1987	January 1986	% Change

Parade contract clause draws ire of some publishers

Most early respondents to a survey of the Southern Newspaper Publishers Association objected to a new clause in updated contracts with Parade magazine that says a newspaper may not carry "any other syndicated newspaper magazine" without risking termination of its contract with Parade.

So far, only three members of SNPA will have to eliminate either Parade or USA Weekend under the clause, said Cynthia W. Durham, information officer for SNPA. They have been given until February 1988 to reach a decision, she said.

After one publisher told SNPA of the clause in February, the SNPA Bulletin ran a story about it in its Feb. 25 issue, attaching a questionnaire on the subject and asking association members to respond.

As of March 18, 36 of SNPA's 435 member newspapers had returned the questionnaires. Their responses were mixed concerning whether they would sign such a contract, Durham said. But while most carry only one of the nationally distributed magazines, there was widespread discontent about Parade's policy, she reported. "It was the principle of the idea, that Parade was seeking to influence editorial content."

"The principle of the thing," countered Parade Publisher Carlo Vittorini, "is we can't afford to give them a good magazine without preserving advertising revenues." He called the SNPA Bulletin story "irresponsible" because it "indicated that we were restricting the distribution of other people's products, and that's not true."

Rather, he said, the clause asserts Parade's right to control its own distribution to meet fiscal needs, a policy it has followed "forever."

The policy has required a gradual implementation of the special clause only in the past three years due to the inclusion of USA Weekend as a supplement to some Friday or Saturday editions, a practice which did not occur with its predecessor, Family Weekly.

Parade's current circulation is 31.7 million through about 300 newspapers, while USA Weekend's is 13 million through about 200 papers [**presstime**, Oct. 1986, p. 71].

"Parade does not distribute through newspapers that carry another national syndicated magazine because we cannot exist without national advertising support," said Parade President Frank McNulty. "We have found that national advertisers are unwilling to pay for inefficient, duplicated readership that would result if a newspaper carried more than one national syndicated magazine."

Whenever Parade representatives have discussed the policy with publishers, he said, "every one fully understood and appreciated our problem and was sympathetic to the contractual steps we took to meet it."

USA Weekend, meanwhile, is experiencing some changes in its markets. Starting April 1, it picked up more than 300,000 circulation by virtue of a new contract with The Boston Herald. But it will lose one large market, Chicago, on May 1, and it may lose a second one, Houston, this fall.

The Chicago Tribune was released from its contract four months early and will stop carrying the magazine, primarily to devote more resources to its own Sunday magazine, said Robert R. Reese, special projects manager. He also cited the loss of national advertising revenues to USA Weekend as a secondary consideration.

The Houston Post notified USA Weekend last September of its intention to cancel its contract with the magazine, but it will be next September before a cancellation can take effect.

Post Publisher Donald F. Hunt said a final cancellation decision has not been made. "We are not ready to say we want to continue for another two years," he said. "Sending in our cancellation gives us an opportunity to rethink things."

The loss of national advertising to USA Weekend was the main reason the Post would cancel the magazine, Hunt said. □

PAGE volume soars

Membership in a purchasing cooperative for independent daily newspaper owners reached 82 and their purchases totaled $17 million in 1986, its second full year of operation.

The purchasing volume represents an 87-percent increase from 1985 for Publishers Associated to Gain Economy, or PAGE.

The cooperative is projecting that purchases this year will reach $25 to $30 million, in large measure because of added newsprint commitments.

PAGE was started in mid-1984 to give independent newspapers the clout to obtain volume discounts previously available only to large newspaper groups [**presstime**, Feb. 1986, p. 61].

PAGE members range in circulation from 6,000 to 120,000. □

Support given for project to save newspaper titles

Newspaper-related foundations and individual newspapers have contributed about 7 percent of all the non-federal funds supporting a national effort to find and preserve about 250,000 newspaper titles published in the United States from 1690 to the present.

With the recent addition of Illinois to the United States Newspaper Program, half of the states now participate in the project, which is primarily funded by the National Endowment for the Humanities and coordinated with the Library of Congress.

Of the $6.4 million in grants so far awarded to program efforts in various states, about $2 million has come from non-federal sources. Of that, more than $140,000 has come from newspapers, the largest single grants being $80,000 from Gannett Foundation and $18,210 from the Journalism Foundation of the Alabama Press Association.

The project has cataloged thousands of newspaper titles that were born, expired or changed with the march of history. Those newspapers now are being preserved for use by scholars, genealogists and the public.

The project began to collect newspapers in 1982, almost 10 years after various historical societies began to push for the effort, including the Organization of American Historians, which made it its highest priority [**presstime**, Sept. 1984, p. 13].

"One of the most exciting aspects of this program is that new newspaper titles and whole runs of old newspapers are being discovered," says Humanities Endowment Chairman Lynne V. Cheney.

"Project directors intensively survey their states, the word gets out that old newspapers are being sought, searches are made, and new material is found in garages, attics, cellars, newspaper offices, and city halls."

In Indiana, where newspapers have contributed more than $12,000 to the effort, researchers have found 5,500 newspaper titles, many more than the initial estimate of 3,200.

The endowment says that newspapers sometimes are found for communities that no longer exist. On the other hand, the project discovered that the present Banner Graphic in Greencastle, Ind., has had 32 ancestor newspapers since 1852.

Among the other Indiana finds were the first issue of the Anti-Slavery Chronicle and Free Labor Advocate, published in New Garden, Ind., in 1847, and an 1885 issue of The Gosport (Ind.) Weekly Spy. □

INPA becomes INMA; INAME (formerly INAE) complains

Members of the International Newspaper Promotion Association voted by a 5-to-1 ratio to change the organization's name. As of March 20, it became the International Newspaper Marketing Association.

"The view of our board is that 'marketing' is the operative word," said INMA President Caroline C. John, vice president and general manager of Cox Arizona Publications Inc. "It encompasses those functions that our people perform," including promotion, research, public relations and product modification.

Opposition to the move came from the International Newspaper Advertising and Marketing Executives, whose leadership said the name change will create confusion among newspaper advertisers and within the newspaper business itself.

Two weeks after INPA issued ballots to members on the name change proposal, INAME President Al Dant, advertising director of The Plain Dealer of Cleveland, asked INAME members to try to convince promotion managers at their newspapers to vote against it, or to rescind their votes if already cast in favor of the change.

According to John, only a handful of members voted to rescind the name change.

Both organizations have headquarters at The Newspaper Center in Reston, Va. □

Group draws 'blueprint' for action on minorities

More than 200 leaders in the drive for racial diversity throughout the newspaper industry gathered in Washington, D.C., in March to develop "A Blueprint for Action" for presentation at ANPA's 100th Anniversary Convention in May.

Washington Post columnist Dorothy Gilliam, chairman of the Institute for Journalism Education, which sponsored the event, said the "blueprint" will help "accelerate the progress" made over the past 10 years.

The final, detailed "blueprint," incorporating ideas from the conference, will set forth "a five-year plan with intermediate deadlines and the prospect for real progress," she said.

Robert C. Maynard, president and editor of The Tribune in Oakland and co-chairman of the conference, called the plan a "mid-course correction" to hold on to talented minority journalists who have been departing because of lack of promotions.

Gilliam said the final blueprint will urge action in four areas:

- Training and encouragement of junior and senior high school students through a national network of journalism workshops and other means
- Insistence by top newspaper management on aggressive recruiting of minority candidates by middle managers, through incentive programs, accountability in performance reviews and other mechanisms
- A commitment to give "minority employees access to the upward career track" through career development programs, such as mentoring and diverse training opportunities
- A "commitment to promote people who are ready," thus relieving the scarcity of minority journalists in decision-making positions.

Although the conference's emphasis was on the news side, participants said the blueprint should also be applied to all other departments. "Only a few of us have ever even raised the possibility before this year" of pushing for increased minority recruitment for business-side newspaper positions, Maynard said.

Along those lines, the first newspaper job fair to focus solely on business-side careers drew 400 minority students and about 55 recruiters from newspapers and associations to The Washington Post March 19-21. The event was cosponsored by the industry-wide Task Force on Minorities in the Newspaper Business and ANPA Foundation [**presstime**, March 1987, p. 75].

Another job fair in March drew 175 American Indian students from 10 high schools in a first-time effort by the Native American Press Association to sow interest in journalism careers among Indian youth.

NAPA Executive Director Margaret A. Clark-Price said she would like to repeat the "Communicative Arts Career Day Symposium" semiannually.

Among the tribal media, the nation's largest daily newspaper owned and managed by American Indians closed suddenly Feb. 20, upon orders of Tribal Chairman Peter MacDonald.

The award-winning Navajo Times Today, published at tribal headquarters in Window Rock, Ariz., had a circulation between 7,000 and 10,000, principally among the Navajo population in the Southwest [**presstime**, May 1984, p. 76].

Tribal officials said the paper's continuing large indebtedness prompted the closure, and that they are working to reopen the newspaper on a sounder basis. But the closure also unleashed accusations against MacDonald of political motivation. He had regained his tribal chairmanship last year following a bitter election campaign in which Navajo Times Today had endorsed his rival. □

Chronicle price highest ever; Freedom trial begins

BUSINESS ROUND-UP

The impending purchase of The Houston Chronicle by The Hearst Corp. for $400 million in cash and notes would represent the highest price paid for a single newspaper, according to industry analysts.

Because the Chronicle is owned by the Houston Endowment, the sale agreement reached in March with Hearst is subject to the approval of Texas Attorney General Jim A. Mattox, who has authority to review transactions of the state's charitable trusts.

The review is "routine," said Mattox spokeswoman Elna Christopher. "We are just reviewing it because of the great amount of money involved that would go to the foundation that gives money to public-interest projects." If Mattox does not approve the sale to New York City-based Hearst, he could file suit to stop it, Christopher said.

William Dean Singleton, owner of the Dallas Times Herald, disclosed that his previous offers of $500 million and $415 million cash for the Chronicle had been rejected by the Houston Endowment, which had to sell the paper by 1989 to comply with federal tax laws [**presstime**, Feb. 1985, p. 52].

Richard J. V. Johnson will stay on as president and publisher of the Chronicle, said Frank A. Bennack Jr., Hearst president and chief executive officer.

One week before the sale agreement, the Chronicle laid off 52 full-time employees, including five from the newsroom, because of the depressed economy in Houston, leading to decreased ad sales. But the Chronicle remains the dominant paper in Houston, leading the rival Houston Post in circulation by 425,434 to 316,209 daily and by 528,153 to 373,573 on Sunday. The Post is owned by Toronto Sun Publishing Corp., which acquired it in 1983.

In other recent business matters affecting newspapers:

• Montreal's new fifth daily, **Le Matin**, began publication and aims to reach 40,000 circulation within a year. Owned by publisher Jean-Guy Duguay and five partners, with 10 percent of the shares reserved for employees, it is printed and distributed by The Gazette of Montreal. The Gazette is part of the Toronto-based Southam newspaper group, which also financed some of Le Matin's start-up costs.

• **Affiliated Publications Inc.**, parent company of The Boston Globe, agreed to acquire Billboard Publications Inc. for $100 million. Billboard publishes eight specialty magazines, including the weekly entertainment magazine, Billboard, and books for the arts and entertainment markets.

• Former Harte-Hanks executive Tucker Sutherland, who formed **Sutherland Media Inc.** of San Antonio with the acquisitions of San Antonio Monthly magazine as well as two daily and four weekly Texas newspapers that Harte-Hanks Communications Inc. had sold Dec. 31 to Worrell Enterprises Inc. of Charlottesville, Va., added to his new company. Sutherland acquired another weekly, The Northwest Leader, serving a suburban area northwest of San Antonio.

• The lengthy intrafamily battle over the ownership of **Freedom Newspapers Inc.** went to trial March 16 in a California Superior Court in Orange County.

Harry H. Hoiles, son of Freedom Newspapers' late founder R.C. Hoiles, is suing his relatives for control of a third of the closely held corporation's assets, placing shares worth more than $300 million at stake [**presstime**, Jan. 1986, p. 62].

• **Dow Jones & Co. Inc.** completed purchase of 51 percent of the stock of Far Eastern Economic Review Ltd., making it a wholly owned subsidiary of Dow Jones. As part of the agreement, South China Morning Post sold its interest in Dow Jones Publishing Co. (Asia) Inc., which publishes The Asian Wall Street Journal, to Dow Jones for $2.1 million.

• Executives of **Clay Communications Investors** are negotiating with several "major newspaper organizations" for sale of The Charleston (W.Va.) Daily Mail and Clay's other newspaper and broadcast properties, said John F. McGee, managing partner of Clay [**presstime**, March 1987, p. 76].

• **Ingersoll Publications Co.** started twice-weekly editions of 17 of its free-circulation St. Louis Suburban Journals, adding Friday to the regular Wednesday publication schedule. □

ANPA Labor Relations and Technology Seminar

Las Vegas Convention Center
June 5-6, 1987

Who Should Attend

Labor Relations Executives, General Managers, Production Directors

This Timely Seminar Explores

Impact of Technology on White-Collar and Production Employees
Retraining and Transfer of Employees
Two-Tier Wage Structures
Negotiating Strategy Development
Competency and Performance Standards
Equal Pay Disputes Activated by Technology

Registration Fee

$350—includes admission to ANPA/TEC '87, ANPA's Technical Exposition and Conference, June 6-10

For More Information

Contact Mary I. Sepucha, Assistant Manager/Labor Relations, ANPA, The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041 (703) 648-1073.

Speeches

Dorothy Gilliam

Howard Hart

Glen E. Nardi

Curtis Bok

Single copies of the following speeches are available from the ANPA Public Affairs Department at The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041:

The Blessings of Liberty
ANPA Chairman and President Alvah H. Chapman Jr., chairman and chief executive officer, Knight-Ridder Inc. Ralph McGill Lecture, Henry W. Grady School of Journalism and Mass Communication, University of Georgia, Athens, Feb. 19

The Press Has Nothing to Fear But the Press Itself
John C. Quinn, editor, USA Today, and executive vice president/news, Gannett Co. Remarks made in receiving the annual William Allen White Foundation Award for Journalistic Merit, University of Kansas, Lawrence, Feb. 10

Advancing the Cause of Racial Diversity in Newspapers
Dorothy Gilliam, columnist, The Washington Post. Task Force on Minorities in the Newspaper Business, Reston, Va., Feb. 1

Tinting and Toning: Common Cold of the Offset Printing Business
George R. Cashau, ANPA director/technical research. Great Lakes/Midstates Newspaper Conference, Chicago, Feb. 22

Comments on Censorship
Cushrow R. Irani, managing director, The Statesman Ltd., Calcutta, India. Challenging the Censors Conference, London, Jan. 16

Satellite Photography, The First Amendment and National Security
Mark E. Brender, chairman, Radio-Television News Directors Association's Media in Space Committee, and national security assignment editor, ABC News, Washington, D.C.; and Maj. Gen. Jack E. Thomas, U.S. Air Force (ret.). The Association of the Bar of the City of New York, Dec. 9

Staying the Course
Howard Hart, president, Canadian Pulp and Paper Association, Montreal. CPPA annual meeting, Montreal, Jan. 30

Modifying the Modified Final Judgment—Removing the Barnacles
Federal Communications Commissioner Patricia Diaz Dennis. Federal Communications Bar Association, Washington, D.C., Feb. 19

From the ANPA Newspaper Packaging and Distribution Symposium II, Chicago, March 3-5:

The Need for Preprint Packaging Specifications
John Kimball, director/advertising, The Record, Hackensack, N.J.

Experience with Ferag Retrosert and Rotodisc
Glen E. Nardi, production director, Philadelphia Newspapers Inc.

The Zip/Zap Preprint Distribution System
William J. Lee, director/data processing, Scripps Howard, Cincinnati

Facilities Planning and Design
Curtis Bok, plant manager, Minneapolis Star and Tribune

Collating and Automation at The Washington Post
Michael Clurman, manager/Virginia plant, The Washington Post

Automated Material Handling
William Schulz, personnel coordinator/engineering, R.J. Reynolds Tobacco Co., Winston-Salem, N.C.

Assistant General Counsel, Tonda F. Rush

Final preparations made for centennial Convention

In what promises to be one of the most dramatic settings ever for an ANPA conclave, the Association's 100th Anniversary Convention will begin its four-day run in New York City with the Statue of Liberty in the background.

The setting, at Castle Clinton National Monument at the tip of Manhattan, is in keeping with the Convention theme, "The Blessings of Liberty: The Next 100 Years." It will commemorate not only the 100th anniversary of ANPA, but also the 200th anniversary of the U.S. Constitution.

President Reagan has been invited to speak during the ceremony.

The May 3-6 Convention will look back in history, examine the newspaper business of today and peer into the future.

Highlights will include a panel discussion by leading thinkers on the societal issues they believe will shape the next 100 years.

A multimedia slide presentation will document the progress made by the American press and American society in the 100 years that ANPA has been in existence.

Other sessions will look at some of the issues facing society and the newspaper business today, including increasing minority employment, dealing with the drug problem and maintaining advertising market share.

Speakers will include a former U.S. President, Jimmy Carter, who will address the concluding lunch; and two potential contenders for the presidency in 1988—Senate Minority Leader Robert J. Dole (R-Kan.) and former Sen. Gary Hart (D-Colo.)—who will speak at the Tuesday lunch.

In March, the Convention Arrangements Committee announced the addition of a number of other speakers to the Convention lineup.

New York Gov. Mario M. Cuomo will be among those addressing Sunday's opening ceremony. New York City Mayor Edward I. Koch will extend greetings at Monday's Keynote Breakfast. First lady Nancy Reagan is scheduled to address Monday's Associated Press Lunch.

Participants in a Wednesday seminar on "The Constitution: Separation of Powers 1987" will include: Judge Robert H. Bork, U.S. Court of Appeals, District of Columbia Circuit; Benjamin C. Bradlee, executive editor of The Washington Post; U.S. Sen. Orrin G. Hatch (R-Utah); Jack Nelson, Washington bureau chief of the Los Angeles Times; Dan Rather, anchorman and managing editor of the CBS Evening News; William Safire, columnist for The New York Times; Abraham D. Sofaer, legal adviser at the State Department; former Central Intelligence Agency Director Stansfield Turner; and former Secretary of State Cyrus R. Vance.

Nancy Reagan

Mario M. Cuomo

Edward I. Koch

Stansfield Turner

For the second year in a row, Convention events will take place at more than one location. Besides the opening ceremony at Castle Clinton, St. Bartholomew's Church will be the site of the Associated Press annual meeting, but all other sessions will be at The Waldorf-Astoria. (The church is across the street from the Waldorf.) Shuttle buses will be available to transport conventioneers between the Waldorf and Castle Clinton as well as from Castle Clinton to various Sunday evening peripheral events.

Convention preregistration in late March was approaching 2,000. Convention-goers who have not yet made hotel reservations through ANPA now must do so themselves.

A limited number of tickets for all ANPA meal functions were still available in late March from ANPA's Membership Department at (703) 648-1097. All meal functions will be open seating.

A two-mile Convention "fun run," sponsored by **presstime** has been tentatively scheduled for 7 a.m. Sunday. Registration for the run will be in the Hilton Room of the Waldorf from 9 a.m. to 6:30 p.m. Saturday and immediately prior to the run Sunday morning on the Park Avenue side of the Waldorf.

Later on Sunday, from 11 a.m. to 3:30 p.m., ANPA staff members and other experts will be available in the Hilton Room of the Waldorf to answer questions at five "Expert Centers." The centers will cover labor and personnel matters, technical operations, legal/postal/government affairs, advertising/marketing, and literacy.

Several peripheral events will be open to all members: a reception at Castle Clinton prior to the opening ceremony, sponsored by Knight-Ridder Inc.; a reception Monday evening at The Metropolitan Museum of Art, sponsored by The New York Times Co.; and a reception Tuesday evening sponsored by King Features Syndicate. Other peripheral events, by invitation only, include a musical presentation at Carnegie Hall (New York Daily News), a broadway show (The Times Mirror Co.) and a champagne brunch at Macy's (The New York Times Co.).

At press time, the Convention Arrangements Committee headed by Times Mirror President David Laventhol was putting the finishing touches on the program, which was shaping up as follows:

At the **Sunday** opening ceremony at Castle Clinton, ANPA Chairman and President Alvah H. Chapman Jr., chairman and chief executive officer of Knight-Ridder, will give welcoming remarks. An address by

Annual meeting notice

Notice is hereby given by the Secretary of the Association, Arthur Ochs Sulzberger, that the Annual Meeting of the American Newspaper Publishers Association, Incorporated, a corporation organized under the laws of the Commonwealth of Virginia, will be held at The Waldorf-Astoria, New York City, at 4:30 p.m. Tuesday, May 5, 1987, for the purpose of electing Officers and Directors, and to transact such business as may properly come before the membership.

Gov. Cuomo and possibly one by President Reagan will follow.

The **Monday** ANPA Keynote Breakfast at the Waldorf will begin with the slide presentation looking back over the past 100 years. Then Chapman will deliver the keynote address. Syndicated columnist Calvin M. Trillin will conclude the meeting with his remarks, "A Humorist's View of America and Americans."

The program will then move next door to St. Bartholomew's for the AP annual business meeting. It will feature a film presentation on newspapers and electronic photography.

The AP's Annual Lunch, at the Waldorf, will be addressed by Nancy Reagan.

Two concurrent sessions at the Waldorf will conclude the day's program:

- "The Drug Problem," with moderator Janet Chusmir, president and publisher of the Daily Camera in Boulder, Colo., who recently was named to become executive editor of The Miami Herald.

Panelists will be Allan Adler, legislative counsel of the American Civil Liberties Union; Peter B. Bensinger, president of Bensinger, DuPont & Associates of Chicago and former administrator of the U.S. Drug Enforcement Administration; Dr. John P. Morgan, professor and director of the Pharmacology Department at the City University of New York; Richard T. O'Reilly, national director of the Media-Advertising Partnership for a Drug-Free America; and Richard K. Willard, assistant U.S. attorney general, Civil Division, Department of Justice.

- "Minorities in Our Industry," with moderator Albert E. Fitzpatrick, director of minority affairs, Knight-Ridder. Speakers will be Mary Frances Berry, a member of the U.S. Civil Rights Commission; and William J. Elliott, executive director of Leadership Education And Development in Montclair, N.J. Panelists will include Loren Ghiglione, editor and publisher of The News in Southbridge, Mass.; Pam M. Johnson, publisher and president of The Ithaca (N.Y.) Journal; and Madelyn P. Jennings, senior vice president/personnel, Gannett Co.

The **Tuesday** program will begin with a general session panel discussion on "The Next 100 Years," moderated by Katherine Fanning, editor of The Christian Science Monitor. Among the participants will be Sissela Bok, associate professor of philosophy at Brandeis University, Waltham, Mass.; Freeman J. Dyson, professor of theoretical physics at the Institute for Advanced Study, Princeton, N.J.; Michael K. Hooker, chancellor of the University of Maryland Baltimore County; and former Colorado Gov. Richard D. Lamm, currently a visiting professor of policy studies at Dartmouth College, Hanover, N.H.

The Newspaper Advertising Bureau's marketing/advertising program will follow. It will begin with a report from NAB Chairman Frank A. Daniels Jr., publisher and president of The News & Observer and The Raleigh (N.C.) Times, followed by an overview for 1987 presented by NAB President Craig C. Standen, Executive Vice President Leo Bogart and other NAB staff members.

Next will be a presentation on the Future of Advertising project, including reports from the chairmen of the project's 10 task forces. The NAB annual business meeting will close the morning program.

Tuesday's ANPA Lunch will be addressed by Dole and Hart.

Details of the afternoon general session on the future of retailing were incomplete at press time.

The Tuesday program will conclude with the ANPA annual business meeting and election of officers and directors [**presstime**, March 1987, p. 82].

Wednesday's program will begin with the general session on the separation of powers, conducted by Columbia University Seminars on Media and Society. Fred W. Friendly, director of the seminar program, will make introductory remarks. Moderators will be Arthur R. Miller and Charles R. Nesson, professors at Harvard Law School.

The ANPA Lunch will be addressed by former President Carter, after which the Convention will adjourn. □

over-set

A drug-data bust

The computerized library database of The San Diego Union and The Tribune was "broken into" by two men using a personal computer and modem.

The pair, subsequently charged with drug possession, had made hard-copy printouts of four stories relating to previous drug arrests and drug-enforcement activities. Police and newspaper officials theorized that the men were trying to determine, among other things, if people named in the stories could have been police drug informants.

Union Associate Editor Peter Kaye said it is unknown how the duo obtained entry to the database. They might have obtained the proper password or might have been "hackers" who figured out the system.

At any rate, "there was no particular harm done to us," Kaye said, although the newspapers do not want to be used for such purposes.

The Union and Tribune have taken steps to ensure that the computer cannot be tapped again, including changing their database password.

The newspapers also say there is "no way" stories could be tampered with by an outsider during the writing and editing process.

Newspaper numbers

49 billion—number of preprints handled by U.S. newspapers in 1986, compared with 16 billion in 1975.

929 and 280—highest (The New York Times) and lowest (Chattanooga Times) number of dollars paid weekly as a top minimum for experienced reporters working under contracts with The Newspaper Guild as of Dec. 1, 1986.

95,000—dollars spent, on average, to defend a libel lawsuit.

59.7—percent of students enrolled in schools of journalism and mass communication who are women.

34—number of ombudsmen at newspapers in the United States and Canada.

Where does a funeral director propose to the obit taker? On the obit page, of course

A man and a woman in Strasburg, Va., set Oct. 10 as the date they will respond to an ad among the obituaries of the Northern Virginia Daily. But they will go to the altar, not the funeral home.

For months, a news clerk at the newspaper, 29-year-old Jeanne P. Eckerson, had been taking death notices over the phone from Charles A. Jackson, 30, a funeral-home employee. "People used to accuse him of going out and digging up bodies just to get to talk to me," Eckerson jokes. Jackson asked her for a date, and as their relationship progressed, he warned that he would propose to her in a public way.

After she had finished the obit page Feb. 12 and left for the night, several scheming newspaper employees inserted on the page a heart-encircled message that Jackson had ordered: "Jeanne: We met through this page. We'll end up on this page. Will you spend the rest of your life with me? Chuck."

Eckerson did not read the page the next day. As Feb. 13 agonizingly ticked by, Jackson had not gotten his response.

That night, weary of the subtle approach, he told Eckerson to read the newspaper. She began at Page 1. Finally, he had to direct her gaze to the message on Page 15.

"I'd always said I'd kill him if he did this publicly, but I lied," Eckerson said. "I said 'Yes'."

Ann Lehman, Northern Virginia Daily

Happy Birthday to you, and you, and . . .

One day in the newsroom of the Atlanta Newspapers, a young reporter who was working far away from his childhood home lamented that it was his birthday and no one even bothered to send him a birthday card.

Religion Editor Billie Cheney Speed heard the comment, and it touched her heart. She baked the reporter a birthday cake.

"Then I thought, 'Heck, why not do it for others who have a birthday?'" Speed says. A tradition was born.

Because there are more than 200 editorial employees at the Journal and Constitution, Speed bakes about one cake a week for those celebrating birthdays in that week.

"They're a great group. It really is my pleasure," she says.

Speed, who has been a reporter for most of the last 42 years (she started as a woman sports reporter), was asked earlier this year what she wanted for her own birthday. She said her cake pans were kind of beaten up and she could use a new one. So on her birthday in February, the staff gave her a heavy-duty Mixmaster and two cake pans, in addition to a cassette tape recorder.

But Speed (at right in photo) got no birthday cake. She is a diabetic and can't touch the stuff.

A funny thing happened on the way to the bank

We're talking big-time improbables here—like hell freezing over, the Cubs winning a pennant, the hard-nosed chief of The Newspaper Guild sending his paycheck to the newspaper publishers.

Well, the latter happened last month, albeit accidentally.

When **presstime** labor writer Clark Newsom asked the Guild to send him a photograph of Charles Dale, a candidate to succeed the retiring Charles A. Perlik Jr. as the union's president, the Guild complied.

But when the package containing the picture arrived, Newsom also found inside a smaller sealed envelope (without a return address) addressed to a Maryland savings and loan. A call to the Guild prompted an internal inquiry at the union's Washington, D.C., headquarters. Inadvertently, someone there had shoved Perlik's paycheck into the larger envelope sent to **presstime**.

Once the error was discovered, of course, the union leader's paycheck was sent off to the bank—from ANPA headquarters.

Have You Looked at Your Yellow Pages; Lately?

It's Grown, Hasn't It?

And now you probably have 2 or even 3 directories in your market where there was just one a few years ago. Perhaps you haven't looked at the Yellow Pages as competition, but they may be your biggest competitor for local ad revenue.

American Consulting Services in Vancouver, Washington, has developed a marketing program for the newspaper industry which can teach your ad reps how to convert Yellow Page dollars into newsprint contracts. Millions of dollars have already been recaptured by the newspaper industry through this training program. You have an opportunity this year to increase your bottom line by simply checking into this cost-effective seminar.

Quality and commitment: The best in writing.

"I'm sort of the back roads person for the AP," says Special Correspondent Jules Loh. "I have been to every state, not as a tourist but as a reporter, talking to the people. And I'm forever discovering something about this country that I didn't know before."

The Associated Press is a news organization that doesn't have a star system, but Jules Loh stands out. His stories, focused on the everyday lives of Americans, often show the extraordinary side of ordinary people. His well-crafted pieces have been spotlighted in almost every newspaper in the country and have made his name one of AP's most familiar bylines.

Loh is a product of AP. He came up through the bureau system, starting 28 years ago in Louisville, filing the wire. He's spent his career taking on all kinds of news and features assignments, routine and special, to serve the needs of the thousands of member newspapers and broadcasters who own AP.

Like him, the 2,850 people who staff AP's 219 offices around the world are dedicated to giving these members the highest quality service in the news industry — a goal that is a continuing commitment by everyone in AP.

"Quality is not something I specifically think about every time I go to work in the morning," says Loh. "But when you're working with people who have a commitment to excellence and to quality, the quality comes out."

AP Associated Press
Quality. Commitment.

1887 100 Years of Making Communications History 1987

presstime

INDEX VOLUME 9, NUMBER 5 MAY 1987

Special Report *Happy 100th, ANPA! A look back at the life and times of the American Newspaper Publishers Association. It all began in 1887 when 46 newspaper executives met at a Rochester, N.Y., hotel to form an organization devoted to the business concerns of daily newspapers. Since then, the Association has tangled with the government over issues as diverse as newsprint tariffs and wartime censorship, jousted with newspaper unions, confronted new competitors and otherwise become a force fighting effectively for the interests of North American newspapers.* **28**

Foreign owners *Although at least 150 U.S. newspapers are now owned by non-U.S. companies, the foreign invasion has focused moe on other media.* **6**

Work of art *Newspapers and newspapering have inspired many artists over the years. Here are a few examples of their famous and not-so-famous efforts.* **12**

Rx for UPI: Radical surgery *Former UPI President Milton R. Benjamin says only a leaner, refocused wire service can hope to survive on its own.* **14**

The heat of battle *Sunny Florida is the site of what may be the hottest newspaper competition in the United States today.* **16**

End of the line for "front ends"? *Not yet. Many still see a future for the electronic editorial systems, even though PCs are coming on strong.* **40**

These editors deliver *In an effort to keep the newsroom in closer touch with readers, four U.S. dailies have editors who double as circulation overseers.* **50**

Profile: George W. Wilson *The president of the Concord Monitor will be nominated to lead ANPA into its second century.* **54**

Essay: Memories *Stanford Smith and Cranston Williams reminisce about their combined 36 years as ANPA chiefs of staff.* **56**

Coupon promotion problem *A hitch has arisen in same-day promotion of coupon values—not enough inserts to cover the entire press run.* **86**

Electronic monitoring *The use of computers to track employee productivity is a new labor issue. Some newspaper unions say it hampers performance.* **90**

ANPA/TEC '87 *It's back in Las Vegas and bigger than ever. Take a look at what's in store for the floor at the June 6-10 Exposition.* **98**

CHAIRMAN'S CORNER

A busy year of going in the right directions

This, my last column in this space, prompts me to look back at what we set out together to do during ANPA's past year. The reason I haven't looked back before now, really, is that we who have had the opportunity to head your Association the last 12 months have just been too busy going from one task and activity to another! And, I feel pretty confident, now, that we have been going in the right directions.

A year ago I asked you to share views with me and to let me know, particularly, "anytime you see us straying off the course you think best for us all." Well, you are not bashful folks; you did speak up to me scores of times as we met at ANPA and other newspaper business events. Your constructive suggestions and occasional candid gripes helped your Association's elected leadership target the things you knew were most important to us all.

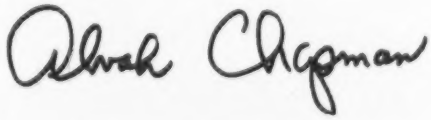
Alvah H. Chapman Jr.

We agreed to continue priority attention on technical developments, and we did. We worked on electronics and flexo and ink; we helped our individual newspapers achieve better printing quality, both color and black-and-white; we supported AD/SAT and the Future of Advertising Project; and we find ourselves now confidently anticipating even newer technologies like erasable laser-discs and ion deposition printing!

I pledged a year ago special emphasis on distribution and circulation. Today our committee experts are hard at work on a publication that will give us lots of new ideas on how to "fine tune" our operations toward a "total system solution" to the ever-evolving challenges of getting our good editorial and advertising products to our readers.

And, I wanted us during this past year to make special efforts to transfer the wisdom developed in ANPA meetings and projects out to you in the field faster and in a more consumable form. I'm particularly proud of the fine Convention and ANPA/TEC programs we have offered, of presstime's excellence, and of the well-attended training programs, seminars and workshops by which "the word" was made available to you and your colleagues.

Betty and I could not have been more deeply honored than to have led your outstanding Board of Directors. Let us say simply, "Thank you." And please join me in letting your new Officers and Directors know that they have our support and that we eagerly await their vital leadership "to advance the cause of a free press."



Alvah H. Chapman Jr.
ANPA Chairman and President

Lasercomp Express

The first laser imagesetter that gives you a page-a-minute with everything in it.

Lasercomp Express, the latest generation in Monotype's world-renowned line of laser imagesetters, offers the most advanced features and capabilities ever available. With it, newspapers, magazines and any other time-critical printing application users can finally take full advantage of all the speed, quality and cost-saving benefits laser typesetting systems can provide.

Express, as its name implies, has its roots in speed and performance. Express is the first laser imagesetter that allows a complete newspaper page with text and integrated graphics to be output in one minute. And, unlike other systems, it has the capability to accept and output every element within a page, including logos, line illustrations and halftones. At 1000 lines per inch, it assures the highest resolution type and graphics.

If you need more performance than this, add the dual processor option. With this option the Express is capable of concurrent input and output—further improving its already impressive throughput performance.

With Monotype's expertise in interfacing—we interface to over 60 different front-end systems—Lasercomp Express integrates easily with either your existing system or your choice of the most up-to-date, interactive systems.

Express features an 82 pica width and can hold more than 200 fonts, each containing 128 characters. You can select these from Monotype's vast and continually expanding library of digital typefaces.

More than any other laser typesetter, Express defines state-of-the-art. So no matter what business you're in, you can depend on Lasercomp to beat your deadlines without compromising your bottom line.

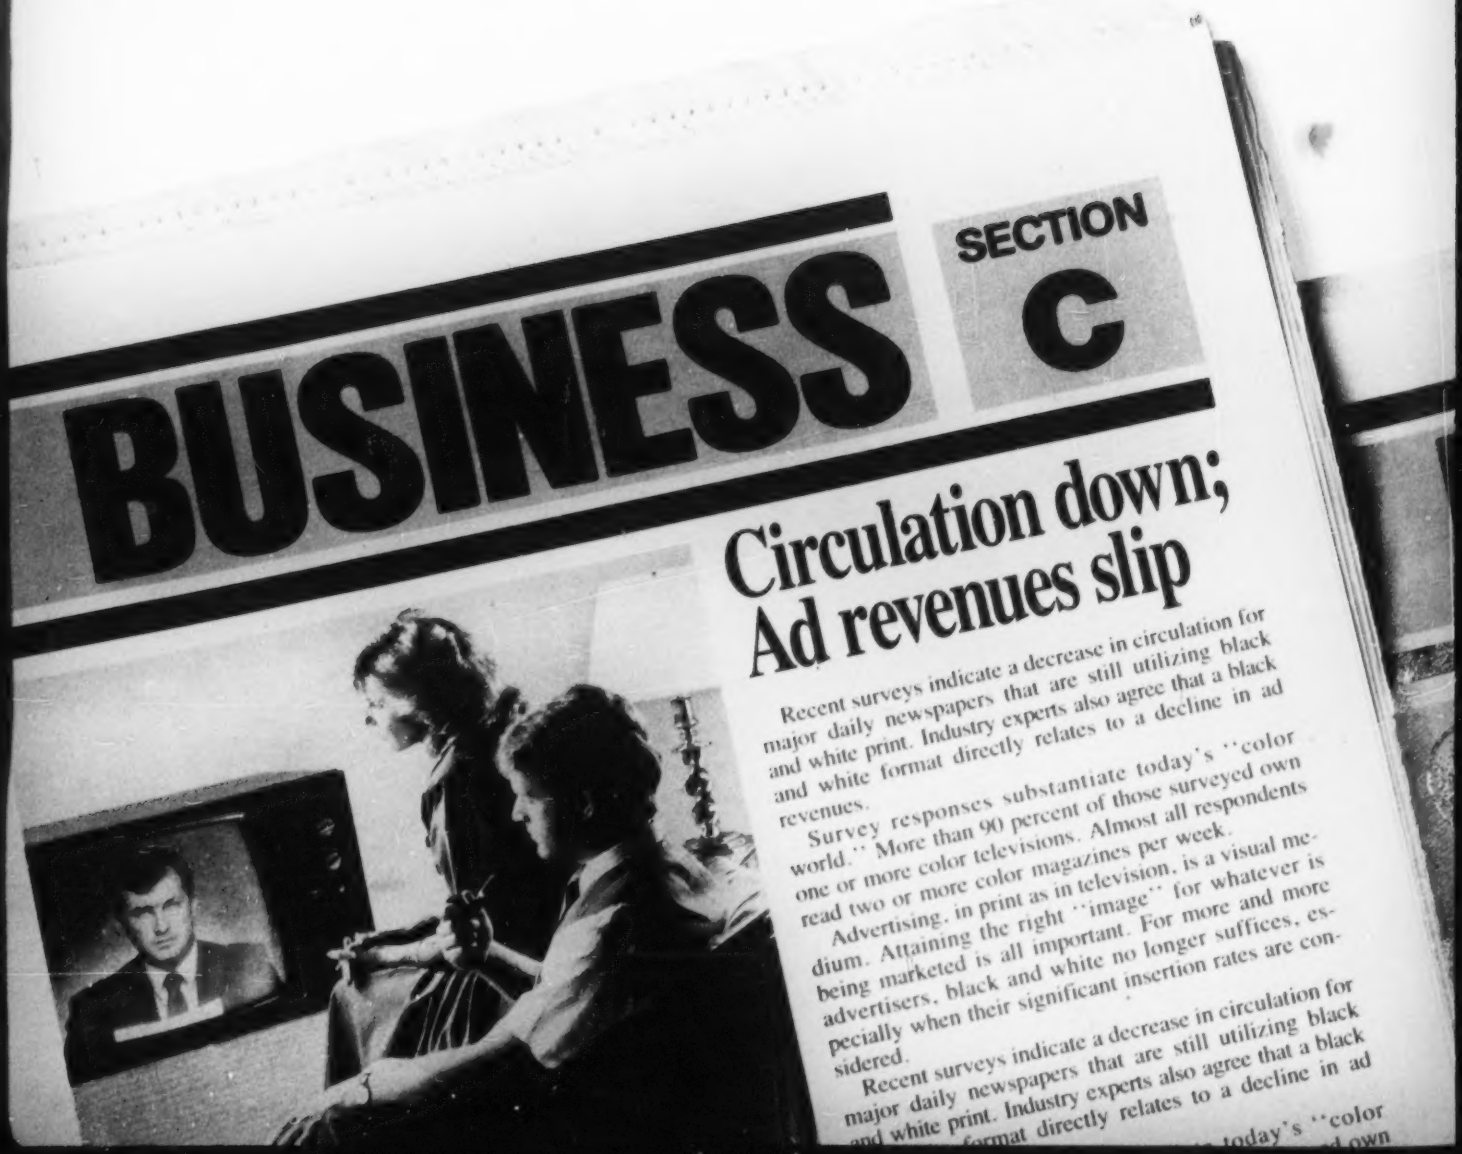
What used to be black and white and read all over...



BUSINESS
SECTION C
Circulation down; Ad revenues slip
Recent surveys indicate a decrease in circulation for major daily newspapers that are still utilizing black and white print. Industry experts also agree that a black and white format directly relates to a decline in ad revenues.
Survey responses substantiate today's "color world." More than 90 percent of those surveyed own one or more color televisions. Almost all respondents read two or more color magazines per week.
Advertising, in print as in television, is a visual medium. Attaining the right "image" for whatever is being marketed is all important. For more and more advertisers, black and white no longer suffices, especially when their significant insertion rates are considered.
